The copy filmed here has been reproduced thanks to the generosity of:

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol ⟶ (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole ⟶ signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

PREFACE TO THE SEVENTH VOLUME

IN the preface to the Sixth Volume of this work, published in the spring of 1901, it was remarked that the last half-dozen years of the Nineteenth Century, which that volume covered, had been filled with events so remarkable and changes so revolutionary in political and social conditions that many people had asked for an extension of my work to report them. The years then reviewed disclosed only the beginnings of what the decade since has been developing, in movements and achievements so varied, so numerous, in such rapid succession, with effects so profound and so problematical, that their appeal to our interest seems the strongest that has come to us yet from human history. That the interest in them justifies this further extension of my compilation of "recent history" has been made clear to me by the frequency of the suggestions of another volume which have come to the publisher and to myself. In the new volume I have striven to make a clear exhibit of all these strangely pregnant evolutionary and revolutionary movements of the present time, which are traversing all divisions and institutions of all society, occidental and oriental, along all the lines of its organization, — international, national, municipal, political, industrial, intellectual, moral, — leaving nothing in life untouched.

A few indications of the subjects dealt with most extensively in the volume may convey some idea of its scope, and of the aims pursued in its preparation. For example: "Railways" and "Combinations" ("Trusts"), treated mainly as the subjects of regulative governmental action, occupy 38 pages in all. "Labor Organization" fills 25 pages with the incidents of its trade unions, labor parties, strikes, mediations, arbitrations and industrial agreements. "Labor Protection" receives 6 pages, for the account of what has been done in various countries in the matters of employers' liability, industrial insurance, hours of work, etc. "Labor Remuneration" receives 9 pages, for the reporting of experiments in coöperation, profit-sharing, wages-regulation, pensions, etc. Various dealings with the problems of "Poverty and Unemployment" are set forth in 8 pages; similarly the problems of "Crime and Criminology" receive nearly 6; those of the Liquor Traffic 9; those of the Opium evil, 3. The development of organized work for "Social Betterment" is traced in 5 pages; that of reform in "Municipal Government" in 12. The "Race Problems," which are troubling many countries and people, are depicted in 15 pages. Twenty-six pages are given to the Educational history of the last decade; recent "Science and Invention" are reported in 16. "Children under the Law" are the subject of 8 interesting pages on recent legislation touching the young.

The contradictory states of temper in the world on the subject of War are depicted under two contrasted headings — "War, The Preparations for" and "War, The Revolt against," in particulars which fill 35 pages. Of the one great war of the period, between Japan and Russia, and the triumph of mediation which brought it to a close, the narrative, in about 20 pages, is full. The story of the late revolution in Turkey is told authentically in 9 pages, and that of Persia in 10. The abortive attempts at revolution in Russia, and the sham of constitutional government conceded, have their history in 18 pages. The signs of wakened life in China are described in 12. The discontent of India and Lord Morley's measures of reform in the

British-Indian goverment, enlarging the native representation in it, are set forth broadly in 15. Generally, as concerns the British Empire, the interesting conditions that have arisen in it very lately, adding South Africa to the group of unified Colonial Dominions, which are young British nations in the making, and drawing them all into a league with the "Mother Country" for organized imperial defense, are amply portrayed. So, too, are the agitations in recent British politics at home, which have arisen from an increasing antagonism between popular interests represented in the House of Commons and class interests intrenched in the House of Lords. In American politics, the remarkable invigoration and freshening of spirit which characterized the administration of President Roosevelt are made apparent in a broad exhibit of their many effective results.

As was said of Volume VI., it can be said, I think, with even more truth of this, that it presents "History in the making, — the day by day evolution of events and changes as they passed under the hands and before the eyes and were recorded by the pens of the actual makers and witnesses of them."

As an appendix to the present volume, a new feature, related to the whole work, has been introduced. It offers a considerably extensive series of systematic courses for historical study and reading, the literature for which is supplied in the seven volumes of "History for Ready Reference." This has been prepared in response to many requests which the publishers have received. Even for casual investigations it will be found serviceable to every possessor and user of the work.

ABYSSINIA: A. D. 1902. — The French in favor. — Their railway building and plans. — "Through Abyssinia the French hope to establish a line of trade across Africa from east to west in opposition to our Cape to Cairo railway from north to south. In this they have already achieved some success. They have settled themselves along the Gulf of Tadjoura, on the south of which they hold the magnificent Bay of Djibouti, while on the north their flag waves over the small port of Obok. But their real triumph in these regions has been the establishment of a lasting friendship with Abyssinia by judicious consignments of arms and ammunition — which were used against Italy in the war of 1896. Finally, they are now in the act of building a French railway from Djibouti to Addis Abeba, the capital of Abyssinia. This railway will completely cut out the British port of Zeila, for in the concession granted by Menelik it is stipulated that no company is to be permitted to construct a railroad on Abyssinian territory that shall enter into competition with that of M. Ilg and M. Chefneux. . . .

"At Menelik's capital, Addis Abeba, there is, to use the expression of M. Rodrigues le Roux a silent duel in progress between the representatives of the various nationalities. We are represented by Colonel Harrington. But, although Menelik is wise enough to extend a friendly greeting to all, there is no reason to suppose that we should enjoy as great a share of favour as other nations. Although throughout the war we preserved a strict neutrality, we are regarded as a powerful and aggressive neighbour, and as the ally of Italy, whereas the French have been the truest friends of Abyssinia. The Russians are also in communication with the Negus, and their efforts are, of course, seconded by France. As for the Italians, their position seems now to be as good as that of any European nation." — G. F. H. Berkeley, *The Abyssinian Question and its History* (*Nineteenth Century, Jan.*, 1903).

A. D. 1902. — Treaty with Great Britain. — A treaty between Great Britain and the Emperor Menelek, of the Kingdom of Ethiopia (Abyssinia), signed on the 15th of May, 1902, defines the boundaries between the Soudan and Ethiopia, and contains the following important provisions:

"*Article III.* His Majesty the Emperor Menelek II., King of Kings of Ethiopia, engages himself towards the Government of his Britannic Majesty not to construct, or allow to be constructed, any work across the Blue Nile, Lake Tsana, or the Sobat, which would arrest the flow of their waters into the Nile, except [illegible]cement with his Britannic Majesty's G[illegible]nt and the Government of the Soudan [illegible]*Article IV.* The Emperor Menelek engages [illegible] to allow his Britannic Majesty's Government and the Government of the Soudan to select in the neighborhood of Itang, on the Baro River, a block of territory having a river frontage of not more than 2000 metres, in area not exceeding 400 hectares, which shall be leased to the Government of the Soudan, to be administered and occupied as a commercial station, so long as the Soudan is under the Anglo-Egyptian Government. It is agreed between the two high contracting parties that the territory so leased shall not be used for any political or military purpose. *Article V.* The Emperor Menelek grants his Britannic Majesty's Government and the Government of the Soudan the right to construct a railway through Abyssinian territory to connect the Soudan with Uganda. A route for the railway will be selected by mutual agreement between the two high contracting parties."

ACRE DISPUTES, The: Claims on the region by Brazil, Peru, and Bolivia. — Its final partition. — A considerable territory of much richness in the southwestern part of the Amazon Valley, around the upper waters of the Madeira, the Aquiry, and the Purus tributaries, was long in dispute between Brazil, Bolivia, and Peru, and became a cause of serious quarrel between the two first named in 1903. The then Brazilian President, Rodriguez Alves, in his first annual message, May, 1903, stated the situation from the Brazilian standpoint as follows:

"Our former relations of such cordial friendship with Bolivia have suffered a not insignificant strain since the time when the Government of that sister Republic, unable to maintain its authority in the Acre region, inhabited exclusively, as you know, by Brazilians who, many years previously, had established themselves there in good faith, saw fit to deliver it over to a foreign syndicate upon whom it conferred powers almost sovereign. That concession, as dangerous for the neighboring nations as for Bolivia itself, encountered general disapproval in South America. As the most immediately interested, Brazil, already in the time of my illustrious pre-

decessor, protested against the contract to which I refer, and entered upon the policy of reprisals, prohibiting the free transit by the Amazon of merchandise between Bolivia and abroad. Neither that protest nor the counsels of friendship produced at that time the desired effect in La Paz, and, far from rescinding the contract or making the hoped-for modifications therein, the Bolivian Government concluded an especial arrangement for the purpose of hurrying the entrance of the syndicate into the possession of the territory.

"When I assumed the government that was the situation, and in addition the inhabitants of the Acre, who had again proclaimed their independence, were masters of the whole country, excepting Puerto Acre, of which they did not get possession until the end of January. Although since January negotiations have been initiated by us for the purpose of removing amicably the cause of the disorders and complications which have had their seat of action in the Acre ever since the time when for the first time the Bolivian authorities penetrated thither, in 1899, yet the Government of La Paz has nevertheless thought proper that its President and his minister of war should march against that territory at the head of armed forces with the end in view of crushing its inhabitants and then establishing the agents of the syndicate."

The Brazilian President proceeded then to relate that he had notified the Bolivian Government of the intention of Brazil to "defend as its boundary the parallel of 10° 20′ south," which it held to be the line indicated by the letter and the spirit of a treaty concluded in 1867; and that Bolivia had then agreed to a settlement of the dispute through diplomatic channels. "Upon the Bolivian Government agreeing to this," he continued, "we promptly reëstablished freedom of transit for its foreign commerce by Brazilian waters. Shortly after this the syndicate, by reason of the indemnity which we paid it, renounced the concession which had been made it, eliminating thus this disturbing element."

In conclusion of the subject, President Alves reported: "To the Peruvian Government we have announced, very willingly, since January, that we will examine, with attention, the claims which in due time they may be pleased to make upon the subject of the territories now in dispute between Brazil and Bolivia."

The result of the ensuing negotiations between Brazil and Bolivia was a treaty signed in the following November and duly ratified, the terms of which were summarized as follows in a despatch from the American Legation at La Paz, December 26: "Three months after exchange of ratifications Brazil is to pay an indemnity of £1,000,000 and in March, 1905, £1,000,000. A small strip of territory, north Marso, Brazilero, embracing Bahia Negra and a port opposite Coimbra, on Paraguay River are conceded, and all responsibilities respecting Peruvian contentions are assumed. The disputed Acre territory is conceded by Bolivia. A railroad for the common use of both countries is to be built from San Antonio, on Madeira River, to Cuajar Ameren, on Mamore River, within four years after ratification. Free navigation on the Amazon and its Bolivian affluents is conceded. A mixed commission, with umpire chosen from the diplomatic representation to Brazil, will treat all individual Acre claims."

Subsequently it was determined in Bolivia that the entire indemnity received from Brazil should be expended on railroads, with an additional sum of £3,500,000, to be raised by loan.

For the settlement of the remaining question of rights in the Acre territory, between Bolivia and Peru, a treaty of arbitration, negotiated in December, 1902, but ratified with modifications by the Bolivian Congress in October, 1903, provided that "the high contracting parties submit to the judgment and decision of the Government of the Argentine Republic, as arbitrator and judge of rights, the question of limits now pending between both republics, so as to obtain a definite and unappealable sentence, in virtue of which all the territory which in 1810 belonged to the jurisdiction or district of the Ancient Audience of Charcas, within the limits of the viceroyalty of Buenos Ayres, by acts of the ancient sovereign, may belong to the Republic of Bolivia; and all the territory which at the same date and by acts of equal origin belonged to the viceroyalty of Peru may belong to the Republic of Peru."

The case was pending until July, 1909, when judgment favorable to the claims of Peru was pronounced by the President of the Argentine Republic, Señor Figueroa Alcorta. According to the award, as announced officially from Peru, the line was drawn to "follow the rivers Heath and Madre de Dios up to the mouth of the Toromonas and from there a straight line as far as the intersection of the river Tehuamanu with meridian 69. It will then run northwards along this meridian until it meets the territorial sovereignty of another nation."

The Bolivians were enraged by the decision against them, and riotous attacks were made on the Argentine Legation at La Paz, the Bolivian capital, and on Argentine consulates elsewhere. Worse than this in offensiveness was a published declaration by President Montes of Bolivia that the arbitration award respecting the frontiers of Bolivia and Peru had been given by Argentina without regard to Bolivia's petition that an actual inspection of the territory should be made in case the documents and titles submitted were unsatisfactory. "Had this been done," said the President of Bolivia, "the arbitrator would have been convinced of the respective possessions of the two countries. It is inexplicable how the arbitrator, after examining the titles and documents, could give such a decision. He passed over the elementary principles of international rights in awarding to Peru territory which had never been questioned as belonging to Bolivia. As a consequence Bolivia rejects the award."

The insulted Government of Argentina demanded explanations; diplomatic relations between the two countries were broken off, and war seemed imminent. Fortunately the term of President Montes was near its close, and a man of evidently cooler temper, Elidoro Villazon, succeeded him in the Presidency on August 12th. The new President, in his message to Congress next day, while characterizing the award as unjust, said: "We must proceed circumspectly, and be guided by international rights and the customs of civilized nations in similar cases. I consider it right to avail ourselves of the means offered by diplomacy to obtain a rectification of the new frontier line given by arbitration, thus saving the compromised possessions of Bolivia."

With this better spirit entering into the contro-

versy, Bolivia was soon able to arrange with Peru for a concession from the latter which made her people willing to recognize the award. This agreement was effected on the 11th of September, and its terms, as made known in a despatch from Rio de Janeiro, were as follows: "Peru surrenders to Bolivia a very small extent of territory lying between the Madre de Dios River and the Acre, traversed by the rivers Tahuamano and Buyamaro, which together form the river Orton, an affluent of the Beni River. This territory, with an area of about 6,500 square kilometres, was discovered and colonized by Bolivians, who to-day are in possession of numerous prosperous industries there. Peru gets possession of all the upper course of the Madre de Dios, from its head waters to its confluence with the river Heath. Such a slight modification as the foregoing from the decision reached by the arbitrator in no way disturbs the Argentine Republic."

As between Peru and Brazil the boundary question was settled by a treaty signed at Rio de Janeiro on the 8th of September, three days before the Bolivian pacification.

This probably closes a territorial dispute which has troubled four countries in South America for many years, and brought quarrelling couples to the verge of war a number of times.

AFGHANISTAN: A. D. 1901-1906. — Death of Abdurahman. — Succession of his son, Habibullah. — Signs of a progressive spirit in the new Ameer. — The late Ameer, Abdurahman, died in October, 1901, and was succeeded by his eldest son, Habibullah. Early in the third year of his reign the new Ameer began to show signs of a wish to have his country move a little on the lines of European progress, in the march which so many of his Asiatic neighbors were joining. His undertakings were disturbed for a time by trouble with his half-brother, Omar Jan, and with the latter's mother, the Bibi Halima or Queen of the Harem; but he brought the trouble to an end which does not seem to have been tragical, and that, in itself, is a notable mark in his favor. The Russo-Japanese War interested him immensely, and he established a daily post between Khyber and Cabul to bring speedy news of events. He then read the reports in public, with expositions, to make the listening people understand the bearing of what was happening on their own interests, and the lessons they should learn from what the Japanese were doing. He is said to have done much in the way of improving agriculture and horse-breeding in Afghanistan; he has a desire to establish a Chiefs' College, with the English language as the basis of instruction, but has met with strong opposition in this undertaking; and he has introduced electric lighting, with probably other luxuries of modern science, in Cabul. Such things in Afghanistan mark a highly progressive man. His political intelligence is proved by the cordiality of his relations with the British Indian Government. An interesting account of conditions in the Ameer's country in 1904 was given by Mr. D. C. Boulger, in the *Fortnightly Review* of December, that year, under the title of "The Awakening of Afghanistan."

A. D. 1905. — The Ameer becomes King. In a new treaty between the Government of Great Britain and the Ameer of Afghanistan, the latter was recognized as King.

A. D. 1907. — Convention between Great Britain and Russia relative to Afghanistan. See (in this vol.) EUROPE: A. D. 1907 (AUG.).

AFRICA: Its Colonizability by white peoples. — The regions habitable by Europeans. — "There are three obstacles to the white race from Europe overrunning and colonising the continent of Africa as it has overrun and colonised the two Americas and Australasia. The first is the insalubrity of the well-watered regions and the uninhabitability of the desert tracts; the second is the opposition of strong indigenous races; and the third, of quite recent growth, is a growing sentiment which is increasingly influencing public opinion, in Europe more especially, and which forbids the white man to do evil that good may come: namely, to displace by force of arms pre-existing races in order that the white man may take the land they occupy for his own use. It is probable that the second and third reasons combined may in future prove the more effective checks. Deserts, to be made habitable and cultivable, only need irrigation, and apparently there is a subterranean water supply underlying most African deserts which can be tapped by artesian wells. The extreme unhealthiness of the well-watered parts of Africa is due not so much to climate as to the presence of malaria in the systems of the Negro inhabitants. This malaria is conveyed from the black man to the white man by certain gnats of the genus *Anopheles* — possibly by other agencies. But the draining of marshes and the sterilisation of pools, together with other measures, may gradually bring about the extinction of the mosquito; while, on the other hand, it seems as though the drug (*Cassia Beareana*) obtained from the roots of a cassia bush may act as a complete cure for malarial fever. . . .

"For practical purposes the only areas south of the Sahara Desert which at the present time are favourable to white colonisation are the following. In West Africa there can be no white colonisation under existing conditions; the white man can only remain there for a portion of his working life as an educator and administrator. . . . In North-East Africa, Abyssinia and Eritrea will suggest themselves as white man's countries — presenting, that is to say, some of the conditions favourable to European colonisation. The actual coast of Eritrea is extremely hot, almost the hottest country in the world, but it is not necessarily very unhealthy. The heat, however, apart from the existence of a fairly abundant native population, almost precludes the idea of a European settlement. But on the mountains of the hinterland which are still within Italian territory there are said to be a few small areas suited at any rate to settlement by Italians, who, by-the-by, seem to be getting on

very well with the natives in that part of Africa. But a European colonisation of Abyssinia, possible as it might be climatically, is out of the question in view of the relatively abundant and warlike population indigenous to the Ethiopian Empire. . . .

"Then comes Central Africa, which may be taken to range from the northern limits of the Congo basin and the Great Lakes on the north to the Cunene River and the Zambesi on the south. British East Africa and Uganda offer probably the largest continuous area of white man's country in the central section of the continent. The Ankole country in the southwest of the Uganda Protectorate and the highlands north of Tanganyika, together with the slopes of the Ruwenzori range, offer small tracts of land thoroughly suited to occupation by a white race so far as climate and fertility are concerned; but these countries have already been occupied, to a great extent, by some of the earliest forerunners of the Caucasian (the Bahima), as well as by sturdy Negro tribes who have become inured to the cold. To the northeast of the Victoria Nyanza, however, there is an area which has as its outposts the southwest coast of Lake Rudolf, the great mountains of Debasien and Elgon, and the snow-clad extinct volcanoes of Kenia and Kilimanjaro. This land of plateaux and rift valleys is not far short of 70,000 square miles in extent, and so far as climate and other physical conditions are concerned is as well suited for occupation by British settlers as Queensland or New South Wales. But nearly 50,000 square miles of this East African territory is more or less in the occupation of sturdy Negro or Negroid races whom it would be neither just nor easy to expel. . . .

"The only portion of German East Africa which is at all suited to European settlement lies along the edge of the Nyasa-Tanganyika Plateau. Here is a district of a little more than a thousand square miles which is not only elevated and healthy, but very sparsely populated by Negroes. A few patches in the Katanga district and the extreme southern part of the Congo Free State offer similar conditions.

"In British Central Africa we have perhaps 6,000 square miles of elevated, sparsely populated, fertile country to the northwest of Lake Nyasa and along the road to Tanganyika. There is also land of this description in the North-East Rhodesian province of British Central Africa, in Manikaland, and along the water-parting between the Congo and the Zambesi systems. Then in the southernmost prolongation of British Central Africa are the celebrated Shiré Highlands, which, together with a few outlying mountain districts to the southwest of Lake Nyasa, may offer a total area of about 5,000 square miles suitable to European colonisation. A small portion of the Moçambique province, in the interior of the Angoche coast, might answer to the same description. Then again, far away to the west, under the same latitudes, we have, at the back of Mossamedes and Benguela, other patches of white man's country in the mountains of Bailundo and Shella.

"In South Africa, beyond the latitudes of the Zambesi, we come to lands which are increasingly suited to the white man's occupation the further we proceed south. Nearly all German South-West Africa is arid desert, but inland there are plateaux and mountains which sometimes exceed 8,000 feet in altitude, and which have a sufficient rainfall to make European agriculture possible. . . . About two-thirds of the Transvaal, a third of Rhodesia, a small portion of southern Bechuanaland, two-thirds of the Orange River Colony, four-fifths of Cape Colony, and a third of Natal sum up the areas attributed to the white man in South Africa. The remainder of this part of the continent must be considered mainly as a reserve for the black man, and to a much smaller degree (in South-East Africa) as a field for Asiatic colonisation, preferentially on the part of British Indians.

"Counting the white-skinned Berbers and Arabs of North Africa, and the more or less pure-blooded, light-skinned Egyptians, as white men, and the land they occupy as part of the white man's share of the Dark Continent, we may then by a rough calculation arrive (by adding to white North Africa the other areas enumerated in the rest of the continent) at the following estimate: that about 970,000 square miles of the whole African continent may be attributed to the white man as his legitimate share. If, however, we are merely to consider the territory that lies open to European colonisation, then we must considerably reduce our North African estimate." — H. H. Johnston, *The White Man's Place in Africa* (*Nineteenth Century, June*, 1904).

Agreements between England and France concerning Egypt, Morocco, Senegambia, and Madagascar. See (in this vol.) EUROPE: A. D. 1904 (APRIL).

British, German, and Congo frontier agreement. — The following was telegraphed to the Press from Berlin, November 29, 1909: "An agreement was signed in Berlin during the summer, Reuter's representative learns, whereby various questions affecting the frontier lines between British Uganda and German East Africa and the Congo, which have been under discussion for years, were definitely settled. The agreement is understood to be satisfactory to both parties, but the details are not to be published as yet."

French Central: A Land-locked Empire. — "Since 1898, successive expeditions have converged from the French Niger Territories, from South Algeria, and from the French Congo towards Lake Tchad, which has ever exercised a mystic charm over the minds of explorers. Rabah, the usurper of Bornou, has been killed, and his son Fadel'allah recently met the same fate, so that all the belt of black countries stretching from the north of Sokoto, the north of Bornou and Baghirmi to the confines of Wadaï, the most easterly limit of the French sphere, are now occupied in a military sense. . . . Even if we consider the French as now firmly settled in these countries, peopled with timid blacks from whom little is to be feared, the succeeding problem, what to do with them, presents no seductive outlook.

"The key to the situation is the question of transport, for here we have a vast land-locked empire, the roads to which are long, complicated, and difficult. For the present the question of a great Trans-Saharan railway may be left out of account, and in all probability more mature consideration will convince the French of the futility of such a scheme. Three roads running through French territory are available; from the

east by the Niger, from the south by the French Congo, and from the north, Tunis or Algeria, across the great Sahara. Of the three, the only one which can be made of practical utility for a long time to come is that across the Sahara. From the centre of Africa there are several well-known caravan routes, all capable of being commercially used, provided the intervening tribes can be brought to acquiesce in the French domination. All these terminate in Turkish territory." — E. J. Wardle, *The French in Central Africa* (*Contemporary Review, Oct.*, 1902).

Subjugation of Hausa Land and occupation of Sokoto. — Early in 1903 the High Commissioner of Nigeria, Sir F. Lugard, sent an expedition against the Emir of Kano, in the northern part of the Nigerian Protectorate, within the Sultanate of Sokoto, which had never been made submissive to the rule which Great Britain claimed. Kano was reached and taken by assault on the 3d of February, the Emir and his horsemen escaping toward Sokoto. The expedition then proceeded against Sokoto, where feeble resistance was offered, and the seat of the Sultanate was taken on the 15th of March. These conquests are believed to have effected a firm establishment of British ascendancy throughout the Niger territory, from the coast to the Saharan sphere of the French. The possession of Kano is important, as it is the starting point of caravan routes eastward and northward and the chief commercial town of the Western Sudan.

Wars with the Natives. — In the German Parliament, on the 12th of January, 1905, it was stated by the Director of the Colonial Department, Dr. Stübel, that up to that date 11,000 German troops had been employed against the Hereros and Witbois in Southwest Africa, and that the campaign of 1904 had cost 42,000,000 marks (about $10,500,000). The military estimate for 1905 was 60,000,000 marks. General von Trotha, Governor of the colony, who had been in command of operations, and who had set a price on the heads of Morenga and other insurgent chiefs, and had threatened the whole tribe with extermination, was to be superseded; but the Emperor, notwithstanding, conferred on him the Order "Pour le Merite." A similar conflict with the natives in German East Africa was opened in August, 1905, by the murder of Bishop Spiers and four missionaries and Sisters of Mercy. The Wangonis are of the Zulu race, mustering about 30,000 warriors, and reinforcements of the German troops had to be sent out.

Opening of Diamond Fields. — Diamond discoveries in German Southwest Africa began to acquire importance in 1908. As stated in a lecture on the subject by Herr Dernburg, the German Colonial Secretary, at Berlin, in January, 1909, these diamond deposits lie in crescent form around Lüderitz Bay, beginning to the south of Elizabeth Bay and extending northwards to the sea-coast in the vicinity of Anischab. The full extent of the stretch of diamond-bearing sand can only be ascertained by careful measurement, but it is even now permissible to describe the deposits as very considerable. The diamonds, which are found mixed with small agates and other half-precious stones, vary from one-fifth to three-quarters of a carat — the average not exceeding one-third of a carat. They are almost perfect octahedrons of good water. The regular exploitation may be said to have begun in September, 1908, the total recovered before that date only amounting to 2,720 carats. In September the amount was 6,644 carats, in October 8,621, in November 10,228, and in December 11,549, or in all 39,762, the price of which would be about £55,000. The administrative regulations introduced stipulate, first, that half the net profit shall go to the Southwest African Treasury; secondly, that measures shall be taken to secure an adequate market for the new supply and to prevent depreciation; thirdly, that suitable conditions shall be established for the working of the mines; and, fourthly, that their exploitation shall be mainly reserved for German capital, and that increased work shall be provided for the German diamond-cutting industry.

Portuguese: A. D. 1905-1908. — Continued existence of slavery. — General F. Joubert-Pienaar, one of the prominent Boer leaders in the Boer-British War, is the authority for startling statements concerning the continued maintenance of slavery in Portuguese Africa. He attempted to become a settler in that region, and related subsequently what he saw and heard during his stay in it. Of an experience at the Island Principe he said: "The English director of the cable office took me to some of the cocoa plantations, with which the slopes of the hills are covered. He told me that it was a terribly unhealthy place to live, and that Europeans could not exist there for more than a couple of months at a time, and that frequent changes have to be made, therefore, in the telegraph department. He told me, further, that the year before the whole original population of the island had died from malarial fever, and that the following year they imported five hundred slaves, men and women, to repopulate the island. That was ten months before my visit. Pointing to five women walking on the street, he said: 'There are all that are left of the women imported, and only about a dozen men remain.' I asked him how they carried on the work of the plantations. He said it was done by simply importing slaves, from time to time, to replace those who had died."

General Joubert-Pienaar declares that he never heard of a single case where one of these slaves had returned to his own country, while in the coast towns the abnormal proportion of native women and children noticeable is due to the fact that the men have been sent as slaves to the islands. The method of obtaining the slaves and of making the pretense of a contract with them is thus described: "When any slaves are wanted in the islands, the plantation owner informs the slave-traders on the mainland. The slave-trader goes to a strong chief, inland, and bargains with him for the number of slaves he requires, generally paying him in rifles and ammunition. This chief will not send any of his own men to the islands, but, calling his braves, he goes to some weaker tribe, attacks it, and annihilates the tribe,

taking the men, women, children, and cattle captive. The men, and as many women as are necessary, he hands over to the slave-trader, the rest of the women and the cattle he keeps for himself and his people, and the children he sells to colonists for slaves. On these slave-hunting expeditions the most terrible cruelties are enacted and the most gruesome atrocities perpetrated. . . . Arriving at the coast, these men — and sometimes women when they are required — are brought before an officer appointed for the purpose. He reads the contract to them in Portuguese; and after the contract has been read to these people, who do not understand one word of the language, a black man, who is stationed there for the purpose, shouts to these slaves to say 'Yes!' Of course they all repeat the 'Yes' after him, and the Portuguese official then certifies that these men have all agreed to go and work on the islands under the terms of the contract read to them. He then takes a little tin box, in which a copy of the contract is placed, and ties it around the neck of each of the slaves."

Somaliland: Troubles with the Mullah. — In 1902 the British in their Somali Coast Protectorate began to be harassed by raids from the bordering desert region led by a religious agitator who had assumed the character known as that of a Mullah. Three years previously the British Consul at Berbera had reported to London the appearance of this personage, Muhammad Abdullah by name, in the Dolbahanta country, and that he was said to be "collecting arms and men with a view to establishing his authority over the southeastern portion of the Protectorate." He had made several pilgrimages to Mecca, and had attached himself there to a sect which "preaches more regularity in the hours of prayer" and "stricter attention to the forms of religion." He had begun the use of force to compel the tribes of his region to join his sect, and was evidently gaining power to make trouble. The trouble was realized in due time, and became serious in 1902, when, in October, Colonel Swayne, with a native levy of troops, having driven the Mullah's raiders back into the desert, followed them thither, and suffered a serious reverse. He was attacked and compelled to retreat, with a loss of two officers and 70 men killed and two officers, with about 100 men wounded. Troops were then sent to the Protectorate from India and careful preparations were made for dealing with the Mullah in a more effectual way. He, meantime, sent demands for political recognition and for the cession to him of a port.

Early in 1903 operations against the Mullah were renewed, with strongly increased forces from India and from African native levies: but the results were again disastrous. A detachment from a column which pursued the Mullah into his own region ventured too far in the advance and was overwhelmed, losing nearly 200 officers and men. There appears to have been no success during the year to counterbalance this reverse.

Peace with the Mullah. — The Mullah was brought at last to an agreement with Great Britain and Italy which established comparative peace for the time being in Somaliland, with the promise of freedom in trade.

Notwithstanding the pacific agreement with the Mullah, effected in 1905, troubles on the Somali border have continued, because of his attacks on friendly tribes. Early in 1909 it was announced that the British forces in Somaliland were to be increased, but that there was no intention to embark on any expedition against the Mullah. A despatch from Bombay, India, on the 3d of January, said: "Further operations against the Somaliland Mullah are strongly deprecated. It is impossible to conduct a successful campaign, owing to the difficulty of obtaining supplies, unless a light railway 200 miles long is built to Bohotle. The Mullah, who is an able man, is not believed to be anxious to engage in fresh hostilities with the British, but he is determined to dominate the Hinterland. Experts consider that no new movement on the lines of the last campaign would produce a satisfactory result. The Mullah's strength is unknown, but it is probably great, as his camp sometimes covers ten square miles. His mobility is astonishing, and he can always elude our troops. Our present advanced outpost is Burao, 80 miles from Berbera, where there is a small force of the King's African Rifles. The country is practically worthless, and the best course, probably, is to hold the coast and to leave the far interior severely alone. The friendly tribes cannot be further effectively protected without permanently employing a large force. Minor operations are now merely a waste of money."

Sudan: Suppression of a new Mahdi. — A new Mahdi proclaimed himself in Southern Kordofan in November, 1908. He was a native of Tunis, named Mahomed El Amin, who had twice made the pilgrimage to Mecca. Colonel Mahon, the Deputy-Governor of the Sudan, on hearing of Mahomed's proclamation, started instantly from Khartoum, with 200 cavalry, sending orders to El Obeid for 200 infantry, with Maxims, to meet him near Tagalla. With this force, after a five days march, through the desert toward the Tagalla mountains, he caught the Mahdi, took him to El Obeid and tried and hanged him straightway.

Population. — Lord Cromer, in his annual report, 1904, estimated the population of the Sudan, within the British-Egyptian Condominium, at no more than 1,870,000, to which number it had been reduced by war and disease from former estimates of 8,525,000, prior to the Mahdi domination.

International Institute: Its origin and purpose. — Created under the auspices of the King of Italy. — Forty nations associated in its membership. — Its seat near Rome. — The idea of an international organization for systematizing the agricultural production of the world and regulating the markets of food products, by constant and authentic knowledge of crops and conditions, was conceived some years ago by Mr. David Lubin, of California. It was first expressed by him publicly at Budapest in 1896, but was the growth of thirteen years of thought preceding that date. As the result of Mr. Lubin's efforts to interest governments and peoples in the project, King Victor Emmanuel III., of Italy, became its hearty patron in 1903, and took the initiative step toward effecting an organization as wide as the civilized world, by inviting all nations to take part in a convention of delegates for the purpose, at Rome, in May, 1905. The invitation, as addressed to the Government of the United States by the Italian Ambassador at Washington on the 26th of February, 1905, was in these words: "By order of my government I have the honor to inform your excellency that His Majesty the King, my august sovereign, has taken the initiative in the formation of an international institute of agriculture to be composed of representatives of the great agricultural societies of the various countries and of delegates from the several governments. This institute, being devoid of any political intent, should tend to bring about a community of interests among agriculturists and to protect these interests in the markets of the world. It will study agricultural conditions in the different countries, periodically indicating the supply and the quality of products with accuracy and care, so as to proportion production to demand, increase and distribute the various crops according to the rate of consumption, render the commerce of agricultural products less costly and more expeditious, and suitably determine the prices thereof. Acting in unison with the various national bureaus already existing, it will furnish accurate information on conditions regarding agricultural labor in various localities, and will regulate and direct the currents of emigration. It will favor the institution of agricultural exchanges and labor bureaus. It will protect both producers and consumers against the excesses of transportation and forestalling syndicates, keeping a watch on middlemen, pointing out their abuses, and acquainting the public with the true conditions of the market. It will foster agreements for common defense against the diseases of plants and live stock, against which individual defense is less effectual. It will help to develop rural coöperation, agricultural insurance, and agrarian credit. It will study and propose measures of general interest, preparing international agreements for the benefit of agriculture and the agricultural classes.

"Carrying out the intention of His Majesty, the Italian Government appeals to all friendly nations, each of which ought to have its own representatives in the institute, appointed to act as the exponents of their respective governments, as organs of mutual relations, and as mediums of reciprocal influence and information. It accordingly now invites them to participate through their delegates in the first convention, which is to be held at Rome next May for the purpose of preparing rules for the new institute.

"The King's Government trusts that the United States will be willing to coöperate in the enterprise, the first inspiration of which is due to an American citizen, and that, accepting the invitation to the conference at Rome, it will send thither a delegation commensurate with its importance as the foremost agricultural nation in the world."

Gratifying responses to the invitation were made by most, if not all, of the governments addressed, and the Conference at Rome was held at the appointed time. It concluded its sessions on the 7th of June by attaching the signatures of the delegates of the Powers represented to a final Act, which embodies the resolutions on which they had agreed. This Act of organization was as follows:

"ARTICLE 1. There is hereby created a permanent international institute of agriculture, having its seat at Rome.

"ARTICLE 2. The international institute of agriculture is to be a government institution, in which each adhering power shall be represented by delegates of its choice. The institute shall be composed of a general assembly and a permanent committee, the composition and duties of which are defined in the ensuing articles.

"ARTICLE 3. The general assembly of the institute shall be composed of the representatives of the adhering governments. Each nation, whatever be the number of its delegates, shall be entitled to a number of votes in the assembly which shall be determined according to the group to which it belongs, and to which reference will be made in article 10.

"ARTICLE 4. The general assembly shall elect for each session from among its members a president and two vice-presidents. The sessions shall take place on dates fixed by the last general assembly and according to a programme proposed by the permanent committee and adopted by the adhering governments.

"ARTICLE 5. The general assembly shall exercise supreme control over the international institute of agriculture. It shall approve the projects prepared by the permanent committee regarding the organization and internal workings of the institute. It shall fix the total amount of expenditures and audit and approve the accounts. It shall submit to the approval of the adhering governments modifications of any nature involving an increase in expenditure or an enlargement of the functions of the institute. It shall set the date for holding the sessions. It shall prepare its regulations. The presence of the general assemblies of delegates representing two-thirds of the adhering nations shall be required in order to render the deliberations valid.

"ARTICLE 6. The executive power of the institute is intrusted to the permanent committee, which, under the direction and control of the general assembly, shall carry out the decisions of the latter and prepare propositions to submit to it.

"ARTICLE 7. The permanent committee shall be composed of members designated by the respective governments. Each adhering nation shall be represented in the permanent committee

AGRICULTURE

by one member. However, the representation of one nation may be intrusted to a delegate of another adhering nation, provided that the actual number of members shall not be less than fifteen. The conditions of voting in the permanent committee shall be the same as those indicated in article 8 for the general assemblies.

"ARTICLE 8. The permanent committee shall elect from among its members for a period of three years a president and a vice-president, who may be reelected. It shall prepare its internal regulations, vote the budget of the institute within the limits of the funds placed at its disposal by the general assembly, and appoint and remove the officials and employees of its office. The general secretary of the permanent committee shall act as secretary of the assembly.

"ARTICLE 9. The institute, confining its operations within an international sphere, shall —

(a) Collect, study, and publish as promptly as possible statistical, technical, or economic information concerning farming, both vegetable and animal products, the commerce in agricultural products, and the prices prevailing in the various markets;

(b) Communicate to parties interested, also as promptly as possible, all the information just referred to;

(c) Indicate the wages paid for farm work;

(d) Make known the new diseases of vegetables which may appear in any part of the world, showing the territories infected, the progress of the disease, and, if possible, the remedies which are effective in combating them;

(e) Study questions concerning agricultural coöperation, insurance, and credit in all their aspects; collect and publish information which might be useful in the various countries in the organization of works connected with agricultural coöperation, insurance, and credit;

(f) Submit to the approval of the governments, if there is occasion for it, measures for the protection of the common interests of farmers and for the improvement of their condition, after having utilized all the necessary sources of information, such as the wishes expressed by international or other agricultural congresses or congresses of sciences applied to agriculture, agricultural societies, academies, learned bodies, etc.

All questions concerning the economic interests, the legislation, and the administration of a particular nation shall be excluded from the consideration of the institute.

"ARTICLE 10. The nations adhering to the institute shall be classed in five groups, according to the place which each of them thinks it ought to occupy. The number of votes which each nation shall have and the number of units of assessment shall be established according to the following gradations:

Groups of nations.	Numbers of votes	Units of assessment.
I	5	16
II	4	8
III	3	4
IV	2	2
V	1	1

In any event the contribution due per unit of assessment shall never exceed a maximum of 2,500 francs. As a temporary provision the assessment for the first two years shall not exceed 1,500 francs per unit. Colonies may, at the request of the nations to which they belong, be admitted to form part of the institute on the same conditions as the independent nations.

"ARTICLE 11. The present convention shall be ratified and the ratifications shall be exchanged as soon as possible by depositing them with the Italian Government."

In communicating this act of the Conference to the Government of the United States, the Italian Ambassador at Washington wrote August 9, 1905: "The final act of the conference was signed by the delegates under reservation of the approval of their respective governments, nor could it be otherwise. After this approval the convention, which constitutes the essential part of the act, shall, if approved (as the King's Government does not doubt it will be), assume the character of an obligation on the part of the nations which shall have adhered to it through the signature of plenipotentiaries appointed for the purpose."

On March 27, 1906, he was able to announce that "the States which were represented at the Conference of last year at Rome . . . have now all sanctioned by the signature of their plenipotentiaries the Convention drafted at that Conference." As appears from a copy transmitted, the Convention had been signed by the plenipotentiaries of forty nations, including twelve American republics besides the United States. To this gratifying announcement the Ambassador from Italy added the following:

"His Majesty the King at the council of January 28 last signed a decree, a few copies of which I have the honor to inclose, by which a royal commission is established, and whose precise duty is to carry into effect, as soon as it becomes operative, the convention which will soon be referred to the several contracting governments for ratification."

At the second general meeting of the Institute at Rome, Dec. 12, 1909, more than 100 foreign delegates were present.

"His Majesty the King, desiring again to prove how much he has at heart the contemplated international institute, has ordered that the net income of the royal domains of Tombelo and Coltano, amounting yearly to 300,000 lire, shall be turned over to the above-mentioned royal commission from the 1st of July next until the day when, the international institute of agriculture being legally constituted, the administration and usufruct of the said domains shall, in accordance with the announcement made to the international conference at its session of June 6, 1905, be transferred to the institute itself.

"In obedience to His Majesty's interest, the royal commission has decided to apply the sum graciously placed at its disposal for the aforesaid period to the construction of a palace, where the international institute will have its headquarters, and which will therefore be solely due to the munificence of the sovereign. The new building that is to stand on the village Umberto I., near the Porta Pinciana, and will cover 10,000 square meters of public property, will, it is fully expected, be completed about the end of next year, which is the time when the permanent committee of the institute will likely be convened at Rome. This munificent act of His Majesty the King, whereby the erection of quarters worthy of the international institute of agriculture is

provided for, thus begins the execution of the convention of June 7, 1905."

Transmitting to the American Ambassador at Rome the President's ratification of the Convention, on the 11th of July, 1906, Secretary Root made known that Congress had appropriated $4800 as the quota of the United States to the support of the International Institute of Agriculture for the fiscal year 1907, and $8000 for the travelling expenses of the delegates to be appointed to the grand assembly of the Institute, and for the salary of one member of the permanent committee; and to this he added: "In pursuance of the authority thus conferred, Mr. David Lubin, of Sacramento, California, has been selected to represent this Government on the permanent committee, it being understood that he is willing to serve without salary." — *Papers relating to the Foreign Relations of the United States*, 1905 *and* 1906.

ALASKA: A. D. 1903. — Settlement of the boundary question. — Dissatisfaction in Canada dissipated by better knowledge of the facts. — The Alaska boundary question (see in Volume VI. of this work, under ALASKA BOUNDARY QUESTION) was brought to a settlement in 1903 by an arrangement which submitted it to a Commission of six, three representing the United States and three acting for Great Britain and Canada. The American Commissioners were the Hon. Elihu Root, Secretary of War, and senators Henry C. Lodge and George Turner, of Massachusetts and the State of Washington respectively. The British and Canadian members were the Lord Chief Justice of England, Lord Alverstone, Sir Louis Jette, of Quebec, and A. B. Aylesworth, of Toronto, Ontario. The Commission, meeting in London, arrived at its decision in October, signing, on the 20th, an agreement on all the questions submitted. "By this award," said President Roosevelt, in his subsequent Message to Congress, "the right of the United States to the control of a continuous strip or border of the mainland shore, skirting all the tide-water inlets and sinuosities of the coast, is confirmed; the entrance to Portland Canal (concerning which legitimate doubt appeared) is defined as passing by Tongass Inlet and to the northwestward of Wales and Pearse Islands; a line is drawn from the head of Portland Canal to the fifty-sixth degree of north latitude; and the interior border line of the strip is fixed by lines connecting certain mountain summits lying between Portland Canal and Mount St. Elias and running along the crest of the divide separating the coast slope from the inland watershed, at the only part of the frontier where the drainage ridge approaches the coast within the distance of ten marine leagues stipulated by the treaty as the extreme width of the strip around the heads of Lynn Canal and its branches. While the line so traced follows the provisional demarcation of 1878 at the crossing of the Stikine River, and that of 1899 at the summits of the White and Chilkoot passes, it runs much farther inland from the Klehine than the temporary line of the later *modus vivendi*, and leaves the entire mining district of the Porcupine River and Glacier Creek within the jurisdiction of the United States. The result is satisfactory in every way. It is of great material advantage to our people in the Far Northwest. It has removed from the field of discussion and possible danger a question liable to become more acutely accentuated with each passing year. Finally it has furnished a signal proof of the fairness and good will with which two friendly nations can approach and determine issues involving national sovereignty, and by their nature incapable of submission to a third power for adjudication." — *Message of President Roosevelt, Dec. 7, 1903.*

In Canada the feeling was very different from that expressed by President Roosevelt. There, the dissatisfaction was intense. The two Canadian Commissioners had opposed the award, while Lord Alverstone cast his vote with the three Americans, which provoked the accusation that his decision had been given, at the instigation of the British Government, not judicially, but diplomatically, for the pleasing of the United States, at the sacrifice of Canadian interests and rights. The groundlessness of such defamatory suspicions became plain when Lord Alverstone made public the reasons for his vote. A recent historian of Canada ends his account of the matter with the following remarks:

"In vain did students and experts declare that they had felt before the tribunal met that Canada had, in very many respects, a weak case. It was pointed out that some of the Canadian surveys gave the line as the Americans claimed it, that Americans had by long occupation got a hold upon and a right of possession to various ports and sections, and that against this occupancy there had been no British protest whatever. Finally one distinguished citizen reminded the Canadians that if they had been allowed to select one man as sole arbitrator they would have been glad to accept Lord Alverstone. Lord Alverstone was really the one arbitrator and judge. Had he decided against the Americans, the case would have been deadlocked for years. In time Canadians came to a more sober and reasonable attitude on the subject. They came to see that Lord Alverstone could not have been prejudiced and that his decision was really the only one that was fair and unbiased. Some came also to see that the American case was much the stronger, and that in this light the decision was a just one. But they were not and are not ready to believe that the whole scheme was anything but one contrived at Washington to get the contest settled to the advantage of the Americans." — F. B. Tracy, *Tercentenary History of Canada*, v. 8, p. 1044 (*Macmillan Co., N. Y.*, 1908).

A full account of the arbitration with the correspondence preceding it, and the opinions written by the arbitrators severally, is given in the British Parliamentary "Papers by Command" (United States, No. 1, 1904), Cd. 1877.

A. D. 1906. — Convention to provide for final establishment of the boundary line. — Final proceedings for establishing the boundary line of Alaska were provided for in a Convention between the United States and Great Britain, signed April 21, 1906. The need and object of the Convention were set forth in its preamble as follows:

"WHEREAS by a treaty between the United States of America and His Majesty the Emperor of all the Russias, for the cession of the Russian possessions in North America to the United States, concluded March 30, 1867, the most north-

erly part of the boundary line between the said Russian possessions and those of His Britannic Majesty, as established by the prior convention between Russia and Great Britain, of February 16, 1825, is defined as following the 141st degree of longitude west from Greenwich, beginning at the point of intersection of the said 141st degree of west longitude with a certain line drawn parallel with the coast, and thence continuing from the said point of intersection, upon the said meridian of the 141st degree in its prolongation as far as the Frozen Ocean,

"And whereas, the location of said meridian of the 141st degree of west longitude between the terminal points thereof defined in said treaty is dependent upon the scientific ascertainment of convenient points along the said meridian and the survey of the country intermediate between such points, involving no question of interpretation of the aforesaid treaties but merely the determination of such points and their connecting lines by the ordinary processes of observation and survey conducted by competent astronomers, engineers and surveyors;

"And whereas such determination has not hitherto been made by a joint survey as is requisite in order to give complete effect to said treaties."

To make such determination it was agreed that each Government should "appoint one Commissioner, with who may be associated such surveyors, astronomers and other assistants as each Government may elect."

A. D. 1906. — Election of a delegate to Congress. — An Act to authorize the election of a Delegate to Congress from the Territory of Alaska was approved by the President May 7, 1906.

ALCOHOL PROBLEM.

Austria: A. D. 1903.— Resolution of the National Convention of the Social Democratic Party against alcoholic drinks. — At a convention of the Social Democracy of the Austrian Empire, held at Vienna, in November, 1903, Dr. Richard Frohlich read an elaborate report against the use of intoxicating liquors, concluding with an earnest appeal, in these words. "We want to create a new social order: to give the world a new face! To lay the foundations for the new society is the task of political and industrial organization — and there is no greater deterrent to the accomplishment of that task than alcohol. In building the new mansion of the future we think also of the men who are to dwell in it. Does it not bring a blush of shame to our cheeks merely to imagine that the men of the future society will be contented because they are *intoxicated!* Contentment in that new order will arise from a sound brain and the satisfaction of the rational desires which proceed from it. We have enough retarding forces to contend with in our struggle for this ideal of the future generation. One such force we are able to day to overcome if we will. That is alcoholism, the last refuge of philistinism and stupid conservatism. If we really want the new world, we must provide the new men to make it. The program of total abstinence does not set new ideals for us, but it gives us a new weapon, sharp and effective for the conquest of our old ideals. The responsibility is upon us to use this weapon. Let us do it!"

In response, the Convention adopted the following resolution:

"The convention of the party recognizes in alcohol a serious detriment to the physical and mental power of the working man, and a great hindrance to all efforts of organization in the social democracy. Every means should be employed to remove the evils which have come from it.

"The first aim in this struggle must be the economic betterment of the proletariat. And that must be accomplished by a clear teaching of the effects of alcohol, and by the removal of the common toleration of drinking

"The convention of the party, therefore, recommends that all the party groups and brotherhoods lend their support to the crusade against alcohol, and declares that the first step in this direction must be the abolishment of compulsory drinking in all of the meetings of the organization. Members of the party who are converted to total abstinence are recommended to form total abstinence clubs, to continue the propaganda and to see to it that their members are true to the political and economic duties of the party organization."

Canada: A. D. 1906-1908. — The Canada Temperance Act. — Under what was known as the Scott Act, of 1878, the privilege of local option had been given to counties and cities in Canada, and had been brought into exercise by nine cities and seventy-three counties, which prohibited the sale of intoxicating liquors within their limits; but in most of these the supporters of the law were gradually overcome and the prohibition removed. In all the provinces except Quebec, a referendum vote taken in 1898 showed majorities in favor of a Dominion Prohibition Law; but the vote cast was so light and the adverse majorities in cities was so large that the government did not feel warranted in bringing forward a Bill. In 1906, however, the demand for local option in the matter of permitting alcoholic liquors to be sold had become strong enough to extort from Parliament the desired legislation. As amended in 1908, Part II. of this Canada Temperance Act (Part I. having prescribed the proceedings for bringing Part II. into force) provides that "from the day on which this Part comes into force and takes effect in any

county or city, and for so long thereafter as, and while the same continues or is in force therein, no person shall, except as in this Part specially provided, by himself, his clerk, servant or agent,—(*a*) expose or keep for sale, within such county or city, any intoxicating liquor; or, (*b*) directly or indirectly on any pretense or upon any device, within any such county or city, sell or barter, or, in consideration of the purchase of any other property, give to any other person any intoxicating liquor; or, (*c*) send, ship, bring or carry or cause to be sent, shipped, brought, or carried to or into any such county or city, any intoxicating liquor; or, (*d*) deliver to any consignee or other person, or store, warehouse, or keep for delivery, any intoxicating liquor so sent, shipped, brought or carried." But these last two subsections are not to "apply to any intoxicating liquor sent, shipped, brought or carried to any person or persons for his or their personal or family use, except it be so sent, shipped, brought or carried to be paid for in such county or city to the person delivering the same, his clerk, servant, or agent, or his master or principal, if the person delivering it is himself a servant or agent."

To bring Part II. of the Act into force in any county or city, not less than one-fourth of the total number of electors therein must petition the Governor in Council for a poll of votes on the question, and when the vote is taken there must be an affirmative majority; failing which no similar petition can be put to vote in the same community for three years.

On the 2d of May, 1909, the following announcement of the operation of the law in the province of Ontario was made: "May Day, 1909, will long be remembered by the advocates of local option in Ontario. One hundred and forty-two bars passed out of existence yesterday, and of the 807 municipalities in the province 834 are now without a single license in force. The Toronto commissioners have cut off 40 licenses, leaving only 110 in a city of nearly 400,000 people."

Casual occurrences of saloon suppression, showing what goes with it. — Communities in which the liquor traffic is ordinarily favored are sometimes compelled by exigencies of circumstance to suppress it temporarily, and are forced then to see how much of crime and disorder goes with it. During the weeks in which military authority cleared saloons from San Francisco, after the calamity of 1906, every observer made note of the conspicuous freedom of the city "from all kinds of violence and crime," though the whole organization of life was upset. One trustworthy journal reported conditions six months after the calamity as follows: "During the two months and a half after April 18 San Francisco was probably the most orderly large city in the United States. Violence and crime were practically unknown. During that time the saloons and liquor stores of the city were closed tight. About the middle of July the saloons were permitted to open again. This action of the city government was accompanied by the expectation on the part of many citizens of an outbreak of violence and disorder. Clergymen, and it is said even the police, advised men and women to carry firearms for their own protection. For the past three months San Francisco has been living under a reign of terror. In eighty days eighty-three murders, robberies, and assaults were registered on the police records. A despatch to Ridgway's, the new weekly periodical, reports the sale in San Francisco during one week in October of over six thousand revolvers."

When Stockholm, in the summer of 1909, was undergoing the trials of the great general strike, and by general consent of all concerned the sale of liquors was stopped, the same report went out, that magistrates and police had little to do. And that is the standing account of things from the Panama Canal Zone, about which an English visitor, Sir Harry Johnston, wrote in April, 1909:

"The whole of the canal zone (ten miles on either side of the canal banks) is 'teetotal,' except in the actual towns of Panama and Colon. No alcohol is sold by the Canal Commission at its hotels or boarding-houses. And the general result of these stern measures — the improvement in health and the absence of crime — amply justifies this anti-alcohol policy. . . . There is singularly little serious crime throughout the canal zone. One has the sensation of being perfectly safe anywhere at any time of day or night. Petty dishonesty among the lower classes is common, especially at the railway stations, where one is liable to lose small articles of baggage if they are left unguarded. Panama in this respect is worse than the other towns of the Isthmus, new or old. But there is no open shock to any one's prejudices or sentiments in the way of flagrant immorality (as at New Orleans, for example)."

So easily can communities solve half, at least, of their most troublesome problems, and cure half, at least, of their worst social maladies, if they will!

England: A. D. 1902. — Passage of an amended licensing law. — A moderate reform. — A Licensing Bill, moderately in the interest of temperance reform, was discussed and passed in Parliament during the summer of 1902. It made publicans more strictly responsible for drunkenness incurred on their premises; strengthened the prohibition of liquor selling to habitual drunkards; improved measures for the suppression of public drunkenness; subjected licenses to tradesmen for the sale of liquors off their premises to the unqualified discretion of justices, and facilitated the separation of husbands and wives from a drunken mate.

A. D. 1904. — Passing of a new Licensing Bill, providing compensation for the withdrawal of licenses on grounds of public policy. — An agitation in Great Britain which almost equalled for a time that produced in the same period by Mr. Chamberlain's campaign for a preferential tariff was stirred up by a new Licensing Bill, introduced as a Government measure on the 20th of April, 1904. The bill provided for compensation to be made, at the expense of the liquor trade, for the taking of a license away from any public house, on grounds of public policy, no matter how briefly the license had been held. A fund for the compensations was to be raised by assessment on all engaged in the trade. Authority to refuse the renewal or transfer of licenses on any ground other than ill conduct or character was withdrawn from local magistrates and exercised by the courts of quarter sessions (composed of the justices of the peace in each county) only. When a public house was thought to be superfluous by local magistrates they were required to report the

ALCOHOL PROBLEM

case to quarter sessions, where a hearing upon it would be given. If the Bench of quarter sessions decided to extinguish the license, it must specify the grounds of its decision in writing, and award a compensation, based on the estimated difference between the value of the licensed premises and the value of the same premises without a license. If no agreement on this basis could be reached, the Inland Revenue Commissioners should determine the sum.

The Bill was advocated in the interest of temperance, as being calculated to reduce the number of public houses, and to raise their character. Mr. Balfour upheld it as "a great temperance measure." It should be the aim of Government, he argued, to "encourage respectable persons to keep public houses, and with that object they should make the trade secure." On the other side it was opposed with exceeding bitterness as a measure that had the backing and was in the interest of the brewers and the whole liquor trade; that created vested interests in the trade, rooting it to a new depth; that tended to add value to the low class of public houses, and obstructed future temperance reform. Repeated attempts to introduce a limit of years after which the awarding of compensation for the withdrawal of license would cease were defeated, and the Bill passed both Houses in August, substantially as it came into Parliament four months before.

A. D. 1907. — Drink in its relation to crime. — Testimony of judges. — "The following is from a newspaper report of a speech by Judge Rentoul, delivered in the Guildhall, Cambridge, on the 15th of October, 1907. He happened to be one of the judges of the chief criminal courts of this country, and he said to them on that platform that 90 per cent. of the cases that came to the Central Criminal Court of England came directly through drink. The late Lord Brampton, formerly Sir Henry Hawkins, perhaps the greatest criminal judge during the past century, had also put the figures at 90 per cent. Lord Coleridge, speaking at one Assizes, said, 'Every single case in my present list comes from the use of strong drink.' 'If it were not,' said his Honour, 'for alcohol, three fourths of our criminal courts would be closed in this country and closed forever.'" — H. A. Giles, *Opium and Alcohol in China* (*Nineteenth Century, Dec.*, 1907).

A. D. 1908. — Passage of a new Licensing Bill by the Commons and its rejection by the Lords. — Nothing contributed more to the defeat of the Conservative Ministry in the British Parliamentary elections of 1905 than the moral repugnance of the country to the Licensing Bill of 1904 (described above); and the Liberal Government came to power with no commission from the people more positive than was in the demand for an amendment of that law. In 1908 it brought into Parliament and passed through the House of Commons a Bill which answered the demand, asserting the right and the need and the power in Government to put limitations on the granting of licenses for the sale of intoxicating liquors, without treating them as vested interests under a sacred guard. The limitation, in fact, was made definite and mandatory by the first provision of the Bill, which declared: "Licensing justices shall, in accordance with this Act, reduce the number of on-licenses in their district so that at the end of a period of fourteen years from the fifth day of April nineteen hundred and nine the number of those licenses in any rural parish or urban area in their district shall not exceed the scale set out in the First Schedule to this Act as applied to that parish or area under the provisions of that schedule." The schedule referred to was as follows:

Persons per acre.

2 or less				
Exceeding	2	but not exceeding		25
"	25	"	"	50
"	50	"	"	75
"	75	"	"	100
"	100	"	"	200
"	200			

Number of on-licenses.

1 to	400	persons or part of		400
1 "	500	"	"	500
1 "	600	"	"	600
1 "	700	"	"	700
1 "	800	"	"	800
1 "	900	"	"	900
1 "	1,000	"	"	1,000

The Bill provided further for local option in the matter of granting new licenses, permitting a majority of voters in any licensing district to prohibit further grants; and introduced other changes of law in the interest of temperance, but not going to any extreme. When the measure went to the House of Lords it suffered there the same fate that had been meted out to the Education Bill of 1906. How serious an issue between the Commons and the Lords was raised by that occurrence is intimated in one passage of a speech made by the Liberal Prime Minister, Mr. Asquith, in July, 1909. He was reviewing some of the significant incidents of recent political history, and when he came to the Licensing Bill there was more feeling in his remarks than he had shown before. "That," he said, "was a Bill, as you know, which was debated for weeks and for months and passed through the House of Commons with sustained and unexampled majorities. When it reached 'another place,' what was its fate? It was rejected without even any pretence of consideration of its details, it was rejected in pursuance of a preconcerted party resolution, it was rejected with every circumstance of contumely and contempt. I will not pause to dwell upon, certainly not to praise, the provisions of the Licensing Bill, which, I may say, was to some extent my own handiwork. But in regard to its rejection I will say that it has made two things — that rejection and the circumstances preceding, following, and attending it have made two things — abundantly plain. The first is that it has ruined the prospects of any really effective temperance reform on anything like a large and comprehensive scale during the lifetime of the present Parliament. I will say next the circumstances of that rejection have brought into greater prominence than ever before the fact that our constitutional system is not, or at least that it can be made not to be, the embodiment, but the caricature of a representative and responsible Government. And the question of the relations between the two Houses of Parliament must be for us Liberals, at any rate, as I described it at the time, the dominant issue in our programme."

The requirement of the Act of 1904 that com-

ALCOHOL PROBLEM

pensation should be paid to every license-holder whose license was withdrawn for public reasons, put so narrow a limit on the reductions made, that the 138,611 licensed houses in England and Wales in 1904 had only been diminished by about 3000 in 1908; whereas the country demanded a great cutting down of the excessive number.

A. D. 1908. — Provisions of The Children Act for the Protection of Children. See (in this vol.) CHILDREN, UNDER THE LAW: AS DEPENDENTS, &c.

A. D. 1909. — Taxation of the Liquor Trade proposed in the Budget. See (in this vol.) ENGLAND: A. D. 1909 (APRIL–DEC.).

A. D. 1909. — The Decreased Consumption of Whiskey caused by increased tax. — Speaking in Parliament of the increased whiskey tax in his Budget, on the 29th of October, some months after it had gone into effect and its yield was being shown, the Chancellor of the Exchequer, Mr. Lloyd-George, acknowledged that he had greatly overestimated the revenue it would produce. He said: "The whole point was to what extent would an addition of a halfpenny a glass deter a man from taking his usual share of drink. I could no more estimate that than any other member of the House. I made a very liberal allowance for decrease in consumption, so liberal that nobody either in or out of the House agreed with it. Many said it was absurd. . . . I assumed that people who could afford it would not regard the halfpenny at all; that they would buy exactly the same quantity of whisky as before. The working classes I assumed would probably purchase a smaller quantity. Supposing a man says, I spend 2s. 6d. on drink; he would not spend more; therefore he would consume less.

"I made a rough calculation upon such information as I had how that would affect the consumption of whisky as a whole, but I find the change has gone beyond that, and my information now is not merely that there are thousands of people who drink a percentage which is, in proportion to the increase, less, but some of them drop it altogether. Some of them are barely drinking half what they were before. Altogether a most extraordinary effect has been produced upon the habits of the people. I am not here to apologize for that at all. In some districts, I am told, the drinking of spirits has gone down by 70 per cent. in Ireland, I think. I hear that there are districts in Scotland where it has gone down 50 per cent. I have a communication in regard to the whisky distillers of Glasgow saying that the decrease in Glasgow during September has been 36 per cent.

"People have not even been driven to the consumption of beer. It is really almost unaccountable. People have not been driven from one form of alcohol to another, but have been driven from alcohol altogether. The fact is very extraordinary, and has gone beyond anything I have anticipated. . . . Our anticipations now are that the consumption of spirits, both of foreign and home manufacture, will go down by something between 20 and 25 per cent. That means that a smaller quantity of spirits will be consumed in this country during this year by eight or nine million gallons."

A. D. 1909. — Organization of "The True Temperance Association." — Its aim and appeal. — Under the name of "The True Temperance Association," a London organization headed by Lord Halsbury made the following appeal to the English public, in May, 1909: "Let us take what is to hand — the publichouse; the regulated refreshment house of the people. Let us transform that out of its present condition of a mere drink-shop into a house of general, reasonable, and reputable entertainment — a place where there will be other things to consume besides beer and whisky, and other forms of recreation besides mere drink. We should imitate the model of the Continental café and German *bierhaus*; the White City and other exhibitions have shown us that they would not be exotics in this country; and those exhibitions with their wonderful record of sobriety also show us that there is every ground to expect that England, with transformed publichouses, would be as sober, and w hal as bright as are Continental countries."

England, United States, France, and Germany, A. D. 1900. — Comparative statement of the consumption of alcoholic drink. — "The consumption of alcoholic drink in the above countries, per ten of population, was in the year 1900 as follows: —

Drink-consumption per 10 of population.

Country.	Beer, spirits, and wine. Gallons.	Beer. Gallons.	Spirits. Gallons.	Wine. Gallons.
France	336	62	20	254
United Kingdom	332	317	11	4
Germany	309	275	19	15
United States	147	133	11	3

"Some years agone, the late P. G. Hamerton in his book *French and English* mentioned the increase of drinking in France, and we see that French drink-consumption per head is now greater than British consumption. The French drink more spirits, more wine, and have a larger total consumption per head than any of these three other nations.

"The most striking fact in the above statement is the low drink-consumption per head in the United States. The American total per head is less than one-half of the total consumption per head in any of the three other countries. The superior sobriety of the American workman as compared with the Englishman has often been noticed, and observation in social grades higher than that of the artizan tends to show that American superiority in this respect is a general superiority not confined to workmen only. The developed alertness and prompt energy of the American may, it is quite likely, be due in some part to this relative abstinence from alcoholic drink which is now illustrated.

"Looking back over the fifteen years 1886–1900, for the purpose of observing the increase or the decrease in drink-consumption per head of population, the following results have been obtained: —

Country.	Average yearly drink-consumption, per head of population, during 1886-1890. Gallons.	1891-1895. Gallons.	1896-1900. Gallons.
France	26.5	31.5	32.3
United Kingdom	29.4	31.1	33.1
Germany	24.4	26.6	29.9
United States	11.8	14.3	14.2

	The drink-consumption per head during 1886-1890 being taken at 100 per cent.	The drink-consumption per head during 1896-1900 was per cent.
France	100	122
United Kingdom	100	115
Germany	100	123
United States	100	120

ALCOHOL PROBLEM

"In each country the drink-consumption per head of population has increased since 1886-1890, and, with the exception of the United States, there has been an increase during each five-yearly period observed.

"Comparing the period 1896-1900 with the period 1886-1890, we see that the percentage of increase per head of population in drink consumption was smaller in the United Kingdom than in any of the three other countries. Germany and France have had the largest relative increases per head of population.

"In the United States, the increase of 20 per cent in the drink-consumption per head of population is due to an increase in beer-drinking — the consumption per head of wine and of spirits has declined."—J. H. Schooling, *Drink: in England, the United States, France, and Germany* (*Fortnightly Review*, Jan., 1902).

France: A. D. 1907. — Revolt of the Wine Growers of Southern France against wine adulteration. See (in this vol.) FRANCE: A. D. 1907 (MAY-JULY).

Germany: Temperance requisite in railway employees. — The dangers to the traveling public that are attendant on the use of alcoholic stimulants by railway employees were discussed very seriously not long since by a writer in the *Deutsche Monatsschrift*. "The constantly growing demands upon transit service for safety and speed," he observed, "call for an increasingly higher efficiency of the personnel, not only as regards prudence, judgment, decision, and clearsightedness, but a sense of duty, all which qualities are, it has been proved, vitiated by nothing so readily and to such a degree as by indulgence in alcoholic drinks. The chief danger, moreover, consists not so much in excessive drink resulting in drunkenness, which is easily recognized, as in the more moderate but habitual use of liquor, which is harder to control, and the after-effects of heavy drinking. Scientific investigation has established the fact that even a moderate use of alcoholic beverages impairs the acuteness of sight and hearing, including the power of distinguishing colors. Most of the violations of discipline and duty in the German transportation service are due to indulgence in drink, besides leading to misery and want in the home."

The writer alludes to an association of German railway officials started by himself, whose object it is to enlighten the public regarding the worthlessness of alcoholic drinks as a tonic and how they may be dispensed with as a means of refreshment. This society, he states, has been most encouragingly successful in its efforts. He adds the important statement that the Prussian Government, owing to recent serious accidents, has issued an order prohibiting all railway employees from taking any beverage containing alcohol while on duty.

A. D. 1902. — Resolution of Socialist Congress. — The subject in Prussian schools. — The German Socialist Congress, sitting at Munich in September, 1902, adopted a resolution which warned the working classes against the dangers from immoderate indulgence in alcoholic drinks, but declined to make total abstinence a condition of party membership. In the previous March the Prussian minister of education had given instructions to the school authorities of the kingdom which aimed at the enlightening of the people as to the deleterious effects, both physical and economical, of an excessive use of alcoholic liquors. The same subject had been agitated in the Prussian parliament, and there was discussion of measures of more strict regulation of public houses.

International Congress on Alcoholism. — For twenty-four years an International Congress on Alcoholism has held biennial meetings in different European cities, beginning at Antwerp in 1885, steadily demonstrating a growth of opposition — especially of scientific opposition — even in Continental Europe, to the use of alcoholic liquors. The meeting of 1905 was at Budapest; that of 1907 at Stockholm; that of 1909 at London. The delegates to the latter numbered about 1300, coming from nearly every European country, and from the United States, Canada, and South Africa. Of the strong character of the discussions at the London meeting the New York *Evening Post* said after its adjournment: "Men and women from every country, representing varying conditions of society, offered evidence tending to show, by actual figures of loss, the bad effects of drinking. From the standpoint of education, science, medicine, society, economics, efficiency, and law, the speakers all reached the same conclusion, bringing strong testimony in support. Efficiency was the keynote of papers representing public service on the part of the post office, the railroad, the navy, and the army of Great Britain."

An interesting figure at the Congress, it was said by an American newspaper correspondent, was Judge William Pollard, of St. Louis, who went as a representative of the U. S. Government, and who was known widely as the originator of the pledge instead of prison method of dealing with drunkards. When he spoke on that subject he was given a double allowance of time, on the motion of a delegate from France, and, although under the constitution of the congress no resolution could be put, a declaration in favor of the plan was signed by practically every delegate in the hall. The declaration reads as follows:

"We, the undersigned members and delegates attending the International Congress on Alcoholism assembled in London, July, 1909, desire to record our gratification at the recognition in statute law by Great Britain, Vermont, U. S. A., and Victoria (Australia) of the principle of reforming drunkards by the probation on pledge method, commonly known as the Pollard plan. The possibilities of this wise and beneficent policy are so great that we desire to commend its adoption throughout the world."

"Judge Pollard's plan, established in the Saint Louis police court nine years ago, consists in giving the drunkards a chance of reform. Instead of sentencing them to prison or fining them, Judge Pollard requires persons charged before him with drunkenness to take the pledge. If they do so he suspends sentence on them, and if the pledge is kept for a certain period they hear no more about the matter. If it is broken the fine or sentence is enforced."

One of the results of the Congress was the organization of a "World's Prohibition Confederation," "to better amalgamate the forces in various countries working along their respective lines towards the one common aim of the total suppression of the liquor traffic."

Two sessions were held and the Conference finally decided by unanimous vote upon the following outline of the purposes and methods of the new Confederation:

"(1) Name — The name of this association shall be 'The International Prohibition Confederation (Confederation Prohibitioniste Internationale — Internationaler Verband fuer Alkoholverbot).'

"(2) Object — (a) To amalgamate the forces in various countries working along their respective lines towards the one common aim of the total suppression of the liquor traffic. (b) To obtain notes of progress, information, and news from all parts of the world, and send such information to all organizations joining the Confederation and other applicants.

"(3) Membership — The membership shall consist of representatives of temperance organizations in all countries approving of the objects and such officers as may be elected by the Confederation.

"(4) Finances — The financial support shall be gained from such contributions as the various affiliated societies and individual associate members may subscribe."

New Zealand: A. D. 1896-1908. — Twelve years of Local Option. — Increasing majorities against the liquor traffic. — The vote of women. — Under the operation of a local option law since 1896, New Zealand has been steadily narrowing the liquor traffic, with what seems to be a fair prospect of extinguishing it entirely. The law provides for the taking of a vote in each parliamentary electoral district once in three years on three propositions, as follows:

"1. That the number of licensed houses existing in the district shall continue.

"2. That the number shall be reduced.

"3. That no licenses whatever shall be granted.

"Electors may vote for one of these proposals or for two of them. The prohibitionists strike out the top line, and thus vote for a reduction of the number of licenses, and also for total prohibition in their district. Those who oppose prohibition usually strike out the second and third lines, so as to vote for the continuance of existing licensed houses; while there are others, again, who strike out the first and third issues, with a view simply to a reduction in the number of licensed houses. An absolute majority of the votes carries reduction; but it requires a three-fifths majority to carry 'no-license.' If reduction is carried the licensing committee must then reduce the publicans' licenses in the district by not less than 5 per cent. or more than 25 per cent. of the total number existing."

The local option vote has now been taken five times, with a slow but steady increase of majorities given against the liquor traffic, either to restrict or to end it, — as the following table shows:

	Continuance.	Reduction.	No-license.	Valid votes.
1896 ...	139,500	94,500	98,300	259,800
1899 ...	142,400	107,700	118,500	281,800
1902 ...	148,400	132,200	151,500	318,800
1905 ...	182,800	151,000	198,700	396,400
1908 ...	186,300	161,800	209,100	410,100

The figures here entered of the vote in 1908 are not official, but are said to be close to accuracy.

ALCOHOL PROBLEM

The New Zealand correspondent of the London *Times*, from whose report the above is taken, adds these particulars: "The result of the local option poll taken in December, 1905, was to carry 'no license' in three new districts and reduction in four districts. In 36 of the other districts a majority of the votes polled was for 'no license,' though the three-fifths majority necessary to carry the proposal was not obtained. The results of the recent poll were very striking. In six new districts '[illegible]ense' was carried, and in some others 'no-license' and 'reduction' were only lost by narrow margins. The rapid advance made by the 'no license' party is certainly remarkable.

"While the proportion of votes cast for continuance is steadily declining, the proportion for 'no-license' is increasing at an accelerated rate. Already there is a bare majority of the total votes in favour of prohibition; while if we had national instead of local option the chances are that in a comparatively short period the necessary three-fifths majority to secure total prohibition in the country might be obtained. There are now indications that the 'no license' party will make a bold bid, not only for a bare majority vote on the no license issue, but also for national option. In this event they will alienate the sympathies of the great majority of the moderates who now vote with them, so that the 'no-license' cause may receive, at least, a temporary check.

"Three important suggestions have been made to save the trade — viz., reform from within, State control, and municipalization. Judging from past experience, the first idea seems hopeless. The trade has had its lessons, but has not taken sufficient heed. State control will scarcely be tolerated, since most people realize that the liquor trade in the hands of a Government might be a dangerous political engine, besides which there would always be the temptation ever present to a Government to use it for revenue purposes. Without very necessary reform from within, therefore, the only chance for the liquor trade would seem to lie in the direction of municipalization. Under municipal control, with the abolition of the open bar in favour of the café system, with better liquor, and with a thorough system of inspection and analysis, the liquor trade in New Zealand might obtain a new lease of life. Under the present system there is every indication that its doom is sealed."

The importance of the vote of women, on this question especially, appears in the following statements: "In 1902, 138,565 women, or 74.52 per cent. of those on the rolls, voted; in 1905, 175,046, or 82.23 per cent. of those on the rolls, voted. The proportion of females to males voting at successive general elections also shows a gradual increase from 69.57 per cent. in 1893 to 78.99 in 1905. Then there is the gradual increase in the proportion of females to males in the population of a young country to be considered. At the foundation of the colonies the males, naturally, largely outnumbered the females; but eventually the sexes will become more nearly equal in number. Thus, while in 1871 the proportion of females to males in the colony was only 70.52, in 1906 it was 88.65. Furthermore, women are taking a keener interest than ever in politics. They are beginning

to appreciate the franchise and to exercise it intelligently in ever-increasing numbers."

The warning and alarming effect of the local option vote of December, 1908, on the New Zealand liquor dealers was made apparent by their action taken soon after, as reported in the following Press despatch from Wellington, January 18, 1909:

"As a result of the large 'moderate' vote cast at the recent poll on the question of total prohibition or reduction of facilities for obtaining drink, it was unanimously resolved to-day, at a meeting of the Auckland Brewers and Licensed Victuallers' Association, representing all the wholesale and nearly every member of the retail trade, to abolish barmaids, to abolish private bars, and to raise the age-limit of youths who may be supplied with liquor from 18 to 20. No woman will be supplied with liquor for consumption on the premises unless she is boarding in the house.

"In an interview, the Mayor of Auckland, who is himself a brewer, stated that since the trade has to ask the public every three years for the continuance of its existence, it is necessary for it to be conducted on lines approved by the public at large."

United States: A. D. 1904-1909. — The progress of State, County, and Town Prohibition in the five years. — The following exhibit of the status of state and local prohibition in every State of the United States, on the 1st of November, 1909, compared with the same in 1904, is reproduced, with permission, from the latest leaflet published at the time of this writing (Jan. 1, 1910) by the Associated Prohibition Press, located at 92 La Salle Street, Chicago:

"The record at Prohibition National Headquarters, Chicago, shows that during the past four years the amount of Prohibition territory has been doubled and 20,000,000 people added to those living in Prohibition cities, counties and states, making an aggregate of over 40,000,000 now by their own choice in saloon-free districts.

"The figures below show that nearly two-thirds of the territory and nearly one-half of the people are under Prohibition protection:

"17,000,000 people in the South under Prohibition in 1904.

"25,000,000 people in the South under Prohibition in 1909.

"There are to-day 375 Prohibition cities in the United States, having a population of over 5,000 each, with a total population of more than three million and a half.

"In 1904 there were scarcely 100 Prohibition cities of 5,000 or over; there are now 90 Prohibition cities of 10,000 or over. There are fifty-five industrial centers in fourteen different states of 20,000 population and over, with an aggregate of 2,000,000 population, now under Prohibition law.

"The Prohibition party is organized and at work in practically every state in the Union.

"In 1904 the National Liquor League of the United States was organized at Cincinnati, January 7th and 8th, to put the 'lid' on the apparent beginnings of a Prohibition renaissance. Five years of the 'National Liquor League of the United States' has resulted in 20,000,000 people being added to the Prohibition population of the country; 250 new Prohibition cities; 6 new Prohibition states, hundreds of new Prohibition counties, and thousands of new Prohibition towns and villages in all the rest of the country.

"One of the most striking contrasts between 1904 and 1909 is seen in the transformation which has been wrought in the attitude of the daily and secular press towards the Prohibition question. Since 1904 leading daily papers in all parts of the country have begun to exclude liquor advertising from their columns.

"The daily press of America is to-day giving ten times more attention to and far more friendly treatment of the Prohibition issue than was the case in 1904.

"On Nov. 1st, 1909, the record of state and local Prohibition territory in the United States, at National Prohibition Headquarters, was as follows:

The Situation by States.

State.	1904.	November 1, 1909.
Alabama	20 Prohibition counties. 11 Dispensary. 35 License.	State Prohibition; enforcement legislation enacted by Legislature, August, 1909.
Arizona	No Prohibition territory. Two-thirds majority required.	Data shows business prospers, crime decreasing. Popular vote on Constitutional Prohibition Nov. 29, 1909. New county Prohibition law bare majority substituted for previous two-thirds requirement.
Arkansas	44 Prohibition counties. 29 License. 2 Partially license.	Four-fifths of Territory "dry" in 12 months is prediction. 57 Prohibition counties. State certain in next Legislature.
California	175 Prohibition towns.	250 "dry" towns. Sentiment rapidly growing for State Prohibition.
Colorado	Few Prohibition towns. No local-option law.	100 towns "dry." Stricter law enforcement. Prohibition sentiment growing.
Connecticut	Half of State local Prohibition.	Large increase in no-license vote. Legislature passed several important restrictive measures.
Delaware	Few small Prohibition towns.	Two-thirds of State Prohibition.

ALCOHOL PROBLEM	ALCOHOL PROBLEM
DISTRICT OF COLUMBIA.....Apathy dominant.	
FLORIDA .....30 Prohibition counties.	New high license law. Sentiment for Prohibition organizing. Stricter enforcement
GEORGIA .....104 Prohibition counties out of 134. Large cities all license.	85 counties "dry." Popular vote State Prohibition November, 1910
IDAHO.....No Prohibition territory. "Wide-open" State.	State Prohibition. Supporting sentiment grows. Atlanta elects law-enforcement Mayor. Crime largely decreasing.
ILLINOIS..... 8 Prohibition counties. 500 Prohibition towns. "Wide open" Sunday.	County law passed. Seven vote "dry." State Prohibition campaign on.
INDIANA .....140 Prohibition townships.	36 "dry" counties. 2500 "dry" towns. 23 "dry" cities. No license fight on in Chicago.
	70 Counties "dry." Net Prohibition majority 67,025. Three-fourths of the State population under Prohibition. Sentiment for State Prohibition very active; 1,780,839 or 65 per cent of State population in "dry" territory; 32 "dry" cities (5,000 and over).
IOWA.....35 License counties. Lax enforcement of law.	Campaign for State Prohibition developing great enthusiasm.
KANSAS.....STATE PROHIBITION. Lax enforcement. Law enforcement crusade at Kansas City, Kan., a "fizzle."	Legislature passed 1909 important additions to State law. The sale of alcohol in any form absolutely prohibited. Strict enforcement the rule.
KENTUCKY .....47 Prohibition counties. Legislature defeated very moderate local option bill.	96 Prohibition counties; 1,541,613 or 66 per cent of total population in "dry" territory. State Prohibition campaign launched in earnest.
LOUISIANA.....20 Prohibition parishes out of 54.	Prohibition sentiment grows. Local Prohibition proves notable success in 33 "dry" parishes.
MAINE .....STATE PROHIBITION. Lax enforcement.	Move for resubmission emphatically defeated by State Legislature. Sentiment for law enforcement growing steadily.
MARYLAND .....15 Prohibition counties.	Some locals gains. New high-license law for Baltimore.
MASSACHUSETTS....250 Prohibition towns and cities.	Some local gains. Twenty-five thousand State majority against license. Definite campaign for State Prohibition; 261 towns "dry" out of 321; 20 cities "dry" out of 33; 26,297 State majority against license
MICHIGAN..... 2 Prohibition counties. 400 Prohibition towns.	Thirty Prohibition counties. Important new restrictive legislation took effect Sept. 1, 1909. State Prohibition campaig. on.
MINNESOTA.....400 Prohibition towns.	1,611 "dry" towns. State-wide union of Prohibition forces.
MISSISSIPPI.....65 Prohibition counties. Legislature defeated State Prohibition amendment.	Enforcement of State-wide law passed Feb., 1908 Governor Noel a vigorous prohibitionist.
MISSOURI ..... 3 Prohibition counties 1905.	77 "dry" counties. State Prohibition campaign definitely under way. Vote November, 1910.
MONTANA.....No Prohibition territory.	Prohibition sentiment growing with notable increase of party vote in several districts.
NEBRASKA.....200 Prohibition towns.	26 Prohibition counties. Many local gains. State capital Lincoln, 50,000, voted "dry." State Prohibition campaign on; 48 "dry" county seats.
NEVADA.....No Prohibition territory.	Sentiment against gambling and liquor selling growing. State Prohibition of gambling effective October 1, 1910.
NEW HAMPSHIRE...State Prohibition repealed 1903.	183 "dry" towns.
NEW JERSEY.....Wide-open" State.	Whole year of 1909 filled with agitation. Law-defying Atlantic City ring provokes widespread public sentiment. County option expected.

ALCOHOL PROBLEM	ALCOHOL PROBLEM
NEW MEXICO.....Nothing.	Prohibition forces very active at legislative session. Strong sentiment for State Prohibition growing.
NEW YORK .....285 Prohibition towns. Cities all license by State law.	Few changes. Concerted State-wide campaign on in 300 local Prohibition contests.
NORTH CAROLINA..Local-option passed 1903. Raleigh, capital, had dispensary run by church deacons.	Success of State Prohibition shown by official statistics. In force Jan., 1908.
NORTH DAKOTA ....STATE PROHIBITION. Lax enforcement in some sections.	Same law. Sentiment back of Prohibition law overwhelming throughout State. Strong supplementary legislation passed 1909.
OHIO.....First State local-option law passed.	61 counties "dry." Campaigns in largest cities, and State Prohibition scheduled for near future. Net Prohibition majority in 70 county contests, 66,132.
OKLAHOMA .....Few Prohibition towns.	Enforcement of State Prohibition law steadily growing success. Governor Haskell heartily supporting it. Prohibition Party organized September 27, 1909.
OREGON.....No Prohibition territory. No local-option law.	State Prohibition vote November, 1910. 21 counties "dry."
PENNSYLVANIA ... Prohibition sentiment apathetic.	County option defeated 1909 but sentiment rapidly growing. Confident of advanced legislation at next session.
RHODE ISLAND.....20 Prohibition towns.	Little change
SOUTH CAROLINA..State dispensary. (Abolished 1908.)	37 Prohibition counties out of 43. Sweeping Prohibition victories August 17, 1909. State campaign definitely on.
SOUTH DAKOTA ....Scattering Prohibition towns.	Few local changes. Sentiment for State Prohibition campaign developing.
TENNESSEE*..... 8 License cities. Liquor men threatened repeal of Adams local-option law.	State Prohibition passed January, 1909. Effective July 1, 1909. Liquor manufacture prohibition. Law effective January 1, 1910. Remarkably beneficial effects of Prohibition immediately shown in Nashville and other cities.
TEXAS.....140 Prohibition counties.	154 Prohibition counties. State Prohibition referendum narrowly defeated by Legislature, only increased agitation for that object. Vote expected within two years.
UTAH.....No Prohibition territory.	County Prohibition and State referendum defeated in Legislature, expected at next session.
VERMONT .....Prohibition repealed 1903. 138 Prohibition towns out of 240 in 1904.	216 towns "dry." Demand for resubmission of State Prohibition growing. Prohibition majority of 8,819 in whole State
VIRGINIA.....Local-option law passed 1903.	71 Prohibition counties. Democratic primary being fought out on Prohibition issue.
WASHINGTON.....Few Prohibition towns.	Compromise local Prohibition law, passed Legislature, 1909. Prohibition sentiment growing. Alaska-Yukon Exposition, Seattle, first big "dry" exposition.
WEST VIRGINIA....40 out of 54 counties "dry."	Some local gains. Charleston, state capital "dry" since July 1. Only three wholly "wet" counties. State campaign on.
WISCONSIN .....300 Prohibition towns.	786 towns "dry." Prohibition sentiment growing rapidly; 4,000 business men cheer argument for Prohibition in great debate at Milwaukee March, 1909.
WYOMING .....No Prohibition territory.	New law effective January, 1910, puts whole State under Prohibition outside of incorporated towns.

* A proposal to embody state-wide prohibition in a constitutional amendment was voted down heavily in Tennessee on the 20th of November, 1909.

A. D. 1908-1909. — Diminished consumption of whiskey and beer. — According to the annual report of the Commissioner of Internal Revenue for the fiscal year ending June 30, 1909, there were about 5,000,000 less gallons of whiskey contributing to the Federal revenue than in the fiscal year preceding, and something like 2,500,000 fewer barrels of beer and ale. "This seems clearly to mirror the effect of the prohibition movement which has lately gained such headway in certain sections of the South and West. Ordinarily, the consumption of spirits and malt liquor is fairly steady in times of depression; and when an industrial revival is under way, their use increases and reflects itself in larger revenue returns. The absolute shrinkage in consumption in the past fiscal year, therefore, is doubly significant."

AMERICAN REPUBLICS.

The South and Central American nations: Their recent rapid advance in character, dignity, and importance. —Among the astonishing changes that have come upon the political face of the world within a few years past, producing new arrangements of rank or standing and new distributions of influence in the great family of nations, the emergence of the South American republics from generally chronic disorder and obscure unimportance to a position, almost suddenly recognized, of present weight and dignity and great promise to the future, is far from the least.

In 1890, when Mr. Blaine, as Secretary of State, opened the first well-planned endeavor of our government to put itself into such relations with them, of friendly influence, as the elder and stronger in the family of American republics ought to hold, there was little appreciation of the importance of the movement. Even Mr. Blaine did not seem to be fully earnest and fully sanguine in it, or else his chief and his colleagues in the government were not heartily with him; for his admirable scheme of policy was almost wrecked in the second year of its working, by the unaccountable impatience and harshness with which President Harrison wrung humiliating apologies from Chili for a trifling offense in 1892. The seeming arrogance of power then manifested cast a reasonable suspicion on the motives with which the great republic of North America had made overtures of fraternity to the republics of

AMERICAN REPUBLICS

the South, and it freshened an old distrust in their minds.

Happily, however, Mr. Blaine, in 1890, had brought about the creation of a harmonizing and unifying agency which needed only time to effect great results. This was the Bureau of the American Republics, established at Washington, by a vote of the delegates from eighteen North, South, and Central American governments, at an International American Conference, held in that city in March of the year named. Its immediate purpose was the promotion of commercial intercourse; but the information spread with that object, through all the countries concerned, has carried with it every kind of pacific understanding and stimulation. The common action with common interests thus organized must have had more than anything else to do with the generating of a public spirit, lately, in the Spanish-American countries, very different from any ever manifested before. It has wakened national ambitions in them and sobered the factious temper which kept them in political disorder so long.

Ten years ago, the Central and South American republics had so little standing among the nations that few of them were invited to the Peace Conference of 1900, and the invitation was accepted by none. Spanish America was represented by Mexico alone. At the conference of 1907 at The Hague there were delegates from all, and several among their delegates took a notably important part, giving a marked distinction to the peoples they represent. It was by a special effort on the part of our then Secretary of State that they were brought thus into the council of nations.

Mr. Root has had wonderful success, indeed, in realizing the aim of the policy projected and initiated by Mr. Blaine. He has cleared away the distrust and won the confidence of our fellow Americans at the middle and south of the continent, bringing them to a friendly acceptance of the leading which goes naturally with the power and the experience of these United States. The resulting weight in world politics of what may be called the Concert of America, paralleling the Concert of Europe, is one of the greater products of the present extraordinary time.

Their Second International Conference, at the City of Mexico, in 1901-2. — Its proceedings, conventions, resolutions, etc. — The First International Conference of American Republics was held at Washington in the winter and spring of 1889–90, attended by delegates from eighteen Governments of the New World. (See, in Volume VI. of this work, AMERICAN REPUBLICS.) On the suggestion of President M. Kinley, ten years later, and on the invitation of President Diaz, of Mexico, a second Conference was convened at the City of Mexico, on the 23d of October, 1901. The sessions of this Conference were prolonged until the 31st of January, 1902. It was attended by delegates from every independent nation then existing in America, being twenty in number; but the delegation of Venezuela was withdrawn by the Government of that State on the 14th of January, and the withdrawal was made retroactive to and from the preceding 31st of December. The delegation from the United States was composed of ex-United States Senator Henry G. Davis; Mr. William I. Buchanan, formerly Envoy Extraordinary and Minister Plenipotentiary to the Argentine Republic; Mr. John Barrett, formerly Minister Resident of the United States to Siam; and Messrs. Charles M. Pepper and Volney W. Foster.

The following account of the work of the Conference and its results is compiled from the report made by the delegates of the United States to the Department of State: "Señor Raigosa, chairman of the Mexican delegation, was chosen temporary president, and the Conference then proceeded to its permanent organization by the election of his excellency Señor Lic. Don Ignacio Mariscal, minister of foreign affairs of Mexico, and Hon. John Hay, Secretary of State of the United States, honorary presidents; Señor Lic. Don Genaro Raigosa, of Mexico, president; Senhor Don José Hygino Duarte Pereira, of Brazil, first vice-president, and Señor Doctor Don Baltasar Estupinian, of Salvador, second vice-president. . . . Under the rules adopted 19 committees were appointed and the work of the conference was apportioned among them. . . .

"Discussion between the representatives of the Republics that would constitute the conference began months previous to its opening upon the subject of arbitration, and while every desire was manifested then and thereafter by all to see a conclusion reached by the conference in which all might join, unsettled questions existed between some of the Republics that would participate in the conference of a character that made their avoidance difficult in any general discussion of the subject. . . . This difficulty became more apparent as the conference proceeded with its work. . . . It was tacitly agreed between delegations, therefore, that the discussion of the subject should be confined, so far as possible, to a committee. . . . There was at no time any difficulty with regard to securing a unanimous report favoring a treaty covering merely arbitration as a principle; all delegations were in favor of that. The point of discussion was as to the extent to which the principle should be applied. Concerning this, three views were supported in the conference: (a) Obligatory arbitration, covering all questions pending or future which did not affect either independence or the national honor of a country; (b) Obligatory arbitration covering future questions only and defining what questions shall constitute those to be excepted from arbitration; and (c) Facultative or voluntary arbitration, as best expressed by The Hague convention. . . .

"A plan was finally suggested providing that all delegations should sign the protocol for adhesion to the convention of The Hague, as originally suggested by the United States delegation, and that the advocates of obligatory arbitration sign, between themselves, a project of treaty obligating their respective governments to submit to the permanent court at The Hague all questions arising or in existence, between themselves, which did not affect their independence or their national honor. Both the protocol and treaty were then to be brought before the conference, incorporated in the minutes without debate or action, and sent to the minister of foreign relations of Mexico, to be officially certified and transmitted by that official to the several signatory governments. After prolonged negotiations this plan was adopted and carried out as outlined above, all of the delegations in the conference, excepting those of Chile and Ecuador, signing the

protocol covering adherence to The Hague convention before its submission to the conference. These, after a protracted debate on a point of order involving the plan adopted, later accepted in open conference a solution which made them — as they greatly desired to be, in another form than that adopted — parties to the protocol. The project of treaty of compulsory arbitration was signed by the delegations of the Argentine Republic, Bolivia, Santo Domingo, El Salvador, Guatemala, Mexico, Paraguay, Peru, Uruguay, and Venezuela. . . .

"By the above plan the conference attained the highest possible end, and for the first time each of the American Republics, as a result of that action, takes her place by the side of the other countries of the world in favor of international arbitration; more than this, by the unanimous acceptance thus of The Hague convention on the part of the 19 Republics represented in the conference, it is given that force and character which places it to-day as the formal expression of the governments of the entire civilized world in favor of peace. The delegates of the United States believe, hence, that substantial progress and a noteworthy and historic step in advance has been taken in the interests of peace, and that means have been provided by which wars will be rendered less frequent, if not wholly avoided, between the countries of the Western Hemisphere. The opening of the doors of the permanent tribunal of The Hague to all of the Republics of America, as this protocol has done, is of itself an achievement of the greatest importance. As a result of this action the American Republics now have at their command the machinery of that great international body for the pacific settlement of any dispute they may desire to refer to arbitration. Beyond this the obligations imposed by their adhesion to the convention to have recourse, as far as circumstances allow, to the good offices or mediation of any one or more friendly powers, and to permit these offers to be made without considering them unfriendly, is certainly a point of great value gained by all.

"In addition to accepting The Hague convention the conference went further. It accepted the three Hague conventions as principles of public American international law, and authorized and requested the President of the Mexican Republic, as heretofore explained, to enter upon negotiations with the several American Governments looking toward the more restricted application of arbitration possible, and the way for such a step appear open. In addition to the protocol and treaty referred to, another step was taken in the direction of the settlement of international controversies by the adoption and signing, on the part of every country represented in the conference, of a project of treaty covering the arbitration of pecuniary claims. Under this the several republics obligate themselves for a period of five years to submit to the arbitration of the court at The Hague all claims for pecuniary loss or damage which may be presented by their respective citizens and which cannot be amicably adjusted through diplomatic channels, when such claims are of sufficient importance to warrant the expense of arbitration. Should both parties prefer that a special jurisdiction be organized, according to article 21 of the convention of The Hague this may be done, and if the permanent court of The Hague shall not be open to one or more of the signatory republics for any cause, they obligate themselves to stipulate then in a special treaty the rules under which a tribunal shall be established for the adjustment of the matter in dispute and the form of procedure to be followed in such arbitration. As a supplement to the protocol and treaty above referred to, this project of treaty is of great importance and will most certainly be of wide benefit to the good relations and intercourse between the United States and her sister republics of this Hemisphere." . . .

"Among the most important recommendations made by the First International American Conference, held in Washington in 1889–90, with a view to facilitating trade and communication between the American Republics, was that looking to the construction of an intercontinental railway, by which all of the republics on the American continent would be put into rail communication with each other. In pursuance of the recommendations of that conference, an international railway commission was organized, and under its direction surveys were made which showed that it would be entirely practicable, by using, as far as possible, existing railway systems and filling in the gaps between them. . . . The report of the intercontinental railway commission showed that the distance between New York and Buenos Ayres by way of the proposed line would be 10,471 miles, of which a little less than one-half had then been constructed, leaving about 5,456 miles to be built. Following up the work of the first conference and the intercontinental railway commission, the present conference adopted a strong report and a series of carefully considered recommendations on this subject. . . .

"The resolution . . . providing for the meeting of an international American customs congress in the city of New York within a year, to consider customs administrative matters, is one of the subjects on which early action should be taken by our Government if the success of the congress is to be assured. The governing board of the International Bureau of the American Republics is to fix the date for the meeting of this congress. . . . This congress will have nothing whatever to do with the subject of tariff rates in any of the countries represented. Its functions . . . briefly stated, are to consider means for bringing about, as far as may be practicable, the adoption by the several republics of uniform and simple methods of customhouse procedure and a uniform and simple system of port regulations and charges; measures to secure the adoption and use in customs schedules and laws of a common nomenclature of the products and merchandise of the American republics, to be issued in English, Spanish, Portuguese, and French, and that it may become the basis for the statistical data of exports and imports; to provide for the organization of a permanent customs committee or commission, composed of persons having technical and expert knowledge, which, as a dependency of the International Bureau of the American Republics, or otherwise, shall be charged with the execution of the resolutions and decisions of the congress and the study of the customs laws of the American republics, in order to suggest to the several governments the adoption of laws and

measures which, with regard to custom-house formalities, may tend to simplify and facilitate mercantile traffic. . . .

"Another resolution which contemplates that early action must be taken by the several Governments is that regarding quarantine and sanitary matters. In dealing with this subject the object of the conference was to make sanitation take the place of quarantine. When the ideal had in view by the conference shall have been realized, the cities of the Western Hemisphere will have been put in such perfect sanitary condition that the propagation of disease germs in them will be impossible and quarantine restrictions upon travel and commerce, with their vexations and burdensome delays and expenses, will be unnecessary.

"The conference fully recognized the value and importance to all the Republics of the International Bureau of the American Republics, which was established in Washington in pursuance of the action of the First International American Conference. . . . With a view to rendering the Bureau still more useful to all the countries represented in its administration, and making it still more valuable in establishing and maintaining closer relations between them, the conference adopted a plan of reorganization, or rather of broadening and expanding the existing organization. . . . The new regulations adopted provide that the Bureau shall be under the management of a governing board to be composed of the Secretary of State of the United States, who is to be its chairman, and the diplomatic representatives in Washington of all the other governments represented in the Bureau. This governing board is to meet regularly once a month, excepting in June, July, and August of each year. . . .

"In order that the archæological and ethnological remains existing in the territory of the several Republics of the Western Hemisphere might be systematically studied and preserved, the conference adopted a resolution providing for the meeting of an American international archæological commission in the city of Washington, D. C., within two years from the date of the adoption of the resolution. . . .

"The conference gave its most hearty indorsement to the project for the construction of an interoceanic canal by the Government of the United States." . . .

"The recommendation of the conference that there be established in New York, Chicago, San Francisco, New Orleans, Buenos Ayres, or any other important mercantile center, a bank with branches in the principal cities in the American republics, is in line with the similar resolution adopted by the First International American Conference in Washington in 1889–90."

"In addition to the protocol for the adhesion of the American Republics to the Convention of The Hague, the treaty of compulsory arbitration signed by nine delegations, and the treaty for the arbitration of pecuniary claims, the Conference agreed to and signed a treaty for the extradition of criminals, . . . including a clause making anarchy an extraditable offense when it shall have been defined by the legislation of the respective countries; a convention on the practice of the learned professions, providing for the reciprocal recognition of the professional diplomas and titles granted in the several Republics; a convention for the formation of codes of public and private international law; . . . a convention on literary and artistic copyrights; . . . a convention for the exchange of official, scientific, literary, and industrial publications . . . a treaty on patents of invention, etc.; . . . and a convention on the rights of aliens." The treaty on patents and the convention on the rights of aliens could not be signed by the delegates of the United States, for reasons set forth in their re-

"The delegates desire especially to express their most grateful appreciation of the courtesy extended by the Mexican Government in preparing for the comfort of delegates and in all the arrangements for the conference. Every convenience at the command of that Government was placed at the disposal of delegates to assist them in the discharge of their labors. . . .

"It is the belief of the delegates of the United States that the results of the Second International American Conference will be of great and lasting benefit to the nations participating in its deliberations. . . . That the relations between the American Republics have been improved as a result of the conference cannot be doubted. The intimate daily association for nearly four months, of leading men from every American Republic of itself tended toward this result. Delegates learned that, while existing international relations made differences of opinion inevitable between the representatives of some of the countries, they all had many interests in common. As a result, toleration for the opinions of others was shown by delegates to a marked degree, and the sessions of the conference were remarkably free from acrimonious debates and reflections on the policies of delegations or their Governments."—*57th Cong.*, 1*st Sess.* 1901–2, *Senate Doc.* 330.

Their Third International Conference, at Rio de Janeiro, Brazil, in 1906.—Proceedings, conventions, resolutions.—The Third International Conference of American Republics was held at Rio de Janeiro, Brazil, from July 21st to August 26th, 1906. It was attended by delegates from each of the 21 American Republics, excepting only Hayti and Venezuela. The delegates from the United States of America were the Hon. William I. Buchanan, chairman, formerly Envoy Extraordinary and Minister Plenipotentiary to the Argentine Republic; Dr. L. S. Rowe, Professor of Political Science, University of Pennsylvania; Hon. A. J. Montague, ex-Governor of Virginia; Mr. Tulio Larrinaga, Resident Commissioner from Porto Rico in Washington; Mr. Paul S. Reinsch, Professor of Political Science, University of Wisconsin; Mr. Van Leer Polk, ex-Consul-General; with a staff of secretaries, etc., from several departments of the public service at Washington.

The Conference was attended also by the Secretary of State of the United States, the Hon. Elihu Root, incidentally to an important tour through many parts of South America which he made in the months of that summer. In the course of his journey he visited, on invitation, not only Brazil, but Uruguay, Argentina, Chile, Peru, Panama, and Colombia; and, as stated in the next annual Message of President Roosevelt, "he refrained from visiting Paraguay, Bolivia, and Ecuador only because the distance of their capitals from the seaboard made it impracticable

with the time at his disposal. He carried with him a message of peace and friendship, and of strong desire for good understanding and mutual helpfulness; and he was everywhere received in the spirit of his message."

In the instructions to the delegates from the United States, prepared by Secretary Root, this wise admonition was conveyed: —

"It is important that you should keep in mind and, as occasion serves, impress upon your colleagues, that such a conference is not an agency for compulsion or a tribunal for adjudication; it is not designed to compel States to make treaties or to observe treaties; it should not sit in judgment upon the conduct of any State, or undertake to redress alleged wrongs, or to settle controverted questions of right. A successful attempt to give such a character to the Conference would necessarily be fatal to the Conference itself, for few if any of the States represented in it would be willing to submit their sovereignty to the supervision which would be exercised by a body thus arrogating to itself supreme and indefinite powers. The true function of such a conference is to deal with matters of common interest which are not really subjects of controversy, but upon which comparison of views and friendly discussion may smooth away differences of detail, develop substantial agreement and lead to coöperation along common lines for the attainment of objects which all really desire. It follows from this view of the functions of the Conference that it is not expected to accomplish any striking or spectacular final results; but is to deal with many matters which, not being subjects of controversy, attract little public attention, yet which, taken together, are of great importance for the development of friendly intercourse among nations; and it is to make such progress as may now be possible toward the acceptance of ideals, the full realization of which may be postponed to a distant future. All progress toward the complete reign of justice and peace among nations is accomplished by long and patient effort and by many successive steps; and it is confidently hoped that this Conference will mark some substantial advancement by all the American States in this process of developing Christian civilization. Not the least of the benefits anticipated from the Conference will be the establishment of agreeable personal relations, the removal of misconceptions and prejudices, and the habit of temperate and kindly discussion among the representatives of so many Republics."

The following account of the Conference and its action is derived from the subsequent official report of the Delegates of the United States: —

"The sessions of the Conference were held in a spacious and ornate building, erected especially for this purpose by the Brazilian Government, and situated on the superb new boulevard that for nearly four miles follows the shore of the Bay of Rio, and at the end of the new Avenida Central. The building is a permanent one, reproduced in granite and marble from the plans of the palace erected by Brazil at the Louisiana Purchase Exposition, at St. Louis. It is surrounded by an exquisite garden, and, facing as it does the entrance to the wonderfully beautiful Bay of Rio, the building is a notable landmark. It was christened 'The Monroe Palace' by special action of the Brazilian Government. The Brazilian Government installed in the palace a complete telegraph, mail, and telephone service, and telegrams, cables, and mail of the different delegations and of individual delegates were transmitted free. Recognition is due in this connection to the governments of the Argentine Republic, Paraguay, Uruguay, and Chili, which officially extended, through the director of telegraphs of Brazil, the courtesy of free transit for all telegrams sent by delegates over the telegraph lines of their respective countries. This marked courtesy on the part of Brazil and of the Republics mentioned was greatly appreciated by the delegates. In connection with the work of the Conference, the Brazilian Government organized and maintained at its expense an extensive and competent corps of translators, stenographers, and clerical assistants, whose services were at all times at the command of the delegates. A buffet lunch, for the convenience and comfort of delegates and their guests, was maintained in the palace throughout the period of the Conference. The palace was elaborately lighted and was the center of attraction day and night for great crowds of people, and nothing in connection with its equipment and administration or that concerned the comfort or convenience of delegates was left undone by the Brazilian Government. The Monroe Palace now becomes a national meeting place for the people of Brazil. It will remain as an adornment of the splendid new Rio that has risen from the old city during the past two or three years, and as an evidence of the progress and energy of the Brazilian people.

"The Conference was formally opened in the presence of a large and distinguished audience on the evening of July 23, 1906, by His Excellency the Baron do Rio Branco, the distinguished Brazilian minister for foreign affairs. The approaches to the palace were lined with troops, the public grounds and avenues of the city brilliantly illuminated and packed with people. . . . The Conference unanimously chose as its president, His Excellency Señor Dr. Joaquim Nabuco, the Brazilian Ambassador to the United States; as honorary vice presidents, His Excellency the Baron do Rio Branco, and the Hon. Elihu Root, Secretary of State of the United States, and as its Secretary-General, His Excellency, Señor Dr. J. F. de Assis-Brasil, the Brazilian envoy extraordinary and minister plenipotentiary to the Argentine Republic. The latter selected as his assistants one of the most competent and distinguished groups of men that has served any of the preceding conferences. . . . These officers left nothing undone toward aiding and facilitating the work of delegates, and to them the United States delegation feels greatly indebted for the many courtesies and the great kindness extended on all occasions.

"The conference was attended by delegates from each of the 21 American Republics, with the exception of Haiti and Venezuela." . . .

"The distinguishing note of the Conference was the extraordinary session convened to receive the Secretary of State of the United States, Hon. Elihu Root, who, as stated earlier in this eport, had been named one of the two honorary presidents of the Conference. The reception accorded the Secretary of State by the Conference was one of the most notable political events that has taken place in our relations with Central and South America, and manifested the

feeling of goodfellowship and sympathy that exists between the American Republics. We believe the visit of the Secretary of State to South America has resulted in greater good to our relations with Central and South America than any one thing that has heretofore taken place in our diplomatic history with them. The extraordinary session of the Conference to receive the Secretary of State was held on the evening of July 31 and was one of great brilliancy. In introducing the Secretary of State to the Conference, His Excellency Dr. Joaquim Nabuco, the Brazilian Ambassador to the United States and President of the Conference, delivered a notable address, to which the Secretary of State replied."

It was, indeed, a notable utterance of pregnant and impressive thought which Mr. Root addressed to this important congress of the American Republics, and it well deserved the distinction that was accorded to it by the President of the United States, when he appended it to his Message to Congress the following December. A considerable part of the brief but richly filled address may fitly be quoted here:

"I bring from my country," said the Secretary, "a special greeting to her elder sisters in the civilization of America. Unlike as we are in many respects, we are alike in this, that we are all engaged under new conditions, and free from the traditional forms and limitations of the Old World in working out the same problem of popular self-government.

"It is a difficult and laborious task for each of us. Not in one generation nor in one century can the effective control of a superior sovereign, so long deemed necessary to government, be rejected and effective self-control by the governed be perfected in its place. The first fruits of democracy are many of them crude and unlovely; its mistakes are many, its partial failures many, its sins not few. Capacity for self-government does not come to man by nature. It is an art to be learned, and it is also an expression of character to be developed among all the thousands of men who exercise popular sovereignty.

"To reach the goal toward which we are pressing forward, the governing multitude must first acquire knowledge that comes from universal education, wisdom that follows practical experience, personal independence and self-respect befitting men who acknowledge no superior, self-control to replace that external control which a democracy rejects, respect for law, obedience to the lawful expressions of the public will, consideration for the opinions and interests of others equally entitled to a voice in the state, loyalty to that abstract conception — one's country — as inspiring as that loyalty to personal sovereigns which has so illumined the pages of history, subordination of personal interests to the public good, love of justice and mercy, of liberty and order. All these we must seek by slow and patient effort; and of how many shortcomings in his own land and among his own people each one of us is conscious!

"Yet no student of our times can fail to see that not America alone but the whole civilized world is swinging away from its old governmental moorings and intrusting the fate of its civilization to the capacity of the popular mass to govern. By this pathway mankind is to travel, whithersoever it leads. Upon the success of this our great undertaking the hope of humanity depends. Nor can we fail to see that the world makes substantial progress towards more perfect popular self-government. . . .

"It is not by national isolation that these results have been accomplished or that this progress can be continued. No nation can live unto itself alone and continue to live. Each nation's growth is a part of the development of the race. There may be leaders and there may be laggards, but no nation can long continue very far in advance of the general progress of mankind, and no nation that is not doomed to extinction can remain very far behind. It is with nations as with individual men; intercourse, association, correction of egotism by the influence of others' judgment, broadening of views by the experience and thought of equals, acceptance of the moral standards of a community the desire for whose good opinion lends a sanction to the rules of right conduct — these are the conditions of growth in civilization. . . .

"To promote this mutual interchange and assistance between the American republics, engaged in the same great task, inspired by the same purpose, and professing the same principles, I understand to be the function of the American Conference now in session. There is not one of all our countries that cannot benefit the others; there is not one that cannot receive benefit from the others; there is not one that will not gain by the prosperity, the peace, the happiness of all. . . .

"The association of so many eminent men from all the Republics, leaders of opinion in their own homes; the friendships that will arise among you; the habit of temperate and kindly discussion of matters of common interest; the ascertainment of common sympathies and aims; the dissipation of misunderstandings; the exhibition to all the American peoples of this peaceful and considerate method of conferring upon international questions — this alone, quite irrespective of the resolutions you may adopt and the conventions you may sign, will mark a substantial advance in the direction of international good understanding.

"These beneficent results the Government and the people of the United States of America greatly desire. We wish for no victories but those of peace; for no territory except our own; for no sovereignty except the sovereignty over ourselves. We deem the independence and equal rights of the smallest and weakest member of the family of nations entitled to as much respect as those of the greatest empire, and we deem the observance of that respect the chief guaranty of the weak against the oppression of the strong. We neither claim nor desire any rights, or privileges, or powers that we do not freely concede to every American republic. We wish to increase our prosperity, to expand our trade, to grow in wealth, in wisdom, and in spirit, but our conception of the true way to accomplish this is not to pull down others and profit by their ruin, but to help all friends to a common prosperity and a common growth, that we may all become greater and stronger together.

"Within a few months, for the first time the recognized possessors of every foot of soil upon the American continents can be and I hope will be represented with the acknowledged rights of equal sovereign states in the great World Congress at The Hague. This will be the world's

formal and final acceptance of the declaration that no part of the American continents is to be deemed subject to colonization. Let us pledge ourselves to aid each other in the full performance of the duty to humanity which that accepted declaration implies; so that in time the weakest and most unfortunate of our republics may come to march with equal step by the side of the stronger and more fortunate. Let us help each other to show that for all the races of men the liberty for which we have fought and labored is the twin sister of justice and peace. Let us unite in creating and maintaining and making effective an all-American public opinion, whose power shall influence international conduct and prevent international wrong, and narrow the causes of war, and forever preserve our free lands from the burden of such armaments as are massed behind the frontiers of Europe, and bring us ever nearer to the perfection of ordered liberty. So shall come security and prosperity, production and trade, wealth, learning, the arts, and happiness for us all."

The fruits of the Conference were embodied in four conventions and a number of important resolutions. The text of a convention agreed to, which establishes between the States signing it the status of naturalized citizens who again take up their residence in the country of their origin, will be found elsewhere in this volume, under the subject-heading NATURALIZATION. Another, which amends and extends the operation of a treaty signed at the Second Conference, at Mexico, in 1902 (see above) is as follows: —

"Sole article. The treaty on pecuniary claims signed at Mexico January thirtieth, nineteen hundred and two, shall continue in force, with the exception of the third article, which is hereby abolished, until the thirty-first day of December, nineteen hundred and twelve, both for the nations which have already ratified it, and for those which may hereafter ratify it."

The third Convention signed was a modification and extension of another of the agreements of the Second Conference, at Mexico, having relation to patents of invention, literary property, etc. The fourth Convention provides for an "international Commission of Jurists, composed of one representative from each of the signatory States, appointed by their respective Governments, which Commission shall meet for the purpose of preparing a draft of a code of Private International Law and one of Public International Law, regulating the relations between the nations of America." The more important of the resolutions adopted were the following:

"To ratify adherence to the principle of arbitration; and, to the end that so high a purpose may be rendered practicable, to recommend to the Nations represented at this Conference that instructions be given to their Delegates to the Second Conference to be held at The Hague, to endeavor to secure by the said Assembly, of world-wide character, the celebration of a General Arbitration Convention, so effective and definite that, meriting the approval of the civilized world, it shall be accepted and put in force by every nation."

"To recommend to the Governments represented therein that they consider the point of inviting the Second Peace Conference, at The Hague, to examine the question of the compulsory collection of public debts, and, in general, means tending to diminish between Nations conflicts having an exclusively pecuniary origin."

Other resolutions of the Conference were directed to a broadening of the work and an enlargement of the influence of the International Bureau of the American Republics; to the erection of a building for that Bureau and for the contemplated Library in Memory of Columbus; to the creation in the Bureau of a section having "as its chief object a special study of the customs legislation, consular regulations and commercial statistics of the Republics of America," with a view to bringing them into more harmony, and to securing the greatest development and amplification of commercial relations between American Republics; to promote the establishment and maintenance of navigation lines connecting the principal ports of the American continent; to bring about more effective coöperation in international sanitary measures; to advance the construction of lines that shall form, connectedly, the desired Pan-American Railway, extending through the two continents.

The time and place of future conferences are to be determined by the Governing Board of the Bureau of American Republics.

The International Bureau: Its increased efficiency. — The gift of a building to it by Mr. Carnegie. — The International Bureau of the American Republics, instituted at Washington in 1890 (see in Volume VI. of this work), assumed larger functions and increased importance in 1906, after the return of Mr. Root, United States Secretary of State, from his tour of visits to the South American States. The Hon. John Barrett, who had sucessively represented the Government of the United States in Panama, in Argentina and in Colombia, as well as at the Second Pan-American Conference, in Mexico, was made Director of the Bureau, and entered upon its duties with an exalted belief in the possibilities of good to be done in the American hemisphere by an energetic promotion of more intimate relations between its peoples. At the same time a new dignity was given to the International Union of the American Republics, embodied in the work of the Bureau, by the provision of a stately building for its use. Mr. Root had persuaded Congress to appropriate $200,000 for the site and building of such a home, to be offered to the Union, and this inadequate sum was supplemented by a generous private gift. It was easy to interest Mr. Andrew Carnegie in a project which bore so directly on the promotion of international friendliness and peace, and he offered an addition of $750,000 to the fund for the Pan-American Building.

The site secured for the structure is that of the old Van Ness mansion, about half-way between the State, War and Navy Building and the Potomac River. It covers a tract of five acres, facing public parks on two sides. There the corner stone of a central seat of Pan-American coöperations and influences was laid in May, 1908, in the presence of official representatives from twenty one American republics, and under their assembled flags.

A. D. 1903. — The Foreign Population. — "Statistics of 1903 showed 1,000,000 foreigners in Argentina in a total of 5,000,000. Of these 500,000 were Italians, 200,000 Spaniards, 100,000 French, 25,000 English, 18,000 Germans, 15,000 Swiss, 13,000 Austrians, and the remainder of many nationalities. The number of Americans did not exceed 1,500, although many are coming now, to go into cattle-raising and farming in the country or into all kinds of business in Buenos Ayres. English influence is very strong, especially in financial circles, with the Germans almost equally active." — John Barret, *Argentina* (*Am. Review of Reviews, July*, 1905).

A. D. 1904. — Inauguration of President Quintana. — Dr. Manuel Quintana, elected President of the Republic, was inaugurated on the 12th of October, 1904, and entered on an administration which promised much good to the country.

A. D. 1905. — A revolutionary movement promptly suppressed. — A revolutionary undertaking, in Buenos Aires and several provinces, had its outbreak on the 4th of February, but was suppressed so promptly that the public disturbance by it was very brief. Particulars of the affair were reported by the American Minister at Buenos Aires, Mr. Beaupré, as follows: "On the afternoon of the 3d instant rumors of an intended movement subversive of the established government of this country came to the Federal authorities from various parts of the Republic. These rumors were at first discredited, but finally proved so persistent that the President and heads of the various departments of the government proceeded to take measures of precaution. In the early hours of the morning of the next day, the 4th instant, the anticipated outbreak came simultaneously in the capital, Rosario, Mendoza, Cordoba, and Bahia Blanca, these being the largest cities of the Republic and the principal political and military centers.

"In the capital the plan of the revolutionists seems to have been to attack the police stations and military arsenal, with a view perhaps of forcing the police of the capital into their ranks and of supplying themselves with arms and munitions. At the arsenal, by a simple stratagem of the minister of war, the malcontents were lured into the building and arrested. About the police stations there was some fighting, particularly at Station No. 14; but the insurgents proved unprepared and insufficiently organized, so that by dawn the movement had completely failed in this city. Except that many of the shops remained closed throughout the day of the 4th, and except for the presence of armed police in the streets, there were no evidences of any revolutionary effort. Some half dozen fatalities are reported.

"The prompt and effective suppression of the revolution in this city is due in large measure to the energy and judgment displayed by the President and his ministers, who spent the entire night in the Government House in council. Following up the precautionary measures of the 3d instant and the active measures of the night of the 3d and 4th, the President proceeded at 8 A. M. of the 4th to declare the Republic in a state of siege for a period of thirty days, to call out the reserves and to establish a censorship of the press and of the telegraph service.

"The movement in Rosario was about as brief and unsuccessful as that in the capital, so that by the forenoon of the 4th it was known to have failed in the two principal cities of the Republic. Here there was also some blood shed.

"In the meantime the real center of the movement was the city of Cordoba, while serious trouble seemed in view in the city of Mendoza, where the revolutionists were said to be in a strong position, and in the province of Buenos Aires, where troops and marines were already in movement from Bahia Blanca upon the capital."

Forces despatched to those points made as quick an ending of the revolt there as at the capital. "The revolutionary forces at Cordoba had made prisoners of the vice-president of the Republic, Dr. Figueroa Alcorta, and other prominent citizens. These prominent men they are reported to have proposed putting in their vanguard unless concessions were made to them. This and the conditions of the revolutionists the vice-president telegraphed to the Executive, who did not allow himself to be moved by threats or even by sympathy for his colleague. Consequently the revolutionists, finding threats and resistance vain, fled yesterday before the government troops arrived. With the failure of the movement in Cordoba the revolution is considered at an end and the country has returned to its former condition of peace and tranquillity."

A. D. 1906. — Death of its President. — Dr. Manuel Quintana, the much esteemed President of the Argentine Republic, died in March, 1906, and was succeeded by the Vice-President, Dr. Figuero Alcorta, who will fill the office until 1910.

A. D. 1908. — Dreadnought building. See (in this vol.) WAR, THE PREPARATIONS FOR.

A. D. 1909. — Assassination of Colonel Falcon. — As Colonel Falcon, Prefect of Police at Buenos Ayres, was returning from a funeral, with his secretary, on the 14th of November, a bomb was thrown into the carriage and exploded, with fatal effects to both. The assassin, a youth of nineteen years, was captured. The murder had been preceded by a number of bomb explosions in the past six months, all attributed to anarchists from Europe, of whom large numbers were said to have been collected in Buenos Ayres.

A. D. 1909. — Chief food supply to Great Britain. — "How many readers of *The Times* (said a special correspondent of the London *Times* writing from Buenos Aires, October 15, 1909), if asked to name the country which supplied the United Kingdom last year with the largest quantity of wheat, of maize, and of refrigerated and frozen cattle, would unhesitatingly award the first place to the Argentine Republic? How many English people realize that this South American Republic is changing places with the North American Republic in the exporting of these and other food products to the United Kingdom? The Argentine Republic last year occupied, and may in the future occupy, the first, whilst the United States may have to be content with the second, place in the exportation of foodstuffs. The change is partly due to the shortage of meat in America, and partly to the fact that with their increasing population the United States will have less and less surplus provisions with which to supply the world. Last year, the Argentine Republic sent England three times more maize than the United States did, something like four and a half million cwt. more wheat, and considerably over twice the amount of refrigerated and frozen cattle. The shipments of meat are considerably heavier for the first nine months of 1909, so the proportion shipped by the Argentine Republic is not likely to be less for the present year."

A. D. 1909. — Building of the Transandine Railway Tunnel. See (in this vol.) RAILWAYS: ARGENTINA-CHILE.

A. D. 1910. — Agreement with Uruguay concerning the River Plate. — The following message came from Buenos Ayres on the 6th of January, 1910: "A burning question between Argentina and Uruguay, which for two years was seemingly insoluble and possibly involved Brazil, has been settled by Señor Roque Saenz

Peña. As Argentine Plenipotentiary he signed a Protocol at Montevideo yesterday, of which the following is a summary: Recognizing the reciprocal desire for friendly relations, fortified by the common origin of the two nations, the parties agree to declare that past differences are not capable of being regarded as a cause of offence and shall not be allowed to continue. The navigation and use of the waters of the River Plate will continue as heretofore without alteration, and differences which may arise in the future will be removed and settled in the same spirit of cordiality."

ARYA SAMAJ, The: This is "an organization founded in Bombay more than 30 years ago by a devout Gujerati Brahmin who was born in Kathiawar. So far as I am aware, it has few followers in Bombay nowadays; but in the last years it has waxed very strong in the Pun. . . . Originally it was a purely religious movement, based upon the teaching of the Vedas. It promotes the abolition of caste and idolatry, condemns early marriages, and permits the remarriage of widows. At the same time it is violently hostile to Christianity. There can be no question that large numbers of members of the Arya Samaj are only concerned with its spiritual side; but there can be equally no question that the organization, as a whole, has developed marked political tendencies subversive of British rule . . .

"In the United Provinces it is believed that there are now about 40,000 members of the Arya Samaj. I have entirely failed to secure any trustworthy estimate of the number of its members in this province [the Punjab], but there are flourishing branches of the Samaj in every large town and in many of the important villages, and proselytism is being actively pursued with marked success. The members of the Samaj strenuously deny that their organization has a political side. The literature of the sect, and particularly the writings of their founder, the ardent ascetic Dayanand Saraswati, who came from Kathiawar, show no trace of any interest in mundane politics. Dayanand was an enthusiast who denounced the idolatrous tendencies of modern Hinduism, and advocated a return to the earlier, purer faith. . . . Dayanand's clarion call of "Back to the Vedas" produced a complete revulsion of feeling, and he made the Punjab a stronghold of the new creed. For that reason, the Arya Samaj is to this day the bitterest opponent of Christianity in India; and Punjabi Mahomedans declare that it is also their most formidable foe." —*India correspondence of The Times.*

A. D. 1901-1902. — The Tariff Question in the First Parliament of the Commonwealth. — Issue between the Senate and the Representative Chamber. — "The tariff originally proposed by the government was framed on lines of extreme protection, with special reference to the languishing industries of Victoria; it was inevitable that the opposition, mainly representing New South Wales, should fight tooth and nail to prevent its becoming law. The result of the struggle, which lasted almost without a serious interruption for nine months, has been a compromise which leaves the tariff of the commonwealth neither one thing nor the other. There can be little doubt that in debating power and political generalship the victory lay generally with the opposition; but after all the result, so far as it was a victory for the party of free trade, was due to the action of the Senate.

"To many, and apparently not least the cabinet, the prompt and effective interference of the Senate in a question of taxation, which was generally supposed to be practically placed by the constitution almost as much beyond their control as custom has placed it beyond that of the House of Lords in England, was a great surprise, and as the first test of the respective powers of the two chambers of the legislature it can hardly fail to be of great political importance. It was provided by the constitution not only that all bills involving the taxation of the people, directly or indirectly, should, as in this country, originate in the representative chamber of the legislature, but further that such bills should not be altered or amended in their passage through the Senate. As a concession to the less populous states, it was agreed when the constitution was framed that while only the chamber, elected on a strict basis of population, should impose or control taxation, the Senate, in which all the states enjoy, as in America, equal representation, should have the right to suggest, for the consideration of the other chamber, any amendments it thought desirable in any money bill sent on for its assent. This provision, mild and inoffensive as it was supposed to be, has now been used in a way to upset the policy of the government, and practically to compel the assent of the representative chamber to the views of a Senate majority. The tariff bill as passed by the government majority was subjected to an exhaustive criticism by the Senate, and finally fully fifty items of the schedule imposing duties were referred back to the representative chamber, with a request for their reconsideration and reduction or excision.

"The government attempted to meet the difficulty by agreeing to a few trifling amendments on the lines suggested, and got the chamber peremptorily to reject all the others, sending the bill back in effect as it was. To this the Senate replied by calmly adhering to the views it had already expressed, and sending the bill back

AUSTRALIA, 1902

again for further consideration, allowing it to be pretty plainly understood that, in the event of their views being ignored, they would place their reasons on record and reject the bill altogether, thus preventing any uniform tariff being established during the session. Face to face with so grave a difficulty the cabinet gave way, and agreed to a compromise which they would not have dreamed of doing but for the action of the Senate, with its free-trade majority of two votes. The immediate result of the long struggle has been the passing of a tariff act which pleases neither party, but will apparently raise the required revenue of $40,000,000, needed to meet the wants of the federal and state governments."—Hugh H. Lusk, *The First Parliament of Australia* (*American Review of Reviews*, *March*, 1903).

A. D. 1902.—The "States Rights" temper.—Question of constitutional relations between Commonwealth and States in external affairs, as raised by South Australia.—Decision of the Imperial Government.—"State-rights" questions and the provincialistic spirit behind them made a prompt appearance in the Australian Commonwealth after its federation was accomplished. One of the first wrangles to occur between the General Government and that of a State was appealed necessarily to the Imperial Government at London, because it arose out of a call from the latter, in September, 1902, for information about an incident which concerned a Dutch ship. The request for information went from London to the Commonwealth Government, and from the latter to the Government of South Australia, where the incident in question occurred, involving some act of its officials. The South Australian Ministry declined to pass the desired information through the channel of the Commonwealth Ministry, but would give it to the British Colonial Office, direct. A long triangular argumentative correspondence ensued, in the course of which much that seems like a repetition of the early history of the United States of America appears. Such as this, for example, in one of the letters of the Acting Premier of South Australia to the Lieutenant-Governor of that State: "The importance to the States, especially to the smaller States, of strictly maintaining the lines of demarcation between Commonwealth and State power is manifest. Already a movement has begun to destroy the Federal element in the Constitution. A remarkable indication of this may be gathered from a speech made by Sir William Lyne, the Commonwealth Minister for Home Affairs, at Kalgoorlie, in Western Australia, on the 2nd day of the present month. Speaking of the Constitution, Sir William Lyne said: 'If the population increased in the States as he expected, he did not think three of the larger States would still consent to be governed by four of the smaller ones. He hoped that when the time came there would not be bloodshed, but that things would settle themselves in a manner worthy of the records of the first Parliament.'

"Believing, as Ministers do, that the peaceful and successful working of the Constitution depends upon the strict maintenance of the lines of demarcation between the powers of the Commonwealth and those of the States, and that that line is drawn clearly in the Constitution, they cannot agree to the opinions of the Right Honourable the Secretary of State for the Colonies, which increase, by implication, the power of the Commonwealth, and which seem to Ministers to tend to Unification, and to a sacrifice of the Federal to the National principle."

This communication, transmitted to London, drew from the then Colonial Secretary, Mr. Chamberlain, an unanswerable reply, addressed to the Lieutenant-Governor and dated April 15, 1903, in part as follows:

"Your Ministers contend 'that the grant of power to the Commonwealth, notwithstanding the general terms of Section 3 of the Act, is strictly limited to the Departments transferred, and to matters upon which the Commonwealth Parliament has power to make laws and has made laws,' and that 'in the distribution of legislative and consequently of executive power, made by the Constitution, all powers not specifically ceded to the Commonwealth remain in the States.'

"They are unable to agree 'with the contention that there does not appear to be anything in the Constitution to justify this limitation,' and argue that the validity of any claim of the Commonwealth to any particular power, should be tested by enquiring:—Does the Constitution specifically confer the power?

"The view of the Act which I take is that it is a Constitution Act, and creates a new political community. It expressly declares that 'the people of New South Wales, Victoria, South Australia, Queensland, and Tasmania, and also, if Her Majesty is satisfied that the people of Western Australia have agreed thereto, of Western Australia, shall be united in a Federal Commonwealth under the name of the Commonwealth of Australia.' The object and scope of the Act is defined and declared by the preamble to be to give effect to the agreement of the people of New South Wales, Victoria, South Australia, Queensland, and Tasmania 'to unite in one indissoluble Federal Commonwealth under the Crown of the United Kingdom of Great Britain and Ireland, and under the Constitution hereby established.'

"The whole Act must be read in the light of this declaration and the provisions of Section 3. So far as other communities in the Empire or foreign nations are concerned, the people of Australia form one political community for which the Government of the Commonwealth alone can speak, and for everything affecting external states or communities, which takes place within its boundaries, that Government is responsible. The distribution of powers between the Federal and State Authorities is a matter of purely internal concern of which no external country or community can take any cognizance. It is to the Commonwealth and the Commonwealth alone that, through the Imperial Government, they must look, for remedy or relief for any action affecting them done within the bounds of the Commonwealth, whether it is the act of a private individual, of a State official, or of a State government. The Commonwealth is, through His Majesty's Government, just as responsible for any action of South Australia affecting an external community as the United States of America are for the action of Louisiana or any other State of the Union.

"The Crown undoubtedly remains part of the constitution of the State of South Australia

and, in matters affecting it in that capacity, the proper channel of communication is between the Secretary of State and the State Governor. But in matters affecting the Crown in its capacity as the central authority of the Empire, the Secretary of State can, since the people of Australia have become one political community, look only to the Governor-General, as the representative of the Crown in that community."

The published correspondence ends with this, and it is to be assumed that South Australia had no more to say.—*Correspondence respecting the Constitutional Relations of the Australian Commonwealth and States in regard to External Affairs (Parliamentary Papers, Cd.* 1587).

A. D. 1903.—The Governor-Generalship.—In August, Lord Northcote, previously Governor of the Presidency of Bombay, was appointed Governor-General of Australia, succeeding Lord Tennyson.

A. D. 1903-1904.—Resignation of Premier Barton.—The Deakin Ministry.—Four months of power for the Labor Party.—Its influence in the Commonwealth.—Sir Edmund Barton, who had been the Prime Minister of the Australian Commonwealth since its Union in 1900 (see AUSTRALIA in Volume VI. of this work), resigned in 1903 to accept a place on the bench of the High Federal Court, and was succeeded by Mr. Alfred Deakin, previously Attorney-General in the Federal Cabinet. The most important occurrence of the year in the Commonwealth was the election of a new House of Representatives in the Federal Parliament and of one third of its Senate. These were the first federal elections occurring since those of 1900 which constituted the original Parliament, opened in May, 1901, and the first in which women went to the polls. The main issue in the elections was between the Labor Party and its opponents, and the rising power of the former was shown by its gain of six seats in each House, four from the Ministry and two from the opposition in the Senate, and all six from the Ministry in the lower House. This threw the balance of power into its hands in both branches of Parliament. Naturally, in these circumstances, labor questions became dominant in Australian politics, with Socialistic tendencies very strong.

The Deakin Ministry was defeated in April, 1904, on an industrial arbitration bill which excluded State railway employés and other civil servants from its provisions, contrary to the demands of the Labor Party. The adverse majority was made up of 23 Labor representatives, 13 opponents of the protectionist policy of the Government, and 4 from the ranks of its own ordinary supporters. The ministry resigned, and the leader of the Labor Party, Mr. J. C. Watson, a young compositor by trade, was called to form a Government, which he did, drawing all but its Law Officer from the Labor Party. It is creditable to the capability of this Labor Ministry that, with so precarious a backing in the House, it should have held the management of Government, with apparently good satisfaction to the public, for about four months. It was defeated in August on another labor question, and gave way to a coalition Ministry of Free Traders and Moderate Protectionists, formed under Mr. George Houston Reid.

An account of the Labor Ministry and its leader, from which the following facts are taken, was given by *The Review of Reviews for Australasia* at the time of its ascendancy: The average age of the members is only forty-three years, while in England sixty is the average age at which corresponding rank is attained. The nationalities of the members are as follows: One, the prime minister, is a New Zealander, two are Australian-born, two are Irish, two are Scotch, and one is Welsh. There is not one who was born in England.

Mr. John Christian Watson, the premier, is but thirty-seven years of age. He was born in Valparaiso, where his parents were on a visit, but was only a few months old when they returned to New Zealand. At an early age he began his apprenticeship as a compositor, joining the Typographical Union. When nineteen, he came to Sydney and joined the composing staff of the *Star*. Then he became president of the Sydney Trades and Labor Council, and president of the Political Labor League of New South Wales. In 1894, he was returned to a New South Wales Parliament, and took the leading place among the Labor members. In 1901, he was returned to the first federal Parliament. He was selected to lead the Labor party in the federal House, and has won golden opinions in that position. He is a born leader of men, and has rare tact. He overcame the apprehension caused by his youth. He curbed the extremists of his party. Power came to him at once. He seized the advantage of leading a third party between two opponents. It was he, rather than Sir Edmund Barton or Mr. Deakin, who decided what should pass and what not.

The situation developed in this period is described by an American writer, whose sympathies are ardently with the Labor Party, as follows: "Protectionists and Free Traders (so called) were so divided in the Australian Parliament that neither could gain a majority without the Labor Party. A succession of governments bowled over by labor votes drove this hard fact into the political intelligence. The Labor Party was then invited to take the government. For five months men that had been carpenters, bricklayers, and painters administered the nation's affairs. No convulsion of nature followed, no upheavals and no disasters. It is even admitted that the government of these men was conspicuously wise, able, and successful. But having a minority party, their way was necessarily precarious, and on the chance blow of an adverse vote they resigned. Some scene shifting followed, but in the end the present arrangement was reached, by which the government is in the hands of the Protectionists that follow Mr. Deakin, and the ministry is supported by the Labor Party on condition that the Government adopt certain legislation. And that is the extent of the 'absolute rule of the Labor gang.' The Deakin Government does not greatly care for the Labor Party, nor for the Labor Party's ideas, but it rules by reason of the Labor Party's support, and in return therefor has passed certain moderate and well-intentioned

AUSTRALIA, 1905–1906

measures of reform. Indeed the sum-total of the 'revolutionary, radical, and socialistic laws' passed by the Labor Party, directly or by bargaining with the Deakin or other ministries, indicates an exceedingly gentle order of revolution. It has done much in New South Wales and elsewhere to mitigate the great estate evil by enacting graduated land taxes; it has passed humane and reasonable laws regulating employers' liability for accidents to workmen and laws greatly bettering the hard conditions of labor in mines and factories. It has passed a law to exclude trusts from Australian soil. It has stood for equal rights for men and women. In New South Wales it has enormously bettered conditions for toilers by regulating hours of employment even in department and other stores and by instituting a weekly half-holiday the year around for everybody. It has tried with a defective Arbitration and Conciliation Act to abolish strikes. To guard Australia against the sobering terrors of the race problem that confronts America, it has succeeded in keeping out colored aliens. It has agitated for a Henry George land tax and for the national ownership of public services and obvious monopolies. And with one exception this is the full catalogue of its misdeeds." [The "one exception" is the abolition of coolie labor.] — Charles E. Russell, *The Uprising of the Many, ch.* 24 (*Doubleday, Page and Co., N. Y.*, 1907). — See, also, LABOR ORGANIZATION: AUSTRALIA.

A. D. 1905-1906. — Mr. Deakin's precarious ministry. — Power of the Labor Party without responsibility. — Its principles and its "Fighting Platform." — Important legislation of 1905. — The Federal Capital question. — General election of 1906. — Mr. Reid, the Free Trade Premier, had taken office on an agreement with Mr. Deakin, the Protectionist leader, that the tariff question should not be opened during the term of the existing Parliament. But the truce became broken early in 1905, each party attributing the breach to the other, and the Reid Ministry, beaten on an amendment to the address replying to the Governor-General's speech, resigned. The Protectionists, in provisional alliance with the Labor Party, then came back to power, with Mr. Deakin at their head.

Of the political situation in 1905 it was said by a writer in one of the English reviews: "The Labour Party can dictate terms to the Ministry, and ensure that its own policy is carried out by others. It is strongest whilst it sits on the cross benches. During the few months it was in office it was at the mercy of Parliament; it left most of the planks of its platform severely alone, and it had, during that time, less real power than it has had either before or since. It is not likely again to take office, unless it can command an absolute majority of its own members to give effect to its own ideas, and, indeed, it perhaps would be better for Australia that it had responsibility as well as power, rather than as at present power without responsibility. However, if not at the next general election, the party is bound ere long to get the clear Parliamentary majority it seeks. Under these circumstances, great importance attaches to its aims and organisation. . . .

"To quote from the official report of the decisions of the last Triennial Conference of the Political Labour organisations of the Commonwealth, which sat in Melbourne last July, the objective of the Federal Labour party is as follows:

"(a) The cultivation of an Australian sentiment, based upon the maintenance of racial purity, and the development in Australia of an enlightened and self-reliant community. (b) The security of the full results of their industry to all producers by the collective ownership of monopolies, and the extension of the industrial and economic functions of the State and Municipality. The Labour party seek to achieve this objective by means of a policy that they invariably refer to as their platform. The planks of what is called the 'Fighting Platform' are as follows:

"(1) The maintenance of a white Australia. (2) The nationalisation of monopolies. (3) Old age pensions. (4) A tariff referendum. (5) A progressive tax on unimproved land values. (6) The restriction of public borrowing. (7) Navigation laws. (8) A citizen defence force. (9) Arbitration amendment." — J. W. Kirwan, *The Australian Labour Party* (*Nineteenth Century, Nov.*, 1905).

A strike in one of the coal mines of New South Wales during 1905 brought the Arbitration Act of that province to an unsatisfactory test. The dispute, concerning wages, went to the Arbitration Court and was decided against the miners. They refused to accept the decision, abandoning work, and the court, when appealed to by the employers, found itself powerless to enforce the decision it had made. The judge resigned in consequence, and there was difficulty in finding another to take his seat.

The Labor Party secured the passage of an Act which gives the trade union label the force of a trade mark. Another important Act of 1905 modified the Immigration Restriction Act, so far as to admit Asiatic and other alien students and merchants, whose stay in the country was not likely to be permanent, and which, furthermore, permitted the introduction of white labor under contract, subject to conditions that were expected to prevent any lowering of standard wages.

The location of a federal capital became a subject of positive quarrel between the Government of the Commonwealth and that of New South Wales. By agreements which preceded the federation, the Commonwealth capital was to be in New South Wales, but not less than a hundred miles from Sydney. This hundred-mile avoidance of Sydney was considerably exceeded by the Federal Government when it chose a site, to be called Dalgety, about equidistant from Sydney and Melbourne. New South Wales objected to the site and objected to the extent of territory demanded for it. Mr. Deakin proposed a survey of 900 square miles for the Federal District. New South Wales saw no reason for federal jurisdiction over more than 100 square miles.

Ultimately Dalgety was rejected and a site named Yass-Canberra, or Canberra, was agreed upon and the choice confirmed by legislation. It is in the Murray district, about 200 miles southwest of Sydney.

A general election in the Commonwealth, near the close of 1906, gave the Protectionists a small increase of strength in Parliament, and the Labor Party gained one seat, raising its representation from 25 to 26. The losers were the so-called Free Traders, or opponents of protective tariff-

making. Their leader, Mr. Reid, in the canvass, dropped the tariff issue and made war on the State Socialism of the Labor Party. He held in the new Parliament a considerably larger following than the Protectionist Premier, Mr. Deakin, could muster, but it contained more Protectionists than Free Traders.

A. D. 1906. — Developing the water supply. See (in this vol.) CONSERVATION OF NATURAL RESOURCES: AUSTRALIA.

A. D. 1907. — The "New Protection," under the Tariff Excise Act. See (in this vol.) LABOR REMUNERATION: THE "NEW PROTECTION."

A. D. 1907. — Statistics of state schools. See EDUCATION: AUSTRALIA.

A. D. 1907 (April-May). — Imperial Conference at London. See BRITISH EMPIRE: A. D. 1907.

A. D. 1908 (Dec.). — Population of the Commonwealth. — According to a letter to the London *Times*, from Sydney, "the population of Australia on December 31, 1908, was estimated at 4,275,304 (exclusive of full-blooded blacks), showing an increase of 509,965, or of 13.5 per cent. in the eight years of federation. That," said the writer, "is not a satisfactory expansion, and we should have fared better. New South Wales gained 231,367, or 17 per cent, and Western Australia 87,143, or 48.4 per cent, but all the other States fared indifferently. There is reason to hope that in the change of fashion, Australia will again grow into some favour with the emigrant from home."

A. D. 1908. — Change of Ministry. — Late in the year, the Ministry of Mr. Deakin lost the provisional support of the Labor party, which had kept it in control of the Government for nearly four years, and suffered a defeat in Parliament which threw it out. For the second time a short lived Labor Ministry was formed, under Mr. Andrew Fisher.

A. D. 1908. — The Governor-Generalship. — After five years of service as Governor-General, Lord Northcote returned to England in the fall of 1908 and was succeeded by Lord Dudley.

A. D. 1909. — Attitude of the people toward immigration. — Land-locking against settlement. See (in this vol.) IMMIGRATION: AUSTRALIA.

A. D. 1909. — A summary of sixty years of growth and progress. — Sir John Forrest, Treasurer of the Commonwealth of Australia, in his Budget Speech to the Federal House of Representatives, in August, 1909, surveyed the position of Australia as part of the British nation, — a continent, he observed, containing two billion acres, with a coast line of 12,000 miles, no other nation having right or title to any part of this splendid heritage of the Southern Hemisphere, which was another home for the British race. Sixty years ago, said Sir John, the population of Australia was 400,000 and there were no railways. Now the inhabitants numbered nearly four-and-a-half millions, of whom 96 per cent were British. They had £112,000,000 deposited in banks and deposits in savings banks to the amount of over £46,000,000, the depositors in these being one third of the entire population. They had produced minerals to the value of £713,000,000. Ten million acres were under crop. During last year Australia had produced 62,000,000 bushels of wheat. It had exported butter of the value of £2,387,000 and wool of the value of £23,000,000. Australia had 90,000,000 sheep, 10,000,000 cattle, and 2,000,000 horses. The oversea trade in 1908 represented £114,000,000.

A. D. 1909. — Proposed federalization of state debts. — On the 8th of September, 1909, the Government introduced a Bill in the House of Representatives for the amendment of the Constitution so as to enable the Commonwealth to federalize the State debts incurred since the inauguration of the Commonwealth, in addition to those then existing. The Premier urged that if the agreement was carried out the Commonwealth would be freed financially, and if the debts were taken over the *per capita* payments would be appropriated to meet the interest on the debts, the States making up any deficiency. The Bill was passed by the House on the 7th of October.

A. D. 1909. — Federal acquisition of the Northern Territory. — A Bill providing for the transfer to the Commonwealth of the vast unpopulated Northern Territory of the Australian Continent was before the Parliament of the Commonwealth during the last summer. In advocating its passage, the Minister for External Affairs explained that "the area to be transferred under the Bill was equal to France, Germany, Belgium, Switzerland, and Italy together. Port Darwin was nearer to Hongkong than to Sydney, and while the Northern Territory remained unpeopled it was a perpetual menace to Australia. The military authorities, Sir George Le Hunte, formerly Governor of South Australia, and Lord Northcote, formerly Governor-General of the Commonwealth, had all strongly urged its effective occupation, and Mr. Roosevelt had advised the Commonwealth to fill its 'empty north.'

"By the terms of the agreement the Commonwealth would assume responsibility for the debt of the territory, amounting to £2,725,000, and the accumulated deficit of the past administration, amounting to £600,000. The measure provided for the taking over of the Port Augusta-Oodnadatta Railway at a price of £2,240,000, and for the Commonwealth to undertake the construction of a trans-continental line connecting the territory with South Australia, at an estimated cost of £4,500,000. The latest reports showed that the interior of the territory was a fertile and well-watered white man's country, the healthiest in the tropical world, and that it was capable of carrying a large population." — *Despatch from Melbourne to The Times, London.*

A. D. 1909 (May-June). — Opening of the session of Parliament. — Programme of business proposed. — The political situation. — Coalition under Mr. Deakin against the ministry. — Its success. — Resignation of Premier Fisher and Cabinet. — Return of Mr. Deakin to power. — His programme. — The Federal Parliament was opened at Melbourne on the 26th of May. In the speech of the Governor-General, Lord Dudley, as reported to the English Press, he stated that "notwithstanding a decrease in the Customs and postal revenue, arrangements had been made to pay old-age pensions from July 1. Large financial obligations would be incurred in the near future and would demand careful attention. Parliament would be invited to consider the financial relations between

AUSTRALIA, 1909

the Commonwealth and the States, with a view to an equitable adjustment of them. Proposals would be submitted for the establishment of a Commonwealth silver and paper currency.

"The Governor-General went on to refer to the coming Imperial Defence Conference and the establishment of a General Staff for the Empire. Engagements had, he said, been entered into for the building of three destroyers, and Parliament would be asked to approve a policy of naval construction including the building of similar vessels in Australia and the training of the necessary crews. A measure providing for an effective citizens' defence force would be introduced at an early stage.

"It being recognized that the effective defence of Australia required a vast increase in the population, it was proposed to introduce a measure of progressive taxation on unimproved land values, leading to a subdivision of large estates, so as to offer immigrants the inducement necessary to attract them in large numbers.

"Proposals would be submitted for the amendment of the Constitution, so as to enable Parliament to protect the interests of the consumer while ensuring a fair and reasonable wage to every worker [see in this volume, LABOR REMUNERATION: THE 'NEW PROTECTION'] to extend the jurisdiction of Parliament in regard to trusts and combinations, and to provide for the nationalization of monopolies."

In an editorial article on the situation at this juncture in Australia, which was, it remarked, "as interesting as it is obscure," the London *Times* rehearsed the main facts of it as follows: "It will be remembered that towards the close of last year the withdrawal of its support by the Labour party led somewhat unexpectedly to the defeat and resignation of Mr Deakin's Cabinet. A Labour Ministry was subsequently formed, and was enabled by Mr. Deakin's refusal to combine with the Opposition against it to prorogue Parliament and get into recess. It has since elaborated a programme, announced by Mr. Fisher, the Prime Minister, to his constituents at Gympie, a few weeks ago, and recapitulated yesterday in the Governor-General's speech, which strongly resembles in most particulars the national policy advocated by Mr. Deakin when in power, and includes besides one or two additional proposals, such as 'the nationalization of monopolies,' more exclusively the property of the Labour party itself. These latter aspirations are probably more pious than practical, and are certainly not the issues on which the Labour Ministry is now to stand or fall. It will stand or fall by its proposals for the readjustment of the financial relations between the Commonwealth and the States, the establishment of a local flotilla designed for coastal defence, the creation of a citizen army based on universal training, and the imposition of a progressive land tax calculated to bring about the subdivision of large estates.

"This latter proposal is the only one in which the Labour party cannot claim to be carrying out the spirit, if not the letter, of Mr. Deakin's own programme; but, curiously enough, it does not seem to be the question on which Mr. Deakin has taken immediate issue with them. He is taking issue, we gather, first and foremost on the question of defence. The Labour Ministry is to be censured for refusing to make the offer of the Australian Dreadnought in the name of the Commonwealth. In taking this line Mr. Deakin has already made it clear that he has not in any way modified his previous views on the necessity of providing immediately for the creation of an Australian flotilla, but he considers that this necessity should in no way prevent Australia from adding in emergency to the strength of the British fleet. Speaking at Sydney last month, he said: 'Our defence needs not only our own flotilla but a fleet on the high seas as well. It is for us to recognize that by joining New Zealand and making our offer of a Dreadnought for the Imperial Navy . . . the Commonwealth must do its share to prove the reality of Australia's federal unity, to prove the unity of the Empire, to stand beside the stock from which we came.'

"On this point there is no obscurity. It presents a clear difference of view dividing Mr. Deakin and the two sections of the Opposition with which he has now coalesced from the policy of the Ministry in power. But while it provides a rallying ground from which the coalition may defeat the Ministry, it provides no subsequent line of united advance. The terms on which the coalition has been formed seem indeed to contemplate no definite policy at all."

The coalition against the Ministry of Mr. Fisher, referred to in the above, accomplished its purpose on the day after the opening of Parliament, by carrying a vote of adjournment which the Ministry accepted as a vote of want of confidence, and resigned. The former Premier, Mr Deakin, then resumed the reins of Government, with a following that does not seem to have been expected to hold together very long. On the reassembling of Parliament, June 23, the Prime Minister made a statement of the business to be submitted to the House, including along with other measures the following: "A Bill would be introduced establishing an inter-State commission which, in addition to the powers conferred by the Constitution, would undertake many of the functions of the British Board of Trade. It would also undertake the duties of a Federal Labour Bureau, which would comprise the study of the question of unemployment and a scheme for insurance against unemployment. The commission would also assist in the supervision of the working of the existing Customs tariff. . . . An active policy of immigration would be undertaken, it was hoped with the co-operation of all the States. . . . The appointment of a High Commissioner in London with a well-equipped office was necessary to take charge of the financial interests of the Commonwealth, to supervise immigration, and to foster trade and commerce. . . . The Old Age Pensions Act was to be amended in the direction of simplifying the conditions for obtaining the pensions. . . . The policy of the Government in the matter of land defence would be founded on universal training, commencing in youth and continuing towards manhood. A military college, a school of musketry, and probably a primary naval college would be established to train officers. The counsel of one of the most experienced commanders of the British Army would be sought for with regard to the general development and disposition of Australia's adult citizen soldiers.

"In view of the approaching termination of the ten year period of the distribution of the Customs revenue provided for in the Constitution, a temporary arrangement was being pre-

pared, pending a satisfactory permanent settlement of the financial relation between the State and the Commonwealth."

A. D. 1910. — The last year of a troublesome Constitutional Requirement. — Article 87 of the Constitution of the Commonwealth of Australia (see in Vol. VI. of this work), reads as follows: "During a period of ten years after the establishment of the Commonwealth, and thereafter until the Parliament otherwise provides, of the net revenue of the Commonwealth from duties of custom and of excise not more than one fourth shall be applied annually by the Commonwealth towards its expenditure. The balance shall, in accordance with this Constitution, be paid to the several States, or applied toward the payment of interest on debts of the several States taken over by the Commonwealth." This, which has been known as the Braddon section, has imposed a serious handicap on the Federal Government. As its working was described recently by an English Press correspondent, "it made the Commonwealth raise four pounds whenever it wanted to spend one. It made the States begrudge the Commonwealth every penny it spent, even out of its own quarter — for every penny saved out of that quarter was an extra penny for the States. And it prevented every State Treasurer from knowing, until the Federal Treasurer had delivered his Budget speech, how much money he was likely to get from Federal sources for his own spending."

At the end of the year 1910 the requirement of the Article will cease to be obligatory, and the Federal Parliament will be free to make a different appropriation of the revenue from customs and excise. Meantime the subject is under discussion, and in August, 1909, it was announced that a conference of the State Governments had come to an agreement — subject to ratification by the Federal Government — which provides for the annual *per capita* payment of 25s. in lieu of the three-fourths of the Customs revenue which has hitherto been returned to them. Western Australia to receive a special extra contribution of £250,000, decreasing by £10,000 annually until it ceases. Until the arrangement becomes operative, the Commonwealth may deduct from the statutory payments to the States £600,000 annually towards the cost of old-age pensions.

The readjustment of State shares in the Customs revenue is said to involve an annual loss to New South Wales of £1,000,000. According to a London newspaper correspondent, "the main effects to the Commonwealth are the abolition of the book-keeping system between the States, the power to issue Australian stamps, telegrams, &c., and the securing of about £2,300,000 a year, or more, additional revenue. The States lose revenue to a similar amount, but there is a transfer of old-age pensions to the amount of nearly £1,000,000, of which they are relieved. In three of the States, all of which suffer little by the change, the pensions are new, and a considerable boon to the people. But more than half the money sacrifice falls upon New South Wales, and it goes to relieve her less prosperous neighbours. Well, that is true Federation! Naturally the Southern States would have nothing but a *per capita* distribution from the Commonwealth, and the New South Wales Ministers agreed to it with their eyes open. At present the Commonwealth Government secures the further revenue needed. But whether this agreement will so distinctly suit that Government as the State populations grow is another matter."

A Bill for the required amendment of the Federal Constitution was introduced in the House of Representatives by the Prime Minister, Mr. Deakin, on the 8th of September. On the 4th of November, in opposition to the Government, an amendment to the Bill, limiting the duration of the agreement, instead of giving it force in perpetuity, was carried in committee of the whole by the casting vote of the chairman. On the 1st of December the Bill had its third reading in the Senate.

A. D. 1902-1903. — Notice by Austria of intention to end, in 1904, the Customs Union which formed part of the Ausgleich, or Federation Compact of 1867. — Language struggle in Austria. — The difficulties between Austria and Hungary, concerning a renewal of the *Ausgleich*, or federation compact of 1867, which created the dual empire, — some account of which is given in Volume VI. of this work, — were compromised in 1900 by an agreement which extended the *Ausgleich* temporarily until 1907 (see, in that volume, AUSTRIA-HUNGARY: A. D. 1899-1900). It was stipulated, however, in the agreement, that if no permanent settlement of the questions involved should have been reached by the end of the year 1902, either party to the *Ausgleich* should be free to dissolve the Customs Union that formed part of it after 1904, provided that said party should have formally denounced the compact prior to Jan. 1, 1902. The formal notice or denunciation was given accordingly by Austria, whose government gave notice that it would end the Customs Union unless better terms from Hungary could be secured. In Hungary the Independence party led by Ferencz Kossuth, the son of Louis Kossuth, was eager for the break, desiring no union with Austria beyond that of the two crowns on one head. The tariff question seemed insoluble, because

Hungary wanted protection for its agriculture, which Austria believed to be greatly disadvantageous to herself.

The prime ministers of the two Governments came to an agreement which was submitted to the two parliaments early in 1903, but obstruction in both bodies prevented any effective action. On other questions the antagonism was no less pronounced. The Hungarian Independence party was resolute in determining to separate the Hungarian from the Austrian army, making it distinctly Hungarian, under Hungarian officers and using the Hungarian word of command. This drew from the Emperor, in September, a public announcement that he must and would hold fast to the existing organization of the army. At length, in December, Kossuth agreed, for his party, to abandon obstruction on condition that Parliament should proclaim, as a principle, that "in Hungary the source of every right, and in the army the source of rights appertaining to the language of service and command, is the will of the nation as expressed through the legislature." But though obstruction from the Independence party ceased then it was continued by a Catholic party, on grounds of personal hostility to the Protestant Premier, Count Tisza, and the Government, deprived of authority to recruit the army, kept in service the men whose term had expired.

An almost equal deadlock of legislation prevailed in Austria, where the struggle over language questions between Czechs and Germans went fiercely on; while Croatia was full of rebellious spirit, excited by the Magyarizing policy of its Hungarian governor.

Twice, during 1903, the Hungarian administration underwent a change, the Szell Ministry giving way in June to one headed by Count Kuen Hedervary, he, in turn, being displaced by Count Tisza in October. The latter was a son of Koloman Tisza, who had formerly held the reins in Hungary for many years.

A. D. 1904. — Paralysis of Government in both divisions of the dual empire. — Legislation in both Austria and Hungary was paralyzed throughout 1904 by obstructive oppositions which nothing could pacify. In Austria it was the battle of Czech against German for language rights; but, in the end, the German Premier, Dr Körber, lost the support of his own race, by allowing Italian law-classes to be formed in the University at Innsprück, with a faculty of their own. He resigned on the last day of the year, and was succeeded by Baron Gautsch.

In Hungary the obstruction was maintained by a combination of three parties, — the Independence Party of Ferencz Kossuth, which is irreconcilable in its repudiation of the union with Austria, the Liberal-Conservative Separatists, so-called, led by Count Apponyi, and a Catholic People's Party, under Count Zichy. The extraordinary attitude of these practical anarchists, as they would seem to be, is indicated by a performance at the opening of the session of the Hungarian Parliament on the 13th of December, 1904, which is described in the *Annual Register*, as follows: "They entered the House before the usual time of meeting, assaulted the police when they endeavored to prevent some of the members from mounting the President's platform, tore down the woodwork, destroyed the furniture, and finally had themselves photographed, with the ex-Premier Baron Banffy at their head, in the midst of the ruin they had wrought. This extraordinary scene was described by M. Kossuth as 'a symbol of the political maturity of the Magyars, who, after asserting their rights, refrain from excesses;' and by Count Apponyi as 'an evidence of the importance attached to continuity of legal right in Hungary.' When the broken furniture was removed and the House was restored to something like its former appearance, the members returned; but all the attempts of the Government to speak were howled down by the Opposition." The Opposition which accomplished this paralysis of Government in Hungary numbered, in its three divisions, only 190 members, out of 451.

A. D. 1905-1906. — Continued deadlock, seated mainly in Hungary. — Resignation of Count Tisza. — The Fejervary Ministry. — Dissolution of the Hungarian Parliament. — Kossuth and his allies take office. — Universal male suffrage adopted in Austria. — The deadlock of political forces in the Dual Empire was prolonged through another year, Hungary being the main seat of the block. Elections for the Hungarian Diet, in January, went heavily against the Ministry of Count Tisza and strongly in favor of that section of the Opposition which bore the name of the Independence Party and which was led by Ferencz Kossuth. Count Tisza resigned, and the Emperor-King endeavored to make terms with Kossuth, Apponyi, and Andrassy under which the Government might be carried on with parliamentary support. This proved impracticable, especially by reason of the insistent demand of the Opposition for a separation of the Hungarian from the Austrian part of the imperial army, and the determination of the sovereign not to yield to that demand. Count Tisza and his colleagues were kept in office until June, despite a heavy vote of censure in the Diet, and then the Emperor appointed as Premier General Baron Fejervary, who commanded no more support than his predecessor had done. The majority in the representative chamber denounced the Ministry as unconstitutional, and issued a manifesto, calling on the people to withhold taxes and military service from this simulacrum of Government, which had no lawful claim to either. This was accepted as good counsel by great numbers of people, and grave embarrassments resulted from the non-payment of taxes.

In the August number (1905) of *The American Review of Reviews* Count Albert Apponyi, leader of one of the parties united more or less in the Hungarian Opposition, gave the Hungarian side

of the political issues with Austria. In part, he wrote: "The writer had the honor of delivering at St. Louis, at the Arts and Science Congress of last year, a short historical account of our relation with the Austrian dynasty. There are to be found the chief facts, which show: (1) That our forefathers called that dynasty to the Hungarian throne, not in order to get Hungary absorbed into an Austrian or any other sort of empire, but, on the contrary, under the express condition of keeping the independence and the constitution of the Hungarian kingdom unimpaired; (2) that this condition has been accepted and sworn to by all those members of the dynasty (Joseph II. alone excepted) who ascended the Hungarian throne; (3) that, nevertheless, practical encroachments on our independence, followed by conflicts and reconciliations, have been at all epochs frequent; (4) but that a juridical fact *never* occurred which could be construed into a modification of that fundamental condition of the dynasty's title to Hungary. . . . The physical person of the ruler is, in truth, the same in both countries, but the juridical personality of the King of Hungary is distinct and, as to the contents of its prerogative, widely different from the juridical personality of the Emperor of Austria. Hungary is the oldest constitutional country on the European Continent. The royal prerogative in her case is an emanation of the constitution, — not prior to it, — and consists in such rights as the nation has thought fit to vest in her king. In Austria, on the other hand, the existing constitution is a free gift of the Emperor, and has conferred on the people of Austria such rights as the Emperor has thought fit to grant to them. The title of 'Emperor of Austria-Hungary' . . . [sometimes used] is simply nonsense. The time-hallowed old Hungarian crown has not been melted into the brand new Austrian imperial diadem. That imperial title does not contain, to any extent, the Hungarian royal title. The Emperor of Austria, as such, has just as much legal power in Hungary as the President of the United States has. He is, juridically speaking, a foreign potentate to us.

"On these fundamental truths, no Hungarian — to whatever party he may belong — admits discussion. . . . The Liberal party, vanquished at the last elections, does not in the least differ from the victorious opposition as to the principles laid down in these pages; it only advocated a greater amount of forbearance against the petty encroachments which practically obscured them. That policy of forbearance became gradually distasteful to the country; seeing it shaken in the public mind, the recent prime minister, Count Tisza, formed the unhappy idea of gaining a new lease of power on its behalf by a parliamentary *coup d'état*. The rules of the House were broken, in order to prevent future obstruction, chiefly against military bills. This brought matters to an acute crisis. The parliament in which that breach of the rules had taken place became unfit for work of any sort, the country had to be consulted, and down went the Liberal party and the half-hearted policy it represented with no hope for revival.

"The army question, with its ever-recurring difficulties, is a highly characteristic feature of the chronic latent conflict between the Austrian and the Hungarian mentality. It amounts to this, that, as we are a nation, we mean to have an armed force corresponding to our national individuality, commanded in our language, and serving under our flags and emblems. It would be unnatural for any nation, and would be, in fact, an abdication of the title of 'nation,' to renounce such a national claim. The Austrians, on the other hand, — and, unhappily, their influence is still prevalent in this question, — not yet having abandoned the idea of a pan-Austrian empire, uncompromisingly adhere to the present military organization, which makes the German language and the imperial emblems prevalent throughout the whole army, its Hungarian portion included."

In September, 1905, the Emperor-King summoned the chiefs of the opposing coalition to Vienna and renewed his endeavor to make terms with them; but his own conditions, relative to the army, to the language of command and service in it, to the tariff relations between Austria and Hungary, and to other matters of dispute, were apparently as uncompromisable as theirs, and only intensified the bad feeling in the country.

A little later the Fejervary Ministry announced a programme of policy which offered concessions and many excellent measures, but all save one of them were scorned. That one was a proposal of universal suffrage, with direct secret balloting, which in both Hungary and Austria had now become a subject of wide popular demand. The agitation for it became clamorous in the later months of the year, especially in the Austrian towns. But the leaders of the Hungarian Opposition were supposed to be personally hostile to universal suffrage. "As representatives of the most educated, wealthy, and powerful race in the kingdom, they have long enjoyed absolute political control. But universal suffrage," says a contemporary journalist, "would so increase the non-Magyar elements in Parliament as to deprive the Magyar leaders of much of their ascendency. At present these leaders are strong enough to defeat the King's magnificent programme, announced by Baron Fejervary. But such a defeat would place them in an embarrassing position. They would have definitely assumed an attitude which belies their name of Liberal."

The Fejervary programme was well planned to be troublesome to the opponents of the Government. While not surrendering to their demand for the Magyar language of command in the Hungarian part of the Imperial army, it proposed that the men who do not speak that language should be trained in it as far as possible. And it included a number of other most important measures: for compulsory free education; for compulsory insurance of workmen; for small farm grants to the peasantry; for the conversion of mortgage debts that weigh on small land owners, and for various taxation reforms. Evidently the Opposition endeavored to keep public attention and public feeling focused on the claim for a distinct Hungarian army, with the Magyar language for its word of command. Kossuth, the dominating leader of the coalition against the Government, defined the argument for this claim. No mention, he said, is made of any common army in the agreement on which the Dual Empire is founded. The Hungarian Constitution vests in the Emperor of Austria, as King of Hungary, "all those things which refer to the commanding and administration . . . of the Hungarian army."

But the Constitution does not hint that the Hungarian army should be commanded in German. It has not specifically forbidden such a thing, but in another part of the Constitution it is provided that the language of public services in Hungary shall be Hungarian. And is not the army a "public service"? he asked. Besides, he explained: "A century ago the Hungarian magnates, generally, paid for their own soldiers, and ours was not, in the beginning, a State army. When the combination with Austria came about, the officers were of all nations, and the Austrians brought in many of their own. To tell the truth, our own Hungarians were too lazy — there is no other word for it — to take the trouble to reorganize and start a Hungarian army, so they left it to the Austrians for the time being. It was for this reason, and with the consciousness of this defect, that Article XI. expressly left the language of command to be determined, constitutionally, later. But we also expressly confined it within the limits of our own Constitution . . . and we spoke of a Hungarian army, not a common one."

The year 1906 opened with the discords of the situation in Hungary rather heightened than lessened, and on the 19th of February the Emperor dissolved the Hungarian Parliament, announcing that he did so for the reason that the parties of the Opposition had "persistently refused to take over the Government on an acceptable basis without violating the Royal rights as by law guaranteed." Disturbances on the occasion were prevented by strong forces of soldiery and police. Two days later the Austro-Hungarian tariff and a commercial treaty, both of which had been refused ratification in Hungary, were promulgated as of force, pending future action; and by various other arbitrary measures the Emperor-King assumed the right to prevent a governmental collapse. This attitude on the part of the sovereign appears to have produced a change of attitude among his opponents; for early in April M. Kossuth and Count Andrassy entered into an arrangement with him for the formation of a Ministry by themselves and their associates of the Coalition, with the understanding that the army question should be put aside until after the election of a new Parliament, to meet in May. At that session they promised to pass the budget, the new international commercial treaties, to maintain in every way the existing condition of things between Austria and Hungary, to permit the passage of a bill providing for universal manhood suffrage, and then for Parliament to terminate its labors, allowing the election of a new one under the universal suffrage system, the Cabinet to be reformed conformably to the desires of the parliamentary majority. Thereupon the Emperor-King requested Dr. Alexander Wekerle, a former Hungarian Prime Minister, to form a Cabinet, including in it Kossuth, Apponyi, Andrassy, and Zichy. At the election, held soon after, the Independence party won about 250 out of 400 seats. The new Parliament was opened on the 22d of May.

In Austria, the grand event of 1906 was the franchise reform, which extinguished the whole system of class representation and established a representative Parliament on the broad basis of a manhood vote. "Every male citizen who had completed his twenty-fourth year and was not under any legal disability was entitled to be registered as a voter after one year's residence.

Every male, including members of the Upper House, who had possessed Austrian citizenship for at least three years and had completed his thirtieth year, was eligible for election as a deputy; but members of the Upper House elected to the Lower could not sit in both at once. Voting was to be direct in all provinces. In Galicia, however, every constituency would return two deputies, each voter having one vote, so as to permit of the representation of racial minorities, the population being composed of Poles and Ruthenians. Voting was to be obligatory under penalty of a fine wherever a provincial Diet should so decide. This Bill was passed, in the face of the opposition of the Conservative and aristocratic members of both Houses and of the extreme representatives of the various nationalities, mainly through the influence of the Emperor. He regarded it as the only way to get rid of Parliamentary obstruction, and the best means of stimulating loyalty to the dynasty."

Two changes of Ministry occurred in Austria during 1906, Baron Gautsch, as Premier, giving way to Prince Hohenlohe in April, and the latter resigning in June, to be succeeded by Baron Beck. Count Goluchowski, who had been Austro-Hungarian Minister of Foreign Affairs since 1895, resigned in October, because of ill-feeling against him in Hungary, and was succeeded by Baron Aehrenthal.

A. D. 1906 (January-April). — At the Algeciras Conference on the Morocco question. See (in this vol.) EUROPE: A. D. 1905-1906.

A. D. 1907. — Effects of universal and equalized suffrage in Austria. — Elections were held in Austria a few months after the passage of the law which introduced equal and universal male suffrage, and the character and disposition of the elected Reichsrath, which met in June, 1907, afforded indications of some remarkable effects from the extension and equalizing of the franchise. It was expected, of course, to popularize the Reichsrath, and break the domination of the upper classes in that body; but, according to reports, it has done much more. Prior to 1896, the members of the Abgeordneten or lower house of the Reichsrath, then numbering 353, were all divided into four sections, elected by four classes of people, as follows: 85 elected by the owners of large landed estates, 22 by chambers of commerce and manufactures; 115 by town taxpayers assessed for five florins of annual tax, and by doctors of universities; 131 by country taxpayers assessed for five florins yearly. In that year the membership was enlarged by an addition of 72, who were to be representatives of the whole people, elected by universal male suffrage, while the old classified representation remained as before. The new law has swept away the whole system of a classified representation, and the representative house is now leveled to one footing, as a body of deputies from the people at large.

The most conspicuous effect of this in the elections appears to have been a sudden break of the power which the German element in the much-mixed population of the Austrian dominion has been able to exercise hitherto. Hence, it must be the fact that the Germans hold far more than their proportion of the property which the old system represented, and derived from that, formerly, a weight in the Reichsrath which their numbers cannot give them on the equalized vote.

Altogether, in the various Cisleithan states — the two Austrias proper, Bohemia, Moravia, Galicia, Silesia, Salzburg, Tyrol, Styria, Carinthia, Carniola, Istria, Dalmatia — they form a little more than one third of the total population, the other two thirds being mainly Slavonic, in many divisions, principally Czech, Polish, and Slovene.

Ten years ago the Austrian Reichsrath was offering a spectacle of factious disorder so violent that it drew the attention of the world, and was made entertaining as well as interesting by Mark Twain, then a resident for some months at Vienna and writing descriptions of the scenes of tumult that went on before his eyes. See in Volume VI. of this work AUSTRIA-HUNGARY: A. D. 1897 (OCTOBER-DECEMBER). The specially bitter race quarrel was over a language question between the Germans and the Czechs. The Czechs had succeeded in forcing the government to give their own tongue its rightful public use in Bohemia, where the German had displaced it officially for a long time past. The determination of the Germans in the Reichsrath to undo this change practically paralyzed that legislature for a number of years, and seemed to be driving the realm of the House of Austria to inevitable wreck.

Indeed, some factions of the Germans made no concealment of their wish for such a wreckage, out of which the German Kaiser at Berlin might pick the pieces that it pleased him to take. They have never doubted the sympathy and countenance of their kinsmen in the neighboring empire, and that has emboldened them to an attitude which a minority, in other circumstances, would hardly take.

Within the last few years there has been a quieting of the antagonism; but most observers of the state of things in Austria have looked for serious troubles to arise, whenever the great personal influence of the present Emperor is withdrawn by his death. The imperial dominion of the Austrian archdukes could not be dissolved and its parts redistributed without subjecting the peace of Europe to such a trial as it never yet has gone unbrokenly through. If the Germans lose disturbing power in the Reichsrath, as the late elections are said to indicate that they will, racial factions give place to political parties, as a consequence of the equalized and universalized suffrage, then Austria may possibly be welded into a nation, and her neighbors may not be tempted to quarrel over her dismembered remains.

A. D. 1907. — Final negotiation of a new financial Ausgleich. — Adjustment of the vexed questions of tariff, joint debt, and revenue quotas. — The long struggle toward a readjustment of the *Ausgleich* or Agreement of 1866 between Austria and Hungary, on its financial side, was brought to a close on the 8th of October, 1907, by the signing of a new agreement that day. It continued the common customs arrangement until 1917, and provided that commercial treaties concluded with foreign powers must be signed by the representatives of both Austria and Hungary — a concession by Austria to Hungary. Hitherto the Austrian Minister of Foreign Affairs had conducted such negotiations. On its part, Hungary made the minor concession of conforming its stock exchange laws to those of Austria. Previously, excise duties had been common to both states; henceforth they were to be left to each state to be determined and levied. In the joint fiscal burden Hungary's contribution was increased from 34.4 per cent to 36.4 per cent. Provision was made for a court of arbitration, composed of four Austrian and four Hungarian members, who must chose a ninth member as chairman.

A. D. 1908-1909. — Hungarian politics. — The State Bank question. — Split in the Independence party. — M. de Justh, a new party leader. — Attitude of M. Kossuth. — Deadlock returned. — The complete deadlock of legislation in Hungary from 1904 into 1906 was overcome but partially, and not for long, by the patched-up coalition which started the wheels of Government anew, under Dr. Wekerle, in April, 1906, as related above. In the course of the next two years the Wekerle Ministry accomplished some useful legislation, besides achieving the ratification of the important tariff and commerce agreement which settled long-troublesome disputes with Austria; but its very slight coherent energy was exhausted soon, — too soon for its promise of universal suffrage to be fulfilled. Practically, it seems to have been at the end of its capabilities for some time before the spring of 1909, when, in April, it resolved to resign, and began an effort to escape from office which went on through the year without success. The Crown could induce no one to take from Dr. Wekerle the impossible task of government, and kept that unfortunate gentleman in his powerless place.

In Austro-Hungarian politics a new contention had now been developed, which divided the Independence party, led hitherto by M. Kossuth and Count Apponyi, so that it acquired on the new question a third more extreme sectional chief, in the person of the President of the Chamber, M. de Justh. The followers of M. de Justh were demanding the transformation of the existing joint State Bank into two autonomous banks, connected in operation, but distinctly Hungarian in one organization and Austrian in the other. This demand was opposed in Austria as determinedly as the obnoxious demand for army use of the Hungarian language in Hungarian regiments, and the Crown would give sanction to neither. Apparently, neither Kossuth nor Apponyi would act with M. de Justh on the bank question, and the Independence party lost, consequently, its advantage as the largest of the various parties in the Chamber.

In November, when a test of numbers occurred at a conference of the party, the following of M. de Justh was found to be largely in the majority. A resolution demanding the separate Hungarian State Bank was adopted by 120 votes against 74, despite a declaration by M. Kossuth that he would quit the party if it took that stand. According to a Press report of what occurred at the conference, the burden of Kossuth's speech to the conference was "that without his name and his leadership the party would never have obtained the majority, and that many of those who were about to vote against him owed their seats in Parliament to his recommendation. His speech was indeed a scarcely-veiled threat that when deprived of the support of his name his opponents would find themselves forsaken by their constituents. The defeated minority proceeded forthwith to constitute itself as the 'Independence, 1848, and Kossuth party,' as distinguished from

AUSTRIA-HUNGARY, 1909

the 'Independence and 1848 party,' over which M. de Justh now reigns supreme."

Immediately after his triumph at the party conference M. de Justh resigned the presidency of the Hungarian Chamber and presented himself for reelection. In that test he suffered defeat, the combined forces of the Andrassy Liberals, the Clerical People's party, and the Kossuth group casting 201 votes against 157. The Croatian Deputies abstained, owing, it is said, to a promise made to them by Dr. Wekerle that, if they remained neutral, he would deliver Croatia from the oppressive rule of the Ban, Baron Rauch. The political situation in Hungary was thus more than ever confused.

A. D. 1908-1909.—The "Greater Servia Conspiracy."—Alleged treasonable movement of Servians in Croatia.—The Agram trials.—The following telegram to the newspaper press, from Agram, Austria, October 5, 1909, reported the conclusion and the result of a long prosecution which had drawn wide attention and excited deep feeling in many parts of Europe for a full year: "After a trial lasting seven months, sentences were handed down to-day in the cases of fifty-two school teachers, priests, and other persons charged with connection with what is known as the 'Greater Servia conspiracy.' The prisoners were accused of high treason in participating in a movement for the union of Croatia, Slavonia, and Bosnia to Servia, even carrying the propaganda among the troops of the Austro-Hungarian army. Thirty of the accused are condemned to terms of rigorous imprisonment varying from four to twelve years, twenty-two were acquitted. The persons condemned have given notification of appeal."

On the 31st of December it was announced from Vienna that all but two of the condemned had been set at liberty pending their appeal, this being consequent on the revelations of forgery in the documents on which they were convicted. See EUROPE: A. D. 1908-1909 (OCT.-MARCH) at close of article.

A. D. 1908-1909.—Arbitrary annexation of Bosnia and Herzegovina.—Violence to the Treaty of Berlin.—The European disturbance and its settlement. See (in this vol.) EUROPE: A. D. 1808-1809 (OCT.-MARCH).

A. D. 1909.—The language quarrel in Austria.—"Amid deafening uproar from the Czech Radicals, the Austrian premier has submitted to the Chamber [February 3, 1909] two bills for the regulation of the Bohemian language question. The bills, which in present circumstances appear to have little chance of becoming law, divide Bohemia into 239 judicial and 20 administrative districts. Of the former, 95 are German, 138 Czech, and the remainder mixed, while of the administrative districts five are German, 10 Czech, and five mixed. In the German districts German is to be the predominant language, and in the Czech districts Czech, while in the mixed districts, which include Prague, the two languages are placed on an equal footing. Provision is, however, made for the use of either language if necessary throughout the whole province."—*N. Y. Eve. Post.*

A telegram to the same journal from Vienna, March 10, reported: "The Lower House of the Austrian Parliament, which closed on February 5, after a scene of extraordinary turbulence arising from old racial ill-feeling between the Germans and the Czechs, reopened to-day with every promise of a continuance of the disorders. The galleries of the House were crowded with partisans of the two factions, and as soon as the ministers appeared hostile shouts came from the Czech and radical benches, drowning the cheers of the members of the Left party and the Poles.

"Premier von Bienerth, amid an incessant tumult, declared the nineteenth session opened, saying he hoped the work would be crowned with success and the proceedings not disturbed. His statement sounded ironical in face of the unbroken uproar."

The following is a later Press despatch, November 2, from Vienna: "The Emperor has accepted the resignations of the two Czech Ministers in the Austrian Cabinet, and has sanctioned the laws adopted by the Diets of Upper and Lower Austria, Salzburg and Vorarlberg, to establish the unilingual German character of those provinces. In the name of the Czech people the Czech National Council addressed yesterday a telegram to the Emperor begging that the laws might not be sanctioned, since, runs the telegram, they affect the honour of the Czech people and must cause constant racial strife both in the provinces and in Vienna, 'which is not only the capital of Lower Austria, but is also the capital of the whole empire and of all its races. These laws are a dangerous beginning of constitutional changes in your Majesty's glorious empire.' A copy of the telegram was sent to the Polish leader, Dr. Glombinski, with an 'expression of the deepest regret that members of the Polish party should have supported as Ministers these anti-Slav laws.'"

A revival of turbulent obstruction to legislative proceedings in the lower house of the Austrian Reichsrath led, at last, in December, to the enactment of rules which so enlarge the powers of the speaker as to enable him to suppress factious obstruction and to suspend deputies who outrage the decencies of behavior in the Chamber. The measure was limited in its operation to a year, but is expected to be prolonged

A. D. 1909 (Dec.).—Alleged plan of a Federated Triple Monarchy.—"There has been circulated in Paris a curious document, full of figures, supposed to be based on authentic information. This document relates to the plan attributed to Prince Lœntur and Count d'Aehrenthal to change the dual monarchy of Austria-Hungary into a triple monarchy. Croatia, Bosnia-Herzegovina, and Dalmatia, according to the scheme, would be united into an independent and constitutional kingdom, corresponding to the old Illyria. The double state, Austria-Hungary, would be changed into a three-fold Austria-Hungary-Illyria. A Slav nation would thus stand side by side with the Teutonic nation of Austria and the Magyar nation of Hungary. Its extent would be a good deal smaller, a little more than one-third, of the other two, and its population about a quarter of the Hungarian and one-sixth of the Austrian. According to this document, which is declared to have strong claims to be considered authentic, this change would no doubt be followed by a further one. Bohemia and Moravia would also want home rule. The monarchy would thus become a kind of Federal state. Hungary alone would remain standing strong and united as the centre and leader of this federation."—*N. Y. Eve. Post, Dec.* 29, 1909.

A. D. 1909-1910. — The Hungarian situation. — Late in December, Dr. de Lukacs, who had served in the former Szell Ministry, was persuaded by the Crown to undertake the formation of a Government which might hope to secure some measure of parliamentary support, and on the 4th of January he was formally appointed Prime Minister; but his undertaking ended on the 7th, when he resigned, and Count Khuen Hedervary was heroic enough to accept the apparently hopeless task. The Hedervary Ministry suffered defeat on the 28th of January, when a vote of no confidence was carried by M. de Justh, and the King thereupon prorogued the chamber until March 24. A majority of the members, however, remained in session until they had adopted a resolution declaring the Government to be unconstitutional and forbidding the payment of taxes to it. Such is the Hungarian situation at the time this record of events goes to print — February, 1910.

A. D. 1910. — The Archduke Franz Ferdinand, Heir Apparent to the thrones. — Since the tragically mysterious death (Jan. 30, 1889) of the Emperor's only son, Rudolph, the heir apparent to the several Hapsburgh crowns has been the Archduke Franz Ferdinand, son of the Emperor's brother, the late Archduke Karl Ludwig. In order to contract a morganatic marriage, some years ago, he renounced the right of his children to the imperial and regal succession; but it is believed that he will force the regularizing of his marriage and the annulling of his renunciation, as he is reputed to be a man of strenuous will. According to report, also, he is strongly anti-democratic and reactionary, and extremely likely to give trouble as a sovereign to this democratic generation.

Bulgaria and Servia: A. D. 1905. — Customs Union Convention between the two States. — Anger and Hostility of Austria. — Dictatorial demands on Servia. — The frontier closed to trade. — "Servia and Bulgaria, in July, 1905,

BALKAN AND DANUBIAN STATES

signed a Customs Convention, creating a customs union and breaking down the tariff barriers between the two countries. The age is the age of union in business, in finance, in every department in life. . . . Not only has the Customs Convention between the two countries, which is, after all, but the first step towards a real zollverein, demonstrated the trend of international development, but it has enabled the world to see clearly the relations existing between the small Balkan States — unprotected by any guarantee of neutrality — and their great neighbours. It has been made clear that, despite all the many protestations in Vienna of goodwill to the Balkan States, Austria does not wish to see real progress in that part of Europe. And what is true of Austria is true also of Russia. . . .

"True to her unvarying policy, Austria no sooner heard of the Customs Convention than she set to work to destroy it, claiming that it damaged her commercial interests. By her unjust attempts at coercion, plain and undisguised, Austria brought into being a political bond between Bulgaria and Servia which was not in existence at the time of the signature of the Customs Convention. . . .

"In the past Servia has fallen more and more completely under the domination of Austria; her geographical position and her internal troubles made her an easy prey for Vienna, and had it not been for the desire of Russia to share the dainty morsel, Servia would in all probability have gone ere this to join the Servian provinces of Bosnia and Hersegovina as an integral part of the Austrian Empire. Her commerce is almost solely with Austria or Hungary, and her finances are under the control of a French-Austrian syndicate. It might therefore well seem incredible that the small State, bound thus hand and foot to the oppressor, should dare to oppose her desire for liberty to the Austrian desire for gain, political, commercial, or financial. But just as under the Turkish rule the Servians began to fight for freedom in small bands so the Customs Convention with Bulgaria represents the first blow for economic and political freedom. . . . While the Convention represents an effort on Servia's part to free herself from the thrall of Austria, it was not directed against that country. It seeks rather to open up new markets and new means of export, for which there was sufficient reason in the fact that there was no increase in the export of Servian goods to Austria during the last few years, some of which even showed a decrease. Commercial development demanded that new markets should be sought, and a new route *viâ* Bulgaria to the Black Sea ports be opened up. . . .

"On January 8th the Austrian Minister in Belgrade presented a note from his Government making it a condition that in order that the negotiations for a commercial treaty should not be suspended, the Servian Government should engage not to bring the Customs Union before the Skouptchina before the conclusion of the treaty. At the same time he indicated the disastrous results of refusal on Servia's part. The Servian Cabinet accepted the Austrian proposals as to the postponement of the presentation of the Customs Union to the Skouptchina, and promised also to consider the modification of the Convention in so far as these modifications were not contrary to the nature of the Customs Union. The Austrian Minister recommended a change of the reply, because his Government would not accept it as it stood. On the Servians refusing to make any change, he gave them till the afternoon of the next day to repent, with the alternative that the treaty negotiations would be broken off and the frontiers closed. . . . Servia insisted upon maintaining her dignity as a nation, while expressing her readiness to meet Austria in every possible economic way. Furious at the Servian refusal, the Viennese authorities ordered the closing of the frontiers to Servian cattle, pigs, and even fowls. This last restriction was contrary to the existing treaty of commerce between the two countries which does not expire till March 1st, 1906. The cattle and pigs were excluded under the arbitrary veterinary convention, it having been found that a pig had died of 'diplomatic swine fever,' a contagious disease, prevalent when Servia opposes Austrian desires. The cool indifference with which Austria ignored her treaty obligations with Servia led to a profound feeling that it was hardly worth making sacrifices in order to obtain a new commercial treaty, which could be as equally well ignored. Patriotic fervour waxed great in Servia, and the people prepared to make a good fight for their liberty. But it was never overlooked that the relations with Austria were of great and vital importance." — Alfred Stead, *The Serbo-Bulgarian Convention and its Results* (*Fortnightly Review, March*, 1906)

Herzegovina: A. D. 1908.—Annexation to Austria. See (in this vol.) EUROPE: A. D. 1908-1909 (OCT.-MARCH)

Montenegro: A. D. 1905. — Prince Nicholas's Constitution, and his operation of it. — "When Prince Nicholas heard that the Czar had promised his people a Constitution, he, disciple of Russia in all things, determined to outdo Nicholas II., and, as a matter of fact, granted his little country [December, 1905] a more liberal Constitution than that which Russia enjoys. In Russia certain things were not to be discussed in the Duma. In Montenegro, everything could be discussed. When this principle began to be put in practice, however, although in the most loyal and respectful manner, the Prince took offence and began to imprison politicians who dared to ask for information about the financial condition of the principality. As a consequence, he made himself unpopular among what in Russia would be called the 'intelligencia,' but, being a man of far stronger personality and more striking genius than the Czar of Russia, he is still feared and obeyed. He is, in fact, an old soldier with all the old soldier's preference for barrack discipline as the only method of rule, and in thinking that he understood what is meant by the words 'constitutional government' he deceived himself, for he does not understand, and being an old man surrounded by flatterers, he is perhaps less able to understand now than he would have been thirty years ago.

"If he had been more adaptable, and had taken greater pains to instruct his people in the methods of parliamentary government, the constitutionalist movement might have been a success, but unfortunately he withdrew from Cettinje in a 'huff' when the Skupschina passed some criticisms on the government, and declined to cooperate with the deputies, though they were all very anxious to have his advice. It is stated, on the other hand, however, that the Skupschina interpreted in too large a sense the

Constitution that had been granted to them "— *Special Cor. N. Y. Eve. Post, Cottage, Dec.* 15, 1908.

A. D. 1908-1909. — With Servia against Austrian annexation of Bosnia and Herzegovina. See (in this vol.) EUROPE: A. D. 1908-1909 (OCT.-MARCH)

Roumania: A. D. 1866-1906. — Development of the country under King Charles I. and his admirable Queen. — "The efforts of King Charles have been principally devoted towards internal improvement. Railways have increased and improved since the State purchased them in 1886, at an outlay of 237,500,000 francs. Then there were 1,407 kilometres; in 1903 these had increased to 3,177. In the Dobrudja, given to Roumania after the war with Turkey, the King has created a great commercial port at Constantza, whence the grain and petroleum of Roumania can flood the market. From here will radiate a Roumanian merchant marine, which will bear the Roumanian flag to all parts of the world. Agriculture has been carefully cherished, and to-day the country is one of the principal grain exporting countries of the world, and the lot of the peasant, formerly so low, has been improved. An educational system has sprung into being, owing much to the direct support and inspiration of the Royal family. The finances have been put on a stable footing, and although the nation has already acquired a sufficiency of debt, the future is not at all dangerously beset. Thanks to the discovery of extensive petroleum fields, Roumania has been strengthened and raised from the position of a country relying solely on the rain and sun for its prosperity; while thanks to the King's indefatigable efforts and unceasing watchfulness, the petroleum industry has been protected from becoming the monopoly either of the ruthless Standard Oil Trust or of the politically guided and government supported German Bank. Had King Charles done nothing else for Roumania, his determined and wise action in this question would have earned him all praise. But whether it be in the question of the Danube, with its international Commission, or of the transformation of the twelve enormous Crown lands, dispersed over the kingdom, into national and social models, to see and follow — a work due principally to M. Kalindero — the King's interest in all things which directly or indirectly touch Roumania is unabated.

"And what manner of man is this, who has thus created a European State out of the remnants of a land cursed by a Turkish rule and Phanariot sway? First and foremost he is always a Hohenzollern, swayed by his obedience to duty, and based upon that Hohenzollern saying: 'It is not enough to be born a prince, you must show that you are worthy of the title,' and second, he is ever a true Roumanian, who has caught much of the inspiration of those great former Roumanian leaders and warriors. His youth was one of discipline and healthy education, while the influence of his father on his character can never be overestimated. Every inch a king, he never forgets that he is always also a man — personal animosities never cloud his national judgment. An indefatigable worker and on an organised plan tending towards definite ends, King Charles devotes his whole time to his never-ceasing task. By his marriage to Princess Elizabeth of Wied' [known in literature as Carmen Sylva] 'a marriage so non-political as to make it a political event of the first importance,' he brought to Roumania a queen who made herself beloved of all, and speedily became the centre of all charitable ideas and works." — Alfred Stead, *King Charles I. of Roumania* (*Fortnightly Review, July*, 1906).

A. D. 1902. — Oppression of the Jews. — Appeal of the United States to the signatories of the Treaty of Berlin. — On the 11th of August, 1902, Mr. John Hay, Secretary of State in the Government of the United States, addressed a communication to the American Ambassadors and Ministers in Great Britain, France, Germany, Austria-Hungary, Russia, Italy, and Turkey, whose governments were parties to the Berlin Treaty of 1878, directing that it be read to the proper ministers in the governments of those countries. The communication related to the treatment of the Jews in Roumania, which had long been a matter of deep concern to the United States, not only from sympathy with the persecuted people, but also because of the state in which it drove them as emigrants to this land. An abridgment of Secretary Hay's despatch, published at the time, renders its substance as follows:

"As long ago as in 1872 this country protested against the oppression of these Jews under Turkish rule. The Treaty of Berlin it was supposed would cure this wrong by the provisions of its forty-fourth article, which prescribed that 'in Roumania the difference of religious creeds and confessions shall not be alleged against any person as a ground for exclusion or incapacity in matters relating to the enjoyment of civil and political rights, admission to public employments, functions and honors, or the exercise of the various professions and industries in any locality whatsoever. These prescriptions, however, have, in the lapse of time, been rendered nugatory as regards the native Jews of Roumania. Apart from the political disabilities of the Jews in that country, and their exclusion from the liberal professions, they are denied the inherent rights of man as a breadwinner in the ways of agriculture and trade. They are prohibited from owning land or from cultivating it as common laborers; they are debarred from residing in the rural districts, and many branches of petty trade and manual production are closed to them in the cities. They have become reduced to a state of wretched misery. The experience of the United States shows that the Jews possess in a high degree the qualities of good citizenhood. No class of immigrants is more welcome to our shores when coming equipped in mind and body, but when they come as outcasts, made doubly paupers by physical and mental oppression in their native land, their migration lacks the essential conditions which make alien immigration either acceptable or beneficial. Many of these Roumanian Jews are forced to quit their native country, and the United States is almost the only refuge left to them. They come hither unfitted by the conditions of their exile to take part in the new life of this land, and they are objects of charity for a long time. Therefore the right of remonstrance against the acts of the Roumanian Government is fairly established in favor of this Government. This Government cannot be a

BALKAN AND DANUBIAN STATES

tacit party to what it regards as an international wrong. It is constrained to protest against the treatment to which the Jews of Roumania are subjected. The United States is not a signatory to the Treaty of Berlin, and cannot, therefore, appeal authoritatively to the stipulations of that treaty, but it does earnestly appeal to the principles consigned therein, because they are the principles of international law and eternal justice."

A. D. 1907. — Agrarian and anti-Semitic riots. — Serious riotings of the peasants of Roumania, in both Moldavia and Wallachia, occurred in April, 1907. Before the rising could be suppressed more than 100,000 troops were employed; the capital, Bucharest, was in a state of siege, and martial law was proclaimed throughout the country. At first the character of the uprising seems to have been purely agrarian. The peasants demanded land at low prices and tried to throw off the yoke of the middlemen, who are mostly Jews. As the revolt spread, villages, farms, and even some towns were plundered and destroyed by wholesale. Hundreds of peasants were killed, and in several sections a state of real war existed for more than a week. King Charles issued a proclamation to his people promising the redress of their grievances. The Conservative ministry resigned on March 24 and a Liberal government was at once formed under the presidency of Dr. Sturdza.

Servia: A. D. 1901-1903. — Royal Constitution-making and unmaking. — The character of the Servian monarchy, and the value to the nation of its king-made Constitution, may be judged from the following report, May 12, 1903, to the State Department of the United States Government, by its Minister at Athens, who has the care of American interests at Belgrade: "The Servian constitution now in force is that which was granted the country by King Alexander on April 6–19, 1901. Under this constitution the influence of the radical party had gradually increased to such an extent that the King thought it was dangerous to the welfare of the country. For some time there were rumors to the effect that a new constitution was in contemplation and would probably be put into force on the anniversary of its predecessor. More or less excitement was caused by these reports, and in consequence the King determined to act at once.

"On the afternoon of March 24–April 6 last [1903] a royal proclamation was issued to the Servian people, explaining the King's views of the situation, suspending the constitution referred to above, annuling the ukase of April 6, 1901, and all subsequent ukases relating to the election of senators, retiring all the members of the council of state, dissolving the Skupshtina (national chamber of deputies), annulling the election of all senators chosen for the period 1901–1906, annulling various laws relating to the liberty of the press, the election of deputies, etc., and putting into force certain laws which had previously been repealed.

"The next morning a second proclamation was issued, putting the same constitution in force again, and directing the life senators to elaborate a provisional law for the election of senators and deputies, who should hold office, respectively, until September, 1909, and May, 1907.

"The date for the elections has been fixed for the first part of June. It is considered probable that the Radical members of the Government (four ministers, I believe) will soon withdraw from the cabinet."

A. D. 1903. — The murder of King Alexander, Queen Draga, her brothers, and two ministers of state. — The military plot. — King Alexander, who received the Servian crown, as a mere boy, by the abdication of his father, the erratic King Milan, in 1889 (see, in Volume I. of this work, BALKAN AND DANUBIAN STATES: A. D. 1879–1889), began his reign autocratically, but attempted twelve years later, to propitiate popular favor by the grant of a liberal constitution, in 1901. This failed, however, to win the good will of his subjects, and he annulled it in April, 1903, with much of the legislation it had produced. This intensified public feeling against him, and against his unpopular Queen, — the former lady-in-waiting at his mother's court, Madame Draga Maschin, his marriage to whom in 1900 is related in volume VI. of this work (see BALKAN AND DANUBIAN STATES: SERVIA, in that volume). There were fears of an intention to force recognition of Queen Draga's brother as heir apparent to the crown, and feeling in the army became especially bitter against both king and queen. The outcome was an awful tragedy of murder on the night of June 10–11, 1903, when a party of officers broke into the palace and slew, with barbaric ferocity, the King, the Queen, the Queen's brothers, the Prime Minister, and the Minister for War. The following account of the horrible tragedy appeared in the next issue of *The Contemporary Review:*

"All traces of the midnight carnage in the palace of Belgrade have been cleared away. The Pretender for whose benefit it was perpetrated comes in. First proclaimed in the midst of the still warm corpses, the title of military acclamation has been ratified by a National Assembly, convened by the Pretorians almost simultaneously with the massacre to meet three days after that event, and in the palace where Colonel Maschine and his lieutenants, acting in the names of outraged national dignity and social purity, put to shame human nature, Karageorgevich, whose career as a Pretender in some points resembles that of Louis Napoleon, accepts the proffered crown. The telegraphic agencies have informed us that order reigns at Belgrade, and that Peter I. has entered his capital amid demonstrations of public joy. The representatives of the Press of Europe, numbering about a hundred, were, through the civility of a palace official who witnessed the nocturnal invasion, taken through the theatre of one of the most revolting crimes of modern history. They were minutely informed of the circumstances connected with it, saw the smashed doors and floors where dynamite tubes had exploded, the pistol shots in walls and ceilings; the timepieces shaken by the explosion had stopped at five minutes past one on the morning of the 12th June. The palace official took them into the little wardrobe room in which the King and Queen had hidden themselves, and, when found, met their doom unshriven, offering no resistance. . . .

"Officers who had studied in the Zurich Polytechnic school knew how to use dynamite without injury to themselves when they wanted to break in doors massive as those of a church. Those who had been told off to cut the electric

BALKAN AND DANUBIAN STATES

wires communicating with lamps had indiarubber gloves. They searched by the light of composite candles they had brought in their pockets for the hiding-place of the King and Queen. When they discovered the fugitives, some of the officers held high the candles for their comrades to lay on and not spare the unfortunate pair. There was no attempt to resist. All Alexander wanted was 'to die with Draga,' and this elevated him into the region of romance. It may hereafter furnish a theme to Servian bards. Another modern circumstance makes one's flesh creep. The bodies, flung out of a window, lay on a garden walk until dawn, when a soldier received an order to wash them there with a fireman's hydrant, and when they had been cleansed to lay them on the tables of the palace kitchen for dissection. The surgeons had been requisitioned to come there at five o'clock. . . .

"At the post-mortem in the palace kitchen at Belgrade, the surgeons counted in the body of Alexander six revolver wounds, each deadly, and forty-two sword wounds. Draga received two pistol balls and sixty-two sword cuts and slashes. She had been cut to pieces, but they left her face unmutilated. And — still more frightful — her corpse bore black and blue marks that testified to a merciless pounding with strong fists. The regicides gave so many conflicting accounts of their adventure that one did not know what to believe. It is now certain that the King and Queen were defenceless, that they at once on being aroused by the dynamite took refuge in her wardrobe room, and that they never sought to escape by the roof, and did not run through a long suite of rooms, slamming the doors after them. They had not a moment's time to utter a prayer.

"Draga's brothers received a five minutes' respite to make their souls. Nicodemus, the eldest, for whom Mademoiselle Pach mourns in Brussels, asked for cigars and for leave to embrace his brother. He and Nicholas faced unflinchingly a firing party, casting away the cigar ends as they stood before a wall. . . .

"Colonel Maschine, who figures as the ringleader in the conspiracy, had been in the inner circle of King Milan, who thought him a valuable officer. Milan, a man with considerable ability and without his match in playing an intricate and difficult diplomatic game, had been educated in his mother's fast set in Vienna, and at a Paris lycée. . . . Military force as a means of government recommended itself to his barbarous mind. It may be that he saw in Maschine a man suitable for *coup d'état* work. An ostensible reason for taking him into favour was Maschine's bravery in the campaign against Bulgaria and his personal fidelity to Milan, as twice evinced in saving his life. The partiality of the King buoyed up Maschine's hopes of a brilliant military career. Death overtook Milan, who so often had escaped poison and assassin's bullets, on his way to Belgrade, where he was to have set Alexander aside and remounted the throne. His unexpected decease blighted the colonel's prospects, inasmuch as Draga gained thereby uncontrolled influence over the King. She and the Maschines had long kept up a bitter feud. Barbarians like to brood over their grievances, real or imaginary. Colonel Maschine could not forget or forgive, and his pride prevented him from trying to propitiate her when she let him know that he thought her more intractable than she really was. He had set about the slander that she poisoned her first husband, and then made believe he committed suicide. This story had been told by the Colonel to Milan. Alexander, when his father repeated it to him, called it a 'machination,' the name he ever after gave to slanders and libels that came to his knowledge about Draga. He refused to hear calumnious tales, but could not prevent anonymous letters passing into the hands of his secretary, and spoke of the Court of Russia as being stupidly turned against his wife by 'machinations.' One can understand from this why Colonel Maschine became the soul of the horrible conspiracy, and bent his whole mind to carry out a plan which has succeeded, through his perfect generalship as to *ensemble*, the minutest attention to details, the widest prescience, the coolest head and an utter unscrupulousness." — Ivanovich, *The Servian Massacre* (*Contemporary Review, July*, 1903).

In the same issue of *The Contemporary*, Dr. Dillon wrote: "A graphic version of one scene of the tragedy, which was given to me by one of the murderers, Adjutant N., is as follows: 'We were wild with passion, trembling with excitement, incapable of receiving any impressions from the things and people around us. Hence we cannot say who shot the King in the head, who in the heart. But I have a vivid recollection of some things. I remember turning out the electric light and going to fetch candles to light my comrades on the way. That done I remained together with them to the end. I remember our breaking into the King's bedroom, finding it empty, and then looking into the Queen's wardrobe room, where we found the pair. Who fired first? I don't know; nobody knows. At first we did not fire at all. We drew our sabres and cut off the fingers of the King and Queen; four fingers were hewn from the King's hand. Then we fired.'" — E. J. Dillon, *Servia and the Rival Dynasties* (*Contemporary Review, July*, 1903).

The hideous crime which ended the reign of King Alexander excited horror everywhere except in Servia. There it seemed to be approved and rejoiced over universally, even the head of the national Servian Church, the Metropolitan of Belgrade, officiating at a thanksgiving service and commending the army for what it had done. Senators and Deputies of the Skupstchina filled the vacant throne by the election of Prince Peter Karageorgievitch, descendant of Kara Georg (Black George), the primary hero of the later struggle of the Servians with the Turk. King Alexander had been of the house of Milosh Obrenovitch, founder of the Obrenovitch dynasty, which supplanted that of Kara Georg (see BALKAN AND DANUBIAN STATES: 14TH-19TH CENTURIES: SERVIA, in Volume I. of this work). Prince Peter, then in exile at Geneva, accepted the blood-stained crown, and was welcomed at Belgrade on the 24th of June. Foreign governments, except those of Russia and Austria-Hungary, gave no recognition to the new sovereign for some time; but, said a writer in *The Fortnightly Review* of the next month, "no thrill of horror has been manifested by the 'dear brothers' and 'cousins' of the royal victims; on the very day of the holocaust, when the mangled corpses of a King and Queen were being exposed to the outrages of frenzied fiends, there was never a

pause in the pomp and circumstance and revelry of European Courts. But the ghastly details of the deed have appealed to the melodramatic instincts of the vulgar, arousing a morbid indignation throughout every land. What honest person could fail to be stirred by the story of the conspirators, sitting over their wine under the verandah of the Srbski Kruna, uproariously urging the gipsy band to play Queen Draga's March before they sallied forth to hack her to pieces with their swords; by the airy apologies of the baffled murderers when they roused a citizen for axes and candles, wherewith to track down their victims in the sleeping palace; by the thought of the ill-starred young Sovereigns lying in their own gardens, riddled with bullets, sighing through the small hours for the long-delayed relief of death? In the pages of ancient or mediæval history, even in sensational fiction, such hellish horrors could not fail to arouse intense emotion; in the cold glare of the twentieth century they are brought home so vividly that we are almost eye-witnesses."—Herbert Vivian, *A 'Glorious Revolution' in Servia* (*Fortnightly Review, July*, 1903).

A general election in September gave the Radicals a decisive majority in the Skupstchina, and a Radical Ministry under General Gruitch was formed.

A. D. 1904.—Coronation of King Peter.—King Peter was anointed and crowned with due ceremony, at Zicha, on the 9th of October, 1904. Representatives of all the Powers in Europe except Great Britain did honor to the occasion by their presence; thus condoning the foul crime which smeared the new King's crown with blood. The officers who committed the crime had been dismissed from their palace posts, but rewarded by military promotion.

A. D. 1909.—Renunciation of the crown by the Crown Prince.—The following note was addressed to the Prime Minister of Servia by the Crown Prince, George, on the 25th of March, 1909: "Driven by unjustified insinuations based on an unfortunate occurrence, I beg in defence of my honour, as well as of my conscience, to declare that I renounce all claims to the Throne, as well as any other privileges to which I am entitled. I beg you to take note of this, and to take the necessary steps that this action may receive the necessary sanction. I place my services as a soldier and citizen at the disposal of my King and Fatherland, ready to give my life for them.—GEORGE."

The "unfortunate occurrence" alluded to was the death of one of the Prince's servants from injuries which the Prince was believed by the public to have inflicted, as he was reputed to have a brutal temper.

A. D. 1902. — Popular opposition to the plural vote. — Demand for constitutional revision defeated. — General strike in the country. — Substantially universal but not equal suffrage is given to the male citizens of Belgium by the Constitution of the kingdom as revised in 1893 (see CONSTITUTION OF BELGIUM, in Volume I. of this work). All have one vote, but certain classes of persons, qualified by property ownership, tax-payments, education, office-holding or professional dignity, are given one or two supplementary votes. Opposition to this political inequality had been growing from the first, until it united the Socialist and Liberal parties in a demand for the revision of the Constitution, not only to abolish the plural suffrage, but to introduce proportional representation and compulsory education. The agitation attending this demand brought about, in April, a general strike throughout the country of workmen in all departments of industry, to the extent of 350,000. The Government resisted the demand, maintaining that the system of plural voting had not been sufficiently tried, and the bill for constitutional revision was defeated in the Chamber of Representatives, after a bitter debate, by 84 votes to 64.

The situation was described as follows by Mr. Townsend, the American Minister to Belgium, in a despatch of April 19: "The struggle between labor and capital in Belgium has become extremely acute in the past few years. A large industrial population, confined to a small superficial area, with long hours of labor and small wages, have combined to produce a feeling of discontent among the working classes, who, perhaps unjustly, blame the existing Government for a condition of affairs which may be due to economic conditions rather than political. This is a factor which may be largely responsible for the rapid growth of Socialism in Belgium during the past few years. Liberals and Socialists have combined to fight for universal suffrage, and have raised the cry 'one man one vote' as a panacea for the existing ills.

"The Clericals maintain that the existing system of plural voting meets the present requirements of the country; that it places a premium on education, and acts as a check to the power of the ignorant, who are prone to resort to violence and disorder. The more moderate Liberals in the House of Representatives expressed a willingness to accept a compromise in the shape of a total abolition of the triple vote, granting one vote at 25 years and a second vote to married men of 35 or 40 years, with legitimate issue. The Clericals, however, would not consider a compromise and opposed revision in any form.

"During the past fortnight, while the debates on the subject of revision were being held in the House of Representatives, the socialists and workingmen have held nightly meetings at the Maison du Peuple, and have frequently paraded the streets shouting for universal suffrage and 'one man one vote.' The Liberal members, as well as some of the socialist leaders in the House, have cautioned the paraders to be calm, to avoid violence and disorder. But the ranks of the paraders have been swelled by the addition of the representatives of the very lowest and criminal classes of the population, the result being a conflict with the police followed by the breaking of windows and other damages to property. Shots were exchanged between the gendarmes and rioters, several of the latter being killed and wounded. Similar scenes were at the same time enacted in other towns in Belgium, consequently the Government called out the troops. Order has been restored, but the streets of Brussels, as well as the large towns, are lined with soldiers. A general strike has taken place in all the industrial centers of Belgium, with the avowed object of forcing the Government to grant universal suffrage, but without success. The feeling of unrest is very general all over the country." — *Papers relating to the Foreign Relations of the U. S.*, 1902, *p.* 85.

A. D. 1903-1905. — King Leopold's administration of the Congo State. See (in this vol.) CONGO STATE: A. D. 1903–1905.

A. D. 1904. — Liberal gains in the elections, at the expense of the Catholics and Socialists. — Belgian elections, in May, reduced the majority by which the Clericals still retained control of the Government, and took six seats in the representative chamber from the Socialists, adding in all nine to the representation of the Liberal party. The latter continued, with no success, its demand for a revision of the Constitution, especially for the abolition of the plural vote, which gives the Church party its majority in Parliament, while its voters are an actual minority of the nation.

Belgian feeling on the subject of the charges of brutal oppression in the Congo Free State was deeply stirred, and its current ran strongly against the accusers of the King. The public in general appears to have been fully persuaded that interested motives were actuating the whole criticism of Congo administration, and that the stories of inhumanity to the natives were wholly false.

A. D. 1909 (Dec.). — Death of King Leopold. — Accession of King Albert. — On the 17th of December, 1909, King Leopold died. He was succeeded on the throne by Prince Albert, son of his brother, the Count of Flanders. Of the new King, who was born in 1875, it was said by *The Times*, of London: "The happiest expectations are cherished in Belgium for the new King's reign. He has shown, together with his gracious Consort, that desire to identify himself with the interests of the humblest of his subjects which we are accustomed to admire among the characteristic merits of our own Royal Family. He was naturally precluded by his position from taking any part in the controversies connected with the Congo, but it may reasonably be thought that if his uncle's life had been less prolonged the constitutional difficulties raised by the 'Congo question' would have been avoided. He is known to have been painfully impressed by the need of reform during his recent visit to the colony."

A. D. 1904.—An impromptu Revolt that became a comedy of errors.—"To the American who is under the impression that all South America is continually in the throes of one or another revolution it will come as a surprise to learn that this vast district, comprising one half the territory and almost two thirds the population of the whole continent, has known no revolution since the founding of the Republic. The revolts of 1893, 1897, and 1904, menacing in varying degree, were outbursts fostered by a centralization of national vitality which inspired the belief in each insurrectionist that it was but necessary to strike the head,—the body would lie dormant. The justification of this belief lay in the historical fact that the vast majority of successful revolts throughout South America have consisted merely in *coups d'état*. The masses have lain dormant, and the fighting, if any, has generally come after the somersault.

"The revolt of November of last year in Brazil was so typical of South American revolutions, and so elementary, that it affords a lucid illustration. Owing to the prompt and efficient measures taken by the government to suppress true reports of the disturbance, and owing, too, to its signal failure, this revolt was scarcely mentioned by the American press. Nevertheless, it missed by little causing international commotion. . . .

"A great epidemic of smallpox led the government to require of Congress a law making vaccination compulsory. Long and heated debate on the constitutionality of the measure went on, while the epidemic assumed alarming proportions. The Executive's patience being worn out, arbitrary pressure was brought to bear, and the law passed. This intervention brought down the general censure of the press, and the opposition seized the handle with disproportionate avidity. On the eleventh of November a mass meeting was held in one of the central squares of Rio Janeiro. . . . The mounted police broke up the meeting with the flat of the sword: no lives were lost. On the following day the scene was duplicated, several people injured, and a life lost. By night riots had broken out in various parts of the city.

"Up to the fourteenth of November, revolution was not even rumored. . . . Toward evening city and government were genuinely surprised by the news that General Travassos, who was to have commanded a battalion in the review, immediately upon the announcement of its postponement had proceeded to the Military Academy on the outskirts of the city, and, before the student body, had demanded of the officer in charge transfer of his command. Frightened by the attitude of the cadets, the commanding officer made a puerile protest, and surrendered. He and his staff were allowed to withdraw, and carried the news of the revolt to the city. It was soon confirmed: the cadets were advancing on the President's palace, under the leadership of General Travassos. . . .

"The shortest line of march was along the bay front, and to repulse the attack were sent by land a battalion of the line reinforced by police, and by sea two gunboats under the play of searchlights from an armored cruiser. The cadets marched under the assurance that no soldier of the line would fire on them, as the army was back of the movement. . . . They were met by an armed force, indistinguishable owing to the destruction of all the lamps by rioters. The force was the advancing battalion, and it is generally believed that it fired on the cadets, mistaking them for the returning body of police which had followed the water front. Brisk fighting ensued, when suddenly the cry arose among the cadets that they had been betrayed, and were attacked by soldiers of the line. They broke and made a disorderly retreat to the Academy. Almost simultaneously the soldiers learned their mistake, and that they had opposed a commanding officer; and they turned in precipitous flight. General Travassos was mortally wounded in the engagement. . . .

"Meanwhile the detachment of police dispatched from the city had advanced along the bay front to the stone quarry, where they awaited

the rebels. Drawn up at this spot under close formation, they were mistaken by the gunboats for the cadets, and were made the target of a disastrous hail of bullets from quick-firing guns. Their retreat also was precipitous.

"Such was the comedy of errors which will be known as the Revolt of 1904. Its net results were a rude but salutary recall of the government to watchfulness; added prestige abroad for the government, vouched by a rise in its bonds; and, most significant of all, spontaneous and immediate support of the Chief Executive from neighboring states. And yet the credit was not due to the government, which avowedly had been caught napping, but to the Goddess of Chance, the arbiter of every *coup d'état*."—G. A. Chamberlain, *The Cause of South American Revolutions* (*Atlantic Monthly, June*, 1905).

A. D. 1904.—Settlement of boundary between Brazil and British Guiana.—By the decision of the King of Italy, to whom the boundary question in dispute between Brazil and British Guiana had been referred, the line separating the territories of the two states was defined, as drawn by Nature, along the watershed, starting from Mount Yakentipu and running easterly to the source of the river Mahu, thence down that river to the Tacuta and up the latter to its source, where it touches the boundary already determined. Both countries to have free navigation of the rivers in question.

A. D. 1906.—Presidential Election.—The quadrennial presidential election occurring in Brazil in the spring of 1906 raised Dr. Alfonso Moreira Penna from the Vice-Presidency to the Presidency of the Republic, with no disturbance of its quiet.

A. D. 1906.—German Colonies.—"Already 500,000 Germans, emigrants and their offspring, are resident in Brazil. The great majority of them, it is true, have embraced Brazilian citizenship, but their ideals and ties are essentially and inviolably German. In the south, where they are thickest, they have become the ruling element. German factories, warehouses, shops, farms, schools and churches dot the country everywhere. German has superseded Portuguese, the official language of Brazil, in scores of communities. Twenty million pounds of vested interests—banking, street railroads, electric works, mines, coffee-plantations, and a great variety of business undertakings—claim the protection of the Kaiser's flag. A cross-country railway and a still more extensive projected system are in the hands of German capitalists. The country's vast ocean traffic, the Amazon river shipping, and much of the coasting trade are dominated by Germans.

"Over and above this purely commercial conquest, however, looms a factor of more vital importance to North American susceptibilities—namely, the creation of a nation of Germans in Brazil. That is the avowed purpose of three German colonising concerns, which have become lords and masters over 8,000 square miles of Brazilian territory, an area considerably larger than the kingdom of Saxony, and capable of dwarfing half-a-dozen German Grand Duchies. It is the object of these territorial syndicates to people their lands with immigrants willing to be 'kept German'—a race of transplanted men and women who will find themselves amid conditions deliberately designed to perpetuate 'Deutschthum,' which means the German language, German customs, and unyielding loyalty to German economic hopes."—F. W. Wile, *German Colonisation in Brazil* (*Fortnightly Review, Jan.*, 1906).

"The talk about German exploitation of Brazil for colonization purposes is pure buncombe. The writer has visited the southern Brazilian provinces of Rio Grande do Sul, Santa Catharina, and Paraná, where most of the Germans reside, and he has seen no more reason for Brazil to fear ulterior purposes on the part of Germany than has the United States because Germans form a large percentage of the population of New York, Chicago, and Milwaukee. The Germans make excellent Brazilian citizens, while loving the Fatherland from association and respecting the Emperor for his great personality."—John Barrett, *The United States and Latin America* (*North American Review, Sept.* 21, 1906). A. D. 1907.—Adoption of obligatory military service.—By a law enacted in 1907 military service was made obligatory.

A. D. 1908.—Dreadnought building. See WAR, THE PREPARATIONS FOR.

A. D. 1908-1909.—Increasing immigration. See IMMIGRATION AND EMIGRATION.

A. D. 1909.—Frontier agreements and demarcations.—The Message of President Penna to Congress, May 3, 1909, contained the following announcements: "On September 15 last, a treaty between Brazil and Holland was finally approved at The Hague, to determine the limits of our frontier with the Colony of Surinam or Dutch Guiana. The demarcation of the new frontier line between Brazil and Bolivia in Matto Grosso is now completed, and awaits only the approval of the two Governments interested. The same mixed commission to which was intrusted this survey will now proceed to reconnoitre the head-waters of the Rio Verde. The Government of the French Republic proposes the appointment of a mixed commission for the demarcation of the common boundary established on December 1, 1900, by arbitration of the Swiss Federal Council. An agreement will shortly be arrived at with Great Britain to determine the frontier of Brazil with British Guiana."

A. D. 1909.—Death of President Penna.—Accession of the Vice-President.—Dr. Alfonso Penna, President of Brazil, died suddenly on the 14th of June, 1909, and was succeeded in the office by the Vice-President, Señor Nilo Pecanha, who will fill out the presidential term, ending November 15, 1910. Meantime an active canvass of candidates for the succeeding term has been in progress, the names most discussed being those of General Hermes de Fonseca, Baron Rio Branco, Minister of Foreign Affairs, and Señor Ruy Barbosa, a prominent advocate.

THE BRITISH EMPIRE.

A Census of the Empire. — In March, 1906, a "Census of the British Empire" — the first ever undertaken — was published as a Parliamentary Blue Book. Its preparation had been proposed by Mr. Chamberlain, who suggested, while Colonial Secretary, that the figures of the census of the United Kingdom in 1901 should be collated with those of other portions of the empire, to be analyzed, tabulated, and published as a whole. A full realization of the plan of collation had been found impracticable, owing to the wide differences of circumstance and of the forms of census-taking in different parts of the Empire; but many summings up of highly interesting and important facts were obtained.

The territory covered by the British Empire was shown to be 11,908,378 square miles, being an increase of 40 per cent. since 1861, and embracing more than a fifth of the land surface of the globe. This exceeds the area of the Russian Empire (European and Asiatic) by more than three millions of square miles. It is nearly three times the area of the Chinese Empire, and more than three times that of the United States and their exterior possessions. An exact count of population in all regions of the Empire was impossible, but the estimated total is 400,000,000, of which 300,000,000 is assigned to Asia and 43,000,000 to Africa. The United Kingdom contains 41,500,000, British America 7,500,000, Australasia, 5,000,000, the Mediterranean possessions 500,000, and there are 150,000 in the Channel Islands and the Isle of Man. Classified by religion, there 208,000,000 Hindus, 94,000,000 Mohammedans, 58,000,000 Christians, 12,000,000 Buddhists, and 23,000,000 of other religions — Parsees, Confucians, Jews, Sikhs, and Jains, over whom Edward VII. of England reigns as Emperor or King. His Asiatic subjects alone are three-fourths as many as the Emperor of China is supposed to rule, and considerable more than twice the number that live within the whole sweep of the scepter of the Tsar.

A. D. 1902. — Conference at London with the Prime Ministers of the self-governing Colonies. — Address of the Colonial Secretary, Mr. Chamberlain. — Results of the Conference. — Taking advantage of the presence in London of the Prime Ministers of the various self-governing colonies of Britain, on the occasion of the coronation of King Edward VII., a Conference with them, touching questions of general interest, was arranged by the Secretary of State for the Colonies, Mr. Chamberlain, in meetings which extended from June to August, 1902. The proceedings were confidential, and no report of discussions made public; but the resulting resolutions, together with the opening address of the Colonial Secretary, and certain statements on subjects considered, are printed in a Parliamentary paper (Cd. 1299) from which the following account of the Conference is derived:

Mr. Chamberlain in his address argued strongly and with feeling for a political federation of the Empire. He said: "I may be considered, perhaps, to be a dreamer, or too enthusiastic, but I do not hesitate to say that, in my opinion, the political federation of the Empire is within the limits of possibility. I recognize as fully as any one can do the difficulties which would attend such a great change in our constitutional system. I recognise the variety of interests that are concerned: the immense disproportion in wealth and the population of the different members of the Empire, and above all, the distances which still separate them, and the lack of sufficient communication. These are difficulties which at one time appeared to be, and indeed were, insurmountable. But now I cannot but recollect that similar difficulties almost, if not quite as great, have been surmounted in the case of the United States of America. And difficulties, perhaps not quite so great, but still very considerable, have been surmounted in the federation of the Dominion of Canada. . . . We have no right to put by our action any limit to the Imperial patriotism of the future; and it is my opinion that, as time goes on, there will be a continually growing sense of the common interests which unite us, and also, perhaps, which is equally important, of the common dangers which threaten us. At the same time I would be the last to suggest that we should do anything which could by any possibility be considered premature. We have had, within the last few years, a most splendid evidence of the results of a voluntary union without any formal obligations, in the great crisis of the war through which we have now happily passed. The action of the self-governing Colonies in the time of danger of the motherland has produced here a deep and a lasting impression. . . . I feel, therefore, in view of this it would be a fatal mistake to transform the spontaneous enthusiasm which has been so readily shown throughout the Empire into anything in the nature of an obligation which might be at this time unwillingly assumed or only formally accepted. The link which unites us, almost invisible as it is sentimental in its character, is one which we would gladly strengthen, but at the same time it has proved itself to be so strong that certainly we would not wish to substitute for it a chain which might be galling in its incidence. And, therefore, upon this point of the political relations between the Colonies and ourselves, His Majesty's Government, while they would welcome any ap-

BRITISH EMPIRE, 1902

proach which might be made to a more definite and a closer union, feel that it is not for them to press this upon you. The demand, if it comes, and when it comes, must come from the Colonies. If it comes it will be enthusiastically received in this country.

"And in this connection I would venture to refer to an expression in an eloquent speech of my right honorable friend, the Premier of the Dominion of Canada — an expression which has called forth much appreciation in this country, although I believe that Sir Wilfrid Laurier has himself in subsequent speeches explained that it was not quite correctly understood. But the expression was, 'If you want our aid call us to your councils.' Gentlemen, we do want your aid. We do require your assistance in the administration of the vast Empire, which is yours as well as ours. The weary Titan staggers under the too vast orb of its fate. We have borne the burden for many years. We think it is time our children should assist us to support it, and whenever you make the request to us, be very sure that we shall hasten gladly to call you t our councils. If you are prepared at any time to take any share, any proportionate share, in the burdens of the Empire, we are prepared to meet you with any proposal for giving to you a corresponding voice in the policy of the Empire. And the object, if I may point out to you, may be achieved in various ways. Suggestions have been made that representation should be given to the Colonies in either, or in both, Houses of Parliament. There is no objection in principle to any such proposal. If it comes to us, it is a proposal which His Majesty's Government would certainly feel justified in favourably considering, but I have always felt myself that the most practical form in which we could achieve our object would be the establishment or the creation of a real council of the Empire, to which all questions of Imperial interest might be referred, and if it were desired to proceed gradually, as probably would be ou[illegible] — we are all accustomed to the slow ways which our Constitutions have been worked out — if it be desired to proceed gradually, the Council might in the first instance be merely an advisory council. But, although that would be a preliminary step, it is clear that the object would not be completely secured until there had been conferred upon such a Council executive functions, and perhaps also legislative powers, and it is for you to say, gentlemen, whether you think the time has come when any progress whatever can be made in this direction."

Turning naturally from this to the subject of imperial defence, Mr. Chamberlain gave the substance of a paper which would be submitted to the Conference, exhibiting comparatively the naval and military expenditure of the United Kingdom and of the different self-governing colonies. The cost of the armaments of the United Kingdom had increased enormously since 1897, and "that increase," he said, "is not entirely due to our initiative, but it is forced upon us by the action of other Powers who have made great advances, especially in connection with the Navy, which we have found it to be our duty and necessity to equal. But the net result is extraordinary. At the present moment the estimates for the present year for naval and military expenditure in the United Kingdom — not including the extraordinary war expenses, but the normal estimates — involve an expenditure per head of the population of the United Kingdom of 29*s.* 3*d.* per annum. In Canada the same items involve an expenditure of only 2*s.* per head of the population, about one-fifteenth of that incurred by the United Kingdom. In New South Wales — I have not the figures for the Commonwealth as a whole, but I am giving those as illustrations — and I find that in New South Wales the expenditure is 8*s.* 5*d.*; in Victoria, 3*s.* 3*d.*; in New Zealand, 3*s.* 4*d.*; and in the Cape and Natal, I think it is between 2*s.* and 3*s.* Now, no one, I think, will pretend that that is a fair distribution of the burdens of Empire. No one will believe that the United Kingdom can, for all time, make this inordinate sacrifice. . . . I think, therefore, you will agree with me that it is not unreasonable for us to call your serious attention to a state of things which cannot be permanent. We hope that we are not likely to make upon you any demand that would seem to you to be excessive. We know perfectly well your difficulties, as you probably are acquainted with ours."

The speaker passed next to the question of commercial relations between the mother land and its colonies. "Two salient facts" he set with emphasis before his colonial audience. "The first is this. That if we chose — that is to say, if those whom we represent chose — the Empire might be self-sustaining. It is so wide; its products are so various; its climates so different, that there is absolutely nothing which is necessary to our existence, hardly anything which is desirable as a luxury, which can not be produced within the borders of the Empire itself. And the second salient fact is that the Empire at the present time, and especially the United Kingdom — which is the great market of the world — derives the greater part of its necessaries from foreign countries, and that it exports the largest part of its available produce — surplus produce — also to foreign countries. This trade might be the trade, the inter-imperial trade, of the Empire. It is at the present time, as I say, a trade largely between the Empire and foreign countries. Now, I confess, that to my mind that is not a satisfactory state of things, and I hope that you will agree with me that everything which can possibly tend to increase the interchange of products between the different parts of the Empire is deserving of our cordial encouragement. What we desire, what His Majesty's Government has publicly stated to be the object for which they would most gladly strive, is a free interchange. If you are unable to accept that as a principle, then I ask you how far can you approach to it? If a free interchange between the different parts of the Empire could be secured it would then be a matter for separate consideration altogether what should be the attitude of the Empire as a whole or of its several parts towards foreign nations? . . .

"Three proposals have been made for the consideration of the present Conference, on the initiative of New Zealand. The first and the most important one is that a preferential tariff should be arranged in favour of British goods which are now taxable in the respective Colonies and in the United Kingdom. And although no proposal comes to us from Canada, I am, of course,

aware that similar questions have been recently specially discussed very actively and very intelligently in the Dominion, and that a strong opinion prevails there that the time is ripe for something of this kind."

Thereupon Mr. Chamberlain examined the results of the Canadian preferential tariff, showing that England derived very little commercial benefit from it, and continued: "I think the very valuable experience, somewhat disappointing and discouraging as I have already pointed out, but the very valuable experience which we have derived from the history of the Canadian tariff, shows that while we may most readily and most gratefully accept from you any preference which you may be willing voluntarily to accord to us, we cannot bargain with you for it; we cannot pay for it unless you go much further and enable us to enter your home market on terms of greater equality."

On the subject of imperial defence, the result of the Conference was an agreement from Australia and New Zealand to increase their contribution towards an improved Australasian squadron and the establishment of a branch of the Royal Naval Reserve to £200,000 a year for the former and £40,000 for the latter; an agreement from Cape Colony and Natal to contribute £50,000 and £35,000 per annum respectively toward the general maintenance of the Navy, and a pledge from Newfoundland of £3000 per annum toward a branch of the Royal Naval Reserve. From Canada no agreement was reported. In a "Memorandum by the First Lord of the Admiralty" of interviews held with the several Premiers it is said: "Sir Wilfrid Laurier informed me that His Majesty's Government of the Dominion of Canada are contemplating the establishment of a local Naval force in the waters of Canada, but that they were not able to make any offer of assistance analogous to those enumerated above."

Concerning preferential trade, the following resolutions were adopted:

"1. That this Conference recognises that the principle of preferential trade between the United Kingdom and His Majesty's Dominions beyond the seas would stimulate and facilitate mutual commercial intercourse, and would, by promoting the development of the resources and industries of the several parts, strengthen the Empire.

"2. That this Conference recognises that, in the present circumstances of the Colonies, it is not practicable to adopt a general system of Free Trade as between the Mother Country and the British Dominions beyond the seas.

"3. That with a view, however, to promoting the increase of trade within the Empire, it is desirable that those Colonies which have not already adopted such a policy should, as far as their circumstances permit, give substantial preferential treatment to the products and manufactures of the United Kingdom.

"4. That the Prime Ministers of the Colonies respectfully urge on His Majesty's Government the expediency of granting in the United Kingdom preferential treatment to the products and manufactures of the Colonies either by exemption from or reduction of duties now or hereafter imposed.

"5. That the Prime Ministers present at the Conference undertake to submit to their respective Governments at the earliest opportunity the principle of the resolution and to request them to take such measures as may be necessary to give effect to it."

The Prime Ministers of the Colonies also stated the extent to which they were prepared to recommend to their several Parliaments a preferential treatment of British goods: The Premier of Canada would propose to continue the existing preference of 33⅓ per cent., and an additional preference on lists of selected articles — (*a*) by further reducing the duties in favor of the United Kingdom; (*b*) by raising the duties against foreign imports; (*c*) by imposing duties on certain foreign imports now on the free list. In New Zealand the recommendation would be of a general preference by 10 per cent., or an equivalent in respect of lists of selected articles on the lines proposed by Canada. At the Cape and Natal a preference of 25 per cent. would be advised, or its equivalent given by increasing duties on foreign imports. The recommendation in Australia would be of a preferential treatment not yet defined.

A resolution was adopted favoring future Conferences at intervals not exceeding four years. Other resolutions recommended that a preference be given to products of the Empire in all Government contracts, Imperial or Colonial; that the privileges of coastwise trade within the Empire be refused to countries in which the corresponding trade is confined to ships of their own nationality; that a mutual protection of patents within the Empire be devised; that the principle of cheap postage between the different parts of the Empire on all newspapers and periodicals published therein be adopted; that the metric system of weights and measures be adopted throughout the Empire. These were the mainly important conclusions derived from the Conference, and it was difficult to regard them as quite satisfactory.

A. D. 1903. — Mr. Chamberlain's declaration for preferential trade with the Colonies. — Its political effects in Great Britain. — His resignation from the Cabinet. — Disclosures of the correspondence. See (in this vol.) ENGLAND: A. D. 1903 (MAY-SEPT.).

A. D. 1907. — Conference of Imperial and Colonial Ministers at London. — Formulation of the Constitution of the Conference, to be known as the Imperial Conference. — Discussion of preferential trade, imperial defence, and other subjects. — Resolutions adopted. — According to the resolution adopted by the Colonial Conference of 1902, the next Conference should have been held in 1906, but by agreement of all parties it was deferred until the following year. In the interval, a protracted correspondence occurred between the Colonial Office and the Governments of the several States federated in the Commonwealth of Australia, each of which claimed representation in the Conference by its own Ministers, and protested against the sufficiency of the representation that would be given to it by the General Government of the Commonwealth. The "State Rights" doctrine received no encouragement, however, and only the Premier of the Commonwealth, Mr. Deakin, and one of the members of his Cabinet, took part in the Conference, which held its first meeting in London on the 15th of April and its final one on the 14th of May.

At the first meeting there were present, as

BRITISH EMPIRE, 1907

representatives of the Imperial Government, the Prime Minister, Sir Henry Campbell-Bannerman, the Secretary of State for the Colonies, the Earl of Elgin, in the Chair, and several other Members of the Cabinet and officials of the Administration. The Premiers of the self-governing colonies, excepting Sir Robert Bond, of Newfoundland, who arrived a few days later, were all in attendance, — namely, Sir Wilfrid Laurier, of Canada, the Hon. Alfred Deakin, of Australia, the Honorable Sir J. G. Ward, of New Zealand, Dr. L. S. Jameson, of Cape Colony, the Honorable F. R. Moor, of Natal, and General Louis Botha, of the Transvaal. The Conference was first addressed by the Prime Minister, and responses to his remarks were made by the several colonial premiers. It was then agreed that the constitution of the Conference and the question of military defence should be the subjects first considered. Before ending this preliminary sitting it was decided, as one ruling on the constitution of the Conference, that any Ministers accompanying their Prime Ministers, should be at liberty to attend its meetings.

At the second session of the Conference resolutions brought forward by the Governments of Australia and New Zealand, proposing to give the character of an Imperial Council to the Conference, and a resolution from the Government of Cape Colony on the subject of Imperial Defence, together with a draft resolution concerning the constitution of the Conference which the Chairman, Lord Elgin, submitted, were discussed, without action taken. The discussion was continued at the third and fourth meetings, and the resolution proposed by the Secretary of State for the Colonies, being amended in some particulars, was adopted at the end, as follows:

"That it will be to the advantage of the Empire if a Conference to be called the Imperial Conference is held every four years at which questions of common interest may be discussed and considered as between His Majesty's Government and his Governments of the self-governing Dominions beyond the seas. The Prime Minister of the United Kingdom will be *ex officio* President, and the Prime Ministers of the self-governing Dominions *ex officio* members of the Conference. The Secretary of State for the Colonies will be an *ex officio* member of the Conference and will take the chair in the absence of the President. He will arrange for such Imperial Conferences after communication with the Prime Ministers of the respective Dominions.

"Such other Ministers as the respective Governments may appoint will also be members of the Conference — it being understood that, except by special permission of the Conference, each discussion will be conducted by not more than two representatives from each Government, and that each Government will have only one vote.

"That it is desirable to establish a system by which the several Governments represented shall be kept informed during the periods between the Conferences in regard to matters which have been or may be subjects for discussion, by means of a permanent secretarial staff charged under the direction of the Secretary of State for the Colonies with the duty of obtaining information for the use of the Conference, of attending to its resolutions, and of conducting correspondence on matters relating to its affairs.

"That upon matters of importance requiring consultation between two or more Governments which cannot conveniently be postponed until the next Conference, or involving subjects of a minor character or such as call for detailed consideration, subsidiary conferences should be held between representatives of the Governments concerned specially chosen for the purpose."

On the subject of Imperial Defence, which was then taken up, and in the discussion of which the Secretary of State for War took part, the following resolutions were approved:

"That the Colonies be authorized to refer to the Committee of Imperial Defence through the Secretary of State for advice any local questions in regard to which expert assistance is deemed desirable.

"That whenever so desired, a representative of the colony which may wish for advice should be summoned to attend as a member of the Committee during the discussion of the questions raised.

"That this Conference welcomes and cordially approves the exposition of general principles embodied in the statement of the Secretary of State for War, and, without wishing to commit any of the Governments represented, recognizes and affirms the need of developing for the service of the Empire a General Staff, selected from the forces of the Empire as a whole, which shall study military science in all its branches, shall collect and disseminate to the various Governments military information and intelligence, shall undertake the preparation of schemes of defence on a common principle, and without in the least interfering in questions connected with command and administration, shall at the request of the respective Governments advise as to the training, education, and war organization of the military forces of the Crown in every part of the Empire."

At subsequent meetings the following resolutions were adopted or accepted:

On the subject of Emigration: "That it is desirable to encourage British emigrants to proceed to British colonies rather than foreign countries. That the Imperial Government be requested to coöperate with any colonies desiring immigrants in assisting suitable persons to emigrate."

On the subject of Judicial Appeals: The Conference "assented to the following finding: The resolution of the Commonwealth of Australia, 'That it is desirable to establish an Imperial Court of Appeal,' was submitted and fully discussed.

"The resolution submitted by the Government of Cape Colony was accepted, amended as follows: 'This Conference, recognizing the importance to all parts of the Empire of the appellate jurisdiction of His Majesty the King in Council, desires to place upon record its opinion —

"'(1) That in the interests of His Majesty's subjects beyond the seas it is expedient that the practice and procedure of the Right Honourable the Lords of the Judicial Committee of the Privy Council be definitely laid down in the form of a code of rules and regulations.

"'(2) That in the codification of the rules regard should be had to the necessity for the removal of anachronisms and anomalies, the possibility of the curtailment of expense, and the desirability of the establishment of courses of procedure which would minimize delays.

"'(3) That, with a view to the extension of uniform rights of appeal to all colonial subjects

BRITISH EMPIRE, 1907

of His Majesty, the various Orders in Council, instructions to Governors, charters of justice, ordinances and proclamations upon the subject of the appellate jurisdiction of the Sovereign should be taken into consideration for the purpose of determining the desirability of equalizing the conditions which gave right of appeal to His Majesty.

"'(4) That much uncertainty, expense, and delay would be avoided if some portion of His Majesty's prerogative to grant special leave to appeal in cases where there exists no right of appeal were exercised under definite rules and restrictions.'

"The following resolutions, presented to the Conference by General Botha and supported by the representatives of Cape Colony and Natal, were accepted:

"'(1) That when a Court of Appeal has been established for any group of colonies geographically connected, whether federated or not, to which appeals lie from the decisions of the Supreme Courts of such colonies, it shall be competent for the Legislature of each such colony to abolish any existing right of appeal from its Supreme Court to the Judicial Committee of the Privy Council.

"'(2) That the decisions of such Court of Appeal shall be final, but leave to appeal from such decisions may be granted by the said Court in certain cases prescribed by the statute under which it is established.

"'(3) That the right of any person to apply to the Judicial Committee of the Privy Council for leave to appeal to it from the decision of such Appeal Court shall not be curtailed.'"

And now, at last on the 30th of April, the Conference came to the discussion of the question which had been dominant in all minds from the first, — the question of preferential trade. Essentially it was a settled question already,— settled, that is, by the voters of the United Kingdom a year and a half before, when they took the administration of their Government away from the party which had approved the fiscal proposals of Mr. Chamberlain. The commercial negotiation of the colonies now was with a Ministry that stood pledged against the preferential tariff arrangements they desired. On their side they had committed their fortunes to the stimulant working of protective tariffs, against which the judgment and experience of England was still firm. The preferential tariffs which preferential trade involved were in the line of their policy, but directly antagonistic to hers. How impossible this made an arrangement of reciprocity on that line was intimated gently by the Prime Minister when he spoke to the Conference at its first sitting, but set forth later in plain words by the Chancellor of the Exchequer, Mr. Asquith, and by the President of the Board of Trade, Mr. David Lloyd-George. "If the Colonies," said Mr. Asquith, "thought it their duty to foster industries by protective tariffs their action would not evoke remonstrance or even criticism from him. He noted that various self-governing Colonies gave preference to the Mother Country, but it was a fact that these preferential tariffs did not admit the manufactures of the Mother Country to compete on equal terms with the local product. Doubtless the Colonies held this to be vital to their interests, and in the same way His Majesty's Government held that free trade was vital in the interests of the United Kingdom. Reference had been made to the fact that Cobden advocated free trade here as a part of a universal system of free trade, but the official author of the policy, Sir Robert Peel, defended it on the ground of its necessity to this country alone. His Majesty's Government held that it was more necessary now than it was in his day. He pointed out the position now existing. We had a population of 44,000,000 bearing the whole weight of an enormous debt largely contracted in building up the Empire, and of the cost of Imperial diplomacy and Imperial defence. That population was dependent for food and raw materials on external sources of supply. This is the essential point for consideration. He asked how the supremacy of Great Britain was maintained. He thought it must be attributed to our special productive activity, to the profits which we obtain from keeping the biggest open market in the world, and to the enormous earnings of our shipping. All these were based in the long run on keeping our food and our raw materials on the same basis and as nearly as possible at the same price. Free trade was no shibboleth, but a principle maintained because it was a matter of vital national interest. He drew attention to the tariff reform campaign, and observed that, after the full test examination and discussion, the people of England had declared in favour of free trade by a majority of unexampled size. As spokesman for the people, His Majesty's Government could not accept any infringement of that policy, even by way of such an experiment as Dr. Jameson had suggested. It was necessary to state that fact fully and frankly at the outset. . . .

"For these reasons His Majesty's Government, speaking for the people of this country, could not accept the principle of preferential trade by way of tariff preference. He thought, however, that the discussion had thrown light on other methods by which inter-Imperial trade relations might be improved. Reference had been made to the improvement of means of communication, especially steamer services, to the increase in the number of commercial agents in the Colonies, to the desirability of removing or reducing the Suez Canal dues, and of establishing mail communication with the Australasian Colonies viâ Canada. All these were matters on which His Majesty's Government would be fully ready to consider and coöperate with any practical proposals, and he said this the more earnestly as he felt that in the performance of his duty it had been necessary for him to enunciate a general policy which was not in accord with the views of the Colonial representatives."

Mr. Lloyd-George was equally plain spoken. "He had hoped," he said, "it might have been possible for those present, acknowledging the limitations imposed on them by the convictions they respectively held on fiscal issues, to see whether it might not be possible to find other means of attaining the object in view. The Colonies regard a tax on our foods as necessary both for raising revenue and also for the protection of their own industries. Mr. Deakin acknowledged that the late election in Australia was fought on the issue of protection and preference. It was open for the representatives of the Imperial Government to have ignored the mandate given to Mr. Deakin and to have endeavoured to commit their colleagues here to a

BRITISH EMPIRE, 1907

policy of free trade within the Empire, to which those colleagues would not assent without being false to the trust reposed in them by their own people. Sir William Lyne the other day had urged the commercial union of the whole Empire, quoting the consolidation of the United Kingdom, the United States, and the Federation of South Africa and Australia. In these cases all tolls and tariffs were removed.

"Had a free trade resolution been pressed by His Majesty's Government and refused, it might have been said by the Press that the Colonies had refused to listen to the appeal of the Mother Country to be put on equal terms with her children and had for the door had been slammed in the face by her ungrateful progeny. His Majesty's Government had not taken this course, recognizing the unfairness of ignoring local conditions and exigencies. They were not here to manœuvre each other into false positions, but to discharge the practical business of the Empire. They were in perfect accord as to the object to strive to promote. His Majesty's Government were in favour of any scheme for the development of inter-Imperial trade which did not inflict sacrifices on any individual community so as to create a sense of grievance deep enough to introduce the elements of discontent and discord, and thus impair the true unity of the Empire.

"He agreed that this federation of free commonwealths is worth making some sacrifice for. He differed only on ways and means. He was convinced that to tax the food of our people is to cast an undue share of sacrifice on the poorest part of the population, and that a tax on raw material would fetter us in the severe struggle with our foreign competitors. This, therefore, was a sacrifice which would weaken our power to make further sacrifices, and we ought not to be called upon to make it. In Mr. Deakin's resolution the Government were asked to do what no protectionist country in the world would do — viz., to tax necessaries of either life or livelihood which we cannot produce ourselves, and of which the Colonies cannot supply us with a sufficiency for many years.

"He wished to acknowledge the considerable advantage conferred upon the British manufacturer by the preference recently given to him in colonial markets. The Canadian tariff had produced a satisfactory effect on our export trade, and apparently had also benefited Canada, for our purchases from Canada had also increased. The South African and New Zealand tariffs had not yet been put to the test by much actual experience, but would no doubt have a similarly happy result. The same applied to Australia, and Great Britain felt grateful, not merely for the actual concessions, but for the spirit of comradeship and affection which inspired the policy. But it was said, 'What are you prepared to do in return?' His first answer was that Great Britain was the best customer the Colonies have got for their products. To illustrate this he gave the following figures: In 1905, the last year for which the information was available, the exports from the self-governing Colonies to all foreign countries only amounted to 40½ millions, while the exports to the United Kingdom amounted to 65¾ millions, exclusive of bullion and specie (21¾ millions)."

The outcome of the discussion was a simple reaffirmation of the five resolutions on the subject that were adopted at the Conference of 1902, and which will be found in the report of that Conference, preceding this. Before putting those resolutions to vote Lord Elgin stated that His Majesty's Government could not assent to them so far as they implied that it is necessary or expedient to alter the fiscal system of the United Kingdom. They were agreed to, subject to that reservation. Sir Wilfrid Laurier, who moved their readoption, said in doing so: "Free trade within the Empire had been suggested, just as there was free trade within the boundaries of the United States, Germany, and France. For the British Empire this was impossible for two reasons — the United Kingdom was not prepared to limit free trade to the Empire, and the Colonies were not prepared to accept free trade even within its boundaries. In Canada the policy of free trade within the Empire was impracticable, as it was necessary for her to have Customs duties as a main source of revenue. Canada had given the British preference deliberately, and had no cause to regret it; she had from time to time increased it, and in the last tariff had maintained it generally at the increased amount of 33⅓ per cent. Canadian opinion had been almost unanimous in favour of preference, for Canada felt that she would as a result of the preference sell more to Great Britain and buy more from her. Mr. Asquith had not given Canada all the credit to which he thought she was entitled in making a comparison which showed no great advantage to British goods. He dwelt on the effect of the proximity of a nation like the United States, of their own stock, enormous in numbers, and most enterprising in trade; it was not a matter for surprise that their trade with that country had increased. But, so far as they could, they had done everything to keep trade within the Empire. They had built canals and railways from east to west of Canada, and they had taken care to assist the principle of mutual trade so far as legislation could do it. . . . He explained that in the recent revision of the Canadian tariff they had adopted a new principle in providing an intermediate tariff for negotiation. They were prepared to negotiate with nations like France or Italy on the basis of that tariff, but their lower preference tariff remained reserved for the British Empire."

Other resolutions adopted or accepted during the last two sessions of the Conference were as follows:

"That it is desirable that the attention of the Governments of the Colonies and the United Kingdom should be called to the present state of the navigation laws in the Empire and in other countries, and to the advisability of refusing the privileges of coastwise trade, including trade between the Mother Country and its Colonies and possessions, and between one colony or possession and another, to countries in which the corresponding trade is confined to ships of their own nationality, and also to the laws affecting shipping, with a view of seeing whether any other steps should be taken to promote Imperial trade in British vessels." (This was voted by the representatives of the Colonies only, "His Majesty's Government dissenting.")

"That it is desirable that His Majesty's Government, after full consultation with the Colonies, should endeavour to provide for such uniformity

as may be practicable in the granting and protection of trade marks and patents."

"That it is desirable, so far as circumstances permit, to secure greater uniformity in the trade statistics of the Empire, and that the Note prepared on this subject by the Imperial Government be commended to the consideration of the various Governments represented at this Conference."

"That it is desirable, so far as circumstances permit, to secure greater uniformity in Company Laws of the Empire, and that the memorandum and analysis prepared on this subject by the Imperial Government be commended to the consideration of the various Governments represented at this Conference."

"That, in view of the social and political advantages and the material commercial advantages to accrue from a system of international penny postage, this Conference recommends to His Majesty's Government the advisability, if and when a suitable opportunity occurs, of approaching the Governments of other States, members of the Universal Postal Union, in order to obtain further reductions of postage rates, with a view to a more general and if possible a universal adoption of the penny rate."

"That, with a view to attain uniformity so far as practicable, an inquiry should be held to consider further the question of naturalization, and in particular to consider how far, and under what conditions, naturalization in one part of His Majesty's dominions should be effective in other parts of those dominions, a subsidiary conference to be held, if necessary, under the terms of the resolution adopted by this Conference on April 20 last."

"That in the opinion of this Conference the interests of the Empire demand that in so far as practicable its different portions should be connected by the best possible means of mail communication, travel, and transportation: That to this end it is advisable that Great Britain should be connected with Canada, and through Canada with Australia and New Zealand by the best service available within reasonable cost; That for the purpose of carrying the above project into effect such financial support as may be necessary should be contributed by Great Britain, Canada, Australia, and New Zealand in equitable proportions."

A. D. 1909. — The total of its prospective Military Strength when present Imperial plans are carried out. — In a speech made in March, 1909, Mr. Haldane, Minister for War, summed up the total of defensive military strength which the Empire might count on when recent plans for Imperial defence were carried out. He said: "With the divisions between the Cape and Malta and those which Lord Kitchener had in India, the Regular Army for overseas work 16 divisions, equivalent to eight army corps which was larger than any other nation had for overseas work, the reason being that we, unlike others, were responsible for 12 million square miles and [illegible] millions of human beings. The second line, what one might call the local line of home defence, consisted of the 14 divisions of the Territorial Army. Supposing Canada, the population of which was very rapidly increasing, were to insist on the foundations laid at the Conference by the new proposals which Canada had accepted already add five or six Territorial divisions of her own. Those would be for her own defence, but they know that in 1899, when a supreme emergency arose, she did not scruple to send forth her strength to help the Mother Country. In Australia there was a remarkable movement for the organization of the forces of the Crown, which might easily produce five Australian Territorial divisions. New Zealand might produce another division, and South Africa could rapidly produce four or five. . . . If they could add to the 14 second line divisions at home 16 for the second line Army of the Empire there would be 30 divisions altogether, and these, added to the 16 Regular first line divisions for use overseas, would give us an army for war conceivably and practicably of 46 divisions, equivalent to 23 army corps. The army of Germany had 23 army corps, and no other army in the world had an organization so great. He was speaking of possibilities."

A. D. 1909 (June). — The Imperial Press Conference in England. — Among the many endeavors of late years in England to draw the distant peoples of the great British Empire into closer relations with its sovereign Mother Country, and into the feeling of stronger ties of unity among themselves and with her, none seems to have been wiser or more surely of effect than that which brought about the Imperial Press Conference of June 1909. It assembled sixty representatives of the Newspaper Press of every part of the Empire and of every shade of political opinion. It entertained them delightfully and impressively for three weeks. It made all England and its colonies and dependencies listen to their discussion of many questions, all bearing on the fundamental desire to make the most and best that can be made of the great political organism which extends its law to every continent and its influence to all the world. It brought before them its most distinguished and eloquent men to address them at meetings and feasts. It assembled at Spithead its stupendous central fleet of battleships, to pass it in review before them. It filled their minds with an undoubtedly new realization of what the United Kingdom of Great Britain and Ireland, the sovereign, the seat, the center of greatness in the Empire — is to it; and they went back to Canada, to Australia, to South Africa, to New Zealand, even to India, to propagate that realization in other minds.

A Western Australian editor, speaking at one of the banquets of the Conference, referred to the results, as being: "The influence that had been brought to bear upon the overseas delegates could not fail to have very great effects upon their writings in the future. Coming as they did from isolated parts of the Empire, it was an agreeable surprise to them to find that they had all been thinking Imperially, and speaking in much the same way. While the spirit of nationalism was growing up very strongly, they felt that the spirit of nationalism was in no way out of harmony with the true spirit of Imperialism; and it had been a revelation to the delegates to find the unanimity that existed, not only among the English-speaking people of the Empire, but among those who came from different races. They had been helped to strengthen that feeling of Imperial unity in the certain hope that eventually the

BRITISH EMPIRE, 1909

highest ideals of the best form of Imperialism would be realized. That form of Imperialism was not associated with a policy of aggrandisement, but was associated with the policy that would tend to promote the peace of the world, and the prosperity and the betterment of humanity generally."

A writer in *The Times*, reviewing the Conference after it closed, quoted the above and added: "The speaker just quoted travelled for seven days across Australia before he reached the capital of the State where he joined his fellow-delegates from the Commonwealth. The Australian party, when once it had left Sydney, was three weeks on the ocean before it reached the Pacific coast of Canada. A Canadian delegate, speaking at a banquet in Glasgow, declared that when at home he was as remote from one of his Canadian colleagues as Egypt is from London, and as remote from another, in the opposite direction, as London is from Russia. It might have been supposed that distances like those just indicated would have had the effect of causing some estrangement between men so widely separated; but the contrary proved to be the case. The Australians, following the All-Red route, which was defined as the official route, were greeted on their arrival on Canadian soil with an enthusiasm which both surprised and touched them. Wherever they went they found themselves among friends, anxious and eager to exchange views and ideas on all sorts of subjects affecting the common interests of the two peoples. They were banqueted by many representative men, from the Governor-General downwards, and, having been welcomed with the utmost heartiness at Victoria on the Pacific coast, were given a not less hearty 'God-speed' from Quebec on the St. Lawrence.

"Among the indirect results of the Conference must be mentioned the knowledge gained from such experiences. When in Canada the Australians were able to see how far their own trade interests were identical with those of the people among whom they had come, how the Canadians are facing the same problems both of politics and material development, of commerce and agriculture. And when, the feastings over, they found themselves on board the steamer with their Canadian fellow-delegates, a community of interests was at once established, and lasting friendships were formed.

"Similarly, when the delegates had all assembled in England there arose a spirit of comradeship which subsisted without a jarring note from the beginning of the Conference to the end. Nor must it be forgotten that the men who formed part of this company of editors and writers of the overseas Press were not wholly of British race. From Canada came representatives of the French Canadians, from South Africa some of Boer and Dutch extraction, from India one delegate at least of Indian blood. The welding together of all these men in a spirit of loyalty to the Empire in which they as well as we have a share has been one of the most significant features of the Conference."

The practical object for which the Press Conference strove most earnestly was a cheapening of telegraphic communication, by cable or wireless, between the distant parts of the Empire, to the end that there may be an ampler publication of news from each division of it in every other. It received strong assurances of coöperation from the Imperial Government in its efforts to accomplish this end. To a deputation which waited on him, the Premier, Mr. Asquith, said: "Your Conference, if I may venture to say so, has very wisely appointed a standing committee to deal with that matter. The Post Office and other Government departments concerned will be anxious to assist and to keep themselves in touch with this committee by information and intercommunication and in all other ways that may be practicable. I think it will be the solid and substantial result of your deliberations on this very great Imperial necessity that in regard to the development of electric communication between different parts of the Empire we shall now have on the side of the Press a body formally organized and constantly existing with which we can enter into necessary communication, and by mutual discussion and reference, having regard to the various considerations to which I have already adverted, we may accelerate the developments of what we all agree to be one of the first requisites of an Empire such as ours — a cheap, a certain, a constant, a convenient, and a universally accessible system of electric communication."

A. D. 1909 (July-Aug.). — Imperial Defence Conference. See (in this vol.) WAR, THE PREPARATIONS FOR: MILITARY AND NAVAL.

A. D. 1909 (Sept.). — Congress of Empire Chambers of Commerce. — A Congress of Chambers of Commerce, representing all parts of the Empire, which was assembled at Sydney, New South Wales, on the 14th of September, 1909, gave much of its discussion to the proposition that the several parts of the Empire should afford preferential treatment to each other in their several markets, on a basis of reciprocity, and adopted resolutions to the effect that the Congress "urges upon the Governments of the Empire that they should treat this matter as of present practical importance, and that the organizations represented at this Congress pledge themselves to press their respective Governments to take such action at the next Imperial Conference as will give effect to the principle advocated in this resolution." This was carried on individual voting, by 81 votes to 31. On voting by chambers, the resolution was passed with 60 for, 8 against, and 11 neutral.

Among the other resolutions of the Congress were the following: "That this Congress urges upon his Majesty's Government and upon the Governments of the Colonies the appointment of an Advisory Imperial Council to consider questions of Imperial interest, especially those tending to promote trade between the various parts of the Empire."

"That the settlement in adequate volume of the Anglo-Saxon race in the British Dominions is deserving of the constant solicitude of the Home and Colonial Governments, who are hereby urged to consider what further or better steps than those at present existing should be taken to elaborate a general State-aided scheme at reduced rates to encourage emigration of suitable settlers under well-considered conditions."

"This Congress is of opinion that it is desirable to complete the Imperial route between the Motherland, Canada, Australia and New Zealand by State-owned electric communication across Canada to Great Britain and that the

postal departments of the various Governments of the Empire should be requested to frame a combined scheme of substantial reductions in telegraphic rates."

BUFFALO: A. D. 1901.—The Pan-American Exposition. — Assassination of President McKinley. — Vice-President Roosevelt becomes President of the United States. — In Volume VI. of this work, which went to press in the spring of 1901, an account was given of the plan and preparations made for the Pan-American Exposition at Buffalo, then just at the point of being opened, on the 1st of May. The following characterization of the Exposition by a visitor is sufficient to add what was then said of it:

"They have staged electricity at Buffalo this summer, and they call it the Pan-American Exposition. It took a rectangle of 350 acres for the stage, and over $10,000,000 for the settings. The result, baldly stated, is the most glorious night scene the world has ever had the fortune to witness. The staging of Niagara is the one unforgettable thing about the affair. The Pan-American is, however, much more than this. . . .

"It may be well to say that the original generic scheme for the Exposition, that of joining the three Americas in a unified attempt to show one another their trade resources, seems to be in results far less prominent than was hoped at first. For one reason or another, — I have heard European influences in South America given as a chief cause, — the Latin Americas did not cooperate as was expected. The great trade idea upon which the Pan-American was originally based gradually faded, and gave place to the idea of an electrical beatification — for which the spectator will perhaps be thankful. There are exhibits, to be sure, from most of the South American countries, but the United States occupies industrially foreground, background, and middle distance. The other countries fill in the odd corners. The ardent patriot will see no lack of proportion in this; and as there is a hint of Mexico and the Argentine, and very creditable exhibits by Chile and Honduras, we have enough of the sister continent to justify the name. Most of the southern republics are represented in one way or another. It is hard, however, to explain the insufficiency of Canada's exhibit. It is upon much too small a scale to do credit to her great resources. It is worthy of note that when the other countries realized the importance and beauty of the Pan-American, they set about vigorously to retrieve themselves.

"So the staging of electricity was undertaken. There was Buffalo to start with, and Buffalo is backed in the great race of American cities by the power of Niagara and the commerce of the Lakes. It is delightfully accessible and pleasing. Here was the psychological place. It was also the psychological moment, — a period of general prosperity, a time when America had set about her great task of making commercial vassals of the Old World countries. The psychological idea came with electricity, and under this happy triad of influences conspiring for success the work was begun.

"The managers took a big rectangle of unused land to the north of a beautiful park, and welded with it the most attractive portion of that park for their groundwork. Then they charted an effect. They put millions into an attempt to please, and did more, for they have both pleased and startled, — an effect peculiarly delightful to Americans." — E. R. White, *Aspects of the Pan-American Exposition* (*Atlantic Monthly, July*, 1901).

The Pan-American Exposition may be said to have been paralyzed in the first week of its fifth month by the awful tragedy of the wanton murder of President McKinley, while it entertained him as its guest. Mr. McKinley, with Mrs. McKinley, had arrived in Buffalo on the 4th of September, for a long planned visit to the Exposition, and had accepted the hospitality of its President, Mr. John G. Milburn. On the afternoon of the 6th he held a public reception in the Temple of Music, on the Exposition grounds, and it was there that the brutal assassin found his opportunity for the deed. The following graphic narrative of the tragedy is from the pen of Mr. Walter Wellman in the *American Review of Reviews:*

"Usually a secret-service agent is stationed by the President's side when he receives the public, but on this occasion President Milburn stood at the President's left. Secretary Cortelyou was at his right, and a little to the rear. Opposite the President was Secret-Service Officer

Ireland. Eight or ten feet away was Officer Foster. When all was ready, the line of people was permitted to move, each one pausing to shake the hand of the President. He beamed upon them all in his courtly way. When one stranger timidly permitted himself to be pushed along without a greeting, the President called out, smilingly, 'Hold on, there; give me your hand.' Mr. McKinley would never permit any one to go past him without a handshake. He was particularly gracious to the children and to timid women. Here, as we have often seen him in Washington and elsewhere, he patted little girls or boys on the head or cheek and smiled at them in his sweet way. A woman and a little girl had just passed, and were looking back at the President, proud of the gracious manner in which he had greeted them. Next came a tall, powerful negro — Parker. After Parker, a slight, boyish figure, a face bearing marks of foreign descent, a smooth, youthful face, with nothing sinister to be detected in it. No one had suspected this innocent-looking boy of a murderous purpose. He had his right hand bound up in a handkerchief, and this had been noticed by both of the secret-service men as well as by others. But the appearance in a reception line of men with wounded and bandaged hands is not uncommon. In fact, one had already passed along the line. Many men carried handkerchiefs in their hands, for the day was warm.

"So this youth approached. He was met with a smile. The President held out his hand; but it was not grasped. Supporting his bandaged right hand with his left, the assassin fired two bullets at the President. The first passed through the stomach and lodged in the back. The second, it is believed, struck a button on the President's waistcoat and glanced therefrom, making an abrasion upon the sternum. The interval between the two shots was so short as to be scarcely measurable. As the second shot rang out, Detective Foster sprang forward and intercepted the hand of the assassin, who was endeavoring to fire a third bullet into his victim. The President did not fall. He was at once supported by Mr. Milburn, by Detective Geary, and by Secretary Cortelyou. Before turning, he raised himself on tiptoe and cast upon the miserable wretch before him, who was at that moment in the clutches of a number of men, a look which none who saw it can ever forget. It appeared to say, 'You miserable, why should you shoot me? What have I done to you?' It was the indignation of a gentleman, of a great soul, when attacked by a ruffian. A few drops of blood spurted out and fell on the President's waistcoat. At once the wounded man was led to a chair, into which he sank. His collar was removed and his shirt opened at the front. Those about him fanned him with their hats. Secretary Cortelyou bent over his chief, and Mr. McKinley whispered, 'Cortelyou, be careful. Tell Mrs. McKinley gently.'

"A struggle ensued immediately between the assassin and those about him. Detective Foster not only intercepted the arm of the murderer, and prevented the firing of a third shot from the revolver concealed in the handkerchief, but he planted a blow square upon the assassin's face. Even after he fell, Czolgosz endeavored to twist about and fire again at the President. Mr. Foster threw himself upon the wretch. Parker, the colored man, struck him almost at the same instant that Foster did. Indeed, a half-dozen men were trying to beat and strike the murderer, and they were so thick about him that they struck one another in their excitement. A private of the artillery corps at one moment had a bayonet-sword at the neck of Czolgosz, and would have driven it home had not Detective Ireland held his arm and begged him not to shed blood there before the President. Just then the President raised his eyes, saw what was going on, and with a slight motion of his right hand toward his assailant, exclaimed: 'Let no one hurt him.'"

As soon as possible, the wounded President was removed to the Exposition Hospital, and surgeons were quickly in attendance. The medical director of the Exposition, Dr. Roswell Park, President of the American Society of Surgeons, chanced to be absent, at Niagara Falls, where he was performing an operation at the time. The necessary operation upon the President was performed by Dr. Matthew D. Mann, assisted by Dr. Herman Mynter, Dr. Eugene Wasdin, of the Marine Hospital service, and others. The one fatal bullet of the two that were fired was found to have passed through both walls of the stomach, and its further progress was not traced. Dr. Park arrived on the scene before the operation was finished and took part in the subsequent consultations.

From the hospital Mr. McKinley was removed to Mr. Milburn's house, where Mrs. McKinley, being an invalid, had remained that day. There he received all possible care during the eight days in which the nation hoped against hope that he might be saved. Dr. Charles McBurney was called from New York to join the attending physicians and surgeons, and approved all that had been done. For a week there seemed good ground for believing that the sound constitution of the President would defeat the assassin's attempt; but on Friday the 13th the signs underwent a rapid change, and at fifteen minutes past two o'clock of the morning of Saturday he breathed his last.

Vice-President Theodore Roosevelt, who was then at a camp in the Adirondacks, was summoned at once, and arrived in the city that afternoon. At the house of Mr. Ansley Wilcox (whose guest he became), in the presence of the members of the late President's cabinet and of a few friends and newspaper correspondents, he took the oath of office as President, administered by Judge Hazel, of the United States District Court. Before taking the oath he said: "I wish to say that it shall be my aim to continue, absolutely unbroken, the policies of President McKinley for the peace, the prosperity, and the honor of our beloved country."

The assassin, who called himself Nieman at first, was identified as Leon Czolgosz, a Pole, having reputable parents at Cleveland, Ohio. He had come under anarchist influences and been taught to believe that all heads of government were enemies of the people and ought to be slain. There was no other motive discoverable for his crime. He was arraigned in the County Court, before Justice Emory, on the 17th of September, three days after his victim's death, and, having no counsel, two former Justices of the Supreme Court of the State, Loran L. Lewis and Robert C. Titus, consented to be assigned for

his defence. On the 23d he was tried in the Supreme Court, Justice Truman C. White presiding, the only defence possible being that on the question of sanity, and his guilt was pronounced by the verdict of the jury. On the 26th he was sentenced to be executed, in the State Prison at Auburn, within the week beginning October 28.

CALIFORNIA: A. D. 1900–1909. — Growth. — Industries. — Products. — Railway facilities, etc. — "Within the past decade numerous events have tended to direct the attention of the United States and of the world to the importance of the Pacific ocean and the lands bordering upon it, as the field of great activities in the near future. The Spanish-American war, and particularly the voyage of the battleship Oregon around South America hastened the movement for an inter-oceanic canal. The development of the Alaskan gold fields gave a great impetus to shipping and trade in staple supplies in Pacific coast cities. The war between Russia and Japan revealed the maritime enterprise and established the naval prestige of Japan.

"Since the earliest days of American occupation California has been steadily filling up with people. These later movements in Pacific coast history, together with the steady development of natural resources, have greatly accelerated the advance in population, especially in cities as the centers of industrial and commercial activity. The census of 1900 showed a total population of 1,485,053. At the beginning of 1909 the number is estimated by the State Board of Trade at 2,564,363. The growth of cities in the same period is shown by the following instances, — the first figure being the population by the census of 1900, the second the State Board of Trade estimate for 1909.

	1900.	1909.
Alameda	16,464	25,000
Berkeley	13,214	40,000
Fresno	12,470	32,000
Los Angeles	102,479	305,000
Oakland	66,960	200,000
Sacramento	29,282	55,000
San Francisco	342,783	500,000
San José	21,500	45,000
Stockton	17,506	25,000

"Two features characterize the recent development of California agriculture, — the increased value of the products, and a greater variety of crops. Originally wheat was the staple crop, but now sugar beets, hops, beans, alfalfa, and garden seeds must be added to the common cereals to make the list of staples. In 1908 the wheat crop was valued at $18,894,961, and the barley at $26,841,894.

"Orchards and vineyards furnish one of the best records of advancing wealth. Shipments out of the state by rail and by sea are given by the State Board of Trade as follows:

	1898. Tons.	1908. Tons.
Green Deciduous Fruits	69,732	161,224
Citrus Fruits	180,658	399,094
Dried Fruits	76,662	133,846
Raisins	47,796	29,601
Nuts	5,815	10,887
Canned Fruits	52,219	85,185

CALIFORNIA

"About ninety per cent of all the citrus fruits go from the southern part of the State (south of Tehachapi mountains) and substantially all the fresh deciduous fruits go from the northern and central portions, Sacramento being one of the largest shipping points. Nearly all the dried fruits, raisins, canned fruits, wine and brandy, go from the northern and central portions. Most of the walnuts are grown in the south, and most of the almonds in the northern and central parts of the state. Olives are grown in about equal quantities, north and south. General farming, including stock raising, is much more widely pursued north of Tehachapi than south, and the same is true of the mining industry. The principal forests of the state are in the Sierra region and in the Coast Range Mountains north of Sonoma county.

"Formerly wool was an important product of California. The industry reached its maximum about thirty years ago, — the wool clip of 1876 amounting to 56,550,973 pounds. Since that date the wool product steadily declined till 1906, when the total amount was 24,000,000 pounds. Since 1906 the decline has been swift, as shown by the total of 15,000,000 pounds for 1908.

"In the production of the precious metals the record of California is very steady in recent years, — the gold output for 1900 being valued at $15,863,355, and for 1907 at $16,727,928. On the other hand the oil industry shows a marvelous advance. The output of petroleum from California oil wells was 4,000,000 barrels in 1900, and 48,300,758 barrels in 1908. Since 1906 the oil product of California has amounted to over twenty-five per cent of the total production of the United States. California petroleum now exceeds in value the output of her gold mines.

"For a long time the high cost of fuel retarded the growth of manufactures in California. Recently, however, the production of fuel oil and the introduction of electrical power developed from the water power in the streams of the Sierras have given a great impetus to manufacturing industries. The use of electricity is certain to be greatly increased in the near future and for this reason the people of California are tremendously interested in the policy of the federal government in the preservation of the mountain streams and in the disposition of water-power sites. The value of the products of manufacturing enterprises in the state for 1908 is estimated at about $500,000,000, of which the sum of $175,000,000 is credited to San Francisco, $62,000,000 to Los Angeles, $52,000,000, to Oakland, with Sacramento, San José, Stockton and Fresno following in the order of naming.

"California is a state of magnificent dimensions and it is quite in keeping with the size of the state to find that in 1907, with but two per cent. of the total population of the United States she had three per cent. of the total railway mileage of the country. New construction was almost entirely suspended in 1908, but has been resumed in 1909. The most important new road is the Western Pacific which enters the state by the Beckwith Pass to the north of the line of the Central Pacific route, from Sacramento to Ogden, and with the advantage of crossing the Sierras at 2000 feet less elevation. It reaches the Sacramento Valley by the canyon of the Feather River and opens up a large area of rich country to railway communication. It will be completed through to San Francisco in 1910, and will be the fifth trans-continental line terminating on San Francisco Bay.

"Another great work of railway construction in progress in 1909 is the rebuilding upon an improved grade of the Central Pacific road through the Sierras. The extreme elevation of the present road at the summit of the range (7000 feet) is to be diminished by a lengthy tunnel. Other work of construction soon to be brought to completion is the extension of the Northwestern Pacific, a coast road north from San Francisco Bay to Eureka on Humboldt Bay, and the extension of the Ocean Shore Railway south along the coast to Santa Cruz.

"The records of the State Railroad Commission show in 1909 a total mileage in the state of 6744.54 miles.

"The lines operated by the principal companies measure up as follows:

	MILES.
Southern Pacific System	3,582
Santa Fé System	978
Northwestern Pacific	404
San Pedro, Los Angeles and Salt Lake	341
Western Pacific	237
Yosemite Valley Railroad	79

"Suburban electric railways have reached a high stage of development and utility in Southern California, in the Santa Clara Valley, connecting numerous cities and towns in the vicinity of San Francisco Bay, and in the Sacramento Valley. The increase of electric power by the further utilization of the water power of the Sierra Nevada streams will certainly bring about in the near future a great extension of electrical transportation for freighting as well as in passenger traffic." — Frederick H. Clark, *Head of History Dept., Lowell High School, San Francisco.*

A. D. 1900-1909. — Constitutional changes. — "Amendments to the state constitution originate with the legislature, and are placed before the voters of the state at the biennial state elections. Dissatisfaction with parts of the state constitution is manifested by an increasing number of proposed amendments. So long as property interests are not antagonized, the voters show a willingness to make changes by ratifying a large majority of the amendments proposed. Among the important subjects upon which amendments have been adopted within the past ten years are the following: authorization of legislation for the control of primary elections; providing for the use of voting machines; the establishment of a system of state highways; increasing the salaries of judges and of state executive officers; changing the pay of members of the legislature from $8.00 per diem for a period not to exceed 60 days to the sum of $1000 for the regular session; authorizing the legislature to provide a state tax for the support of high schools; permitting exemption from taxation of various forms of property, such as buildings used exclusively for religious purposes and the endowments of the Leland Stanford Junior University, the California School of Mechanical Arts, and the Cogswell Polytechnical College, — also personal property at the will of the owner to the amount of $100; eight hours made a legal day's work on all public work throughout the state; authorization for the depositing of public

funds in banks. An important change in the state judiciary was made in 1904 by the creation of district courts of appeal for the relief of the congested condition of the business of the State Supreme Court. The state was divided into three judicial districts, in each of which was established a court of appeal consisting of three judges elected from within the district for a term of twelve years.

"A plan for the reorganization of the revenue system of the state was placed before the voters in 1908, but failed of adoption. The proposed amendment was the outcome of a movement that began in 1905 with the appointment of a special commission on taxation. This commission employed expert assistance and made a thorough study of the subject of public revenues. Its work was placed before the next meeting of the legislature from which came the proposed amendment. Its central object was to discover new sources of revenue for the state treasury, leaving the direct property tax for the maintenance of local government alone." — Frederick H. Clark, *Head of History Dep't., Lowell High School, San Francisco.*

CANADA.

A. D. 1896-1909. — The interchange of people between Canada and the United States. — The "American Invasion." — Rapid settlement of the Canadian Northwest. — Immigration in the last decade. — "Nature is healing the schism of the race by her own slow but efficacious methods. Hundreds of families of the United Empire stock have gone back to the United States, in some instances to the very place of their origin. Upwards of a million native Canadians are now living in the States, the great majority as naturalised Americans; whilst American farmers, attracted by cheap land and good laws, are entering the Canadian North-West at the rate of 50,000 a year. The exodus, as migration across the line is called, is a heavy drain on Canada; like an ancient conqueror, it sweeps away the flower of both sexes, leaving the unfittest to survive. During the last 30 years we have spent $10,000,000 on immigration work in Europe, yet our population has not held its natural increase, has not, that is, grown as fast as the population of an old and overcrowded country like England. The Canadian lad thinks no more of transferring himself to Buffalo or Chicago than a Scotch youth of going up to London, perhaps not so much. On the other hand, American tourists, 'drummers,' lecturers, sportsmen and investors come and go in Canada precisely as if this were a State of the Union. When we produce a champion athlete, a clever journalist or eloquent divine, they annex him and advertise him next day as a Yankee. Marrying and giving in marriage is going on without the slightest regard for the doctrines of the Loyalists. There are said to be 200 college professors of Canadian birth in the United States. I am acquainted with some of them, and in their opinion, whatever it may be worth, Canada can best serve herself by becoming politically independent, and could best serve England by joining the American Union, where her presence and vote would offset the Anglophobia latent or active in other elements.

"The influence of the Canadian-Americans, to say nothing of that of the Americans proper, is visible on every side in English Canada; they are constantly visiting the old home, in many cases paying the interest of the mortgage on it. The French Canadians in New England have taught those in Quebec that the priest has no business to interfere unduly in elections, or to make war on Liberalism; that the Press ought to be free, and the State, not the Church, supreme within the sphere she defines as her own. Every day the French Canadian papers publish columns of correspondence from the French settlements in the factory towns across the line, but of British affairs editors and readers know little, and, apparently, care less. I mention this not to sneer at the French Canadian Press, but to show those Englishmen who urge us to cultivate the Imperialist spirit how difficult it would be for Mrs. Partington to keep out the Atlantic.

"In English Canada, our newspapers supply us with British news filtered through American channels; we read American books, are interested in American politics, frequent their watering-places and race tracks, imitate their tariffs, play baseball and poker, live under local institutions fashioned after theirs, think like them, speak like them, eat like them, dress like them; when we visit England, we find ourselves taken for them and treated well in consequence, better than if we confessed ourselves Colonists." — E. Farrer, *Canada and the new Imperialism* (*Contemporary Review, Dec.*, 1903).

"Some ten years since there began to trickle into the vast wastes of the West the tiny rivulet of immigration which has now become a great stream. Many influences have gone toward widening this current of immigration, but the initial impulse which set it in motion came from the courage of one man. In 1896 Clifford Sifton, a young man, thirty-five years of age, who had already played a considerable *rôle* in the politics of Manitoba, became Minister of the Interior in the Dominion Government. He was equipped with a genius for organization, an almost unequaled capacity for persistent hard work, and, above all, a faith in the West which knew neither wavering nor questioning. He threw himself

CANADA, 1896–1909

with immense energy into the task of advertising the Canadian West to the world and inducing immigration. His conception of the problem and its solution was Napoleonic; for he saw what others could not see and even scouted as absurd, that the people who could be induced most easily to lead the procession into the vacant prairies lived in the adjoining States of the American Union. A new generation had grown up in these States on the farms secured as free grants by their fathers in the '70's, and he saw that when they looked for lands for themselves there would be none available at all comparable with those of Western Canada. Therefore, he argued, to acquaint them with the opportunities and possibilities of the new land to the north would be to insure such a migration as he desired, and if the stream once began flowing it would widen by its own velocity. This was the great idea which, given effect to by an organization called into being by first-class executive talent, operating with limitless resources, broke forever the great silence of the prairies and made them the Mecca of the world's landless folk.

"There had been for years Canadian immigration agencies at various places in the United States, but they had been administered in a spirit of perfunctory hopelessness. These offices were reorganized; new ones opened; tens of thousands of dollars were expended in advertising and in the distribution of printed literature; enterprising drummers were sent abroad throughout the Western States to preach up the opportunities of Western Canada; representative farmers were induced to take trips through the Canadian West, all expenses paid by the government, — in fact, everything that trained business talent could suggest was done.

"The result? In the first year of the new order of things 2412 Americans came to Canada, and thereafter the number mounted yearly. By 1899 the figures had reached 11,945; 1901, 17,987; 1902, 26,388; 1903, 49,473; 1904, 45,171; 1905, 43,652; 1906, 57,919. During the ten years ending June 30, 1906, no less than 272,609 persons left the United States to become residents of Western Canada. These people came from all parts of the United States. The government homestead records for 1906 show applications from persons coming from every State and Territory of the United States, including the District of Columbia and Alaska. North Dakota led in the applications, with Minnesota a close second; then came Iowa, Michigan, Washington, Wisconsin, Illinois, tapering to two from Alabama and one from Georgia. . . .

"It has given Canada over a quarter of a million of settlers with the highest average of efficiency. They, almost without exception, have sufficient capital to make a good start, a most important consideration in a new country where money is scarce and dear. Akin to the Canadians in race, language, political and social customs, they become a part of the community just as naturally as one stream flows into another at the same level. These settlers have also brought with them fifty years' experience in prairie farming, and by their example have enormously affected agricultural methods. . . .

"More important, however, was the advertisement which the 'American invasion' gave Western Canada. It was precisely what the country needed — indeed there could have been no substitute for it in effectiveness. The Eastern Canadian was rather out of conceit with his own West; and if a migratory instinct drove him onward he went to the United States. In Great Britain Western Canada could get no hearing at all, — her emigrants went to Australia, the United States, New Zealand, or even to alien lands in preference to Canada. It is doubtful whether any possible exertions by the Government could have turned the attention of these people to Canada had not the influx of Americans to the prairies, loudly announced by all controllable agencies of publicity, challenged their attention and pricked their national pride. Once the fact was driven into their consciousness they began to hold that if Western Canada was good enough for 'Yankees' it was good enough for them. British newspapers in particular showed a belated but very real interest.

"The result has been a heavily increasing immigration from the British Isles, until it now exceeds by many thousands every year the arrivals from the United States. For the ten-year period specified above there were 311,747 immigrants from Great Britain, compared with 272,609 from the United States; with 248,250 from 'other countries,' chiefly continental Europe. The Scandinavian, Teutonic, and Slavic peoples are all strongly represented in Western Canada. The most numerous non-British people are the Ruthenians, or little Russians. In addition there is a large yearly influx of Canadian settlers from the older provinces, of whom there is no record excepting in the homestead applications. These figures showed that out of 41,869 applications for homesteads last year 27 per cent. were Canadians, 29 per cent. Americans, 20 per cent. from the British Isles, while the remaining 24 per cent. comprised persons of eighteen different nationalities. These statistics show that Western Canada is overwhelmingly English-speaking." — John W. Dafoe, *Western Canada: Its Resources and Possibilities* (*American Review of Reviews*, *June*, 1907).

Writing from Toronto, June 24, 1909, the regular Correspondent of the London *Times* took the subject of Canadian immigration, especially that from the United States, for extended treatment. Part of his remarks were as follows:

"So long as the American States had free, fertile lands, it was natural that population should flow into the Republic. America, in the mind of Europe, was the land of promise and the home of freedom, and the United States was America. Canada was but a fringe of inhospitable British territory, where the spring came late and summer was brief, and winter was long and stern. The first great impulse to settlement came with the construction of the Canadian Pacific Railway, but an even more material factor in Canadian development was the comparative exhaustion of the free land of the Western States and the increasing reputation of the Canadian West as a wheat-growing country. If the 20th century belongs to Canada, as Sir Wilfrid Laurier has said, it is primarily because the American Republic has become a far less formidable competitor for British and European immigration, and because thousands of American farmers have discovered that they can sell their improved farms at good prices and secure lands of equal value in Canada for themselves and their sons with a very small investment of capital.

"The total immigration since 1901 is estimated at 1,200,000. In that year it was 49,149. It rose in 1902 to 67,379. Thence there was a steady increase until 1907 when the figures were 262,469. In 1908 the total immigration was between 140,000 and 142,000, and for this year the estimate is 200,000. British immigrants began to come in considerable volume in 1901, when there were 17,259 arrivals. The best year was 1907, when the number reported was 120,182, as compared with 83,975 from the Continent of Europe and 58,312 from the United States. The decline in 1908 was chiefly in British and European immigration. Between 50,000 and 55,000 came from across the border, which was a greater number than came from either Britain or Europe. This year it is estimated that 70,000 Americans will come into the country. They will take up between 20,000 and 25,000 homesteads, and as it is considered that they bring property to the average value of $1,000 each this would give a total new capital of $70,000,000. In 1907, the year in which we had our greatest volume of immigration, there were 178,500 British and Americans as compared with 84,000 from the Continent of Europe. For the last year there were 100,000 British and Americans and not a third as many from Europe.

"It is apparent that, even with the best business management the Empire can apply to the direction of its population, the American immigration to Canada will continue to exceed that from Great Britain. One of the most careful and soberminded of our public men with whom I talked a few days ago, a man who knows the West and for years has had intimate official knowledge of the movements of population on both sides of the border, believes that in the next ten or twelve years five millions of Americans will come into Canada. Upon this I pronounce no opinion, save to agree that the overflow from the United States is bound to increase in volume. Naturally there are those amongst us who regard 'the American invasion' with uneasiness, and fear the ultimate effect upon our institutions and upon the relation of Canada to the Empire. In this connexion I can only say that for some years I have been at pains to consult men from all parts of the West who should know the mind of these American settlers and their general disposition towards the social and political institutions of the country, and as yet I have not found a single Western Canadian to express apprehension. They all agree that, while the Americans have a natural affection for 'Old Glory' and as yet may confuse the Fourth with the First of July, they pay ready allegiance to the flag under which they have come to live, and very generally agree that the impartial and inflexible administration of justice in Canada is in itself sufficient reason for the permanence of the British allegiance and an honest loyalty to Canadian institutions. What may be hidden in the womb of the future, when many of these Americans sit in the Legislatures and in the Federal Parliament, and become powerful in moulding public policy, we cannot know, but at least it is seldom that the seeds of revolution thrive amongst a prosperous agricultural population.

"But it is to one particular phase of the movement of population that I desire chiefly to call attention. The migration to the West has had a marked effect on the older Canadian provinces. Many farms in the long settled districts have been almost deserted. The old remain; the young have gone. The only compensation is that the sons prosper in the West."

According to a despatch from Ottawa in September, 1909, "the annual Immigration Report states that the total arrivals in Canada during the last fiscal year were 146,908. For the first time in Canadian history immigrants from the United States exceeded those from the United Kingdom; the figures are respectively 59,832 and 52,901. The total immigration during the 13 years which the present Government has been in office was 1,366,658. American immigrants in that period have brought to Canada £12,000,000 in cash and effects. Immigration from France and Belgium declined last year and Japanese immigration fell off by 7,106. Only six Hindus entered Canada, compared with 2,623 in the previous year; 3,803 immigrants were rejected at ocean ports, of whom 1,748 were deported. The total deportations since 1902, when the system was first inaugurated, were 3,149, of whom 2,607 were English."

Two months later it was reported from Ottawa that during the first six months of 1909 "homestead entries were made by 27,296 *bona fide* settlers, representing free grants of Dominion lands of 4,367,360 acres. This is an increase of 989 entries and of 150,200 acres as compared with the corresponding period of 1908. In September the total number of homestead entries was 2,902; of these 926 were American, 325 English, 109 Scotch, 54 Irish, 336 Canadians from Ontario, and 83 Canadians from Quebec."

Previously, in August, it had been stated that "German capitalists have interested Toronto men in a big plan to colonize the lands of Alberta and Saskatchewan on a time-payment system. The scheme includes advances to settlers for the purchase of implements and for help in house building. The expectation is that 20,000 Germans will avail themselves of the scheme."

A. D. 1898-1903. — German retaliation for the tariff discrimination in favor of British goods. See (in this vol.) TARIFFS.

A. D. 1901-1902. — The Census of the Dominion. — New apportionment of parliamentary representation. — The census of the Dominion, taken in 1901, showed a total population of 5,370,000, of which Ontario contained 2,182,947; Quebec, 1,648,898; Nova Scotia, 459,574; New Brunswick, 331,120; Manitoba, 254,947; British Columbia, 177,272; Prince Edward Island, 103,259; The Northwest Territories, Yukon included, 211,649.

The new distribution of parliamentary representation, determined this year, gave the House of Commons a total membership of 214, apportioned as follows: Quebec 65 (as guaranteed by the Confederation Act); Ontario 86; Nova Scotia 18; New Brunswick 13; Manitoba 10; British Columbia 7; Northwest Territories 10; Prince Edward Island 4; the Yukon 1. The basis was one representative for each 2500 people. Ontario lost 6 seats, Nova Scotia 2, New Brunswick and Prince Edward Island 1 each; all the other provinces gained, British Columbia to the extent of 7 seats, the Northwest Territories 4, and Manitoba 3.

A. D. 1902. — Colonial Conference at London. See (in this vol.) BRITISH EMPIRE.

A. D. 1903. — Discovery of the cobalt silver mines in Ontario. — Ore bodies carrying

values in silver, cobalt, nickel, and arsenic were discovered in 1903, during the building of the Temiskaming and North Ontario Railway near the town of Haileybury, at a distance of about 103 miles from North Bay. The railway line ran over the most important vein that has been found, and signs of the latter were noticed in the spring of the year named. Prospecting was begun in the fall with quick results of important discovery, and the rapid attraction of a large mining population to what has become famous as the Cobalt District. The production of silver in the district increased from $111,887 in 1904 to $9,500 000 in 1908. The ores are said to be unique among those of North America. — 16*th Annual Report of Ontario Bureau of Mines.*

A. D. 1903 (Oct.). — Settlement of the Alaskan boundary question. See ALASKA: A. D. 1903.

A. D. 1903-1904. — Measures to establish sovereignty over land and sea of Hudson Bay region. — "The agreement by Britain and America to arbitrate at The Hague the Newfoundland Fishery Question will probably pave the way for a similar solution of another entanglement, as threatening and complicated as that respecting the Alaskan Boundary, apparently now imminent between Canada and the United States over the sovereignty of Hudson Bay. This has a special relation to the Newfoundland problem, being also based on the treaty of 1818. The Canadian Government in August, 1903, despatched the Newfoundland sealing steamer 'Neptune' (one of the type of wood-built ships suited for the work) to the region, with an official expedition whose three-fold object was: (1) to reassert British sovereignty over all the land and seas there; (2) to expel or subject to Canadian authority the United States whalers who fish there, illegally, it is held; and (3) to secure further data tending to determine the navigability of the waters for an ocean grain route and justify subsidising or discouraging the construction of railways from the north-west to the shores of Hudson Bay.

"In the summer of 1904, in anticipation of the 'Neptune's' return, the Canadian Government purchased from Germany the Antarctic exploring steamer 'Gauss,' re-named her the 'Arctic,' and sent her to Hudson Bay as an official cruiser, she conveying also Major Moodie, of the North-West Mounted Police, who was commissioned as 'Governor of Hudson Bay' and was accompanied by a body of that famous force, to assist him in the administration of this extensive province, they to build posts there and establish themselves at the most important points . . . The undisguised purpose of the Dominion is to take all possible steps to prevent the United States from securing any advantage territorial or diplomatic, which would enable her to put forward pretensions such as have been advanced by her with respect to the Alaskan Boundary.

"The similarity of this question to that of the Alaskan Boundary is quite striking. Geographically, the Hudson Bay region is to the North-eastern portion of the continent what Alaska is to the North-western. In the variety and value of natural resources both have much in common. The development of the Hudson Bay region, while not as advanced as that of Alaska, seems destined to be much accelerated in the near future in every department of industrial endeavour. The United States whalers, voyaging from New Bedford into Hudson Bay, and from San Francisco into Alaskan seas, penetrate to the very confines of the Arctic zone itself. To proceed against them now, after their having enjoyed for over seventy years an unrestricted access to Hudson Bay, whether entitled thereto or not, is a step which may provoke a repetition of the difficulties which were recently experienced over the Alaskan Boundary. . . .

"[Canada] contends that from the entrance to Hudson Strait, which she says is in a line drawn from Cape Chidley, the northern projection of Labrador, to Resolution Island, the southern extremity of Baffin Land, all the waters and lands to the west, including the numerous islands of Arctic America, are her exclusive possession. She bases this contention on the following grounds:—

"1. Discovery (the waters, coastline and hinterland having been discovered and charted by British explorers).

"2. Occupation (the region having been occupied only by the Hudson Bay Company).

"3. Treaty cession (the British rights to the region having been admitted by the French in 1713).

"4. Acquiescence (the United States having acknowledged the Hudson Bay Company's rights in 1818).

"5. Purchase (Canada having bought out the Company in 1870).

"But Americans are indisposed to acquiesce in any such conclusion as regards the waters of the Bay. They contend that the British had originally no rights beyond the three-mile limit, that the French in 1713 could cede them no more, and that the American concurrence in 1818 could apply only to the same territorial waters. In other words, they question the right of the British Monarch to grant such a Charter as he did, and it may be observed here that the same point has frequently been made in England also in the past by opponents of the Company and by legal critics." — P. T. McGrath, *The Hudson Bay Dispute* (*Fortnightly Review, Jan.*, 1903).

A. D. 1903-1905. — Attitude of the Canadian Manufacturers' Association toward Great Britain and the United States on the Tariff question. — "The attitude of the Canadian Manufacturers' Association toward both the United States and Britain has been very frequently misrepresented by opponents of tariff reform in Canada and England. . . . The views of the Association were clearly set forth in the recommendations made by the Tariff Committee at the annual meeting in September, 1903, and adopted by the Association after full discussion. The attendance was very large, and the meeting was practically unanimous, only one member dissenting. The resolutions were as follows:

"'(1) That we affirm the tariff resolution passed at the last annual meeting in Halifax, as follows: Resolved, That in the opinion of this Association, the changed conditions which now obtain in Canada demand the immediate and thorough revision of the tariff, upon lines which will more effectually transfer to the workshops of our Dominion the manufacture of

many of the goods which we now import from other countries; that, in any such revision, the interests of all sections of the community, whether of agriculture, mining, fishing, or manufacturing, should be fully considered, with a view, not only to the preservation, but to the further development, of all these great natural industries; that, while such a tariff should primarily be framed for Canadian interests, it should nevertheless give a substantial preference to the Mother Country, and also to any other part of the British Empire with which reciprocal preferential trade can be arranged, recognizing always that under any conditions the minimum tariff must afford adequate protection to all Canadian producers. (2) That, except in very special cases, we are opposed to the granting of bounties in Canada as a substitute for a policy of reasonable and permanent protection. (3) That we are strongly opposed to any reciprocity treaty with the United States affecting the manufacturing industries of Canada. (4) We recommend that the Dominion Government establish in Canada a permanent tariff commission of experts, who shall have constant supervision of tariff policy and changes, and shall follow closely the workings of the Canadian tariff with a view to making such recommendations to the Government as will best conserve and advance the interests of the Dominion.'

"These resolutions were reaffirmed at the annual conventions in 1904 and 1905, meeting with no opposition." — Watson Griffin, *Canadian Manufacturers' Tariff Campaign* (*North American Review, Aug.*, 1906).

A. D. 1903-1909. — New transcontinental railway project. — The Grand Trunk Pacific. — "The project for a new transcontinental railway made the year 1903 industrially significant. The scheme when finally presented to Parliament by Sir Wilfrid Laurier, on July 31st, provided for the building of a new line from Moncton, New Brunswick, through Quebec to Winnipeg and the Pacific Coast at a terminus then not fixed, but now known to be Prince Rupert. The road is to be divided into two parts; the Eastern from Moncton to Winnipeg, which is to be built by the Government, and the Western from Winnipeg to Prince Rupert, to be built by the Grand Trunk Pacific Railway Company. Provision was made for a lease of the Eastern section by the company and its purchase after fifty years. This company is practically the same as the Grand Trunk Railway Company. Sir Wilfrid estimated the cost at $13,000,000. There were provisions for Government assistance in the guaranteeing of the bonds of the new company." — F. B. Tracy, *Tercentenary History of Canada, v. 3, p.* 1084 (*Macmillan Co., N. Y.*, 1908).

At the half-yearly meeting of the Grand Trunk Company in London, Oct. 31, 1909, the President, Sir C. Rivers Wilson, who had recently returned from Canada, spoke of the present state and prospects of the transcontinental line, partly as follows: "They were, he remarked, under an obligation to complete their road through to Prince Rupert by December 1, 1911, but, owing to the want of labour, he feared there was very little chance of their succeeding in doing so. . . . They had built through to Winnipeg on the one hand and to Lake Superior on the other, but there remained an unfortunate link of 245 miles to complete their junction with Lake Superior. . . . After what had happened he was very chary of making any prediction, but he should think that, after all that had taken place, and after the great pressure which was now being put on the contractors, the road would be finished by next summer. Their great object, of course, was to link up the west with their eastern system. That would be done during the summer by the road coming down to Lake Superior, which would enable them to communicate by water with their Georgian Bay port, and during the winter, when navigation was closed, by way of land north of Lake Superior by the line the Government was to build to a place called Cochrane, about 540 miles distant, where they would obtain communication with North Bay and put themselves in contact with their own Ontario road."

A. D. 1904. — General Election. — Continuance of the Laurier Ministry. — The Earl of Minto succeeded as Governor-General by Earl Grey. — The general election in 1904 resulted in a parliamentary majority of 64 for the Liberals, thus firmly reseating the Laurier Ministry. The Conservatives carried Ontario, but were beaten heavily in the Maritime Provinces, in Quebec, and in the West. The general prosperity of the country gave a backing to the Liberals which no political criticism could overcome.

The Earl of Minto was succeeded as Governor-General, in 1904, by Earl Grey, grandson of the Earl Grey who, as Prime Minister of England in 1832, carried through the first Reform of Parliament, extinguishing the "rotten boroughs," transferring political power from the land-owning aristocracy to the middle class of English people, and beginning the democratizing of government, which two later reforms have made nearly complete. "There can be no doubt," said a Canadian correspondent of one of the London journals lately, "that the present Governor-General is more widely popular in Canada than any of his predecessors in that high office were, or could have been. Happy in his personality, happier still in his opportunities, he is known and liked by all sorts and conditions of Canadians in every part of the country; whereas more than one of those who have represented the Sovereign there since the creation of the Canadian Confederacy were regarded as august functionaries forming the 'dignified part' of the constitutional mechanism (to use Bagehot's phrase), and as sedulously avoiding close contact with the people at large."

Within the past year it has been announced officially from Ottawa that Lord Grey will fill out his full period of six years in the office of Governor-General, expiring in December, 1910.

A. D. 1905. — New Provinces created. — Alberta and Saskatchewan. — Revival of the Separate School controversy. — The compromise settlement. — By Bills brought into the Dominion Parliament by the Premier, Sir Wilfrid Laurier, on the 21st of February, 1905, and sub-

sequently passed, the four Northwest Territories ceded to the Dominion by Great Britain in 1870 (see, in Volume IV. of this work, NORTHWEST TERRITORIES OF CANADA), were reorganized as two provinces, and admitted to membership in the Canadian Federal Union, bearing the names of Alberta and Saskatchewan, with Edmonton for the capital of the former and Regina for the latter. Saskatchewan includes the territories of Saskatchewan, Assiniboia, and one-half of Athabasca, and Alberta the territory of Alberta and the remainder of Athabasca. The entire area of the two provinces is 550,345 square miles, and it extends from Manitoba west to the 110th meridian, and from the United States boundary to 60 north latitude. The population of each province was reckoned at 250,000, and was rapidly increasing. The Dominion Government retains control of the public lands. Each of the new provinces received at the beginning five representatives in the Dominion House of Commons and four in the Senate. A single Legislative Chamber of twenty-five members was provided for each; each has a Lieutenant-Governor, with a Cabinet of responsible Ministers. The Dominion Treasury contributes $250,000 yearly to the revenue of each.

A provision in these bills for conceding separate schools to religious minorities revived the controversy which raged in Canada for many years, after the Province of Manitoba, in 1890, had abolished denominational schools and established a free, compulsory, unsectarian school system (see, in Volume VI. of this work, CANADA: A. D. 1890-1896, and A. D. 1898 (JANUARY). The Government was forced to amend the provision, devising a compromise which cannot be said to have satisfied either party to the dispute, but which saved the Government from a probable defeat. This affords a half hour of religious teaching, by denominational teachers, at the end of school hours, the denominational character of the instruction determined by the majority in attendance, and its reception to be optional. As explained at the time by a writer in *The Outlook*, the working of the system is as follows. "The half-hour is the only noteworthy feature of the separate schools. They are liable for no other school taxation than that which is necessary to support those schools. In all other respects, in every detail of government control and oversight, they are exactly like the schools of the majority. From nine o'clock in the morning until three o'clock in the afternoon the order of lessons is the same for all; so are the textbooks, the standards of efficiency, and the qualifications of the teachers. There cannot be any control of the school by any clerical or sectarian body. There cannot be any sectarian teaching between nine o'clock in the morning and three o'clock in the afternoon. The Normal schools of the new provinces will give a uniform normal training for all teachers, and there will be uniform curricula and courses of study for all schools of the same grade. There will be complete and absolute control of all schools as to their government and conduct by the central school authority created by the new provincial Legislature. The distribution of the legislative grant to all schools will be according to educational efficiency, a wise provision which did not apply to separate schools of the old type. To recapitulate, all the schools are alike, except that where the trustees are Protestant there is Protestant religious teaching from half-past three to four, and where the trustees are Roman Catholic there is Roman Catholic teaching during the half-hour. That is the only distinction, and neither Protestant nor Roman Catholic children, when they are in the minority, need remain to hear any religious teaching against their parents' wishes."

A. D. 1906 (May). — Departure of the last British garrison. — On the 1st of May, 1906, the last British garrison in the Dominion was withdrawn from Esquimault, in British Columbia, under an arrangement which leaves the Canadian Government in undivided control of all military posts.

A. D. 1906-1907. — Political experiments in Ontario. — Broadening the functions of government. — The Canadians of their Middle West, who used to be the most conservative of Britons, have manifested lately a new spirit, wafted, perhaps, from adventuresome New Zealand, and are trying governmental experiments that would stagger Oklahoma, — trying them, too, with what looks like success.

For the development of the rich cobalt and silver mining region on its eastern border, and for the encouragement of colonization farther northward on the same border, the Ontario Government has not hesitated to construct and own and operate officially an important line of railway, the Temiskaming and Northern Ontario, which is reported to have been profitable from the start. The road may possibly be extended to James Bay, the southward projection of Hudson Bay.

The progressive government of Ontario has also undertaken to work for its own benefit the mines in a large lately opened block of the Cobalt mining territory, covering about 100 square miles. In somewhat the same line of economic policy, it determined in 1906 to control the development and transmission of electric power at and from Niagara Falls, and accomplished its purpose by a contract with the Ontario Power Company, which secures power to municipalities in Ontario at an extremely reasonable rate.

This adventurous policy in economic directions is less surprising, however, than an absolutely novel experiment in the officializing of political parties, as agencies in representative government, which has been put on trial in Ontario during two parliamentary sessions. For the first time in constitutional history, the opposition leader in a legislature has been made a recognized functionary and salaried by the Government to the extent of $7,000 a year. Theoretically, the importance of an effectively critical opposition to the majority party in a legislature is always acknowledged. Is there not good sense, then, theoretically at least, in a policy of government which aims to increase the efficiency of that criticism and give it a responsible character, in the mode which the Ontarians are trying?

After between two and three years trial of this last named experiment, with a salaried leader of

the Opposition, the Toronto correspondent of the London *Times* wrote, in June, 1909, to that paper as follows: "This is an experiment in Parliamentary government which has not been attempted elsewhere. It has both advantages and disadvantages. There are few men of wealth or leisure in Canadian public life, and generally a private party fund has been provided for the support of the leader of the Opposition. The charge was commonly made that as this fund was likely to be provided by the few wealthy men of the party they would exact compensation in the form of official appointment or legislative favour when the Opposition leader became the head of the Government. It was decided, therefore, to give a salary, equal to the emoluments of a Minister of the Crown, to the leader of the Opposition. Mr. Borden [leader of the Opposition in Ontario for some time past] sanctioned this legislation and accepted the remuneration provided. It was argued that he thus became a pensioner on the Government, and that a servile consideration for his salary would affect his independence and restrain his criticism of the paymasters on the Treasury benches. Mr. Borden, while disposed more than once to relinquish the salary, felt that this criticism was unjust, and, knowing the grave financial distresses which some of his predecessors had experienced, waited patiently for the attack to exhaust itself and for opportunity to prove that he was not a dependent of the Treasury. At length his course seems to be justified, and the appropriation of a salary for the leader of the Opposition seems likely to become a settled feature of the Canadian Parliamentary system. The real test will come, however, if the system of Parliamentary groups should ever replace the established two-party system in Canada. But for the time the experiment has been justified, and under the conditions which so often obtain in Canada it may even be said that the official salary enhances the independence and dignity of the Opposition leader in Parliament."

A. D. 1907-1909. — Convention respecting commercial relations with France and its amendment. — A Convention which greatly liberalized the tariff regulations affecting trade between Canada and France was concluded between the British and French Governments and signed at Paris on the 19th of September, 1907. It gave "the benefit of the minimum tariff and of the lowest rates of customs duty applicable to like products of other foreign origin," reciprocally, in each country to certain enumerated products of the other; with mutual pledges that every reduction granted by either to any foreign country should apply to similar products of the other.

In January, 1909, an amended Convention was negotiated which liberalized still further this commercial agreement, enlarging the schedules of favored products, especially the agricultural schedules, giving important advantages to Canada in the French market. The amended Convention was ratified in France on the 13th of July, and in Canada early in December.

A. D. 1908 (April). — Treaty respecting the demarcation of the International Boundary between the United States and Canada. — A Treaty "providing for the more complete definition and demarcation of the international boundary between the United States and the Dominion of Canada," negotiated by Ambassador Bryce and Secretary Root, appointed Plenipotentiaries of the Governments of Great Britain and the United States, respectively, was signed at Washington on the 4th of June, 1908. The Treaty provides for parcelling the boundary line in eight sections, for the determination in each of which each Government "shall appoint, without delay, an expert geographer or surveyor to serve as Commissioner." Its first article prescribes with minuteness the procedure to be followed and the consideration to be given to former surveys and determinations of the boundary line "in the waters of Passamaquoddy Bay from the mouth of the St. Croix River to the Bay of Fundy." The second article defines similarly the task appointed to the Commissioners who shall determine the "line drawn along the middle of the River St. Croix from its mouth in the Bay of Fundy to its source." The third article instructs the Commissioners who shall fix the line from the source of the St. Croix to the St. Lawrence. The fourth deals in like manner with the next section of the line, from "the point of its intersection with the St. Lawrence River near the forty-fifth parallel of north latitude, as determined under articles I. and VI. of the Treaty of August 9, 1842, between Great Britain and the United States, and thence through the Great Lakes and communicating waterways to the mouth of Pigeon River, at the western shore of Lake Superior." The fifth pursues the line from "the mouth of Pigeon River to the northwesternmost point of the Lake of the Woods." The sixth traces the work to be done on the line from that point of the Lake of the Woods to the summit of the Rocky Mountains. The seventh relates to the section of boundary "along the forty-ninth parallel of north latitude, from the summit of the Rocky Mountains westward to the eastern shore of the Gulf of Georgia, as defined in article I. of the Treaty of June 15, 1846, between Great Britain and the United States and as marked by monuments along its course," — for the renewing and completing of which monuments commissioners were appointed by concurrent action of the two Governments in 1902 and 1903. The eighth article has to do with the western terminal section of the task, carrying the boundary line "from the forty-ninth parallel of north latitude along the middle of the channel

which separates Vancouver's Island from the mainland and the Haro Channel and of Fuca's Straits to the Pacific Ocean, as defined in article I of the Treaty of June 15, 1846, between Great Britain and the United States, and as determined by the award made on October 21, 1872, by the Emperor of Germany as arbitrator.

In articles one and two there are provisions for the arbitration of disagreements; and the concluding article contains the following:

"If a dispute or difference should arise about the location or demarcation of any portion of the boundary covered by the provisions of this Treaty and an agreement with respect thereto is not reached by the Commissioners charged herein with locating and marking such portion of the line, they shall make a report in writing jointly to both Governments, or severally each to his own Government, setting out fully the questions in dispute and the differences between them, but such Commissioners shall, nevertheless, proceed to carry on and complete as far as possible the work herein assigned to them with respect to the remaining portions of the line.

"In case of such a disagreement between the Commissioners, the two Governments shall endeavor to agree upon an adjustment of the questions in dispute, and if an agreement is reached between the two Governments it shall be reduced to writing in the form of a protocol, and shall be communicated to the said Commissioners, who shall proceed to lay down and mark the boundary in accordance therewith, and as herein provided, but without prejudice to the special provisions contained in Articles I and II regarding arbitration.

"It is understood that under the foregoing articles the same persons will be appointed to carry out the delimitation of boundaries in the several sections aforesaid, other than the section covered by Article IV, unless either of the Contracting Powers finds it expedient for some reason which it may think sufficient to appoint some other person to be Commissioner for any one of the above-mentioned sections."

A. D. 1908 (July). — Tercentenary Celebration of the Founding of Quebec. — The three hundredth anniversary of the founding of Quebec by Champlain was celebrated at that city in July, 1908, with remarkable spirit and success. The Government of the Dominion took an active and important part in the preparations, nationalizing the battle-field of Wolfe's victory over Montcalm, on the Plains of Abraham, and converting it into a park, where the principal pageants and ceremonies of the occasion were performed. The Imperial Government interested itself warmly in the undertaking, the Prince of Wales, Lord Roberts, the Duke of Norfolk, and other distinguished personages from Great Britain coming as guests of the festivity and to bear a part. Living descendants of Wolfe and Montcalm were also invited guests, and the Governments of France and the United States were officially represented. Battleships from the fleets of these nations and from Germany, Italy, Spain, Japan and the Argentine Republic were brought to a friendly concourse in the harbor of Quebec, for participation in the brilliant spectacles of the fête. These included a military representation of the armies of Wolfe and Montcalm, on the field where they fought; a representation of the landing of Champlain, from a ship which duplicated the structure and equipment of his own, and a number of other historical pageants, all admirably planned and executed, and offering a rare entertainment to the many thousands of visitors who were attracted to Quebec from all parts of the Dominion and the United States.

The celebration began on the 19th of July and continued through two weeks.

A. D. 1908 (Sept.). — Act to amend Civil Service Act. See (in this vol.) CIVIL SERVICE REFORM: CANADA.

A. D. 1909. — The projected Georgian Bay Canal. — Present state of the project. — "The scheme for a canal to give through transport for ocean going steamers from Montreal to the Great Lakes may now be said to have emerged from the field of idealism into that of practical politics, the need for such a waterway having been generally recognized by Canadian politicians [illegible] commercial circles there is the strongest feeling that the canal works should be put in hand at once, and at the end of April last a deputation representing 20 Canadian boards of trade and 54 municipalities pressed [illegible] view upon the Government. At the [illegible] time questions of finance alone prohibit practical adoption of the enterprise. . . . [illegible] the work is started, it will probably be found that the contract will be entrusted to private enterprise under Government supervision. . . . The present position of the negotiations between the Government and the canal company is that the latter corporation having matured its scheme, the Government engineers have made a report, and a compromise has now to be effected on those points where the recommendations of the Government engineers differ from the scheme of construction drawn up by the Georgian Bay Canal Company.

"The total distance of the route planned by the canal company engineers between Georgian Bay on Lake Huron to Montreal, the head of ocean navigation on the St. Lawrence River, is 440 miles. The project is essentially a river and lake canalization scheme, and for the greater part of its course the projected route follows the course of the French River and the Ottawa River and its lakes. From Georgian Bay to the summit level it is proposed to utilize the middle channel of French River to Lake Nipissing. From the northern side of this lake to the summit level, a distance of over 80 miles from Georgian Bay, it would be mainly an artificial waterway. From the summit level, 677 ft. above sea level, there is a long fall to Montreal, and the route proposed by the canal company engineers is *via* Trout and Turtle Lakes, the little Mattawa River into Talon Lake to Sand Bay, a distance of 21 miles. A canal three miles long would carry the waterway to the Mattawa River, 13 miles of which would be utilized, and a short canal cut would give access to the Ottawa River, which would then be followed for a distance of 393 miles. Thence the St. Lawrence River or a branch of the Ottawa River, known as the Back River, would form the new waterway for the last 25 miles. The difference in elevation of 659 ft. between Montreal and the summit level, and 99 ft. between the summit and Georgian Bay would be bridged by 27 locks, ranging in lift from 5 ft to 50 ft. These locks would be designed for a length of 940 ft., with a width of 70 ft. and with 22 ft. of water upon the lock sills, the proposed

depth of the canal being 24 ft. The total length of canal cutting for the route is estimated at from 28 to 34 miles and in all about 108 miles out of the total length of 440 miles would require excavation work for lock approaches, canals, and submerged channels.

"The plans of the Government engineers, as embodied in a report to the Department of Public Works, do not differ materially from those of the canal company. The latter proposes a 24ft. waterway, with 22 ft. upon the lock sills; the Government plans provide for a 23ft. waterway, which, it is pointed out, would more than equal the conditions as they exist to-day in the channels connecting the waters of the Great Lakes, which govern the draught of boats on the Lakes.

The opening up of the Great Lakes for ... time to ocean-going traffic would be an event of the first commercial magnitude. It is not generally recognized that the trade of the Lakes is greater than the coasting trade of England, of France, and of Germany put together. The statistical reports of Lake commerce passing through the canals at Sault Ste. Marie, Michigan and Ontario, show that the tonnage passing through these canals increased during 1897 to 1907 from 18,988,755 to 58,217,214.

"Reference should also be made to the water powers which would be created by the present plans for the construction of the canal. The report of the Government engineers states that nearly 1,000,000 h. p. could be secured along the Ottawa and French rivers and it is estimated that 100,000 h. p. would be available within almost a mile of the city of Montreal.

"The question yet to be decided is when can the country afford to start the work. Sir Robert Perks, M. P., who has been intimately associated with the scheme, recently submitted an offer to the Government on behalf of the canal company, who own the charter, to provide £5,000,000 at a 3 per cent. guarantee, with ½ per cent. sinking fund, for the construction of the French River section of the canal, a distance of about 86 miles, and to build docks and warehouses at North Bay on Lake Nipissing. . . . It is estimated that it would take ten years from the inception of the work before the canal would be open for navigation, and that the total cost would be about £20,000,000."—*Engineering Correspondence London Times*, Aug. 18, 1909.

A. D. 1909.—The Great Mackenzie Basin.—The Newest Canadian West.—A report on the agricultural possibilities of the great Mackenzie Basin, prepared by a select committee of the Dominion Senate, was made public in the summer of 1909. "Basing their calculations upon the testimony of witnesses, the Committee calculate that some two million square miles between the northern limits of Saskatchewan and Alberta and the Arctic Circle can be used for pasturage and for the cultivation of wheat, barley, potatoes, and other vegetables. Until a few years ago not only the Mackenzie basin but the valley of Peace rivers were on account of their high latitudes considered to be unfit for cultivation. The comparatively mild climate, which, as the report shows, they in reality enjoy, is said to be due to the proximity of large bodies of water such as the Great Slave and Great Bear lakes and to the *chinook* wind, the warm current of air that blows across the Rocky Mountains from the Pacific. The shortness of the sub-Arctic summer appears to be offset by the proportionate length of the days and by the clearness of the air. In regard to the future of the district with which it deals the report points out that in 1870 the representatives of the people of Eastern Canada were anxious to obtain in regard to what is now the prosperous province of Manitoba exactly the same information as the Committee has been engaged in collecting about Canada's 'new-est West.'"

A. D. 1909.—The opposition in Newfoundland to union with the Dominion. See (in this vol.) NEWFOUNDLAND: A. D. 1909

A. D. 1909 (Jan.).—The Waterways Treaty between the United States and Great Britain, concerning the waters between the former and Canada.—Resulting from the labors of an International Waterways Commission, appointed four years before, a Waterways Treaty, having reference to the lakes and rivers that lie along the boundary between Canada and the United States, was concluded by Ambassador Bryce, on the part of the British Government, and Secretary of State Root, on the part of the United States, in January, 1909. The Treaty was ratified by the Senate of the United States in the closing hours of the Congressional session which ended March 4, but with a proviso, in the form of a resolution attached. The following is a summary of the provisions of the Treaty as it went to the Senate:

"A preliminary article defines the Canadian and American boundary waters.

"Article I. enacts that the navigation of these waters, including Lake Michigan and the canals connecting them, shall for ever continue free and open for the purposes of commerce to the inhabitants of both countries. Regulations affecting canals in the territory of either country shall apply equally to inhabitants of the other who may wish to make use thereof.

"Article II. reserves to the signatories and to the State and provincial Governments exclusive control over the use, diversion, &c., of such waters in their territory as flow into the boundary waters or across the frontier. Any inhabitant of either country injured by the use of this ... lege will be entitled to the le... he would have if he were a native ... de... ant country. The contracting ... reserve the right of objection whenever navigation on their own side of the boundary is imperilled by any diversion of water across it.

"Articles III. and IV. provide that no works shall be undertaken on either side of the line, if such works would be likely to affect the level of the waters on the other side, without agreement between the contracting parties and the sanction of the Joint Commission. Pollution of the waters is also forbidden.

"Article V., which relates to the diversion of the waters of Niagara, the control of the level of Lake Erie, and the flow of the Niagara River, has a clause which states that it is the desire of both parties to accomplish the ... objects with the least possible injury to the investments which have already been made in the construction of power plants on the United States side of the Niagara River under grants of authority from the State of New York, and on the Canadian side of the river under licenses authorized by the Dominion of Canada and the Province of Ontario.

CANADA, 1909

"Article VI. apportions the uses of the St. Mary's and Milk rivers and their tributaries in the west.

"Article VII. provides for the creation of an International Joint Commission, consisting of three representatives of Canada and three of the United States.

"Article VIII. provides that the Commission shall have jurisdiction over, and shall decide all cases involving, the waterways where, under articles III. and IV., their approval is required, and gives principles for their guidance. The contracting parties are to have equal and similar rights. The uses of the water are to be considered in the following order: — First, domestic and sanitary purposes; secondly, purposes of navigation; third, purposes of power and irrigation. The Commission is invested with some discretion with regard to departure from the principle of equal division, &c. In case of a tie vote each Commissioner is to make a separate report to his Government; whereupon the two Governments shall attempt to reach an agreement.

"The two following articles, IX. and X., requiring that all disputes shall be referred to the Commission, stand out as the most important provisions of the treaty. Article IX., after stating that matters of difference shall be referred to the Commission whenever either Government desires, goes on to authorize the Commission in each case so referred to examine into and report upon the facts and circumstances of the particular questions referred, together with such conclusions and recommendations as may be appropriate, subject, however, to any restrictions or exceptions which may be imposed with respect thereto by the terms of reference. Such reports of the Commission are in no way to have the character of an arbitral award. The Commission shall make joint report to both Governments in all cases wherein all or a majority of the Commissioners agree, and in case of disagreement the minority may make joint report to both Governments, or separate reports to their respective Governments. In case the Commission is evenly divided upon any question referred to it, separate reports shall be made by the Commissioners, one on each side to their own Government.

"Article X. extends the powers of the Commission by providing that other matters of difference affecting the rights of either country may be referred to the Commission. In each case so referred the Commission is authorized to examine into and report upon the facts and circumstances of the particular questions and matters referred, together with such conclusions and recommendations as may be appropriate, subject, however, to any restrictions or exceptions which may be imposed with respect thereto by the terms of reference. A majority of the Commission shall have power to render a decision or finding upon any of the questions or matters so referred.

"In the event of a failure of the Commission to agree upon the issues submitted to them for decision or report, the article requires the Commissioners to make a joint report to both Governments, or separate reports to their respective Governments, showing the different conclusions arrived at with regard to matters or questions so referred, which shall thereupon be submitted for decision by the high contracting parties to an umpire chosen in accordance with procedure prescribed in the fourth, fifth, and sixth paragraphs of Article XLV. of The Hague Convention for the pacific settlement of international disputes, dated October 18, 1907. Such umpire, the article concludes, shall have power to render a final decision on matters whereon the Commission have failed to agree."

The resolution attached to the Treaty by the Senate of the United States related to the use of waters flowing at the rapids of St. Mary's River at Sault Ste. Marie, and was introduced by Senator Smith of Michigan. It is as follows:

"Resolved — As part of this ratification, the United States approves this treaty, with the understanding that nothing in the treaty shall be construed as affecting or changing any existing territorial or riparian right in the water, or the rights of owners of lands under water, on either side of the international boundary, at the rapids of St. Mary's River at Sault Ste. Marie, in the use of waters flowing over such lands, subject to the requirements of navigation in the boundary waters and of the navigation of canals, and without prejudice to the existing right of the United States and Canada, each to use the waters of St. Mary's River within its own territory; and that this interpretation will be mentioned in the ratification of this treaty as conveying the true meaning of the treaty, and will in effect form part of the treaty."

This stipulation was objectionable to Canada, and the consent of the Dominion Government to a ratification of the Treaty on the part of Great Britain was withheld. It has been understood, however, that the objection will be substantially removed if the Government of the United States acquires possession of the lands and riparian property concerned, which was provided for by an Act of Congress passed in March. The necessary proceedings will consume some time.

A. D. 1909 (Feb.). — The institution of a Department of External Affairs. — An Associated Press despatch from Ottawa, on the 18th of February, 1909, made known that "the Canadian Government has announced its intention of creating a portfolio of external affairs. Heretofore all of the foreign business of Canada has been carried on through the channel of the British colonial and foreign office. Even after the external affairs branch is created by Canada this will be the principal avenue for such business. That method is cumbersome. In the case of negotiations with the United States, papers have to cross the Atlantic twice in passing from Washington to Ottawa, being sent first to the colonial office and then back to Canada. The process has been much criticised and both the prime minister and the opposition leader have declared themselves in favor of a modification. The creation of the external department is regarded as the first step. The most radical proposal is the intimation that in negotiations with the United States there will hereafter be direct communication between Washington and Canada, through the medium of the British Ambassador."

In the British Parliament, on the 4th of March, the Prime Minister, Mr. Asquith, replied to a question on the subject, as follows: "It is

understood that the Canadian Government propose to establish a Department of External Affairs. This department is merely intended — like the corresponding department of the Commonwealth Government — to conduct correspondence with the Secretary of State for the Colonies, and his Majesty's Ambassador at Washington, and with the several departments of the Canadian Government. At present delay occurs in dealing with the correspondence, as there is no department to conduct the work. No suggestion has been made by the Canadian Government for the increase of their powers in dealing with external affairs."

A. D. 1909 (April). — Statistics of the Budget speech. — Revenue. — Trade. — No increase of taxation. — The following was reported in a despatch from Ottawa, April 20, 1909: "Notwithstanding the financial stringency of the past year, which reduced the revenue of Canada by $11,500,000, Mr. Fielding, Minister of Finance, in his Budget speech today made the gratifying announcement that there was a surplus of $1,500,000 for the year ended March 31. The increase in the net debt was $46,029,000, of which $32,000,000 was for the National Transcontinental Railway and the Quebec Bridge. The total trade of the country during the past year was $553,737,000, a decrease of $97,000,000, principally in imports. The estimated expenditures for the current year were $80,078,024. In the judgment of the Government there was no necessity for increased taxation, but the situation should be met by a substantial reduction in expenditures."

A. D. 1909 (Aug.). — Proposed union of the Maritime Provinces. — A Press despatch of August 19, from Ottawa, reported: "At a conference of the Boards of Trade of the Maritime Provinces at Charlottetown a resolution was adopted in favour of the union of the Maritime Provinces. The Governments of Nova Scotia, New Brunswick, and Prince Edward Island were asked to appoint a committee to draft terms of union. The general opinion is that only union can avert the overwhelming influence of the West in future."

A. D. 1909 (Dec.). — Convention relating to obstructions in the St. John River. — "Commissioners have been appointed on the part of the United States to act jointly with commissioners on the part of Canada in examining into the question of obstructions in the St. John River, between Maine and New Brunswick, and to make recommendations for the regulation of the uses thereof, and are now engaged in this work." — *Message of the President of the U. S. to Congress, Dec.* 6, 1909.

CARNEGIE HERO FUNDS. — April 15, 1904, a letter from Andrew Carnegie was made public announcing that he had set apart a fund of $5,000,000 to be known as "The Hero Fund." In this letter Mr. Carnegie said: "We live in an heroic age. Not seldom are we thrilled by deeds of heroism where men or women are injured or

lose their lives in attempting to preserve or rescue their fellows; such are the heroes of civilization. The heroes of barbarism maimed or killed. I have long felt that the heroes and those dependent upon them should be freed from pecuniary cares resulting from their heroism and as a fund for this purpose I have transferred to a commission $5,000,000 of collateral 5 per cent bonds of the United States Steel Corporation." Only such as follow peaceful vocations on sea or land in the United States or Canada are eligible to receive money or medals for heroic deeds. The commission which has charge of the fund has its headquarters in Pittsburg, Pa. A similiar fund in Great Britain was created soon afterward by Mr. Carnegie, and in May, 1909, he placed, for the same purpose, $1,000,000 of the bonds of the United States Steel Corporation in the hands of trustees in France, under the sanction of the French Government.

A. D. 1903. — Honduras: Revolution, establishing General Bonilla in the Presidency. — In the spring of 1903 a rising in Honduras against the Government was reported to be in progress, under General Bonilla. Early in March the situation was stated by the American consular agent at Amapala as follows:

"A great part of the members of the Congress that was in session in Tegucigalpa, amongst them the President of the Congress, fled from the capital to the frontier of Salvador the 30th of January, so that Congress was de facto dissolved on that date. It seems that the council of ministers formed a new Congress out of the remaining deputies and the substitutes of the fugitives. The new Congress proclaimed Dr. Juan Angel Arias president, and Gen. Maximo B. Rosales vice-president of the Republic. The new Government was recognized by Nicaragua, but I do not know if it was recognized by the other Central American Republics. In the meantime General Bonilla has gone ahead with his military operations against the new government. His forces have taken the fortified towns of Ocotepeque, Santa Rosa, and Gracias, near the frontier of Nicaragua. On the 22d of February General Bonilla was attacked in El Aceituno by General Sierra, the ex-president, who was completely defeated and escaped with several hundred men, the remainder of his troops, to the fortified town of Nacaome, where he still is. General Bonilla has now an army of about 4,500 men."

In despatches of the 15th and 24th of April, Minister Combs, who represented the United States in transactions with both Guatemala and Honduras, advised the State Department that General Bonilla was in possession of Tegucigalpa; that ex-President Arias was a prisoner; that peace was restored, and that Bonilla should be recognized as President. Accordingly the recognition was given.

A. D. 1904. — Nicaragua, Honduras, Salvador, and Guatemala: Peace Conference. — A despatch, August 31, 1904, from the American Minister at San José, Costa Rica, to the State Department at Washington, was as follows: "I have the honor to advise that on the 21st instant, at Corinto, Nicaragua, the Presidents of Nicaragua, Honduras, and El Salvador, and a special delegate representing the President of Guatemala, held a conference ostensibly for the purpose of securing the peace of Central America. . . . The parties holding the conference have issued a lengthy manifesto, which indicates nothing of interest to our Government except that the four governments represented are controlled by parties who will aid each other by military

force, if necessary, in maintaining the status quo, and that the peace of Central America is thus reasonably assured by making revolutionary efforts more difficult and less liable to achieve success."

A. D. 1904. — Nicaragua and Honduras: Agreement to arbitrate boundary dispute. — In October, 1904, the United States Government was informed that Nicaragua and Honduras had agreed to submit a boundary dispute to the King of Spain.

A. D. 1905.—Nicaragua: Treaty with Great Britain concerning the Mosquito Territory. — The following treaty between Great Britain and the Republic of Nicaragua was signed at Managua, Nicaragua, April 19, 1905:

ARTICLE I. The High Contracting Parties agree that the Treaty of Managua of January 28, 1860, is and shall remain abrogated.

ARTICLE II. His Britannic Majesty agrees to recognize the absolute sovereignty of Nicaragua over the territory that constituted the former Mosquito Reserve, as defined in the aforesaid Treaty of Managua.

ARTICLE III. In consideration of the fact that the Mosquito Indians were at one time under the protection of Great Britain, and in view of the interest that His Majesty's Government and the Nicaraguan Government take in their welfare, the Nicaraguan Government agree to grant them the following concessions: —

(*a*) The Government will submit to the National Assembly a law exempting, for fifty years from the date of the ratification of this Treaty, all the Mosquito Indians and the Creoles born before the year 1894, from military service, and from all direct taxation on their persons, property, possessions, animals, and means of subsistence.

(*b*) The Government will allow the Indians to live in their villages enjoying the concessions granted by this Convention, and following their own customs, in so far as they are not opposed to the laws of the country and to public morality.

(*c*) The Nicaraguan Government will concede a further period of two years for them to legalize their rights to the property acquired in conformity with the Regulations in force before 1894 in the Reserve. The Government will make no charge to the said inhabitants either for the lands or the measurement thereof, or for the grant of title-deeds. For this purpose the title-deeds in the possession of the said Indians and Creoles before 1894 will be renewed in conformity with the laws, and, in cases where no such title-deeds exist, the Government will give to each family, at their place of residence, eight manzanas of land, if the members of the family do not exceed four in number, and two manzanas for each person if the family exceeds that number.

(*d*) Public pasture lands will be reserved for the use of the inhabitants in the neighbourhood of each Indian village.

(*e*) In the event of any Mosquito Indians or Creoles proving that the lands which they held in conformity with the Regulations in force before 1894 have been claimed by and allotted to other persons, the Government will indemnify them by the grant of suitable public lands of approximate value as near as possible to their present residences.

ARTICLE IV. The ex-Chief of the Mosquito Indians, Robert Henry Clarence, will be permitted by the Nicaraguan Government to reside in the Republic of Nicaragua and to enjoy full protection so long as he does not transgress the laws, and provided his acts do not tend to incite the Indians against Nicaragua.

ARTICLE V. The Mosquito Indians, and other inhabitants of the former Reserve, will enjoy the same rights as are secured by the laws of Nicaragua to other Nicaraguan citizens.

A. D. 1906. — Honduras, Guatemala, and Salvador: War, ended by mediation of the United States and Mexico. — Neither the Convention of Peace and Compulsory Arbitration signed at Corinto in 1902 by the presidents of all five of the Central American republics, nor the peace agreement between four of them two years later, sufficed to prevent an outbreak of war in 1906 which involved the three states of Honduras, Guatemala, and Salvador. President Roosevelt, in his annual Message to Congress that year, referred to the war as having arisen from "trouble which had existed for some time"; but does not indicate the nature of the "trouble"; nor is any light thrown on it in a long diplomatic correspondence between the parties to it and the governments of the United States and Mexico, which appears in the American report of Foreign Relations for 1906. Probably nobody outside of the belligerents ever learned definitely why they felt called upon to fight, or what they had to settle when peace was made.

Seemingly Honduras was the aggressor; but the affair seems hardly worth the trouble of any deep investigation. Its chief importance is in the successful mediation that was undertaken jointly by the governments of the United States and Mexico, of which President Roosevelt made report in the Message referred to above:

"The thoroughly good understanding which exists between the United States and Mexico," said the President, "enabled this Government and that of Mexico to unite in effective mediation between the warring Republics; which mediation resulted, not without long-continued and patient effort, in bringing about a meeting of the representatives of the hostile powers on board a United States warship as neutral territory, and peace was there concluded; a peace which resulted in the saving of thousands of lives and in the prevention of an incalculable amount of misery and the destruction of property and of the means of livelihood. The Rio Conference passed the following resolution in reference to this action:

"'That the Third International American Conference shall address to the Presidents of the United States of America and of the United States of Mexico a note in which the conference which is being held at Rio expresses its satisfaction at the happy results of their mediation for the celebration of peace between the Republics of Guatemala, Honduras, and Salvador.'

"This affords an excellent example of one way in which the influence of the United States can properly be exercised for the benefit of the peoples of the Western Hemisphere; that is, by action taken in concert with other American republics and therefore free from those suspicions and prejudices which might attach if the action were taken by one alone."

The resulting "General Treaty of Peace and Amity, Commerce, etc., between the Republics of Costa Rica, Salvador, Guatemala, and Honduras," signed September 25, 1906, involved solemn

engagements in its first four articles, as follows:

"ARTICLE 1. There shall be perpetual peace and a frank, loyal, and sincere friendship among the Republics of Costa Rica, Salvador, Guatemala, and Honduras, each and every one of the aforesaid Governments being in duty bound to consider as one of their principal obligations the maintenance of such peace and the preservation of such friendship, by endeavoring to contribute every means to procure the desired end, and to remove, as far as lies in their power, any obstacles, whatever their nature, which might prevent it. In order to secure such ends they shall always unite when the importance of the case demands it, to foster their moral, intellectual, and industrial progress, thus making their interests one and the same, as it becomes sister countries.

"ARTICLE 2. In the event, which is not to be expected, that any of the high contracting parties should fail to comply with or cause any deviation from any of the subjects agreed to in the present treaty, such event, as well as any particular difficulty which may arise between them, shall necessarily be settled by the civilized means of arbitration.

"ARTICLE 3. The Governments of Salvador, Guatemala, and Honduras, in conformity with the stipulations of the treaty executed on board the *Marblehead*, hereby appoint as umpires, Their Excellencies the Presidents of the United States of America and of the United Mexican States, to whom all particular difficulties arising among said Governments shall be submitted for arbitration.

"For the purpose of agreeing on the manner to effect such arbitration, the above-mentioned Republics shall accredit, at the latest within three months from this date, their respective legations near the Governments of the United States of America and Mexico, and in the meanwhile arbitration shall be ruled according to the stipulations of the treaty of compulsory arbitration concluded in Mexico on the 29th of January, 1902.

"ARTICLE 4. Guatemala not having subscribed to the Corinto convention of January 20, 1902, Costa Rica, Salvador, and Honduras do hereby respectively declare, that said Corinto convention is to continue in force, and that any particular difference which may arise among them shall be settled in conformity with the aforesaid convention and with the regulations established by the Central American court of arbitration on the 9th of October of that year."

Notwithstanding these grave pledges to each other, three of the parties to this treaty were at war the next year

A. D. 1907.—Nicaragua, Honduras, and Salvador: War.—Mexican and American Mediation.—The Washington Peace Conference.—General Treaty of Peace and Amity.—Central American Court of Justice.—In February, 1907, a fresh outbreak of Central American war occurred, originally between Nicaragua and Honduras, but involving Salvador, presently, in alliance with Honduras. The arbitration convention of 1904 had not accomplished a specific settlement of the boundary disputes between Honduras and Nicaragua, and President Zelaya, of the latter republic, accused the former of encroachments. Mexico and the United States had endeavored to pacify the disputants before hostilities began, but without success. The quarrel was fought out, and a complete victory won by Nicaragua, whose forces captured the Honduran capital and drove President Bonilla from the country. A provisional government was established in Honduras and terms of peace arranged, April 24th. Then the good offices of President Roosevelt and President Diaz were employed again, with the result which the former communicated to Congress in his Message of December 8, 1907, as follows:

"The effort to compose this new difficulty has resulted in the acceptance of the joint suggestion of the Presidents of Mexico and of the United States for a general peace conference between all the countries of Central America. On the 17th day of September last a protocol was signed between the representatives of the five Central American countries accredited to this Government agreeing upon a conference to be held in the City of Washington 'in order to devise the means of preserving the good relations among said Republics and bringing about permanent peace in those countries.' The protocol includes the expression of a wish that the Presidents of the United States and Mexico should appoint 'representatives to lend their good and impartial offices in a purely friendly way toward the realization of the objects of the conference.' The conference is now in session and will have our best wishes and, where it is practicable, our friendly assistance."

The first regular session of the Conference was held on the 14th of November, the place of meeting being the building of the International Bureau of the American Republics. In addition to the delegates present from the States of Costa Rica, Salvador, Guatemala, Honduras, and Nicaragua, the Republic of Mexico designated Señor Don Enrique C. Creel, Ambassador Extraordinary and Plenipotentiary to the United States, and the United States designated Hon. William I. Buchanan, as representatives from Mexico and the United States at the conference. The Hon. Elihu Root, Secretary of State of the United States, was present, also, at the first session, over which he presided until the organization of the Conference had been effected. His opening address to the Conference included these wise and impressive remarks:

"We cannot fail, gentlemen, to be admonished by the many failures which have been made by the people of Central America to establish agreement among themselves which would be lasting, that the task you have before you is no easy one. The trial has often been made and the agreements which have been elaborated, signed, ratified, seem to have been written in water. Yet I cannot resist the impression that we have at last come to the threshold of a happier day for Central America.

"It would ill become me to attempt to propose or suggest the steps which you should take, but I will venture to observe that the all important thing for you to accomplish is that while you enter into agreements which will, I am sure, be framed in consonance with the most peaceful aspirations and the most rigid sense of justice, you shall devise also some practical methods under which it will be possible to secure the performance of those agreements. The mere declaration of general principles, the mere agreement upon lines of policy and of conduct are of little value unless there be practical and defi

nite methods provided by which the responsibility for failing to keep the agreement may be fixed upon some definite person, and the public sentiment of Central America brought to bear to prevent the violation. The declaration that a man is entitled to his liberty would be of little value with us in this country were it not for the writ of *habeas corpus* that makes it the duty of a specific judge, when applied to, to inquire into the cause of his detention, and set him at liberty if he is unjustly detained. The provision which declares that a man should not be deprived of his property without due process of law would be of little value were it not for the practical provision which imposes on specific officers the duty of nullifying every attempt to take away a man's property without due process of law.

"To find practical definite methods by which you shall make it somebody's duty to see that the great principles you declare are not violated, by which if an attempt be made to violate them the responsibility may be fixed upon the guilty individual — those, in my judgment, are the problems to which you should specifically and most earnestly address yourselves."

The address of Secretary Root was followed by one of excellent counsel from the Mexican Ambassador, and a reply to both was made, on behalf of the Conference, by Señor Don Luis Anderson, Minister of Foreign Affairs of Costa Rica. The Conference then elected its officers, choosing Minister Anderson for its President, and proceeded to the transaction of business.

Fourteen sessions were held between November 14 and December 20, resulting from which eight conventions were agreed to and signed on the latter date. These conventions are: General Treaty of Peace and Amity; Additional Convention to the General Treaty; Establishing a Central American Court of Justice; Extradition; On Future Conferences (Monetary); On Communications; Establishing an International Central American Bureau; and Establishing a Pedagogical Institute.

The essential provisions of the General Treaty of Peace and Amity are in the following articles:

"ARTICLE I. The Republics of Central America consider as one of their first duties in their mutual relations, the maintenance of peace, and they bind themselves to always preserve the most complete harmony, and decide every difference or difficulty that may arise amongst them, of whatsoever nature it may be, by means of the Central American Court of Justice, created by the Convention which they have concluded for that purpose on this date."

"ARTICLE III. Bearing in mind the central geographical position of Honduras and the facilities which this circumstance has afforded in order that its territory should have been most often the theatre of Central American conflicts, Honduras declares from now on its absolute neutrality in any event of conflict amongst the other Republics; and the latter, in their turn, provided such neutrality be observed, bind themselves to respect it and in no case to violate the Honduranean territory.

"ARTICLE IV. Bearing in mind the advantages which must be gained from the creation of Central American institutions for the development of their most vital interests, besides the Pedagogical Institute and the International Central American Bureau which have been established according to the Conventions celebrated to that end by this Conference, the creation of a practical Agricultural School in the Republic of Salvador, one of Mines and Mechanics in that of Honduras, and another of Arts and Trades in that of Nicaragua, is especially recommended to the Governments.

"ARTICLE V. In order to cultivate the relations between the States, the contracting parties obligate themselves each to accredit to the others a permanent Legation.

"ARTICLE VI. The citizens of one of the contracting parties, residing in the territory of any of the others, shall enjoy the same civil rights as nationals, and shall be considered as citizens in the country of their residence if they fulfill the conditions which the respective constituent laws provide. Those that are not naturalized shall be exempt from obligatory military service, either by sea or land, and from every forced loan or military requirement, and they shall not be obliged on any account to make more contributions or ordinary or extraordinary imposts than those which nationals pay."

"ARTICLE X. The Governments of the contracting Republics bind themselves to respect the inviolability of the right of asylum aboard the merchant vessels of whatsoever nationality anchored in their ports. Therefore, only persons accused of common crimes and by order of the competent judge, after due legal procedure, can be taken from them. Those prosecuted on account of political crimes or common crimes in connection with political ones, can only be taken therefrom in case they have embarked in a port of the State which claims them, whilst they may remain in its jurisdictional waters, and after the requirements hereinbefore exacted in the case of common crime have been fulfilled."

"ARTICLE XIV. Public instruments executed in one of the contracting Republics shall be valid in the others, provided they shall have been properly authenticated and in their execution the laws of the Republic whence they proceed shall have been observed."

"ARTICLE XVI. Desiring to prevent one of the most frequent causes of disturbances in the Republics, the contracting Governments shall not permit the head men or principal chiefs of political emigrations, nor agents thereof, to reside in the departments fronting on the countries whose peace they might disturb.

"Those who may have been actually established in a permanent manner in a frontier department shall be able to remain in the place of their residence under the immediate surveillance of the Governments affording them an asylum, but from the moment when they become a menace to public order they shall be included in the rule of the preceding paragraph.

"ARTICLE XVII. Every person, no matter what his nationality, who, within the territory of one of the contracting parties, shall initiate or foster revolutionary movements against any of the others, shall be immediately brought to the capital of the Republic, where he shall be submitted to trial according to law."

"ARTICLE XIX. The present Treaty shall remain in force for the term of ten years counted from the day of the exchange of ratifications. Nevertheless, if one year before the expiration of said term, none of the contracting parties shall

have given special notice to the others concerning its intention to terminate it, it shall remain in force until one year after such notification may have been made."

The "Additional Convention to the General Treaty" is in three articles, as follows:

"ARTICLE I. The Governments of the High Contracting Parties shall not recognize any other Government which may come into power in any of the five Republics as a consequence of a coup d'Etat, or of a revolution against the recognized Government, so long as the representatives of the people, freely elected, have not constitutionally reorganized the country.

"ARTICLE II. No Government of Central America shall in case of civil war intervene in favor of or against the Government of the country where the struggle may take place.

"ARTICLE III. The Governments of Central America, in the first place, are recommended to endeavor to procure by the means at their command a constitutional reform in the sense of prohibiting the reelection of the President of a Republic, where such prohibition does not exist, in the second place to adopt all measures necessary to effect a complete guarantee of the principle of alternation in power."

The "Convention for the Establishment of a Central American Court of Justice" contains thirty-eight articles, with a "Provisional Article" and an "Annexed Article" appended. The more important provisions are in the following:

"ARTICLE I. The High Contracting Parties agree by the present Convention to constitute and maintain a permanent tribunal which shall be called the 'Central American Court of Justice,' to which they bind themselves to submit all controversies or questions which may arise among them, of whatsoever nature and no matter what their origin may be, in case the respective Departments of Foreign Affairs should not have been able to reach an understanding.

"ARTICLE II. This Court shall also take cognizance of the questions which individuals of one Central American country may raise against any of the other contracting Governments, because of the violation of Treaties or Conventions, and other cases of an international character; no matter whether his own Government supports said claim or not; and provided that the remedies which the laws of the respective country provide against such violation shall have been exhausted and that a denial of justice shall be shown.

"ARTICLE III. It shall also take cognizance of the cases which by common accord contracting Governments may submit to it, no matter whether they arise between two or more of them or between one of said Governments and individuals.*

"ARTICLE IV. The Court may likewise take cognizance of the international questions which by special agreement any one of the Central American Governments and a foreign Government may have determined to submit to it.

"ARTICLE V. The Central American Court of Justice shall sit at the City of Cartago in the Republic of Costa Rica, but it shall be authorized to transfer its residence to another point in Central America when it may deem it proper to do so for reasons of health, of guaranteeing the exercise of its functions, or of the personal security of its members.

"ARTICLE VI. The Central American Court of Justice shall consist of five Justices named, one from each Republic and selected from among the jurists who possess the qualifications which the laws of each country may exact for the exercise of high judicial functions, and enjoy the highest consideration, not only because of their moral character but also on account of their professional ability. The vacancies shall be filled by substitute Justices, named at the same time and in the same manner as the regular ones and who shall unite the same qualifications as the former. The attendance of the five Justices who constitute the Tribunal is indispensable in order to have a legal quorum in the judgments of the Court.

"ARTICLE VII. The legislative power of each one of the five contracting Republics shall name one regular and two substitutes as their respective Justices. The salary of each Justice shall be eight thousand dollars, gold, per annum, which shall be paid by the Treasury of the Court. The salary of the Justice of the place where the Court resides shall be designated by the respective Government. Besides, each State shall contribute two thousand dollars, gold, annually for the ordinary and extraordinary expenses of the Tribunal. The Governments of the contracting Republics bind themselves to include their respective contributions in their budgets of expenses and to remit quarterly in advance to the Treasury of the Court the proportion which corresponds to them on account of such expenditures."

"ARTICLE XIII. The Central American Court of Justice represents the national conscience of Central America, wherefore the Justices who compose the Tribunal shall not consider themselves prohibited from the exercise of their functions because of the interest which the Republics, whence they derive their appointment, may have in any case or question. With regard to implications and challenges, the rules of procedure which the Court may fix shall make proper provision."

"ARTICLE XXII. The Court is authorized to determine its jurisdiction, interpreting the Treaties and Conventions germane to the matter in dispute, applying the principles of international law.

"ARTICLE XXIII. Every final or interlocutory decision shall be rendered in accordance with the agreement of at least three of the Justices of the Court. In case of disagreement, one of the substitute Justices shall be chosen by lot, and if still a majority of three be not obtained other Justices shall continue to be chosen by lot until three votes in the same sense shall have been obtained.

"ARTICLE XXIV. The decisions must be in writing and shall contain a statement of the reasons upon which they are based. They must be signed by all the Justices of the Court and countersigned by the Secretary. Once they have been published they cannot be altered on any account; but, at the request of any of the parties,

* After signing the treaties an omission was discovered in this Article. An additional protocol was thereupon signed by all the delegates adding to this Article, and to be considered as an integral part of the Convention, the following words:

"It shall also have jurisdiction over cases arising between any of the contracting Governments and individuals, when by common accord they may have been submitted to it."

the Tribunal may decide the interpretation which must be given to its judgment.

"ARTICLE XXV. The judgments of the Court shall be communicated to the five Governments of the Contracting Republics. The interested parties solemnly bind themselves to submit to said judgment; and they all agree to lend every moral support that may be necessary in order that they may be properly fulfilled, in this manner constituting a real and positive guarantee of respect for this Convention and for the Central American Court of Justice."

"ARTICLE XXVII. The High Contracting Parties solemnly declare that for no motive nor in any case will they consider the present Convention as lapsed; and that, therefore, they will consider it as being always in force during the term of ten years counted from last ratification. In the event that the political entity of one or more of the Contracting Republics is changed or altered, the attributes of the Central American Court of Justice created by this Convention shall be suspended *ipso facto;* and a conference to adjust the constitution of said Court and the new order of things shall be forthwith convoked by the respective Governments; in case they do not unanimously agree the present Convention shall be considered as rescinded."

"PROVISIONARY ARTICLE. As a recommendation of the five Delegations an Article is annexed which contains an amplification of the Central American Court of Justice, in order that the Legislatures that may deem it proper may see fit to include it upon ratifying this Convention."

"ANNEXED ARTICLE. The Central American Court of Justice shall also have jurisdiction over the conflicts which may arise between the Legislative, Executive and Judicial Powers, and when as a matter of fact the judicial decisions and congressional resolutions are not respected."

A. D. 1908. — Inauguration of the Central American Court of Justice. — Gift of a building for its use by Mr. Carnegie. — The Central American Court of Justice, contemplated in the treaty of 1907, quoted above, was formally instituted, at Cartago, Costa Rica, with appropriate ceremony, in the last week of May, 1908. The Hon. William I. Buchanan, in attendance as Commissioner from the United States, added interest to the occasion by announcing the proffer of a gift of $100,000 by Mr. Andrew Carnegie, for the erection of a building to be dedicated to the exclusive use of the Court.

A. D. 1909. — Financial undertakings in New York. — Honduras, Costa Rica, and Guatemala. — In the summer of 1909 various financial undertakings by great banking houses in New York were announced, involving some handling of the debts of Honduras, Costa Rica, and Guatemala. It was thought that these operations were in line with efforts of the State Department at Washington and the Bureau of American Republics to bring about the establishment of a chain of American banking houses in the Latin-American countries, for the advancement of American trade and the promotion of more intimate Pan American relations.

A. D. 1909. — Nicaragua. — Establishment of a colony of Sioux Indians from the United States. — A dispatch to the Press from Boston, November 17, 1909, made the following statement: "To save the remnant of the Sioux tribe of Indians from extinction by consumption and other diseases, a colony of the Indians will be established in Nicaragua early in the new year. Chief Little Bison, a full-blooded Sioux, sailed from Boston on the steamship Esparta to-day for Nicaragua, where he will receive the deeds to 16,000 acres of land granted by the Nicaraguan government for the establishment of the colony. The project is supported financially by F. S. Dellenbaugh, head of the American Geographical Society, and several wealthy New York people. The emigration of the Indians is expected to begin in January."

A. D. 1909. — President Zelaya a menace to peace. — His conduct trying the patience of the United States. — In the early spring of 1909 the disturbing attitude and conduct of the Nicaraguan President, Zelaya, not only towards his near neighbors of Salvador and Honduras, but also in the relations of his Government with that of the United States, had caused the latter to enter again into consultation with the Mexican Government, as to joint action to preserve peace.

For some years the United States had been trying to bring about the settlement of a claim against the Nicaraguan Government preferred by an American company. This Emery claim, as it was known, arose in connection with a concession granted in 1868 for cutting and exporting mahogany. The concession provided that any differences which should arise between the Government and the company should be arbitrated by a tribunal of three members, one to be selected by the Government, one by the company, and the third by these two arbitrators. In 1903 an accusation of smuggling was brought against the company, and the questions raised were submitted to the stipulated tribunal. This decided that, inasmuch as the company had paid taxes to the Government three years in advance, amounting to $30,000, the concession could not be annulled, as President Zelaya wished to have done. Nevertheless Zelaya declared it annulled, and caused proceedings to be instituted for stopping the company's exportations. This led the American Government to interpose. Under instructions from Washington, its Minister at Managua, Mr. Merry, addressed the following note to the Nicaraguan Minister of Foreign Affairs, December 15, 1906: "I have the honor to inform you that I have received instructions from my Government to make an urgent and firm request that your Excellency's Government will settle the Emery company controversy by an international arbitration, and that until a decision has been given thereby, your Excellency's Government will restore to the Emery company all its property, dismissing all legal prosecutions in the case, and permitting the company to resume its work under its concession, as if no controversy had arisen."

This communication secured a promise of the desired international arbitration, and the stopping meantime of proceedings of interference with the company's business. But when the protocol of arbitration was to be drawn the Nicaraguan Government refused to have any question of damages to the company included. On this contention the settlement was blocked for more than two years, and the patience of the Washington Government was about worn out. In just what wrappings of diplomatic language it made that fact apparent has not yet been disclosed to the public; but evidently the understanding of Señor Zelaya was duly penetrated. On the 26th

of May last (1909) his representative at Washington signed a protocol which provided that the questions at issue between the Government of Nicaragua and the Emery Company should be submitted to arbitration, unless the parties could make their own settlement within four months.

This, however, did not end troubles with Nicaragua, — or, rather, with its presidental dictator. Revolutionary attempts in the republic to unseat him gave rise to new offenses on his part against the United States, which President Taft, in his Message to Congress, December 6, 1909, recounted as follows:

"Since the Washington conventions of 1907 were communicated to the government of the United States as a consulting and advising party, this government has been almost continuously called upon by one or another, and in turn by all of the five Central American republics, to exert itself for the maintenance of the conventions. Nearly every complaint has been against the Zelaya government of Nicaragua, which has kept Central America in constant tension or turmoil. The responses made to the representations of Central American republics, as due from the United States on account of its relation to the Washington conventions, have been at all times conservative and have avoided, so far as possible, any semblance of interference, although it is very apparent that the considerations of geographic proximity to the Canal Zone and of the very substantial American interests in Central America give to the United States a special position in the zone of these republics and the Caribbean Sea.

"I need not rehearse here the patient efforts of this government to promote peace and welfare among these republics, efforts which are fully appreciated by the majority of them who are loyal to their true interests. It would be no less unnecessary to rehearse here the sad tale of unspeakable barbarities and oppression alleged to have been committed by the Zelaya government. Recently two Americans were put to death by order of President Zelaya himself. They were officers in the organized forces of a revolution which had continued many weeks and was in control of about half of the republic, and as such, according to the modern enlightened practice of civilized nations, they were entitled to be dealt with as prisoners of war.

"At the date when this message is printed this government has terminated diplomatic relations with the Zelaya government, for reasons made public in a communication to the former Nicaraguan chargé d'affaires, and is intending to take such future steps as may be found most consistent with its dignity, its duty to American [illegible] and its moral obligations to Central [illegible] and to civilization. It may be necessary for me to bring this subject to the attention of the Congress in a special message."

Some days previous to the date of the President's Message, the Secretary of State, Mr. Knox, had addressed a letter of extreme severity to the Nicaraguan Chargé d'Affaires at Washington, Mr. Rodriguez, reviewing the conduct of the Nicaraguan Government, and saying: "In these circumstances the President no longer feels for the government of President Zelaya that respect and confidence which would make it appropriate hereafter to maintain with it regular diplomatic relations, implying the will and the ability to respect and assure what is due from one State to another." The conclusion of the letter was as follows: "To insure the future protection of legitimate American interests, in consideration of the interests of the majority of the Central American republics, and in the hope of making more effective the friendly offices exerted under the Washington conventions, the government of the United States reserves for further consideration at the proper time the question of stipulating also that the constitutional government of Nicaragua obligate itself by convention for the benefit of all the governments concerned as a guarantee for its future loyal support of the Washington conventions and their peaceful and progressive aims.

"From the foregoing it will be apparent to you that your office of chargé d'affaires is at an end. I have the honor to enclose your passports for use in case you desire to leave this country. I would add at the same time that, although your diplomatic quality is terminated, I shall be happy to receive you as I shall be happy to receive the representative of the revolution, each as the unofficial channel of communication between the government of the United States and the de facto authorities to whom I look for the protection of American interests pending the establisment in Nicaragua of a government with which the United States can maintain diplomatic relations."

President Zelaya at once protested against this arraignment, telegraphing to Secretary Knox that his sources of information had been prejudiced, and asking that the United States send a commission of investigation, proposing to resign if his administration was shown to be detrimental to Nicaragua. Receiving no reply, he resigned the presidency of Nicaragua on the 16th of December, announcing the fact by cable to President Taft in these words: "To avoid harm to my country, and desiring that it shall renew friendly relations with the United States, I have to-day sent my resignation to Congress. As my opponents consider my presence a disturbing factor, I propose to show my good faith by leaving Nicaragua. I stand ready to account for my acts."

The vacant presidential office was filled by the Congress of Nicaragua, which elected Dr. Madriz, the choice having been dictated, it was believed, by Zelaya. The revolutionists with whom Zelaya had been contending since October, and who had, on their part, elected and proclaimed their leader, General Juan Estrada, Provisional President of Nicaragua, refused to recognize this Congressional election, and continued, against the government of Madriz, the revolt they had organized against Zelaya, determined to secure for Estrada the power to order a presidential election by the people.

On Christmas Eve Zelaya left Nicaragua for Mexico, being conveyed by a Mexican gunboat from Corinto to Salina Cruz. A few weeks later he migrated to Europe and is understood to have taken up his residence in Belgium.

The revolt led by General Estrada is still in progress at the time this writing goes into print (early in March, 1910), but the latest reports do not warrant expectations of its success.

A. D. 1903. — The burning of the Iroquois Theater. — Chicago has now two of the most painful memories of fire that are in the past of any city. The second was added on the afternoon of December 30, 1903, when 588 people perished in the burning of the Iroquois Theater. The audience was made up principally of women and children, many of whom belonged to prominent families. The whole city was plunged in grief, and the whole world shared in the sorrow and manifested its sympathy. The theater was a new one, and was regarded as the best of any in the city in its method of construction. But inquiry soon proved that it was defective in its provisions for safety. Further examination, moreover, showed a similar condition in other places of assembly, with the result that all the theaters, with many churches and halls in Chicago, were closed by order of the mayor, pending their compliance with certain provisions of the law.

A. D. 1909. — Population, and race mixture. — The City Statistician of Chicago, in his manual for 1909, gives the number of the inhabitants of the city as 2,572,835, of whom 699,534 are Americans or persons whose parents are not foreign born. The Germans rank second, with a population of 563,708; the Irish third, with a population of 240,560. Next come the Poles, with 173,109; the Swedes, with 143,307; the Russians, with 123,238; the Bohemians, with 116,549. Thirty other foreign countries given are all below the 100,000 mark. The Chinese population is given as 1,801, the Japanese as 257. The Albanians are the lowest, with a population of 39.

A. D. 1909. — "The Chicago Plan." — Systematizing the future development. — "Early in 1906 the Merchants' Club, comprising a group of the younger business and professional men of the city, arranged for the preparation of a complete project for the future development of Chicago. The next year the Merchants' Club was merged with the Commercial Club under the name of the latter organization, and the city-planning work was continued under the auspices of that body." The resulting "Plan of Chicago" was reported in the course of the summer of 1909. "The report represents about thirty months' work by men whose thoughts for years have dwelt upon the subject of city building and beautification. The work was in charge of Daniel H. Burnham, chief architect and director of works of the World's Columbian Exposition of 1893, who gave his services to his city without compensation for the purpose of this report. Even so, the expense of preparing and publishing the report has approximated $75,000, all raised by voluntary subscriptions from the business men of Chicago."—

CHILDREN, UNDER THE LAW.

As Dependents:

England: The Poor Law Children. — The following is from a speech in Parliament June 17, 1909, by Mr. John Burns, President of the Local Government Board, which administers the Poor Laws and the Public Health Laws: "In England and Wales there were 280,000 children supported by the rates either inside or outside Poor Law institutions, and of these 70,000 were in cottage homes, barrack schools, scattered homes, and similar institutions. The cost per child maintained in cottage homes varied from 12s. 9d. to 25s. 2d. per week, and in scattered homes from 8s. 6d. to 11s. 2d. At this moment the number of children in workhouse schools, which in 1870 was 29,000, was only from 500 to 600; 19,000 of the Poor Law children were being educated in elementary schools outside . . . With regard to sick children he was delighted to hear the almost unanimous chorus of appeal that the Local Government Board should do a great deal by administration. They had, in fact, transferred 1,000 out of the 2,500 sick children from the London workhouses and infirmaries to an institution on the healthy and breezy downs of Surrey at Carshalton, where they could be better treated, and where they would recover much more quickly than in any of the workhouses and infirmaries in London. If he could find more buildings or institutions available he would transfer more children. He should not rest until all the sick children throughout the country were transferred from workhouses and infirmaries to institutions in the country where they would recover health more rapidly."

United States: Proposed Federal Child Bureau. — Transmitting to Congress, on the 5th of February, 1909, the proceedings of a conference held at Washington on the care of dependent children, President Roosevelt accompanied it with a message, in which he urged the establishment of a Bureau in one of the Departments of the Federal Government, to centralize attention to the subject; with the enactment of such legislation as will bring the laws and practices in regard to the care of dependent children in all Federal territory into harmony, and certain legislation in behalf of dependent children in the District of Columbia. The President maintained that such legislation is important not only for the welfare of the children immediately concerned, but "as setting an example of a high standard of child protection by the National Government to the several States of the Union, which should be able to look to the nation for leadership in such matters."

Statistics showing the large number of dependent children in the country were presented by Mr. Roosevelt. "Each of these children, he said, represents either a potential addition to the productive capacity and the enlightened citizenship of the nation, or, if allowed to suffer from neglect, a potential addition to the destructive forces of the community. The ranks of criminals and other enemies of society are recruited in an altogether undue proportion from children bereft of their natural homes and left without sufficient care. The interests of the nation are involved in the welfare of this army of children no less than in our great material affairs."

In urging a Children's Bureau, one of whose duties will be to investigate and report upon all matters pertaining to the welfare of children and child life, the President pointed out that "the National Government is the only agency which can effectively conduct such general inquiries as are needed for the benefit of all our citizens."

As Dependents and as Offenders:

England: The Children Act of 1908. — Infant Life Protection. — Reformatory and Industrial Schools. — Treatment of Youthful Criminals. — No death-sentence for them. — Special "Places of Detention." — Juvenile Courts. — An act entitled The Children Act, passed by the Parliament of the United Kingdom in December, 1908, and which came into effect April 1, 1909, has such importance that it has been described as "The Children's Charter." According to its full title it is "An Act to consolidate and amend the Law relating to the Protection of Children and Young Persons, Reformatory and Industrial Schools and Juvenile Offenders, and otherwise to amend the Law with respect to Children and Young Persons." It gathers into one great enactment nearly everything in which the guardianship of Law can be specially extended to them, except the matters of education and child labor, which are subjects of distinct legislation. It repeals wholly twenty-one previous enactments and amends more or less seventeen more. It contains 134 sections and fills a so-called Parliamentary "White Book" of 93 pages.

As used in the Act, the word "child" means a person under 14 years; the expression "young person" means one above that age, but under sixteen.

The Act is divided into six parts, which are concerned with the following main subjects: — (1) Infant Life Protection. (2) The Prevention of Cruelty to Children and Young Persons. (3) Juvenile Smoking. (4) Reformatory and Industrial Schools. (5) Juvenile Offenders. (6) Miscellaneous and General.

The provisions for "infant life protection" have to do mainly with the supervision of "baby-farming." Foster parents are forbidden to insure the life of a nurse-child and insurance companies are forbidden to accept any such insurance.

Juvenile smoking is dealt with very drastically, the penalties for selling cigarettes or the material for making them to persons under sixteen years of age being sharp, and both police

men and park-keepers in uniform being empowered to take such materials from the persons of juvenile smokers.

The part of the Act which relates to reformatory and industrial schools enables the Courts to deal effectively with youthful offenders without subjecting them to the prison taint. Boys or girls between the ages of 12 and 16 who are convicted of offences punishable in the case of adults with penal servitude or imprisonment may be sent to a certified reformatory school. In certain defined cases, children may be taken from depraved or drunken parents and consigned to a certified industrial school. In these cases the child may be brought before the Court by any person in order that the provisions of the Act may be set in force. Parents who are unable to control their children may themselves take advantage of the Act, and in these cases the Court may place the children under the supervision of a probation officer instead of sending them to an industrial school. In all cases of children who are liable to be consigned to an industrial school, there is given to the Courts the alternative power of committing them to the care of relatives or other fit persons with or without the supervision of the probation officer.

The most important part of the Act, perhaps, is that relating to juvenile offenders. It allows no young person under sixteen years of age to be sentenced to death. "Sentence of death," says this Law, "shall not be pronounced on or recorded against a child or young person, but in lieu thereof the Court shall sentence the child or young person to be detained during his Majesty's pleasure."

In future, also, no child may be sentenced to imprisonment or penal servitude for any offence, or committed to prison in default of payment of a fine, damages, or costs. No young person may be sentenced to penal servitude for any offence, nor may be be sentenced to imprisonment or committed to prison in default of payment of a fine or costs, unless the Court certifies that he is of so unruly a character or so depraved that it is not desirable to send him to a "place of detention" provided under the Act. These provisions relating to the substitution of "detention" for imprisonment did not come into force until January 1, 1910.

This part of the Act makes elaborate arrangements for the treatment of youthful criminals, both before and after trial. Special "places of detention" are to be opened in all petty sessional divisions. Here children will be placed on arrest (if for some special reason they cannot be released on a recognizance), or after being remanded or committed for trial. Here they may be kept in custody instead of being lodged in gaol if they are sentenced to terms of imprisonment of less than one month. Persons under 16 years of age must also be tried in special "juvenile Courts," unless they are charged jointly with adult offenders. A "juvenile Court" must sit "either in a different building or room from that in which the ordinary sittings of the Court are held, or on different days or at different times from those at which the ordinary sittings are held." Only the Court officials, those directly interested in the case, and the representatives of the Press may be admitted to these Courts, unless the special leave of the magistrate is obtained. Every effort is to be made, both before and after trial, to prevent the association of children with adult criminals. Finally, parents and guardians are to be required to attend the hearing of charges against their children or wards, and may be ordered to pay any fines, damages, or costs imposed.

The miscellaneous provisions of the Act include a number of importance, to prevent the giving of intoxicating liquors to children, to exclude them from drinking places, to safeguard them at entertainments, and to make the Act applicable to Scotland and Ireland.

As Offenders:

Canadian provision for Separate Detention, Reformatory Imprisonment, etc. — The Canadian Prisons and Reformatory Act of 1906 provides that — "Young persons apparently under the age of sixteen years who are, — (*a*) arrested upon any warrant; or, (*b*) committed to custody at any stage of a preliminary inquiry into a charge for an indictable offence; or, (*c*) committed to custody at any stage of a trial, either for an indictable offence or for an offence punishable on summary conviction; or, (*d*) committed to custody after such trial, but before imprisonment under sentence; shall be kept in custody separate from older persons charged with criminal offences and separate from all persons undergoing sentences of imprisonment, and shall not be confined in the lock-ups or police stations with older persons charged with criminal offences or with ordinary criminals."

Other sections of the Act confer discretionary authority on courts and magistrates to sentence convicted offenders whose age does not exceed sixteen years, and whose offence is punishable by imprisonment, to reformatory prisons, for not less than two nor more than five years; also, in certain cases, to commit such offenders to a certified industrial school, from which they may sometimes be permitted to be taken for apprenticeship to any respectable and trustworthy person.

The George Junior Republic. — Much attention has been turned from many directions, within the last few years, upon the reformatory experiment which bears the name of The George Junior Republic. From an ordinary undertaking to give a few summer weeks of country fresh air to a group of neglected, roughly-bred boys, out of the slums of the City of New York, it has grown into a unique institution, which remolds character and refashions life for hundreds of the young of both sexes, who had been given wrong startings in the world by the circumstances into which they were born. It has done this by the simple method of organizing them into a self-governing community, — a republic in which they are citizens, invested with all the responsibilities, duties, and cares that go with republican citizenship in its larger spheres. They make and administer its laws, conduct its public business and its politics, manage its institutions, generate and have experience of its public opinion. The moral and social influence of this training has now been proved by more than a decade of success.

This remarkable organization was not framed up by its architect, Mr. William R. George, on the lines of a preconceived theory, but took its shape slowly from suggestions of experience as they came. He began in 1890 to take companies of boys of the hoodlum class from New York

City to his place of summer residence, at Freeville, a few miles from Ithaca and not far from Auburn, N. Y. He found it hard to rule them, and no satisfactory corrections of wrong-doing and bad behavior could be devised. Physically they were bettered by their summer outings, but he could not see much gain in other ways. This continued for some seasons before his experiments with them began. The first to be applied was a rule that such articles of clothing and the like as had formerly been given to the boys must be paid for in work. At the outset they resented the idea; but before the summer was over they were all cheerfully at work, and the tone of the party was much improved. In the next year culprits, who robbed orchards and committed other misdemeanors, were arraigned before the whole community, for a hearing and a public verdict as to their guilt. Hard labor at stone-breaking and the building of a road now became the penalty for wrong-doing, and, presently, there was a boy constable to see that they did their work.

So, step by step, from year to year, the fabric of self-government and self-supporting industry was constructed, until the Junior Republic emerged, with its President and other executive officers, its representative legislature, its courts, its police, its own monetary system and bank,—a political and industrial commonwealth of boys and girls (for both sexes have been included), taken out of a derelict class for treatment by this simple innoculation with social responsibilities. Writing of the George Junior Republic in 1908, Dr. Lyman Abbott said: "It now has as a territory a hundred and fifty acres of land owned by the Board of Trustees, and the practical use of a hundred and fifty more belonging to Mr. George and some other friends of the Republic who have made their home here because such residence affords them an opportunity to give guidance and inspiration to the boys and girls. The citizens, *i. e.* the boys and girls in the Republic, number upwards of a hundred and fifty. They are in some cases signed over to the Republic by the parents, in other cases practically committed on suspended sentences by the courts. They are extraordinarily free within the territory, but are not free to leave it. Laundry, baking, carpentry, and printing are the principal trades indoors; road-making and land improvement the principal industries out-of-doors. There are two jails, one for the boys, one for the girls; a library, a schoolhouse, a chapel, bank, and a well-organized banking and currency system. There is a court, and there is a judge, who is elected every year by the citizens. From this court an appeal lies in certain cases to a Supreme Court chosen by the boys from the Board of Trustees, but this court only passes on the regularity of the proceedings in the court below, that is, on what might be regarded as equivalent to constitutional and jurisdictional questions. There are a President, a Vice-President, a Secretary of State, and a Secretary of the Treasury, all of whom are elected annually; the three latter officers constituting the Police Commissioners, the Board of Health, and the President's Cabinet. There are both a girl and a boy District Attorney, who are appointed by the President, and certain police officers and prison keepers. All citizens of the Republic, both boys and girls, over fourteen years of age, are voters; no one can remain a citizen after twenty-one. The legislature has been abolished by the citizens themselves, and all laws are made in town meeting, which is held once a month. . . .

"The Republic has been in existence long enough to give the experiment a fair trial, and the results justify the expectations of its friends. In round numbers, about five hundred have gone out from the Republic into life, most of them taken from the class of boys and girls whose environment was fruitful of crime and whose tendency was toward a criminal career. Of these five hundred two or three are known to have returned to crime, and five or six have disappeared entirely. But of these eight or ten failures not one was in the Republic more than a few months—not long enough to get the benefit of the training. The other four hundred and ninety are known to be earning an honest livelihood by honorable labor; and of these four hundred and ninety, twenty have either graduated from college, are now in college, or are just preparing to enter college. At this writing two new Republics are about being organized, one in Georgia and one in California, and a movement is on foot for the organization of a National Association."

Some months later than the above account of the Junior Republic there were reported to be kindred organizations modelled upon it in Connecticut and Maryland, with movements to the same end in Massachusetts, Pennsylvania, and New Jersey, as well as in some countries abroad. Mr. Thomas M. Osborne, of Auburn, who has been from an early day the chief supporter of Mr. George in his work, said recently in a published letter: "I believe that the success of the Junior Republic idea, as we have worked it out during the last fourteen years, is no longer dependent upon Mr. George, its originator, or upon any one man. Its established principles will now live on into the far future, and work the sure righting of thousands of youngsters gone wrong in every section of the greater republic."

But it may work much more than "the sure righting of thousands of youngsters gone wrong." It may, if its working widens and roots itself among the institutions of the future, as it seems likely to do, have a very potent and positive political influence in the world. If men and women representative of a class that is now troublesome to democracy, politically as well as otherwise, should by and by be brought in large numbers yearly from graduation in the Young Republic training schools of imitative citizenship, to be joined with their elders in larger spheres of more entire self-government, are they not likely to introduce a profounder change in the operation of republican institutions than can now be foreseen?

Juvenile Courts.—Their origin and development.—A collection of reports on "Children's Courts in the United States," prepared for the International Prison Commission and edited by Mr. Samuel J. Barrows, Commissioner for the United States, was published in 1904 as House Document No. 701 of the 58th Congress, 2d Session. The following account of the origin of the now widely established Juvenile Courts of America and Europe, and of their development in the United States during the first four years of their existence, is derived from those reports.

Commissioner Barrows opens his introduction to the collected reports with the following re-

marks: "If the question be asked, 'What is the most notable development in judicial principles and methods in the United States within the last five years?' the answer may unhesitatingly be, 'The introduction and establishment of juvenile courts.' Never perhaps has any judicial reform made such rapid progress. Beginning in Chicago in 1899, this institution has sprung up in city after city and State after State until it is now established in eight States and eleven large cities. This progress has been made not merely by changes in procedure or legal technique, nor by the introduction of a new method; it is most of all by the introduction of a new spirit and a new aim. . . . It must not be supposed that the juvenile court is only a smaller court for smaller offenders or simply a court holding separate sessions for such offenders; it represents an altogether different principle. The juvenile court is a life-saving institute in society.

"It is scarcely necessary to say that child-saving methods, institutions, and organizations have long flourished in the United States. The Northern States have regarded juvenile reformatories as a part of their correctional equipment, and the courts have served as vestibules for such institutions; but they have only been incidentally a part of the process. We have not before realized what the court might be and do before resorting to institutions. The children's court still maintains relations with the reform school, but it represents in itself active and vital forces and invokes a whole range of influence and motives which are personal and formative. It appeals to the reform school not as the first, but only as the last resort. The juvenile court has discovered that the child is a child, and, as Judge Hurley says, 'The child should be treated as a child. Instead of reformation, the thought and idea in the judge's mind should always be formation. No child should be punished for the purpose of making an example of him.' . . .

"The methods of children's courts, or juvenile courts as they are termed in some States, differ in different places. In some States the judge is detailed from some other court; in some courts but one judge is assigned to this work. In New York several judges from the court of special sessions act successively in turn as judges of the children's court. In Maryland and Indiana the judges of the children's courts exercise this function only, and it is claimed that it is better than the method of rotation, since the judge who confines himself to juvenile court cases becomes a specialist in this work. In Colorado Judge Lindsey is not only judge of the juvenile court, but also of the county court. He finds advantage in the fact that in his first capacity he can protect the child, while as judge of the county court he can also sentence the guardian or parent who is responsible for the child's delinquency.

"An essential feature of every juvenile court is the probation system and probation officers. Their duty is to investigate the case before trial, and, if the child is placed on probation, to exercise watchcare over them until the period of probation is closed. It is in this way that the parental care of the State is exerted."

The City of Chicago and the Legislature of Illinois have the honors of the origination of the Children's Court as a distinct creation of law. The Visitation and Aid Society of Chicago had been laboring since 1891 to secure various measures of advanced legislation bearing on child-saving, without much success, until, as related in a report by Mr. Hurley, of that Society, the Bar Association of Chicago took the matter in hand, in 1899, and appointed a committee to press it. This committee drafted the first juvenile court law ever planned distinctly to that end and secured its enactment by the Legislature of the State. The law went into force on the 1st of July, 1899. The Court was soon opened, and Judge Tuthill, of the Circuit Court of Illinois, who presided in it from the first, has stated the principles of its constitution and action in these following words:

"The basic principle of the law is this: That no child under 16 years of age shall be considered or be treated as a criminal; that a child under that age shall not be arrested, indicted, convicted, imprisoned, or punished as a criminal. It of course recognizes the fact that such children may do acts which in an older person would be crimes and be properly punishable by the State therefor, but it provides that a child under the age mentioned shall not be branded in the opening years of its life with an indelible stain of criminality, or be brought, even temporarily, into the companionship of men and women whose lives are low, vicious, and criminal.

"The law divides children into two classes, the 'dependent' and the 'delinquent.' A dependent child, in the language of the law, is a child — 'who for any reason is destitute or homeless or abandoned, or has not proper parental care or guardianship, or who habitually begs or receives alms, or who is found living in any house of ill fame or with any vicious or disreputable person, or whose home, by reason of neglect, cruelty, or depravity on the part of the parents, guardian, or other person in whose care it may be, is an unfit place for such a child.' A 'delinquent child' is defined to be — 'any child under the age of 16 who violates any law of this State or any city or village ordinance, or who is incorrigible, or who knowingly associates with thieves, vicious, or immoral persons, or who is growing up in idleness or crime, or who knowingly frequents a house of ill fame, or who knowingly patronizes any policy shop or place where any gaming device is or shall be operated.'

"The law places its enforcement upon the judges of the circuit court, who are required to select one of their number to perform these duties as a part of the judicial work of such judge. . . . The circuit court is a court of original and unlimited jurisdiction, the highest in the State, and the duty of holding the juvenile court was placed in the circuit court (which for convenience is designated the 'juvenile court') as an indication by the legislature of the importance to the State of the work to be done.

"The case of each child brought into court, whether dependent or delinquent, becomes of record, and every step taken in the case is shown upon the court record."

Interest in the Illinois Law was awakened quickly in many parts of the country, and requests for copies of it, says Mr. Hurley in his historical sketch, "began to pour in from all directions. These requests were promptly answered and copies of the Juvenile Court Record, published by the Visitation and Aid Society, containing the necessary information, were sent to applicants. Agitation began in other States

for a law similar to the one passed in Illinois, and those who helped to form the Illinois law were invited to visit other States to explain the measure and the method of administering the law in Cook County.

"The Illinois law proved so satisfactory that many judges throughout the country, not wishing to await the action of a legislature, established branches in their several courts for children cases only, and in the treatment of the cases applied the probate and chancery powers of the court. This was the case especially in Denver, Colorado, where Judge Ben D. Lindsey had a complete and well-equipped juvenile court and probation system before the legislature took any action whatever. A like court was subsequently adopted in Indianapolis by George W. Stubbs. The two latter courts were carried on practically in the same way that they have been since laws were adopted by these States. In most of the States the probation officers are volunteers."

Judge Lindsey, of Denver, has won celebrity among the presiding magistrates of the Juvenile Courts by the kindly shrewdness of the methods by which he has won the confidence, the admiration and devotion of the boys and girls of his city, within the classes with which he has to deal. The scene which his court-room presents on the appointed days when the delinquents on probation come in a body to report to him and to be talked to by him has been often described, and it seems to exemplify a kind of influence that would go farther than any other in resistance to the vitiating conditions which surround masses of the young in all cities. Judge Lindsey's extended report of his work and experience in the Denver Juvenile Court, published in the collection referred to above, is a paper of remarkable interest.

As stated already, the Juvenile Court is now an established institution in nearly every part of the United States, and in many countries abroad. It was established in Great Britain by the notable "Children Act" of 1908 (see above), and was instituted that year in several of the German cities. A Press despatch from Berlin, March 15, 1909, reported the opening of a congress in that city, under the auspices of the German Association for the Care of the Young, which aims at the extension of this important reform. "The labors of the society," says the despatch, "seem to have been stimulated by the passing of the English Children Act of 1908, a German translation of which has been distributed to members of the congress. The movement for the establishment of special Courts for juvenile offenders was taken up in Germany later than in some other countries, but has recently made rapid progress. The first children's Courts were established on January 1, 1908, at Cologne, Stuttgart, and Breslau, and there are now 26 such Courts in Prussia. Official statistics, however, indicate that in recent years the total number of juvenile offenders in Germany has grown about three times as fast as the total number of offenders of all ages. During 1906, 55,211 persons under the age of 18 were sentenced, as compared with 51,232 in 1905 and 49,993 in 1904."

At the meeting of the International Prison Commission, at Lausanne, Switzerland, in 1907, it was significant of the deep interest which the children's court has awakened in Europe that nineteen societies in France, including the Academy of Moral and Political Sciences, the General Society of Prisons, and the faculties of law of Paris, Lille, and Montpellier, and several of the most prominent tribunals in France, asked to have the whole subject of the organization of children's courts elucidated and discussed. A similar interest was shown in Switzerland and Germany.

CHILDREN, UNDER THE LAW

In an extended letter to the London *Times*, published August 19, 1909, Miss Florence Davenport-Hill traced the origin of children's courts to Massachusetts, and gave the following account of their introduction from that source of suggestion into Australia, and thence, to some extent, into Great Britain. Miss Davenport-Hill's statements on the subject are, in part, as follows:

"Although we hear little now from our earliest exemplar, Massachusetts — possibly because she has, I believe, cleared away the class to be dealt with — it is desirable to remember it was she who evolved the then new principle of absolute separation of child from adult, and devised its potent supporter, the probation system — a system affording watchful and kindly help to strong and maybe wilful weaklings. Thus did Massachusetts become a noble example, making the way plain for her successors. Mr. Joseph Sturge, attracted early in the eighties by reports of the 'plan,' visited Boston to investigate its methods. He describes in a pithy narrative subsequently published how his highest expectations were fulfilled; and it is interesting to learn from his pen that 'the probation system by which juvenile offenders are saved from imprisonment has been so successful, economically and morally, that the city of Boston now employs a probation agent to deal with suitable adult cases in a corresponding manner.'

"A copy of Mr. Sturge's narrative reached, by good fortune, the Chief Justice of South Australia, then presiding at a Royal Commission of inquiry concerning adult and juvenile dependents on the State. He recognized, and in his forthcoming report expounded, the value of the Massachusetts plan in its application to children. The result was the creation by the South Australian Government of a department, entitled the State Children's Council, consisting of 12 ladies and gentlemen nominated by the State as honorary members, to deal with erring and neglected children on the lines of that plan. . . .

"Nineteen years ago the Children's Court was opened in Adelaide, and in October, 1903, thanks, Sir, to your sympathetic courtesy, the reproduction in *The Times* of a letter describing it in the *Melbourne Argus* from Miss Alice Henry made known among us its scope, methods, and success. Gradually Benches of Magistrates in various parts of Great Britain and of Ireland who led the way tried the experiment, which was then discovered to be already existing among us here and there, and in a more or less developed form, as at Greenwich, Hull, &c."

As Workers:

Canada: Child Labor Legislation. — "There is not in any province a comprehensive act dealing with the subject of child labor as a whole, and even in Ontario, which has its Factories Act, its Shops Act, its Mines Act, its Municipal Act, its Truancy Act — all bearing on the matter more or less directly — it is still possible for young children to be kept at work by their parents for mercilessly long hours under sweat-

shop conditions. Prince Edward Island, Saskatchewan, and Alberta have neither Shops nor Factories Acts. Ontario, Nova Scotia, Manitoba, and British Columbia have both; Quebec and New Brunswick have Factories Acts, and six of the provinces have Mines Acts. The several Factories Acts resemble one another closely. In general, they prohibit the employment of girls under eighteen and boys under sixteen in factories where the work is dangerous or unhealthy; forbid the employment of children under fourteen in any manufacturing establishment (except canning factories) in three provinces; limit the hours of labor for women and children to ten hours a day and sixty hours a week; and specify the amount of overtime permissible for these classes of workers. The Shops Acts, upon the whole, allow greater latitude to the employers of children; thus the hours of labor are longer and the conditions often not less injurious than those in factories. Except in Ontario, no age limit is set under which a child may not begin work in a shop. Again by the Mines Acts of British Columbia, children of twelve may be employed above ground, and by those of Saskatchewan and Nova Scotia boys of twelve may work under ground. The enforcement of the laws restricting child labor has, from various causes, proved somewhat inadequate. For instance, Nova Scotia has had a Factories Act since 1901, but no inspector of factories till the present year; while Ontario, with a Truancy Act that, if enforced, would prevent many children from engaging in unsuitable labor, has vested the appointment of truancy officers in the municipalities, and these, in many instances, have neglected to make appointments."— *The Outlook, Nov.* 14, 1908.

Recent changes in child labor laws in Canada are as follows:

In Ontario the Factories Act limits the working time of boys under sixteen to ten hours, forbids the employment of children under twelve within doors, and restricts the privileges extended to canning factories. The Shops Act is amended by raising the age limit from ten to twelve years. Manitoba forbids the employment of minors as bartenders. Alberta has raised the age limit of children employed in mines from twelve to sixteen years. British Columbia prohibits the employment of boys under fourteen and girls under fifteen except in the canning of fish.

England: The Employment of Children Act, 1903. — An Act "to make Better Provision for Regulating the Employment of Children" became law in August, 1903. Most of the responsibility for a proper protective regulation of child labor was imposed by this enactment on the local authorities of the Kingdom. Among its provisions were the following:

"1. Any local authority may make byelaws — (i) prescribing for all children, or for boys and girls separately, and with respect to all occupations or to any specified occupation, — (*a*) the age below which employment is illegal; and (*b*) the hours between which employment is illegal; and (*c*) the number of daily and weekly hours beyond which employment is illegal: (ii) prohibiting absolutely or permitting, subject to conditions, the employment of children in any specified occupation.

"2. Any local authority may make byelaws with respect to street trading by persons under the age of sixteen. . . .

"3.—(1) A child shall not be employed between the hours of nine in the evening and six in the morning: Provided that any local authority may, by byelaw, vary these hours either generally or for any specified occupation.

(2) A child under the age of eleven years shall not be employed in street trading.

(3) No child who is employed half-time under the Factory and Workshop Act, 1901, shall be employed in any other occupation.

(4) A child shall not be employed to lift, carry, or move anything so heavy as to be likely to cause injury to the child.

(5) A child shall not be employed in any occupation likely to be injurious to his life, limb, health or education, regard being had to his physical condition. . . .

"4. — (1) A byelaw made under this Act shall not have any effect until confirmed by the Secretary of State, and shall not be so confirmed until at least thirty day after the local authority have published it in such manner as the Secretary of State may by general or special order direct. . . .

"13. In this Act — The expression 'child' means a person under the age of fourteen years:

"The expression 'guardian,' used in reference to a child, includes any person who is liable to maintain or has the actual custody of the child;

"The expression 'employ' and 'employment,' used in reference to a child, include employment in any labour exercised by way of trade or for the purposes of gain, whether the gain be to the child or to any other person: . . .

"The expression 'street trading' includes the hawking of newspapers, matches, flowers, and other articles, playing, singing, or performing for profit, shoe-blacking, and any other like occupation carried on in streets or public places."

Germany: Child Labor Legislation and its operation. — The Reichstag, in 1903, passed a new law for the protection of children, concerning the operation of which a well known English student of social conditions in Germany wrote as follows in 1908:

"Several significant facts may be noted in relation to the protection of childhood in Germany. The legal age of admission to full employment in factories and workshops is fourteen years, though on the production of efficiency certificates children may be employed for not more than six hours daily at the age of thirteen, yet of the 5,607,657 industrial workers subject to inspection in 1905 only 10,245, or under 0.2 per cent., were below fourteen years, and in some States there were none. To show the progress which has been made in this respect it may be stated that in 1875 10 per cent. (88,000 out of a total of 880,500) of the factory workers were between twelve and fourteen years of age. . . . At the same time there is reason to believe that a serious exhaustion of juvenile strength takes place in the unregulated home industries of Germany. Further, from the age of six the child of the people attends the primary school for seven or eight years, and in many cases he is required to attend a continuation school several years longer. In most of the large towns the scholar from first to last receives free systematic medical care at the hands of the school doctors. It begins with a thorough examination on admission, and the health record thus opened is continued throughout the whole period of school life, so that the child is under

CHILDREN, UNDER THE LAW

constant medical supervision until it reaches the working age. Many towns have gone further, and have established dental surgeries, and attached eye and ear specialists to the primary schools."—W. H. Dawson, *The Evolution of Modern Germany*, p. 327 (*Unwin, London; Scribner's, N. Y.*).

United States: Child Labor Laws of the several States in 1908, and as amended since.—The requirements of an effective child labor law are set forth in Pamphlet No. 60 of the National Child Labor Committee as resting "primarily upon certain definite prohibitions, among which are the following: Labor is prohibited (1) for all children under the age of fourteen years; labor is prohibited (2) for all children under sixteen years of age who do not measure sixty inches and weigh eighty pounds; labor is prohibited (3) for all children under sixteen years of age who cannot read fluently and write legibly simple sentences in the English language; labor is prohibited (4) for all children under the age of sixteen years, between the hours of 7 P. M. and 7 A. M. or longer than eight hours in any twenty-four hours, or longer than forty-eight hours in any week; labor is prohibited (5) for all children under the age of sixteen years in occupations dangerous to life, limb, health or morals." Further prescriptions of the Committee relate to the regulations and agencies of authority requisite to an effective enforcement of the Law.

In Bulletin No. 62 of the U. S. Bureau of Labor published in January 1906, there is published a compilation of the laws relating to child labor in each State of the Union, as amended and in force at the close of the year 1905. An examination of them shows that the proposed standard had not then been measured up to in any State, or approached even nearly by more than a few. In not one had the law prescribed a test by weight or measure of the bodily development of a child that should mark Nature's consent to his employment in any kind of work.

Thirteen States, namely, California, Connecticut, Delaware, Indiana, Kansas, Minnesota, New Jersey, Ohio, Oregon, Pennsylvania, Tennessee, West Virginia, and Wisconsin, prohibited in general terms the employment of children under fourteen years in mechanical, manufacturing or mercantile establishments, or to that apparent effect. New York did the same, with the proviso that children over twelve might have employment during school vacation times. Rhode Island, likewise, excepted the vacation time for children under fourteen. The State of Washington allowed certain judges to make exemptions from a similar prohibition, for the needed support of helpless parents. Maine, Michigan, New Hampshire, North Dakota, Texas, Vermont, Virginia, West Virginia, and Wisconsin fixed the age under which no child may be employed in wage-earning labor at twelve. Louisiana appointed it at twelve for a boy and fourteen for a girl. Colorado placed it at twelve for labor in mines only. Florida raised it to fifteen, but only as prohibitory without consent of "those having legal control" of the child. Alabama and Nebraska had it lowered to ten years. South Carolina had kept it at ten until 1903, at eleven until 1904, and at twelve until May, 1905. In the Massachusetts law no absolute prohibition of child labor within any age line appeared.

Educational requirements, conditioning the employment of children, were in most of the State laws, as they stood at the end of 1905, and many of them satisfied the third rule propounded by the National Child Labor Committee, as given above.

In the next three years after the Bureau of Labor's compilation of child labor laws, great reforms in them were brought about, as shown by comparison with the "Handbook 1908" of "Child Labor Legislation" compiled by Josephine Goldmark for the National Consumers' League, and published originally as a Supplement to the Annals of the American Academy of Political and Social Science, May, 1908. Some statements from this are given below:

"The age below which child labor is prohibited varies from sixteen to ten years. The number of employments prohibited also varies greatly—from all employment during school hours to mine work only. . . . Eleven states prohibit work to the sixteenth birthday in either mines or specific occupations injurious to health, or both. These are, for mines, New York, Oklahoma, Pennsylvania (inside anthracite mines), Texas; for specific occupations, Kentucky, Minnesota, Missouri, Ohio, Wisconsin; for both, Illinois and Montana."

The fifteen year age limit is prescribed in only one State, South Dakota, which forbids it in mines, factories, hotels, laundries, theatres, bowling alleys, elevators, messenger service, or places where liquors are sold.

The age limit of fourteen years is prescribed differently in different States. With various qualifications, employment below that age in factories, stores, offices, laundries, hotels, theatres, bowling alleys, is prohibited in California, Idaho, Illinois, Iowa, Indiana, Kentucky, Michigan, Missouri, Nebraska, New York, Ohio, Pennsylvania, and Wisconsin.

In factories or stores it is forbidden in Connecticut, Massachusetts, North Dakota, Oregon, Rhode Island, and Washington.

In factories it is not permitted in Arkansas, Colorado, Delaware, Kansas, Louisiana, Maine, Minnesota, New Jersey, Tennessee, Texas, Wisconsin.

In messenger service it is made unlawful in California, Idaho, Illinois, Kentucky, Maryland, Michigan, Missouri, Nebraska, New York, Ohio, Oregon, Pennsylvania, Vermont, Washington, Wisconsin.

Children under this age are excluded from mines in Arkansas, Colorado, Idaho, Indiana, Iowa, Kansas, Kentucky, Minnesota, Missouri, North Dakota, Ohio, Oregon, Pennsylvania, Tennessee, Utah, Washington, Wisconsin, Wyoming.

In all the prohibitions above cited many and various exceptions are allowed in the laws of different States—as for school-vacation periods, for children of widows and disabled fathers, etc. In like manner, the following State laws which, on general principles, forbid all employment of children under fourteen years during school hours, provide for numerous and different exceptional circumstances: California, Colorado, Connecticut, District of Columbia, Idaho, Illinois, Kentucky, Massachusetts, Minnesota, Missouri, Montana, Nebraska, New Hampshire, New York, North Dakota, Ohio, Oregon, South Dakota, Vermont, Washington, West Virginia, Wisconsin.

The thirteen year age limit is fixed only in North Carolina, which excepts apprentices.

The twelve year limit is applied (with exceptions for the vacation months) to factories or stores in California, to most descriptions of regular employment in Maryland, and to factories in West Virginia. It is applied to factories, with varied exceptions, in Arkansas, Florida, Georgia, Louisiana, Mississippi, New Hampshire, North Dakota, South Carolina, and Texas. It applies to factories, quarries, railroads, and messenger service in Vermont, and to factories, stores, and mines in Virginia. To mines distinctly it applies in Alabama, Florida, Maryland (if the twelve-year child is not wholly illiterate), North Carolina, North Dakota (in school hours), Pennsylvania (in bituminous mines only), South Carolina, Virginia, West Virginia (vacation excepted).

The ten year old limit for labor to be lawful was only in Georgia factories, with exceptions for the babes of widows and disabled fathers.

As to hours of labor, "six states limit employment to 9 hours in one day and 54 in one week: — California, Delaware, Florida, Idaho, Missouri, and New York (applying to children under 16 in stores and as messengers).

"Twenty-four states restrict work to 10 hours in one day and either 55, 58 or 60 hours in one week.

"Five states, Alabama, Georgia, North Carolina, Pennsylvania and Tennessee allow more than 10 hours work in one day," in the hours per week they permit.

"Those states which fail to restrict the hours of labor allowed in one *week* as well as in one *day* invite the possibility of seven days' labor. In Washington, for example, women and girls may not only work ten hours at night, they may do this every night, including Sunday.

"Work at night is effectively restricted to the 16th birthday in 18 states. Twelve states set an early closing hour for children under 16 years, New York fixing 5 P. M.; Michigan, Ohio, Oregon and Wisconsin 6 P. M., and Alabama, Idaho, Illinois, Kentucky, Minnesota, Missouri and New Jersey (in stores) fixing 7 P. M. Of these, the Ohio law is the most comprehensive, since it includes girls to the 18th birthday."

"Children have no positive immunity from night work unless the hours are explicitly stated between which it is unlawful to employ them.... The District of Columbia, 4 territories and 20 states fail to prohibit work at night after a definite closing hour. The sinister feature of this list is the presence of Connecticut, Delaware, Indiana, Louisiana, Maine, Maryland, New Hampshire, Tennessee and West Virginia, all of them important manufacturing states having industries in which children are employed."

Since the compilation of the above several states have made important changes in or additions to their child labor laws, as follows:

In Kentucky the age limit is raised to 14 years during school terms, children between 14 and 16 not to be employed without certificate from school authorities. The hours of labor are limited to ten hours a day and sixty hours a week, and night work is prohibited for children under 16 years.

In Louisiana a fourteen-year age limit is established, with a 9 hour working day, and night work is prohibited for boys under 16 and girls under 18 years.

Mississippi has established a twelve-year limit, applicants under sixteen being required to furnish a certificate of age and educational advantages, and one from county health officer showing physical condition. The time limit is ten hours daily, 58 hours a week.

"New Jersey enacted a compulsory education law, requiring school attendance of all children between the ages of seven and seventeen, except that children of fifteen who have completed the grammar grades and are regularly employed may be excused. This places the age limit for employment during the school period at fifteen years.

"In New York a law was passed transferring the enforcement of the mercantile child labor law from local boards of health in cities of the first class to the State Labor Department, and providing for the creation of a bureau of mercantile inspection. This law became effective October 1st, 1908." It made important changes, affecting dangerous employments, which became effective October 1st, 1909.

"In Ohio an important measure was passed limiting the hours for boys under sixteen and girls under eighteen to eight per day and forty-eight per week." — *National Child Labor Committee* (*General Secretary's Annual Report*).

An act to regulate the employment of child labor in the District of Columbia was passed by Congress on May 28, 1908. This law prescribes an age limit of fourteen years, and prohibits employment during school hours. Exceptions may be made for children in the service of the Senate, or for those whose labor is necessary for the support of a disabled or widowed parent. Street trades are forbidden to boys under ten and girls under sixteen years of age. The time limit for children under sixteen is eight hours a day and forty-eight hours a week.

The report of the National Child Labor Committee, for the year ending September 30, 1909, gives the following additional changes: In South Carolina a system of factory inspection was adopted. The hours of labor, however, were changed from 10 to 11 hours a day. In Maine an educational test was adopted, and the hours reduced from 60 to 58 per week. Rhode Island reduced the hours for women and children from 60 to 56 per week. Pennsylvania enacted a law requiring adequate proof of age of children seeking employment, and requiring school certificate.

Hours of labor have been reduced in the following States: Michigan to 54 hours a week for all women and for males under 18; Kansas, Oklahoma, North Dakota to 8 hour day and 48 hour week; Delaware to 9 hour day and 54 hour week; Maine to 10 hour day and 58 hour week for boys under 16, and girls under 18; Rhode Island to 56 hour week for minors under 16 and all women.

Night work has been prohibited in the following additional States: Delaware, Kansas, North Dakota, Michigan, Oklahoma, California.

Compulsory education laws have been passed in Arkansas and Tennessee, and revised and improved in New Jersey, New York, and Missouri.

A. D. 1906. — Installation of President Montt. — His prospective difficulties. — Don Pedro Montt, elected President of Chile in June, 1906, was installed in office on the 10th of September following — the anniversary of Chilean independence. United States Minister Hicks, reporting the ceremony to his Government, added the following remarks on the political situation: "The new President takes office while enjoying great personal popularity. He is the son of Don Manuel Montt, who was President of Chile from 1851 to 1862. His reputation is that of a calm, well-balanced man, of unimpeachable integrity, strong and self-reliant, but conciliatory and far-seeing. He begins his career with many difficulties on his hands. One question left over from the last administration — that of the rectorship of the university — is already causing considerable trouble. Under the law the President appoints the rector from three persons named by the doctors of the university itself. Señor Letelier has been so named, but as he is said to be a liberal and even a freethinker, the church party and the conservatives generally are fighting him. The new President selected a cabinet last week entirely different from the one now in office, but owing to the rectorship question and some other things it failed and a new one had to be appointed hurriedly.

"Among other difficulties to be met by the new President is the opposition of the Senate. It is understood that there is a majority in that body against him, and it is liable to operate unfavorably to him. Still his friends have full confidence that he will succeed in quieting opposition and will retain the unlimited confidence of the people.

"Under the Chilean constitution much of the power delegated to the President under the American Constitution is retained by Congress. That body really dictates to the President the appointment or removal of his cabinet and thus his functions are quite different from those of the President of the United States."

A. D. 1909. — Arbitration of the Alsop Claim of the United States. — "Many years ago diplomatic intervention became necessary to the protection of the interests in the American claim of Alsop and Company against the government of Chili. The government of Chili had frequently admitted obligation in the case, and had promised this government to settle it. There had been two abortive attempts to do so through arbitral commissions, which failed through lack of jurisdiction. Now, happily, as the result of the recent diplomatic negotiations, the governments of the United States and Chili, actuated by the sincere desire to free from any strain those cordial and friendly relations upon which both set such store, have agreed by a protocol to submit the controversy to definitive settlement by his Britannic Majesty, Edward VII."—*Message to Congress of President Taft, Dec.*, 1909.

The claim referred to is that of "the Alsop Company of New York and Connecticut which advanced large sums of money to the Bolivian government in exchange for the right to valuable guano deposits in that country and other concessions. The government contracted further to return a part of the loan from the receipts of customs at the port of Arica. Before her contract could be fulfilled Bolivia lost Arica and the adjoining districts to Chili in war. In 1885, following representations by the American State Department, Chili agreed to assume the obligations of Bolivia to the Alsop Company. She has never, however, made good her promise, and the matter has been the subject of diplomatic negotiations ever since. The claim now amounts to more than $1,500,000."

A. D. 1900-1905. — Sudden and rapid upspringing of newspapers. — "Without giving actual statistics, it may be mentioned that Peking, which had no newspaper up to the time of the Boxer rising — except a short-lived weekly started by the Peking Reform Club and suppressed by the Empress Dowager — has now three daily newspapers and two fortnightly ones, some of these being partly illustrated. Tientsin has at least three dailies, one of these, the '*Takung Pao*' ('The Impartial'), having the very respectable circulation of twenty thousand. The official organ which calls itself the 'Times' (the '*Shih Pao*'), although not so widely circulated, is well written under European auspices and has

CHINA, 1901-1902

considerable influence. In Shanghai there are now sixteen daily papers (price, eight to ten *cash* each), some of which have circulations of as much as ten thousand, and besides these there are many journals published there. Further south (at Foochow, Soochow, and Canton), there are in all some six or seven daily papers, and at Hong-Kong five, while Kiaochow has one, which is supported by the local German government. In addition to these, several papers are now published in the interior, but the majority, for various reasons, flourish in the treaty ports."—A. R. Colquhoun, *The Chinese Press of To-day* (*North American Review, Jan.*, 1906).

A. D. 1900-1906.—Progressive tariff and internal taxation measures to check the consumption of opium. See (in this vol.) OPIUM PROBLEM.

A. D. 1901-1902.—The Russian grip on Manchuria.—Coercive negotiations with China.—Protests from other Powers.—The Manchurian Treaty of 1902 and its impotence.—Early in December, 1901, the American Minister to China, Mr. Conger, reported to Secretary Hay, at Washington, an impending treaty which Russia seemed likely to force on the Chinese Government, which would practically secure to that aggressive Power, through a prolonged agreement of China with the Russo-Chinese Bank, exclusive railway and mining concessions in Manchuria, and which would protract the Russian evacuation of that country through three years. England and Japan were using all their influence at Peking to prevent the signing of the treaty, and Mr. Hay entered a vigorous protest on the part of the Government of the United States, "animated now, as heretofore, by the sincere desire to insure to the whole world full and fair intercourse with China on equal footing." The pressure from Russia on China was so potent, however, that Mr. Conger, on the 29th of January, 1902, reported to Mr. Hay that Prince Ch'ing, who acted with authority from his Government in the negotiation with Russia, had informed him "that the latter has done the best he could and has held out as long as possible, but that Russian possession of Manchuria has become intolerable, ... that China must at once sign the convention or lose everything; that he has therefore decided to sign the convention [modified in some particulars] and will also sign the separate agreement with the Russo-Chinese Bank, which practically gives exclusive privileges of industrial development in Manchuria." Nevertheless the consummation of the Russian project of coercive diplomacy was delayed until the 8th of April, and the terms of the treaty then signed were considerably moderated from the original design. Its provisions of interest to others than the contracting parties were as follows:

"ARTICLE I. His Majesty the Emperor of all the Russias, desiring to give a fresh proof of his love of peace and his sentiments of friendship for His Majesty the Emperor of China, notwithstanding the fact that the first attacks upon the peaceable Russian population were made from various points of Manchuria, which is situated on the frontier, consents to the reestablishment of the authority of the Chinese Government in the aforesaid province, which remains an integral part of the Empire of China, and restores to the Chinese Government the right to exercise governmental and administrative powers there as before its occupation by the Russian troops.

"ART. II. In resuming possession of governmental and administrative powers in Manchuria, the Chinese Government confirms, as well in regard to the terms as to all the other articles, the engagement strictly to observe the stipulations of the contract concluded with the Russo-Chinese Bank on the 27th of August, 1896, and assumes, according to article 5 of said contract, the obligation to protect the railroad and its personnel by every means, and also pledges itself to guarantee the security in Manchuria, of all Russian subjects in general who reside there and the enterprises established by them. The Russian Government, in view of the assumption of this obligation by the Emperor of China, consents on its part, in case there shall be no agitations of any sort, and if the action of the other powers shall offer no obstacle thereto, gradually to withdraw all its troops from Manchuria so as (*a*) To withdraw, in the course of six months from the signing of the convention, the Russian troops from the southwest portion of the province of Moukden, as far as the Liao-he River, and again to place China in control of the railways; (*b*) To withdraw, in the course of the six months following, the Imperial Russian troops from the remaining portion of the province of Moukden and the province of Kirin; and (*c*) To withdraw, in the course of the six months following, the remainder of the Imperial Russian troops now in the province of Hei-lung Kiang.

"ART. III. In view of the necessity of obviating in future a repetition of the disturbances of 1900, in which the Chinese troops quartered in the provinces adjacent to Russia took part, the Russian Government and the Chinese Government agree to order the Russian military authorities and the dzian-dziuns, to come to an understanding for the purpose of regulating the number and determining the places of cantonment of the Chinese troops in Manchuria until the Russian troops shall have been withdrawn therefrom. The Chinese Government furthermore pledges itself not to organize any other troops above the number thus agreed upon by the Russian military authorities and the dzian-dziuns which shall be sufficient to exterminate the brigands and to pacify the country. After the complete evacuation of the country by the Russian troops, the Chinese Government shall have the right to make an examination of the number of troops in Manchuria which are subject to increase or diminution, giving timely notice of such examination to the Imperial Government, for the maintenance of troops in the aforesaid province in superfluous numbers would manifestly lead to the increase of the Russian military forces in the adjacent districts, and would thus occasion an increase of military expenses, to the great disadvantage of both countries. For police service and the maintenance of internal order in this region outside of the territory ceded to the Chinese Eastern Railway Company, there shall be formed, near the local dzian-dziun governors, a police force, both on foot and mounted, composed exclusively of subjects of the Emperor of China

"Art. IV. The Russian Government consents to restore to their owners the railway lines of Shan-hai-kwan—Yin-kow—Simminting, which have been occupied and protected by the Russian

troops since the end of the month of September, 1900. In consideration of this the Government of the Emperor of China pledges itself:

"1. That in case it shall become necessary to insure the security of the aforesaid railway lines it will itself assume that obligation, and will not request any other power to undertake or participate in the defense, construction, or exploitation of these lines, and will not permit foreign powers to occupy the territory restored by Russia.

"2. That the above-mentioned railway lines shall be completed and exploited on the precise bases of the agreement made between Russia and England April 16, 1899, and on those of the contract concluded September 28, 1898, with a private company, relative to a loan for the construction of the aforesaid lines, and, moreover, in observance of the obligations assumed by the company, especially: Not to take possession of the Shan-hai-kwan — Yin-kow — Simmintingline or to dispose of it in any manner whatever.

"3. That if a continuation of the railway lines in the south of Manchuria, or the construction of branch lines connecting with them, and the construction of a bridge at Yin Kow or at the transfer of the terminus of the Shan-hai-kwan Railroad, which is situated there, shall hereafter be undertaken, it shall be done after a previous understanding between the Government of Russia and that of China."— *Papers relating to the Foreign Relations of the United States*, 1902, *pp.* 271-281.

During the next two years Russia was accused from all sides of infidelity to the engagements of this treaty, and her conduct, which seemed especially menacing to Japan, gave rise to the Russo Japanese War. See (in this vol.) JAPAN: A. D. 1901-1904.

A. D. 1901-1908. — Settlement of the indemnity to be paid to fourteen Powers on account of the Boxer Rising. — Remission of part of it by the United States. — In April, 1901, when the record of events connected with the Boxer rising against foreigners in China was closed in Volume VI. of this work, the Chinese government had promised satisfaction and indemnity to the fourteen Powers whose subjects had suffered from the barbarous attack and whose forces had overcome it, and the measure of indemnity to be paid was then being discussed. The discussion and the reckonings involved were prolonged till September. The final protocol was signed Sept. 7, but it was not until the 30th of that month that the formulated claims of the Powers concerned were accepted by China, and the responsibility of payment assumed by an imperial decree. The total was 450,000,000 taels, equivalent to $334,000,000, divided between Austria-Hungary, Belgium, Denmark, France, Germany, Great Britain, Italy, Japan, Netherlands, Portugal, Russia, Spain, Sweden, and the United States. The sum was not reckoned solely for the covering of losses and expenses, consequent on the Boxer outrages, but was intended to be, in some degree, a penalty imposed on the Chinese nation; and some of the claimant nations were said to be more exacting on this score than others were.

The amount for which the United States stipulated was $24,440,000, and the American government received an indemnity bond for that sum. But when the expenses of the American relief expedition had been accurately ascertained, and all losses and destruction of property belonging to American claimants had been settled, it was found that they would be largely overpaid. It was possible, according to common practice in international dealings, to regard the excess as justly punitive; but a different view was dictated by the wish to show friendliness to China, and a return of the overpayment was proposed. Recommended by President Roosevelt, the necessary sanction was given by Congress, and on the 11th of July, 1908, the American Minister to China addressed the following communication to the Prince of Ch'ing, President of the Wai-Wu-Pu, or Board of Foreign Affairs, at Peking:

"*Your Highness*

"It is with great satisfaction that I have the honor to inform your Highness, under direction of the Secretary of State of the United States, that a bill has passed the Congress of the United States authorizing the President to modify the indemnity bond given the United States by China under the provisions of Article VI. of the final protocol of September 7, 1901, from twenty-four million, four hundred and forty thousand dollars ($24,440,000), United States gold currency, to thirteen million, six hundred and fifty-five thousand, four hundred and ninety-two dollars and twenty-nine cents ($13,655,492 29), with interest at four per cent (4 %) per annum. Of this amount two million dollars ($2,000,000) are held pending the result of hearings on private claims presented to the Court of Claims of the United States within one year. Any balance remaining after such adjudication is also to be returned to the Chinese Government, in such manner as the Secretary of State shall decide.

"The President is further authorized under the Bill to remit to China the remainder of the indemnity as an act of friendship, such payments and remissions to be made at such time, [illegible] in such a manner as he may deem just.

"I am also directed by the Secretary of State to request the Imperial Government kindly to favor him with its views as to the time and manner of the remissions.

"Trusting that your Imperial Highness will favor me with an early reply to communicate to my Government, I avail myself of this occasion to renew to your Highness the assurance of my highest consideration — W. W. ROCKHILL."

In his reply, after reciting the statements conveyed to him by Mr. Rockhill, the Prince wrote (as translated) the following:

"On reading this despatch I was profoundly impressed with the justice and great friendliness of the American government, and wish to express our sincerest thanks.

"Concerning the time and manner of the return of the amounts to be remitted to China, the Imperial Government has no wishes to express in the matter. It relies implicitly on the friendly intentions of the United States Government, and is convinced that it will adopt such measures

as are best calculated to attain the end it has in view.

"The Imperial Government, wishing to give expression to the high value it places on the friendship of the United States, finds in its present action a favorable opportunity for doing so. Mindful of the desire recently expressed by the President of the United States to promote the coming of Chinese students to the United States to take courses in the schools and higher educational institutions of the country, and convinced by the happy results of past experience of the great value to China of education in American schools, the Imperial Government has the honor to state that it is intention to send henceforth yearly to the United States a considerable number of students there to receive their education. The Board of Foreign Affairs will confer with the American Minister in Peking concerning the elaboration of plans for the carrying out of the intention of the Imperial Government.

"A necessary despatch.

"SEAL OF THE WAI-WU-PU."

Simultaneously with the note from Prince Ch'ing, the Wai-Wu-Pu as a body addressed the following to Mr. Rockhill:

"*To his Excellency W. W. Rockhill, American Minister, Peking:*

"Referring to the despatch just sent to your Excellency regarding sending students to America, it has now been determined that from the year when the return of the indemnity begins, one hundred students shall be sent to America every year for four years, so that four hundred students may be in America by the fourth year. From the fifth year and throughout the period of the indemnity payments a minimum of fifty students will be sent each year.

"As the number of students will be very great, there will be difficulty in making suitable arrangements for them. Therefore, in the matter of choosing them, as well as in the matters of providing suitable homes for them in America and selecting the schools which they are to enter, we hope to have your advice and assistance. The details of our scheme will have to be elaborated later, but we take this occasion to state the general features of our plan, and ask you to inform the American Government of it. We sincerely hope the American Government will render us assistance in the matter.

"Wishing you all prosperity,

(Signed)

PRINCE OF CH'ING, YUAN-SHIH-K'AI, NA-TUNG LIEN FANG LIANG-TUN-YEN."

The remittance of somewhat more than $10,000,000 of the indemnity did not involve a repayment of that sum of money to the Chinese government, for the reason that payments on the original indemnity bond were to be in annual instalments, running until 1940, certain revenues being pledged to secure them. The remittance is effected, accordingly, by a readjustment of those payments hereafter

Writing in *The Outlook* of this transaction, and of the impression it was made in China, Mr. George Marvin, who has been for some time in official connection with the Chinese Government, says:

"In pledging itself to the American educational mission the Chinese Goverament has given the fullest evidence of its appreciation. According to estimates made in Peking last summer, it was calculated that by and after the fourth year of the proposed educational foundation the investment necessary to finance the Chinese students in America would amount to $500,000 annually, a sum nearly equivalent to the entire yearly revenue remitted. Already, and quite apart from the scheme proposed in the note of the Wai-Wu-Pu, there are maintained in the United States by Imperial and Provincial funds one hundred and fifty-five Chinese students, picked boys and young men, sons of officials and prominent and wealthy merchants, chosen often by competitive examinations. The students now to be sent annually by the Imperial Government will be still more carefully selected. These are the men destined for positions of responsibility and influence in that 'Awakening China' of which we hear so much." — G. Marvin, in *The Outlook, Nov.* 14, 1908.

A Special Ambassador from China, bearing a letter of thanks from the Emperor, presented it to the President on the 2d of December, 1908.

A. D. 1902. — Return to Peking of the Emperor, Empress-Dowager, and Court. — Receptions to foreign representatives. — Withdrawals of foreign troops. — Recurrence of Boxer outbreaks. — The Emperor, Empress Dowager, and their suite reentered Peking on the 7th of January, 1902. On the 22d the foreign representatives were admitted to audience with the Emperor; on the 28th the Emperor and Empress-Dowager, together, gave a reception to the diplomatic body, the Empress-Dowager being throned on a higher seat than the Emperor; on the 1st of February the Empress-Dowager entertained the ladies of the foreign legations at a banquet, where presents of jewelry were made to all the guests. Sorrow for the misdoings from which the foreigners in China had suffered was expressed on all these occasions, and there seemed to be an earnest desire to make amends for them.

Foreign troops were withdrawn from Tien-tsin on the 15th of August, 1902, and the city delivered to the Chinese Viceroy. Many improvements in streets, bridges, and public grounds had been made by the provisional government which the Allies instituted in 1900. Shanghai was evacuated by the allied forces at the end of the year 1902.

Some recurrence of Boxer movements and insurrections occurred in different parts of the Empire during 1902. Several missionaries and a number of native converts were murdered, chapels were burned, and other outrages committed; but in general there was a restoration of order in the country, and considerable building of railways and forwarding of other enterprises went on.

A. D. 1903 (May-Oct.). — Treaty with the United States. — Opening of two ports in

Manchuria.—Rights and privileges enlarged. —"In the protocol of September 7, 1901, [see, above, A. D. 1901-1908] China had agreed to extend the scope of her commercial treaties with the powers. When the negotiation of a new treaty was begun by Consul-General Goodnow at Shanghai, the United States demanded that at least two new ports in Manchuria be opened to foreign trade and residence. The Chinese commissioners declined to discuss this subject, on the alleged ground that they had no instructions to do so. It was evident that there was secret opposition somewhere, and on May 7, 1903, Mr. Conger reported that it came from the Russian *chargé d'affaires*. Later he secured a written acknowledgment from the Chinese government that such was the case. . . . Mr. Hay then appealed with the utmost directness to the Russian government. . . . On July 14 a definite answer was at length received from Russia, in which she declared that it had never entered into her views to oppose the opening of certain cities in Manchuria to foreign commerce, but that this declaration did not apply to Harbin, one of the cities selected by the United States, which was situated within the railway zone, and therefore was not under the complete jurisdiction of China. A copy of this note was shown to the Chinese government; which finally agreed to insert in the treaty on October 8 (the date on which Russia had agreed to completely withdraw from Manchuria) a provision for the opening of two ports. The United States agreed to t[illegible] arrangement, and on October 8 the treaty was [illegible]ed, and Mukden and Antung named as the open ports."—John H. Latané, *America as a World Power, ch.* 6 (*Harper & Bros., N. Y.*, 1907).

The further scope of the treaty was announced by President Roosevelt in his Message to Congress, Dec. 7, 1903, as follows: "It provides not only for the ordinary rights and privileges of diplomatic and consular officers, but also for an important extension of our commerce by increased facility of access to Chinese ports, and for the relief of trade by the removal of some of the obstacles which have embarrassed it in the past. The Chinese Government engages, on fair and equitable conditions, which will probably be accepted by the principal commercial nations, to abandon the levy of 'liken' and other transit dues throughout the Empire, and to introduce other desirable administrative reforms. Larger facilities are to be given to our citizens who desire to carry on mining enterprises in China. We have secured for our missionaries a valuable privilege, the recognition of their right to rent and lease in perpetuity such property as their religious societies may need in all parts of the Empire."

A. D. 1904.—Railways and Chinese travel on them.—Unused British Concessions.—"It may not have passed out of the public mind that in February, 1899, Mr. Balfour came down to the House of Commons and paraded [illegible]efore it and the country the magnificent [illegible]n England had won in China in respect of Railway Concessions [see, in Volume VI., CHINA: A. D. 1898 (FEBRUARY-DECEMBER.)]. They totalled up to 2,800 miles! The House cheered, the country indulged in a fit of self-complacency, and the critic who asked questions was an ignoramus or a nuisance. Well, five years have gone by, and not one mile of those railways is in existence except the Chinese Northern State Railway, which has passed out of our hands. Of the rest the two great trunk lines, one from Hankow to Canton, and the other in Yunnan, have been abandoned, while among those of shorter length the only one that still remains in active force is the subject of this paper. . . .

"In more than one recently published consular dispatch attention has been drawn to the fact that the Chinese, backward or hesitating in the adoption of every other European or Western innovation, have shown no reluctance to avail themselves of improved means of locomotion. The Northern Railway is used by several million passengers every year; the sections already open of the German railway in Shantung and of the Belgian in Shansi can complain of no lack of traffic. The fears of an earlier period as to what the Chinese would do with regard to railways have been dissipated by experience."—D. C. Boulger, *The Shanghai-Nanking Railway* (*Contemporary Review, June*, 1904).

A. D. 1904.—The Russo-Japanese War in Manchuria. See (in this vol.) JAPAN: A. D. 1904 (FEB.-JULY) and after.

A. D. 1904-1909.—The Hankau Sze-chuen Railway Loan.—The question of American participation.—In 1904 the American Minister at Peking concluded an agreement with the Chinese Government to the effect that, when loans for the construction of a projected railway into the western province of Sze-chuen, from Hankau, should be negotiated, Americans should have an opportunity to subscribe to it. Nearly five years passed before arrangements for the loan were made, and then, in the spring of 1909, it was found that terms had been concluded with a group of British, German, and French bankers for the whole sum sought, of $27,500,000, while American capitalists had not been given the promised opportunity. On behalf of the latter the Government of the United States intervened, claiming fulfilment of the agreement of 1904. The matter was regarded as being both politically and financially important. "A precedent is what we want to establish," said Mr. Crane, the newly appointed Minister to China, in an interview on the subject at New York. "The task of this Government to maintain its position with the European Powers in the East will be less difficult. We are looking twenty years ahead." As the result of communications in July from Washington to Peking, in which President Taft took part personally, the loan arrangement was readjusted, and American capitalists became participant in it to the extent of one-fourth.

According to a despatch from Peking, August 17, the matter was settled definitely that day, on the following terms: "The loan to be increased from $27,500,000 to $30,000,000, and of this latter amount American bankers to get one-quarter, the other three-quarters going to British, French, and German interests. Americans are to have equal opportunity with the other nations to supply material for both the Sze-chuen and the Canton lines and the branches; they will appoint subordinate engineers, and they will have also one-half of all future loans of the Sze-chuen Railroad and its branches with the corresponding advantages."

Subsequently, however, some difficulty in the readjustment of business details in the matter arose, which delayed the final settlement. The

motives of the American Government in claiming a participation in the enterprise were stated as follows by President Taft in his Message to Congress, December 6, 1909: "By the treaty of 1903 China has undertaken the abolition of likin with a moderate and proportionate raising of the customs tariff along with currency reform. These reforms being of manifest advantage to foreign commerce as well as to the interests of China, this government is endeavoring to facilitate these measures with the needful acquiescence of the treaty Powers. When it appeared that Chinese likin revenues were to be hypothecated to foreign bankers in connection with a great railway project, it was obvious that the governments whose nationals held this loan would have a certain direct interest in the question of the carrying out by China of the reforms in question. Because this railroad loan represented a practical and real application of the open-door policy through coöperation with China by interested Powers, as well as because of its relations to the reforms referred to above, the Administration deemed American participation to be of great national interest. Happily, when it was as a matter of broad policy urgent that this opportunity should not be lost, the indispensable instrumentality presented itself when a group of American bankers, of international reputation and great resources, agreed at once to share in the loan upon precisely such terms as this government should approve. The chief of those terms was that American railway material should be upon an exact equality with that of the other nationals joining in the loan in the placing of orders for this whole railroad system. After months of negotiation the equal participation of Americans seems at last assured. It is gratifying that Americans will thus take their share in this extension of these great highways of trade, and to believe that such activities will give a real impetus to our commerce, and will prove a practical corollary to our historic policy in the Far East."

A. D. 1905 (Aug.). — New agreement respecting China between Great Britain and Japan. See (in this vol.) JAPAN: A. D. 1905 (AUG.).

A. D. 1905 (Dec.). — Treaty with Japan relative to Manchuria. — By a treaty with Japan, concluded December, 1905, China consented to lease to Japan the Kwangtung peninsula, at the southern extremity of which are Port Arthur and Dalny, formerly held by Russia under lease from China, and concede to Japan the control of the railway on the peninsula northward as far as Changchin. China also conceded to Japan the right to build a railway from Antung on the Yalu River to Mukden, the ancient capital of Manchuria, provided, however, that at the end of a certain period the road may be purchased by China. More important is the fact that China agreed in the treaty to open to the world's commerce and trade sixteen principal ports and cities in Manchuria, including Harbin, or Kharbin, the modern Russian capital of the province and its most important railway center.

A. D. 1905-1908. — The stir of new ideas. — Imperial Commission to study Representative Systems of Government. — Signs of fruit from it. — Reformative movements. — The Constitutional Programme set forth in August, 1908. — Nine years of approach to a Promised Constitution. — A significant token of the dawning in China of a changed state of mind respecting the western world of Europe and America, and its very different development of scientific knowledge and of social institutions, was afforded in the fall of 1905, when an imperial commission, headed by Prince Tsai Tse, was sent abroad to study representative systems of government. The Commission returned in the following July, and in August a committee of high dignitaries, with Prince Ch'ing for its chairman, was appointed to consider the report it had submitted on administrative reforms. The outcome, soon afterwards, was an imperial edict which recognized a "lack of confidence between the highest and the lowest, between the throne and ministers and the masses," and went so far as to say that "foreign countries become wealthy and powerful by granting a constitution to the masses and allowing suffrage to all." While intimating that China must look forward to a similar admission of the masses to some voice in the government, the edict set forth the pressing need of many reforms, in the official system, the laws, in education, in the finances, and in the army and police. To begin the undertaking of such reforms, Prince Tsai-Tse was put at the head of a committee for dealing with the official system, and before the year closed there were several changes of importance introduced, tending towards more simplicity of methods in public business and more centering of responsibilities. Examinations in Western subjects of knowledge began to replace the old conventional examinations in classic Chinese literature, as tests for admission and promotion in official service, and eagerness was shown in the opening of schools and colleges that approached the European and American type. Simultaneously with these stirrings of a new consciousness and purpose in China, a great moral reform was taken in hand. This was no less than an attempt to rescue the nation from its opium curse. Some account of the opium edict issued in September, 1906, will be found elsewhere, in this volume — see OPIUM PROBLEM.

That these reformative steps were actually taken with a view to the ultimate granting of a constitution to the masses and allowing suffrage to all" was revealed in the summer of 1908, when a programme of gradual approach to constitutional government, by stages which extend through the next nine years, was promulgated at Pekin on August 27th. According to Western ideas the document lacks definiteness, but it is not difficult to believe in the sincerity of its intent. There may be great wisdom of sincerity in the serial planning of successive measures that are to unfold and introduce a constitution at the end of nine years.

The edict of August 27 was summarized and partially translated in a communication to the New York *Tribune*, as follows:

"The preamble alone fills twenty large pages and is written in an incongruous mixture of Chinese Classical terms and new Japanese terminology invented to fit Western meanings. The efforts of the authors have been aimed at conveying to the Chinese mind an understanding of things hitherto beyond its comprehension. The explanations often convey nothing to the Western mind.

"The subject is approached in an almost

CHINA, 1905–1908

prayerful attitude. The fact that China obtains this constitution 'by the imperial will' is reiterated again and again. It is set forth that the imperial government, under the constitution, shall not be criticised, on the principle that the 'sacred majesty of the sovereign may not be offended against,' and that the leaders of the political parties are to be appointed by the throne. Full government under this constitution will become effective at the end of nine years. While the proposed system is called constitutional, it is far removed from Western constitutional government.

"Broadly speaking, the document follows the constitution of Japan. Some of its most striking clauses follow:

"'We beg, as the condition of the country is perilous, and the hearts of the people are uneasy — trouble within and calamity from without, danger threatening, and no parliament at the side to investigate matters — that urgent measures may be taken to overcome half-heartedness and procrastination, that there may be peace above and completion below.

"'We have therefore laid down the general principles of the constitution and the programme for the work of getting everything in readiness in nine years. These may not be changed in the least particular.

"'There will be boundless daily improvement. May the "silken sounds" descend to inform the empire and fix the road for ten thousand years, comforting the hopes of the myriads who long for peace.'

"Fourteen laws are then submitted, as follows:

"1. The Ta Ch'ing Emperor will rule supreme over the Ta Ch'ing Empire for one thousand generations in succession, and be honored forever.

"2. Majesty of the sovereign.

"3. Right of promulgating laws.

"4. Convocation, suspension, extension and dissolution of parliament.

"5. Appointment, payment, promotion, degradation of officials.

"6. Command over army and navy.

"7. Power to make war, peace, treaties; to receive and appoint ambassadors.

"8. Martial law.

"9. Rewards and pardons.

"10. Right over judges and the administration of laws.

"11. Injunction.

"12. Right of raising funds when parliament is not in session.

"13. Right of fixing the expenses of the imperial household.

"14. Respecting authority over the imperial clan.

"'We look to our Empress Dowager and Emperor and see that they take the measure of heaven and earth as their measure and the heart of the people as their heart. The officials and people within the wide seas are reverently grateful.

"'The people should earnestly fulfil all the duties without selfish reservations, which would hinder the public welfare, and without rash impatience, which would confuse the regulation; not looking on the matter as too easy, so that the deliberations become empty wrangling, not failing to understand the limitation of powers, so as to make laws which overstep authority.

"'The sovereign has absolute power, which he exercises in constitutional form.'

"It is then set forth that on the dissolution of parliament the people shall be called on to elect a new parliament, and the document continues:

"'Mercy is from above; officials, below, may not arrogate it to themselves.

"'Officers and people who keep within the law will have freedom of speech, of the press and of assembly. They shall not be disturbed without cause in their possession of property, nor interfered with in their dwellings; and they have the obligation to pay taxes and render military service and the duty of obedience to the law of the land.

"'Members of parliament shall not speak disrespectfully of the court or slander others. Violation of this law will be punished.'

"The nine year programme is as follows:

"'Thirty-fourth year of Kwang Hsu, or 1908 — Local self-government; rules for reorganization of finance; fusion of the Manchu and Chinese military; revision of criminal code.

"'Thirty-fifth year, or 1909 — Election of provincial assemblymen; election to constitutional commission; local self-government bureaus established; census; provincial budgets; determination of functions of Peking officials; issuing of school books.

"'Thirty-sixth year, or 1910 — Provincial assemblies opened; local self-government established; census reports; tax rate fixed; organization of provincial officials; courts of law at provincial capitals and treaty ports; publishing criminal code; extension of schools; preparation for organization of sub-prefecture; department and district police.

"'Thirty-seventh year, or 1911 — Local self-government continued; public account; imperial budget; rules on imperial taxation; rules governing appointments and salaries of civil officials; extension of schools; codes of municipal and commercial laws and civil and criminal procedure drawn up

"'Thirty-eighth year, or 1912 — Completion of general arrangement of urban self-government; census reports; publication of taxation laws of empire; perfection of arrangements for provincial and lesser courts; extension of schools.

"'Thirty-ninth year, or 1913 — Police registration; imperial trial budget of variable expenses; Supreme Court; courts of law in prefectures, sub-prefectures, departments and districts; criminal code promulgated; urban self-government established; rules for rural self-government; rules for urban police.

"'Fortieth year, or 1914 — Imperial trial budget of fixed expenses; publication of system of national accounts; rural self-government established; rules for lower courts.

"'Forty-first year, or 1915 — Imperial household expenses fixed; organization of the Banners' controller's office; public accounting enforced; lower courts established; municipal and commercial laws and civil and criminal procedure rules established; police system complete.

"'Forty-second year, or 1916 — Promulgation of full constitution and the laws of the imperial clan; parliamentary rules and rules for parliamentary elections; budget for consideration of parliament; reorganized official system; appointment of a premier.'

"The document concludes with these words:

"'In the forty-third year of Kwang Hsu, or 1917, China will be, by following this plan, a

parliamentary country like Japan or Russia.'" — *China's Constitution* (*New York Tribune*, Oct. 19, 1908).

Prince Ito, the veteran statesman of Japan, regards the constitutional experiment in China with more anxiety than hopefulness. Speaking on the subject in August, 1909, he expressed doubt of its success, and thought failure would imperil peace in the Far East. His reasoning in brief was this: "First — the enormous area of the Empire and the defective facilities for communication would greatly impede the assembling of a Parliament, especially in time of emergency. Secondly, the immovable character of Chinese conservatism forbade a change even of the system of taxation, notwithstanding the State's urgent need of funds, and there was, therefore, still greater difficulty in effecting the radical alterations required by a constitutional system. Thirdly, the Chinese were untrained in local administration, the institution of which was an essential prelude to a national Assembly. He said he was astonished at the silence of Occidental publicists on this question so vital to the peace of the Orient."

A. D. 1905-1908. — Chinese Exclusion Laws of the United States. — Boycott of American goods in the Empire. See (in this vol.) RACE PROBLEMS: UNITED STATES: A. D. 1905–1908.

A. D. 1905-1909. — Disputes with Japan. — The Fa-ku-menn Railway and the Antung-Mukden Railway questions. — Settlement of the latter by Japanese ultimatum. — It could hardly have been possible for cordially friendly relations to be maintained between China and Japan, in the circumstances which transferred to the latter the extensive rights and privileges in Southern Manchuria, which Russia had acquired in that Chinese province by treaty and lease. By a protocol of December, 1905, after the closing of the Russo-Japanese War, there was an attempt, between Peking and Tokyo, to define the effects of the Treaty of Portsmouth, especially in the bearings of that article of the Treaty which ceded to Japan, "with the consent of the Government of China, the lease of Port Arthur, of Talien, and of the adjacent territories and territorial waters, as well as the rights, privileges and concessions connected with this lease or forming part thereof," and likewise, of "all the public works and property within the territory over which the above lease extends"; but misunderstandings and differences of opinion were sure to arise. Whether it has been more by the fault of Japan than of China that they arose and increased until, in the past year, they became a serious estrangement, is a question on which the judgment of foreign observers is conflicting. The veteran representative of the London *Times* at Peking, whose friendship for the Chinese is fast-fixed by long residence among them, lays the greater weight of responsibility on Japan, though he finds a lack of reasonableness on both sides. Japan, he says (writing July 19, 1909), was welcomed in China with open arms after her victorious war. "No nation ever had a greater opportunity, and faulty must have been the policy which in so short a time has wrought so great a change. Japan is now regarded with a comprehensive distrust that is most disquieting. Not long ago more than 1,000 Japanese of different classes were employed in China, in schools and colleges, in the army and police, in law and prison reform, in agriculture and sericulture, in telephone and electric light companies, on railways, and in many other capacities. At present there are fewer than 400, 52 of whom are in Peking, and these numbers will be further reduced as existing contracts expire. Similar reductions are noted in the number of Chinese being educated in Japan. Three years ago there were more than 20,000; last year there were more than 10,000. The number now is 5,125, and only yesterday it was arranged that in the case of a body of 300 Government students just returned to China, only 88 would be sent to take their places."

"At present each country, through its Press, is protesting against the unreasonableness of the other. Contradictory statements on questions of fact are made on almost every point at issue."

The main contention has related to the projected extension by China of a railway to Fa-ku-menn from the terminus of an existing line at Hsin-min-tun, west of Mukden. It was in the agreement of December, 1905, that no railways in competition with the South Manchurian line, which Japan took from Russia, should be built. The Japanese assert that they had in view this very Fa-ku-menn extension when that stipulation was inserted. The Chinese declare that the negotiation on their part had reference solely to the area east of the Liao River. Japan made two alternative proposals for the settlement of this question: "One that the Chinese should build a railway from Fa-ku-menn to the South Manchurian Railway instead of to Hsin-min-tun, or that the Japanese should build a railway from the South Manchurian line to Fa-ku-menn and thence to the North, in which case Japan would withdraw her objection to the Fa-ku-menn-Hsin-min-tun railway, provided that China undertook not to extend the line beyond Fa-ku-menn without a previous agreement with Japan." China is said to have declined discussion of these proposals, but offered arbitration of the whole matter. Japan objected to arbitration without previous discussion of her new proposals. And so the dispute seemed deadlocked.

Another dispute turned on the interpretation of a clause in the Agreement of December, 1905, which reads: "China agrees that Japan has the right to improve the Antung-Mukden Railway so as to make it fit for the conveyance of commercial and industrial goods of all nations." Japan undertook, as a necessary "improvement" of the road, to reconstruct it, with a change of gauge to connect it with the standard gauge of the South Manchuria and Korean roads. China denied that the agreement gave a right to reconstruction. Several other questions arising between the two peoples have helped to raise hard feeling on both sides; but these have seemed to be at the front.

At length on the 6th of August, 1909, Japan brought discussion of the Antung-Mukden Railway question to a summary ending, by a note to the Chinese Government which announced that "the Imperial Government is now compelled to take independent action, and to proceed to carry out the necessary work of reconstruction and improvement according to treaty rights." Before taking this decisive step, the Japanese Government is said to have consulted

CHINA, 1906

Great Britain and other powers, and to have had approval of her action from London, if not from elsewhere. China yielded to the ultimatum, and this leading cause of quarrel between the great nations of the East was removed on the 4th of September by the signing, at Mukden, of a memorandum of agreement, reported in substance as follows: China agrees, first, not to construct the Hsin-min-tum-Fa-ku-men Railroad without consulting Japan; second, that half the capital required to extend the Kirin Railroad shall be borrowed in Japan; third, that Japan will be permitted to extend the Yinkow and improve and modernize the Antung-Mukden Railroads, to which China was bitterly opposed; fourth, that Japan may work the mines in the Fushun and Yentai districts, and have joint exploitation of the mines reached by the Antung and Manchurian Railroad lines.

In the Chientao boundary dispute Japan agrees to recognize China's sovereignty, while China agrees to open four trade marts in the district.

In a letter to a London journal, a few days before this settlement of the Antung-Mukden Railway question, Lord Stanhope said: "The Chinese have surely deeper reasons for opposing this scheme than the mere fact of reconstruction. They well realize that this railway, crossing narrow valleys, can have no commercial future, but is virtually a strategic railway to strengthen the Japanese grip on Manchuria."

A. D. 1906. — A Commission sent to America and Europe for the study of political and other institutions. — The new spirit astir in China was manifested in the early months of 1906 by the sending of a large Commission of carefully chosen men to the United States and Europe, for observations that would be helpful toward reforms in their own country. It was headed by two High Commissioners of distinction, Tai Hung-chi and Tuan Fang, and they were attended by thirty-five scholars and functionaries of note. They received much attention during their stay of five weeks in the United States, and were placed by the Government under the special charge of Professor J. W. Jenks. Writing subsequently of their mission Professor Jenks said: "The purpose of the commission is, primarily, to make such a study of the political institutions of the various countries visited that they will be able, on their return, to offer valuable suggestions for the improvement of their own. There is even serious talk among the high officials in China of some form of a constitution. In consequence, the commissioners are as eager to learn regarding the working of some of our institutions as regarding their form of organization. Inasmuch as political reform necessarily involves social reform, even as a condition precedent, the commission is devoting special attention to the study of education, in universities and schools, and to methods of social amelioration, in prisons and asylums for the insane and the poor. They, however, are not neglecting the study of our large manufacturing plants, and have clearly in mind, also, the improvement of the industrial conditions of China. It is a matter of peculiar interest that the Empress-Dowager charged them to inquire especially into the education of girls in the United States, since she hoped, on their return, to be able to found a school for the education of the daughters of the princes."

A. D. 1906. — Sixty cities being opened to foreign settlement. — A memorandum on the subject of the foreign settlements at the open ports of China, prepared by the Chinese Secretary of the American Legation at Peking, was transmitted to the State Department at Washington in December, 1906. It conveyed the following information: "In China proper and in Manchuria 46 cities and towns have been thrown open already to foreign residence and international trade. This does not include Dalny, in Manchuria, leased to Japan; Wei-hai-wei, in Shantung, leased to Great Britain; Kiaochow, in Shantung, leased to Germany; Kowloon, in Kuangtung, leased to Great Britain; nor Kuang-chou-wan, in Kuangtung, leased to France. Besides the above, there are 3 cities in Tibet thrown open to trade, making 49 ports in the Empire. In addition to these already declared open, there are 13 cities whose opening in the immediate future is arranged for, and 3 others whose opening depends upon the acceptance by other treaty powers of the provisions of Article VIII. of the last commercial treaty between China and Great Britain. No account is taken of the cities of Turkestan, Mongolia, and the Amur region, in which Russian subjects have for many years enjoyed privileges of trade and consular jurisdiction. It will be seen, therefore, that in the immediate future foreigners will enjoy the right of residence for purposes of trade at more than 60 cities of the Chinese Empire."

A. D. 1906-1907. — Flood and famine in the region traversed by the Grand Canal. — One of the frequent destructive floods in China which produce famine befell the region that is traversed by the Grand Canal in the summer of 1906. Heavy rains covered its vast plains with lakes of water, which drowned out the crops throughout an area estimated at 40,000 square miles. From ten to fifteen millions of people were reduced to famine, and could only be kept alive until the harvests of another year by the generosity of the outside world. It was not vainly appealed to; but the suffering and death in the afflicted country were appallingly great.

A. D. 1908. — Expansion of the Postal Service. — According to a report from Peking on the working of the Imperial Chinese Post Office in 1908, "the operations show an unprecedented expansion." The postal routes cover 88,000 miles, of which 68,000 are courier lines. The number of post offices open in 1901 was 176. There were 2,803 open in 1907, and 3,498 in 1908. The number of postal articles handled in 1901 was 10,000,000. The number was 168,000,000 in 1907, and 252,000,000 in 1908. The number of parcels was 127,000, weighing 250 tons, in 1901; 1,920,000, weighing 5,509 tons, in 1907; and 2,445,000, weighing 27,155 tons, in 1908.

A. D. 1908 (Nov.). — Death of the Emperor, Kuang-hsu, and of the Empress-Dowager, Tze-Hsi. — Accession of the child-Emperor, Hsuan-Tung (Pu-Yi). — The circumstances of the death, almost simultaneously, of the late Emperor, Kuang-hsu, and of the Dowager-Empress, Tze-Hsi, who had been the real ruler of the Empire, are involved in considerable obscurity. The Emperor is said to have died on the 14th of November, 1908, and the Empress on the following day. The announcement of their decease was preceded by the publication of two imperial edicts, one of which made Prince Chun, of the royal family, Regent of the Empire, while the other named Pu-Yi, the Prince's son, three years old, as the heir presumptive to the throne. As communicated later to foreign governments, the Regent was given, by another imperial rescript, full power over the civil and military departments of government, and the entire appointment and dismissal of officials. The promised creation of a Parliament was anticipated in the prescription of his duties, among which were the following:

"When a Parliament has been established the Prince Regent shall attend the same in place of the Emperor, but he need not attend the ordinary sessions. When the Constitutional Commission meets, the Prince Regent shall likewise represent the Emperor there.

"The Prince Regent shall have full authority in negotiating treaties and in appointing representatives abroad.

"The Prince Regent shall enter and leave his chair at the Ch'ien Ch'ing gate. The yamens, according to their duty, shall draw up and report on regulations modelled on the precedent established by Prince Jui-Chung regarding the equipage, escort, and general preparations for movements of the Prince Regent outside the palace.

"Every year the Board of Finance shall transfer to the Department of the Imperial Household the sum of taels 150,000 for disbursement. When the Emperor comes of age, his studies being completed, and his marriage takes place, the official body shall unite in asking him to assume personal direction of the government."

On the 21st of November the members of the Diplomatic Corps at Peking were received in a body at the palace, to present the condolences of the Governments they represent on the deaths of the late Emperor and Empress. As reported to the Associated Press, there were present on the occasion "every official or member of the imperial family who recently has been reported ill, dead by his own hand or estranged from the government, and the desired impression of official stolidity at Pekin which, it was most evident, this occasion was intended to convey, was imparted successfully. This was the answer of the government to the rumors of suicides and deaths current in Pekin for the last week.

"Prince Ching, for the first time since the passing away of their majesties, appeared officially as the head of the foreign board. The heads of the various governmental departments were present, with the members of the imperial clan, and, in addition, several thousand minor officials, all in white, had assembled at imperial command. At the conclusion of the functions, in honor of the dead, the diplomats paid homage to Prince Chun, the regent."

On the 2d of December the strict mourning observed at Peking was suspended briefly, to permit the ceremonies attending the ascension of the dragon throne by the child-Emperor, Pu-Yi, who, as Emperor, took the name of Hsuan-Tung. The ceremonies, described to the Associated Press, lasted but half an hour. "The function began by the princes of the imperial family and the high officials of the empire kowtowing to the memorial tablets of their late majesties. After this they all kowtowed in turn to Pu-Yi; Pu-Yi then offered a sacrifice before the tablets of the Emperor and the Dowager Empress. After this he was relieved of his dress of mourning and clad with much care in a diminutive imperial garment, embroidered with the imperial dragon. His nurses performed this duty with great attention and care. Thus arrayed, the toddling Emperor ascended the throne amid a fanfare of drums, bells and firecrackers. He made his way alone and showed no need of the assistance which willing hands would have given him had his little feet faltered. From the throne Pu-Yi kowtowed to his stepmother, the Dowager Empress Yiahonala. He then received the kowtows, while still on the throne, of all the princes and officials present. This over, he descended from the throne and was again clad in his little dress of mourning.

"The ceremony took place in the throne hall of the Forbidden City. The officials present were selected with great care and were the highest men in the empire. According to an old established custom, a number of humble coolies, men from the lowest walks of life, were brought into the sacred precincts of the Forbidden City to act as witnesses. The soldiery played but an inconspicuous part in the proceedings."

Following the ceremony, an imperial edict proclaiming the ascension was issued. This edict grants amnesty for certain specified offences; rewards all the imperial princes, princesses, and dukes; promotes all officials by one degree and bestows honors on their parents; erases the demerits entered against minor officials; advances the degree of scholars; dismisses all pending petty criminal cases; excuses certain liabilities, and grants bounties to the soldiers in the service of the empire.

A. D. 1908 (Dec.). — Decree reaffirming the Constitutional Programme of the late Empress Dowager. — An imperial edict reaffirming the determination of the new government of China to carry out in its entirety the Constitutional programme laid down by the late Empress Dowager of China in August, 1908, was promulgated on the 4th of December. A literal translation was made public at Washington in January as follows:

"On the first day of the 8th moon (August 27, 1908), the late Emperor reverently received the excellent decree of the late great Empress Dowager strictly ordering the officials and people of Peking and of the provinces to carry out completely by the ninth year all the preparatory work, so that at the appointed time the Constitution may be proclaimed. Also proclamations for the members of Parliament to assemble, and other decrees brightly manifested the sacred instructions, and all between the seas applauded. From ourselves down to the officials and people

high and low all must sincerely obey the excellent decree previously issued. The eighth year of Hsuan T'ung [whose first year dates from Jan. 22, 1909] is the limit of time. Let there be no 'reabsorption of sweat' in this matter. Our hope is that this will certainly be carried out. Let the officials of Peking and the provinces on no account look idly on, and procrastinate, delaying the opportune time. Let patriotism be shone forth. Exert yourselves that constitutional government may be established. And court and 'wilds' (people) may have peace; and so we may comfort the spirits of the late great Empress Dowager and the late Emperor in heaven, and make firm the foundations of countless years of peaceful government."

A. D. 1909 (Jan.). — Abrupt dismissal of Viceroy Yuan Shih-kai from his offices. — Much disturbance of feeling and apprehension of a troublesome reaction in Chinese policy was excited among the foreign representatives in China, on the 2d of January, 1909, by the sudden dismissal of the able and powerful Viceroy of Chi-li, Yuan Shih-kai, from all his offices. He had been looked upon as the great leader of progress in China, — the statesman to be counted on for the most and best influence in the government of the Empire for some years to come. He had the confidence of foreign powers, and was supposed to have acquired a sure footing in the councils at Peking. Latterly, however, it is said to have become known in Peking that "a powerful Manchu cabal was working for his downfall, led by Tieh-liang, the Minister of War, and supported by the aged doctrinaire and Chinese ex-Viceroy, Chang Chih-tung," and the stroke which overthrew him at the beginning of the new year was ascribed to that source. "The cabal has been successful," was the wired message of the Peking correspondent of the London *Times* to his paper; and he summarized the merits of the fallen statesman thus: "No man in China deserved better of his country. He has been in the forefront of progress, and is the best administrator China has produced in this generation. When Governor of Shantung in 1900 his action in resisting the Boxer insurrection and in safeguarding foreigners really saved the Empire from disruption. He created China's modern army and was the leader of the modern educational movement in China, and his famous memorial of September 2, 1905, urging the summary abolition of the antiquated system of literary examination was epoch-making. Under his Viceroyalty the Metropolitan province became the most advanced in the Empire. With Tang Shao-yi he led the anti-opium movement. Since he entered the Ministry for Foreign Affairs China has attained a measure of respect among the Powers which was unknown before."

Some weeks after the blow had fallen, and when the peculiarly Oriental manner of its infliction had been learned, a letter from Peking to the New York *Evening Post* told of it as follows: "At 11 A. M. on Saturday, January 2, the grand councillors were summoned by the regent. Prince Ching had evidently heard a whisper of what was to come, and he pleaded illness. The other grand councillors answered the summons promptly, but when Yuan reached the door of the council chamber he was told that he was not wanted. Three grand councillors therefore went in and found the regent awaiting them with the edict dismissing Yuan Shih-kai already drawn up. 'I want no discussion. Sign this edict!' said the regent. Chang Chih-tung turned to reply. The regent repeated his words impressively, and the edict was signed without further demur.

"Within the next hour, while Yuan Shih-kai was hastily making plans for his personal safety, the news flew around Peking and the city throbbed with excitement. Every one but his immediate councillors was astounded at Prince Chun's temerity. Never in the history of China had such a man as Yuan been thrown out of office at such short notice. To the Western mind, however, there was nothing very harsh in the edict; it said simply:

"'Yuan Shih-kai, a member of the Grand Council and president of the Waiwupu, formerly received repeated offices and advancement under the late Emperor. After our enthronement we gave him great honors, because we considered that his talent certainly was one that could be made use of, if he exerted himself in the public service. Unexpectedly Yuan Shih-kai has now contracted rheumatism in the foot, which makes it hard for him to walk and difficult for him to attend to the duties of his offices. Yuan Shih-kai, therefore, is ordered to vacate his posts and return to his native place to nurse his disorder. Thus is our great mercy to him manifested.'"

Yuan Shih-kai left Peking in haste, evidently in fear of his life, and it was expected that his whole following of friends and supporters would be swept out of their offices and employments. But no such result followed, and credit began to be given to the assurances of the Imperial Government that the dismissal of Yuan meant no reversal of policy or reaction whatever. He was distrusted, it was intimated, because he had been disloyal to the late Emperor in 1898, when the latter attempted great reforms, — see, in Volume VI. of this work, CHINA: A. D. 1898 (JUNE-SEPTEMBER), and after. Yuan Shih-kai was then the chief agent and instrument of the Dowager-Empress in overcoming the well-meaning but weak sovereign and annulling his reformative work. Hence, it was claimed, the present Government's distrust of him.

The Ministers of Great Britain and the United States had ventured some questions as to the significance of the act, but their colleagues did not join them, and no further discussion of the matter diplomatically took place.

A. D. 1909 (May). — New Russo-Chinese Agreement concerning the Chinese Eastern Railway. — Municipalities on the Line. — The Kharbin question. — The Chinese Eastern Railway, so named, is the line which Russia, by Convention with China in August, 1896, obtained permission to construct, from a point on her Trans-Siberian Railway, through Northern Man

CHINA, 1909

churia, to Vladivostok. Under that agreement the Russian authorities claimed a right to institute certain organizations of municipal administration at Kharbin and other towns of rising importance on the line. This right was challenged in 1908 by the American Consul at Kharbin (sometimes written Harbin), Mr. Fisher, who refused to recognize some ordinances of the Russian administration, on the ground that he was accredited to China, only, and could know no other sovereignty in Manchuria than the Chinese. This led to a new Russo-Chinese Agreement, signed at Peking on the 10th of May, 1909, distinctly authorizing the "organization of municipalities on the lands" of the Chinese Eastern Railway. The "sovereign rights of China" are "not to be prejudiced in any way," says the new Agreement; but "municipal bodies are to be established in the commercial centres of a certain importance situated on the lands of the railway. The inhabitants of these commercial centres, according to the importance of the localities and the number of the residents, shall elect delegates by vote, who shall choose an Executive Committee; or else the residents themselves shall take part in the business of the municipality and a representative shall be elected from amongst them who will take upon himself to carry out the resolutions decided upon by meeting of all the residents.

"No difference shall be made on the lands of the railway between the Chinese population and that of other nationalities; all residents shall enjoy the same rights and be subject to the same obligations.

"The right to vote shall belong to every member of the community who owns real estate of a fixed value or who pays a fixed annual rental and taxes."

Reading no farther in the Agreement than this, imperial Russia and China would seem to have jointly planted a seed of democratic municipalities in Manchuria; but that impression is destroyed by qualifying provisions, such as this:

"The President of the Chiao-She-Chu [a Mixed Russo-Chinese Court, formerly created] and the director of the railway, occupying a position superior to the Presidents of the assemblies of delegates and of committees, have a right of control and personal revision, which they may exercise whenever they think fit. . . . In the event of decisions by the assembly of delegates not being approved by the President of the Chiao-She-Chu or the director of the railway, these decisions shall be returned to the assembly for further consideration. If the original decision is adopted by a majority of three-quarters of the members present, it becomes binding."

The effect of the whole agreement would undoubtedly be to give the Russian railway officials supreme authority in the so-called municipalities. Remonstrances against it by the Government of the United States have been supported by Great Britain, Germany, and Austria. The question remains open and troublesome. Dr. Morrison, of *The Times*, wrote of the situation in November as follows:

"The situation in Manchuria is receiving close attention from the Legations because of the increasing difficulty of the problems created by Russian and Japanese claims to territorial and administrative jurisdiction in connexion with their respective railways, claims which conflict with China's unimpaired sovereignty and with the treaty rights of other nations. A tentative proposal was recently submitted to the consideration of the Diplomatic Body, with the approval of the Wai-wu-pu and M. Korostovetz, to create an international settlement at Kharbin on a separate site adjoining the railway settlement. The proposal was unacceptable to the Powers interested because it implied a fundamental discrimination in favour of the railway company, leaving it to exercise, in an important trade centre, powers which are incompatible with treaties and which are not conferred by its charter. . . .

"The Chinese Government entirely fails to avail itself of its opportunities at this juncture. The local authorities are unable, and the Peking Government is unwilling, to take any initiative. The Wai-wu-pu adheres to its policy of shifting opportunism, as shown by its proposal to the Russian Minister to cancel, in deference to the protests of the Powers, the agreement with regard to the Kharbin municipal regulations concluded on May 10, a proposal unaccompanied by any practical alternative whereby political requirements might be reconciled with the undeniable vested interests of the railway. In this connexion it is interesting to note that, whereas England, America, France, Germany, Italy, and Austria-Hungary refused an unqualified assent to the Kharbin agreement, yet no exception has been taken to the regulations of the Japanese railway settlements, although, without any reference to China, they confer the widest powers on the Japanese authorities, including the right of arbitrary taxation and forcible expulsion."

The Russian side of the question was presented in a semi-official statement, made public in October, 1909, as follows:

"The representatives of certain Powers which have trade interests in China have, both in Peking and St. Petersburg, expressed doubts as to the rights of authority exercised by the Kharbin municipality. These representatives have endeavoured, in notes presented to the Chinese and Russian Governments on the matter, and in verbal communications, to prove that certain paragraphs of the treaty which was signed at Peking on May 10, 1909, violated the extra-territorial rights granted to their nationals by treaty with China, and further that some of the measures taken by the Kharbin authorities were opposed to the regulations of the international concession which, in their opinion, has been recently established at Kharbin.

"It is easy to demonstrate that such a point of view is based on a misunderstanding. Extra-territorial rights, so far as they are secured by treaty, comprise exclusively the right of every foreigner to be judged by his own Consul. They do not, however, in any way exempt him from the obligation to pay town and other taxes, or to submit to established regulations. The difference between the pure Chinese open ports where there are no foreign concessions and places which lie in the territorial zone of the Chinese Eastern Railway, and are open to foreign trade, consists solely in the fact that in the former the Chinese authorities have the power to make administration rules at their own discretion, while in places in the territorial zone of the Eastern Railway the Chinese Government has, by the concession agreement signed on August 28, 1896,

and the convention of May 10, 1909, transferred the rights of administration to the Chinese Eastern Railway Company, as a private concession, so that the company acts as the agent of the Chinese Government in supervising the administration of Kharbin and other places.

"Another misunderstanding has evidently given rise to the statement that Kharbin has recently been converted into an international concession. The contracting parties never had any such intentions. By reason of legal acts, as well as of traditions and conditions of a local character, under which Kharbin originated, it is clear that this is a special kind of concession, which is distinguished from other concessions by its exceptionally liberal and exceedingly hospitable regulations in regard to foreigners."

A. D. 1909 (Oct.-Nov.). — Election and opening of Provincial Assemblies. — Beginnings of the institution of Constitutional and Representative Government. — The following, from the Peking reports to *The Times*, London, narrates the actual beginning of the series of proceedings planned and promised for the gradual institution of representative constitutional government. The first is of the date of Oct. 14, 1909:

"To-day marks an era in the establishment of constitutional government in China. In obedience to the Imperial decrees of October 19, 1907, and of July 22, 1908, ordering the establishment, within one year of the latter date, in each of the 22 provinces of China proper and in Manchuria and the New Dominion of provincial deliberative assemblies, elections have been in progress for some time past, and the assemblies meet in accordance with the regulations for the first time to-day, the first day of the ninth moon. . . .

"The elections have taken place according to regulations, and halls have been erected for assemblies to sit wherever a Viceroy or a Governor has his seat. The number of members varies from 140 in Chih-li, 114 in Che-kiang, to 80 each in Kirin, Lehlun-chiang, and Hsin-kiang. The incomplete returns which have been published show nearly 1,000 voters for each representative.

"For weeks past reports have been coming in from provincial authorities asking for instructions and information concerning this new departure. An edict issued last night renews the Imperial admonitions to members of the assemblies as to their deliberations, and to Viceroys and Governors as to their supervision of the deliberations, and exhorts all to display a loyal patriotism so that the country may attain strength and prosperity. The event may be one of great historical importance."

The next was sent from Peking on the 6th of the following November:

"Already, in the opening debates of these Provincial Assemblies, one apprehends the coming chaos, one hears the first whispering of the approaching storm. Peking, peopled in ignorance and petrified in mediæval statecraft, trifles with Demos at its doors, evidently hoping that the Assemblies will consume their own smoke, and that the Mandarin may be preserved by the time-honoured device of holding the balance between contending classes. But the spirits which the Vermilion Pencil has called from the Celestial deep, though elected with all possible precautions of 'silkcoated' franchise, and under the close direction of Viceroys and Governors, show signs of scant respect for the Central Government and of little sympathy for its difficulties. Already, within a fortnight of their birth, many of the Assemblies have passed resolutions denouncing several of the Government's pet proposals — *e. g.*, the opium monopoly, the stamp tax, and the foreign loan for the Hankau-Canton and Hankau-Szechuan Railways. In the case of the stamp tax, 15 provinces have expressed the opinion, and have induced the local officials in many cases to endorse it, that the proposed levy is impracticable, so that, in the words of the native Press, 'its imposition is deferred and the Ministry of Finance is at its wits' end.' Concerning the vexed question of the railway loan, the Hupei Assembly is reported to have endorsed, without a dissentient, their chairman's declaration that the Government's scheme should be resisted 'to the death.'

"The spirit which animates these Assemblies is evidently very similar to that which speaks through the vernacular Press; iconoclastic, patriotic — in the sense that it denounces everything foreign — but lacking, so far, in intelligent leadership and constructive policy. Their attitude towards the Central Government is generally one of scarcely veiled contempt. I cannot illustrate better its general tendency than in the words of a native journalist who, in a recent criticism of the Grand Council, congratulated these rulers of China on their remarkable longevity, but observed that 'there is little hope of longevity for an Empire that is governed by such incompetent survivals.'"

A few weeks later, after the forty days' session of the new Provincial Assemblies had ended, this writer had changed his view. Writing on the 22d of December, he said: "A study of the reports of the proceedings so far available of the first session of the Provincial Assemblies supports the contention that the Throne has been justified in granting the subjects of the Empire a limited right of speech through their chosen representatives. The programmes of debate have been strictly in accordance with the Imperial edict, and the proceedings have been marked with dignity and decorum. The net result justifies the declaration made by a high authority, who has been given special opportunity of forming a judgment, that the 'members have fulfilled their appointed task of working in harmony with the executive authorities in the interests of their respective provinces.'"

A. D. 1909-1910. — Proposal of the United States for the neutralization of Manchurian Railways. — Proposed Chinchow-Aigun Railway. — Late in December, 1909, the United States Government submitted to that of China, and to the interested Powers, a proposition which contemplated the neutralization of the railways in Manchuria, now partly under Russian and

partly under Japanese control, and which looked, also, to an international undertaking of the construction of a Chinchow-Aigun line, to tap the Russian Trans-Siberian road at Tsitshar. In a published statement subsequently, the American Secretary of State, Mr. KNOX, explained that his Government, during the recent railway loan negotiations, had pointed out to the interested Powers that the greatest danger to the policy of the open door in China and the development of her foreign trade arose from disagreements among the great Western nations, and had expressed the opinion that nothing would afford so impressive an object-lesson to China and the world as the spectacle of the four great capitalist nations — Great Britain, Germany, France, and the United States — standing together for equality of commercial opportunity. The American Government believed that one of the most effective steps to this end in order to secure for China the enjoyment of all political rights in Manchuria and to promote the normal development of the Eastern provinces was to take the Manchurian railroads out of Eastern politics and to place them under an economic and impartial administration by vesting in China herself the ownership of the railways. Such a policy would require the cooperation, not only of China, but of Russia and Japan, both of whom it would enable to shift their onerous responsibilities in connexion with those railways on to the shoulders of the combined Powers, including themselves, and would effect a complete commercial neutralization of Manchuria.

The proposal of a neutralization of the existing Manchurian railways was not received with favor in either Japan or Russia, and the other Powers concerned have manifested a disposition to defer to the view taken by those two Governments, which are most immediately touched by it. The position of the Japanese Government on the question was stated publicly in an address to the Diet on the 27th of January by Baron Komura, Minister for Foreign Affairs, who said:

"The United States government recently proposed a plan regarding the neutralization of Manchurian railways. The Imperial government, in view of the important Japanese interests involved, and considering that the proposal came from a friendly Power with which the empire was on terms of close intimacy, submitted the question to the most careful examination. While determined to adhere scrupulously to the policy of the open door and equal opportunity, it should be recognized that the realization of the proposed plan would involve radical changes in the condition of affairs in Manchuria which were established by the treaties of Portsmouth and Peking. The change must be attended by serious consequences. In the region affected by the South Manchurian Railway numerous undertakings have been promoted in the belief that the railway would remain in our possession. As a consequence, the Imperial government, with regret, was obliged to announce its inability to consent to the proposal. I trust that the United States will appreciate our position and that the other Powers will equally recognize the justice of Japan's attitude."

The Russian Government is understood to have taken substantially the same ground, on the general question of a neutralization of Manchurian railways. There and elsewhere, however, there is said to be a readiness to consider the incidental proposition of an internationally financed Chinchow-Aigun road.

CIVIL SERVICE REFORM: Canada: A. D. 1908. — Introduction of Competitive Examinations and the Merit System of appointment and promotion. — An "Act to Amend the Civil Service Act," which came into

force September 1, 1908, divides the Civil Service of the Dominion into the Inside Service and the Outside Service, the former embracing "that part of the public service in or under the several departments of the Executive Government of Canada and in the offices of the Auditor General, the Clerk of the Privy Council, and the Governor-General's Secretary, employed at the City of Ottawa, or at the Experimental Farm Station or the Dominion Astronomical Observatory near Ottawa." The employés of this Inside Service are required to be classified according to their salaries, in three divisions, and all appointments to positions in it are (except as otherwise provided in the Act) to "be by competitive examination, which shall be of such a nature as will determ' .e the qualifications of candidates for the particular positions to which they are to be appointed, and shall be held by the Commission from time to time in accordance with the regulations made by it and approved by the Governor in Council."

For the administration of the Act a Civil Service Commission is created, consisting of two members appointed by the Governor in Council, who are to have no other office or employment, and who may employ necessary assistance for the examinations they conduct. The following are provisions of the Act:

"No person shall be admitted to such an examination unless he is a natural-born or naturalized British subject, and has been a resident of Canada for at least three years, and is, at the time of the examination, of the full age of eighteen years and not more than thirty-five years, and presents the required certificates as to health, character and habits.

"Before holding any such examination the Commission shall require each head of a department to furnish it with the number of additional permanent officers or clerks likely to be required in his department within the next six months.

"On this basis, and having regard also to the requirement of the several departments for temporary services, a computation shall be made by the Commission of the number of competitors to be selected at the next ensuing examination.

"If there remain from a previous examination successful competitors who have not received appointments, their number shall be deducted in making the computation, and their names, in the order of merit, shall be placed at [the top of the list] to be prepared in accordance with section 17 of this Act.

"Thereupon due notice of the examination shall be given by the Commission, stating the character and number of the positions to be competed for.

"Immediately after the examination the Commission shall make out a list of the successful competitors thereat for each position, in the order of merit, up to the number computed in accordance with Section 15.

"From the said list the Commission, on the application of the deputy head, with the approval of the head, of any department, shall supply the required clerks, whether for permanent or temporary duty. . . .

"The selections shall be, so far as practicable, in the order of the names on the list, but the Commission may select any person who in his examination shows special qualifications for any particular subject. . . .

"The cause of the rejection shall be reported by the deputy head to the Commission, who shall thereupon select another person to take the place of the one rejected, and decide whether the latter shall be struck of. the list or allowed a trial in another departmen.

"After a person so selected has served a probationary term of six months, [he shall be deemed] to be permanently accepted for the service. . . .

"The head of the department, on the report in writing of the deputy head, may, at any time after two months from the date of assignment, and before the expiration of six months, reject any person assigned to his department. . . .

"Promotion, other than from the third to the second division, shall be made for merit by the Governor in Council upon the recommendation of the head of the department, based on the report in writing of the deputy head and accompanied by a certificate of qualification by the Commission to be given with or without examination, as is determined by the regulations of the Commission.

"Except as herein otherwise provided, vacancies in the first division shall be filled by promotions from the second division."

Regulations prepared by the Civil Service Commission appointed under the Act require fees, ranging from $2 to $10 to be paid by the candidates for examination.

United States: A. D. 1901-1909. — Progress of reform under President Roosevelt. — At the close of the administration of President Roosevelt, the journal published by the National Civil Service Reform League, entitled *Good Government*, bore the following testimony to the fidelity with which the principles of the reform had been upheld and promoted by the retiring executive:

"One of the first acts of President Roosevelt was the reorganization of the civil service commission, which, under the administration of President McKinley, had become lax and ineffective. Since then the enforcement of the law and rules by the commission has been sincere, vigorous and impartial. Particularly strict has been the enforcement of the prohibition against political assessments. Twice in the midst of political campaigns has the President ordered the removal of prominent officials for levying assessments on their subordinates.

"During his administration President Roosevelt has extended the scope of competition to many new and important offices. Notable among these extensions have been the restoration of the field service of the War Department (withdrawn by President McKinley) and the classification of the rural free delivery service (now numbering some 40,000), the forestry service, deputy collectors of internal revenue, deputy collectors of customs, deputy naval officers, and cashiers and finance clerks in post offices. Prevented by the civil service law from 'classifying' unskilled laborers, President Roosevelt, under general executive authority, has prescribed a system of examination for laborers in Washington and the principal cities. By executive order of June 27, 1906, he provided a system of examination and promotion for the consular service which has done away with the more flagrant evils of that service. His latest and most striking extension has been the classification of

CIVIL SERVICE REFORM

over 15,000 fourth-class postmasters, thereby taking them out of politics.

"He has prohibited the participation of competitive officials in politics further than to vote as they please and to express privately their opinions, and has made this prohibition effective by incorporating it in the civil service rules, thus giving to the commission the power to investigate. He has by vetoing the Crumpacker census bill defeated the attempt by Congress to obtain as spoils some 4,000 clerkships for the next census.

"This is a brief record of President Roosevelt's service to civil service reform during his administration. In considering the criticisms of his course which have been made from time to time by the League and the press, this service should be kept in mind and carefully weighed. For instance, against this record of constant advancement, the suspension of the rules in individual cases — in all about 370 — although in our opinion arbitrary and dangerous as precedents, are of comparatively minor importance. A few have been made for political reasons; the far greater number, however, were acts of charity or personal impulse, and President Roosevelt himself realized the danger in this practice and took steps to curtail it.

"In passing on the justice of the other criticisms of President Roosevelt's course regarding the civil service one should keep in mind the distinction which he has so sharply drawn between the classified and the unclassified service. This is clearly set forth in a reply to a letter from the civil service commission calling his attention to the omission from the postal regulations of President Cleveland's 'pernicious activity' order, and quoting a passage from the 11th report of the commission. President Roosevelt said: 'I personally drew the paragraph which you quote. The paragraph was drawn with a view to making a sharp line between the activity allowed to public servants within the classified service and those without the classified service — the latter under our system are as a rule chosen largely with reference to political considerations, and as a rule are, and expect to be, changed with the change of parties. . . . It seemed to me at the time, and I still think, that the line thus drawn was wise and proper.'

"In considering such appointments to positions in the unclassified service as that of James C. Clarkson as surveyor of the Port of New York for instance, a just analysis must take into account these frankly expressed views. President Roosevelt drew a line between the classified and unclassified service, and as to the latter recognized and availed himself to some extent of existing conditions. He believed that so long as positions remained in the unclassified service it was impractical to eliminate political considerations and that any attempt to do so led to hypocrisy. His remedy was to place the positions in the classified service, wherever practicable. And he has extended the line of the classified service higher than ever before. The League does not believe this theory is ideal, but in carrying it out the President has certainly not set the reform back. Criticism based only on the fact that one who has rendered great service to a cause has not accomplished all that its ardent supporters wish to accomplish can be properly set down as captious.

"In performing its duty to the public, the League has at various times during his administration frankly criticised certain acts of President Roosevelt, which in its opinion were not in line with the best interests of the service. But this does not prevent us from recognizing that during his entire administration President Roosevelt has been loyal to the reform with which he has been so prominently identified. We do not believe that any act of his was intended to injure the reform. Wherever he has thought it practicable to extend the reform he has done so. A President less devoted to the reform would not have been criticised for what President Roosevelt has failed to do."—*Good Government, March*, 1909.

The following exhibit of the whole progress in civil service reform, from its beginning to the end of 1908, was made in the annual report of the Council of the National Civil Service Reform League, presented at the meeting of the League, on the 17th of December in that year: "The whole United States civil service, in 1883, consisted of 110,000 persons, and of these 14,000 were put under the civil service law. Now the federal civil service has grown to 352,000 positions, and, including the last extension, those under the competitive system have increased from 14,000 to about 222,000. Not only in numbers but in proportion to the total has the competitive service increased from 12 7-10% in 1883 to 63% now."

A. D. 1902-1903. — Extension of classification to the Rural Free Delivery Service. — Order concerning unclassified laborers. — "During the year ended June 30 [1903], 25,566 persons were appointed through competitive examinations under the civil-service rules. This was 12,672 more than during the preceding year, and 40 per cent of those who passed the examinations. This abnormal growth was largely occasioned by the extension of classification to the rural free-delivery service and the appointment last year of over 9,000 rural carriers. A revision of the civil-service rules took effect on April 15 last, which has greatly improved their operation. . . . Executive orders of July 3, 1902; March 26, 1903, and July 8, 1903, require that appointments of all unclassified laborers, both in the Departments at Washington and in the field service, shall be made with the assistance of the United States Civil Service Commission, under a system of registration to test the relative fitness of applicants for appointment or employment. This system is competitive, and is open to all citizens of the United States qualified in respect to age, physical ability, moral character, industry, and adaptability for manual labor: except that in case of veterans of the civil war the element of age is omitted. This system of appointment is distinct from the classified service and does not classify positions of mere laborer under the civil-service act and rules. Regulations in aid thereof have been put in operation in several of the Departments and are being gradually extended in other parts of the service. The results have been very satisfactory, as extravagance has been checked by decreasing the number of unnecessary positions and by increasing the efficiency of the employees remaining." — *President's Message, Dec. 7, 1903.*

A. D. 1906.— Excellent legislation in Pennsylvania. See (in this vol.) PENNSYLVANIA.

A. D. 1906-1909. — The Reform of the Consular Service. — A great and greatly needed reformation of the consular service of the United States was begun in 1906, by the passage of an Act of Congress, approved April 5, which provided for the reorganization of the service, primarily by the classifying and grading of the consuls-general and the consuls, and the fixing of salaries in each class. Consuls-general were placed by the Act in seven classes, with salaries as follows:

Class one, twelve thousand dollars. — London, Paris.

Class two, eight thousand dollars — Berlin, Habana, Hongkong, Hamburg, Rio de Janeiro, Shanghai.

Class three, six thousand dollars. — Calcutta, Cape Town, Constantinople, Mexico City, Montreal, Ottawa, Vienna, Yokohama.

Class four, five thousand five hundred dollars. — Antwerp, Barcelona, Brussels, Canton, Frankfort, Marseilles, Melbourne, Panama, Saint Petersburg, Seoul, Tientsin.

Class five, four thousand five hundred dollars. — Auckland, Beirut, Buenos Ayres, Callao, Chefoo, Coburg, Dresden, Guayaquil, Halifax, Hankau, Mukden, Munich, Niuchwang, Rome, Rotterdam, Saint Gall, Singapore.

Class six, three thousand five hundred dollars. — Adis Ababa, Bogota, Budapest, Guatemala, Lisbon, Monterey, San Salvador, Stockholm, Tangier.

Class seven, three thousand dollars. — Athens, Christiania, Copenhagen.

Consuls were divided among nine classes, receiving salaries that range from $8000 in the first class and $6000 in the second, down to $2000 in the ninth. The first and second classes hold but one incumbent each, at Liverpool and Manchester, respectively. There are eight places in the third class, twelve in the fourth, and then the numbers mount rapidly, up to the sixty-nine included in the ninth class.

All fees allowed to be collected for services rendered in connection with the duties of the consular office (which the President may prescribe) are directed by the Act to be accounted for thereafter and paid into the Treasury of the United States. All consular officers whose salaries exceed $1000 are forbidden to be interested in or to transact any business as a merchant, factor, broker, or other trader, or a clerk or other agent of one, or to practice as a lawyer for compensation, or to be interested in the fees or compensation of any lawyer. The whole service is placed under inspection by five inspectors, to be appointed from the members of the consular service; and each consular office must be inspected at least once in every two years.

In June following this important enactment, the Secretary of State, Mr. Root, submitted to President Roosevelt the draft of a recommended executive order, which prescribed new rules to be followed in filling the consular offices, as classified by the recent Act. In doing so, the Secretary made this explanation: "The main features of the order were embodied in the early forms of the Consular Reorganization Bill passed at this session of Congress, but they were dropped out, largely for the reason that their enactment by Congress would appear to be an infringement upon the President's constitutional power to appoint consuls. Your adoption of these rules by executive order will be free from that objection, and judging from the very positive commendation which many members of both Houses have expressed for the proposed change in the method of appointing consuls, I do not doubt that the new system will receive the hearty approval of the Senate and of Congress whenever occasion may arise for an expression upon the subject."

The recommended order was approved and issued by the President. "Subject to the advice and consent of the Senate," it declared in substance as follows: (1) Vacancies in the office of Consul-General and in the office of Consul above class 8 (salary, $2500) shall be filled by promotion from the lower grades of the service, based upon "ability and efficiency, as shown in the service"; (2) vacancies in the office of Consul of these two remaining classes, 8 and 9, are to be filled (a) by promotion, "on the basis of ability and efficiency, as shown in the service," of consular clerks, vice-consuls, and consular agents, and (b) by new appointments from candidates who have passed an examination; (3) officials in the service of the Department of State, with salaries of $2000 or upward, shall be eligible for promotion, always on the basis of ability and efficiency, as shown in the service, to any grade of the consular service above the eighth class; (4) the board of examiners for admission to the service shall consist of the Secretary of State (or such other officer of the department as the President shall designate), the chief of the Consular Bureau, and the chief examiner of the Civil Service Commission (or such other officer as this commission shall designate); (5) this board of examiners shall formulate the rules for examinations; (6) among the compulsory subjects shall be at least one modern language other than English, the natural industrial and commercial resources and commerce of the United States, political economy, and the elements of international, commercial, and maritime law; (7) 80 per cent. shall be necessary for eligibility; (8) candidates must be over twenty-one and under fifty years of age, citizens of the United States, and of good character and physique. They must also have been specially designated by the President for examination.

Other significant provisions of the order are to the effect that no promotion shall be made except for efficiency and conduct, that "neither in the designation for examination or certification or appointment will the political affiliations of the candidate be considered"; and that "due regard should be had to the rule that, as between candidates of equal merit, appointments should be made so as to secure in the service proportional representation of all the States and Territories."

The first examination of candidates for appointment under this order was held on the 14th and 15th of March, 1907, since which time no one has entered the consular service of the United States without satisfying that test.

In June, 1908, Secretary Root announced the promotion or transfer of nearly sixty consular offices, setting in motion the desirable advancement of these officials from post to post, to make the best use of their proved capacity and acquired experience. About a year later, Mr. Root's successor, Secretary Knox, made public the promotion of twenty-seven incumbents of

consular office, and the appointment of twenty-three new recruits to the service from his eligible list. So the long striven-for reform of the American consular service may safely be said to have arrived.

A bill introduced in the Senate, providing for a permanent consular service, based on competitive examinations, was decided by the Committee on Foreign Relations to be unconstitutional, for the reason that the Constitution itself confers the power of appointment of consular officers upon the President, and that Congress has no right to limit this power in any way. President Taft, by an executive order, has practically put the scope of the proposed bill into effect, thereby, in part, limiting the power conferred upon himself. This, in the opinion of the Senators, is all that can be done legally.

A. D. 1908. — Extension of the Merit System to nearly one-third of the Fourth Class Postmasters of the country. — In the Annual Report of the Council of the National Civil Service Reform League, presented at the annual meeting of the League in December, 1908, it was said: "The great event of the year, which so aptly commemorates the 25th anniversary of the passage of the Pendleton bill, is the extension of the competitive system to all fourth class postmasters in the part of the country north of the Ohio and east of the Mississippi, that is, in the New England States, New York, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Wisconsin, and Michigan. This is an extension covering more positions than suggested by the civil service commission. It is an extension large enough to be of present advantage, is made in the more thickly settled portions of the country, where it is easiest to carry it out, and yet it is not on so large a scale as to invite mistakes or perhaps partial failure. This extension covers about 15,000 positions. The order of President Cleveland of May 26, 1896 [see, in Volume VI. of this work, CIVIL SERVICE REFORM: UNITED STATES], covered about 31,000 places; and yet, from the point of political significance, this present extension is the most important, we believe, in the history of civil service reform since January 16, 1883, and when its purpose is fully carried out it will include some 53,000 places."

The report then reviewed the efforts that had been in progress since 1889, with the support of Presidents Cleveland and Roosevelt, to bring about the inclusion of this class of postmasters, at the least, under the rule of appointment subject to competitive examination. President Roosevelt, in his annual Message of 1907, had said: "The fourth-class postmasters' convention has passed a very strong resolution in favor of placing the fourth-class postmasters under the civil-service law. The Administration has already put into effect the policy of refusing to remove any fourth-class postmasters save for reasons connected with the good of the service; and it is endeavoring so far as possible to remove them from the domain of partisan politics. It would be a most desirable thing to put the fourth-class postmasters in the classified service. It is possible that this might be done without Congressional action, but, as the matter is debatable, I earnestly recommend that the Congress enact a law providing that they be included under the civil-service law and put in the classified service."

Congress refused the desired legislation. The law committee of the League was unanimous in the opinion that the President held authority already to make the change by Executive Order, and Mr. Roosevelt gave a hearing on the subject to Messrs. McIlhenny and Greene, of the National Civil Service Commission, and the Hon. Richard Henry Dana, Chairman of the Council of the League. Evidently he became persuaded that his authority was sufficient, and was prepared to act accordingly. About the middle of November, 1908, the National League of Postmasters of the United States, which had been organized in 1905, sent a Committee, with its President, Mr. A. K. Hoag, of Orchard Park, N. Y., to present to the authorities at Washington their claim to a footing of non-political appointment under civil service rules. By good fortune they met at Washington Mr. Dana and Mr. Goodrich, of the National C. S. R. League, who were visiting the Capital on the same errand, and the doubled appeal had quick success. In an interview with President Roosevelt, the Committee of the Postmasters' League received assurances that he would issue an order on the subject, provided that the President-elect, Mr. Taft, would approve his taking that step. The Committee went at once to the Hot Springs in Virginia, where the President-elect was then sojourning, received his ready endorsement of the plan, and conveyed it to the President in power. A fortnight later, on the 1st day of December, the memorable order was proclaimed. On the 1st of the following February a plan of filling vacancies was put into effect.

It was wise, no doubt, to apply the extension of the reform in post-office appointments to one large and important section of the country, and obtain a showing of practical results, before attempting to overturn the old system as a whole. That more will follow in due time is reasonably sure. Mr. Hoag, the President of the National League of Postmasters, in a private note, remarks: "It is already evident that the change is to redound to a better service. Scores of new buildings, new quarters and new equipments are being installed by the emancipated postmasters; which shows that postmasters of this class dare, for the first time, to invest their money in better equipment, feeling that they are likely to remain postmasters long enough to make the investment a paying one, now that their tenure of office does not depend upon their relations to a political faction or boss."

A. D. 1909. — The Census Bill. — Inveteracy of Spoils-seeking in Congress. — Veto of the bill in its first form by the President. — The Amended Bill which became law. — The greatness of the advance of civil service reform in the United States, within the quarter century since its beginning, is one of the most hopefully inspiring facts in recent American history. But, by the side of it stands the warning and shaming fact, that it has been achieved, from first to last, by forces outside of Congress, and outside of all other legislative bodies which supposedly represent the political will of the people. Every measure of legislation that has promoted it has been wrung from unwilling majorities in those bodies, — yielded only when they feared to refuse. That Congress, in both Houses, would wreck with eagerness, to-day, if it dared, the bettered public service of the nation, to recover for its members and their party henchmen the old "spoils" of office and

place, was shown unmistakably, within the last year of this record, by its action on the bill to provide for the taking of the Census of 1910.

The President, and every responsible official connected with the Census Bureau, had borne testimony to the inefficiency and wasteful costliness of previous census-taking under the old system of appointment, and had brought Congress to provide in the bill for an effective test of qualification for the employment by competitive examination. Considerable majorities in both House and Senate turned an equally deaf ear to all considerations of public interest in the matter, and passed a bill which enabled Senators and Representatives to parcel out between themselves the large number of appointments to be made.

President Roosevelt did not hesitate to veto the bill, and gave it a thorough dissection in the Message which explained his disapproval. In part, his comments on the Act offered to him were as follows: "Section 7 of the act provides in effect that appointments to the census shall be under the spoils system, for this is the real meaning of the provision that they shall be subject only to non-competitive examination. The proviso is added that they shall be selected without regard to political party affiliations. But there is only one way to guarantee that they shall be selected without regard to politics and on merit, and that is by choosing them after competitive examination from the lists of eligibles provided by the Civil Service Commission. The present Director of the Census in his last report states the exact fact about these non-competitive examinations when he says: 'A non-competitive examination means that every one of the many thousands who will pass the examinations will have an equal right to appointment, and that personal and political pressure must in the end, as always before, become the determining factor with regard to the great body of these temporary employments. I cannot too earnestly urge that the Director of the Census be relieved from this unfortunate situation.'

"To provide that the clerks and other employés shall be appointed after non-competitive examination, and yet to provide that they shall be selected without regard to political party affiliations, means merely that the appointments shall be treated as the perquisites of the politicians of both parties, instead of as the perquisites of the politicians of one party. I do not believe in the doctrine that to the victor belongs the spoils; but I think even less of the doctrine that the spoils shall be divided without a fight by the professional politicians on both sides; and this would be the result of permitting the bill in its present shape to become a law. Both of the last censuses, the eleventh and the twelfth, were taken under a provision of law excluding competition; that is, necessitating the appointments being made under the spoils system. Every man competent to speak with authority because of his knowledge of and familiarity with the work of those censuses has stated that the result was to produce extravagance and demoralization."

The veto went to Congress on the 5th of February, 1909, one month before the expiration of President Roosevelt's term of office. His successor-to-be was well known to be in sympathy with his views of the public service, and no attempt was made either to pass the bill over the veto, or to proffer its spoils-seeking provisions to the new occupant of the Presidency when he came in. Congress was compelled, in this case, as in many before, to surrender its cherished spoils of salaried public employment to civil service reform, simply because put interests and public sentiment are better represented, as a rule, in the White House than in the Capitol, which is not a pleasing fact.

During the extra session that was called by President Taft, in March, an amended bill was passed which came near to satisfying the demands of reform. It kept a little opening for political favoritism, in a proviso, that the director of the Census may, "when the exigencies of the service require," make his selections from the list of eligibles, not by the candidates' rating, but on the ground of "immediate availability" or previous experience in census work; but this was so small a loophole that the President's signing of the bill was generally approved. "The act empowers the director of the census to appoint special agents to whom will be assigned principally the work of obtaining statistics from manufacturing establishments, mines and quarries. While no qualifying test is required by law for the appointment of these agents, Director Durand has nevertheless provided for their selection subject to a carefully worked out scheme of *competitive* examinations, to be conducted by the United States civil service commission. In rating the candidates the experience declaration and practical test are to be given equal credit. All candidates who receive a combined rating of 70 will be placed on an eligible list, from which selection will be made as the needs of service require. Eligibility, according to the instructions, 'is not of itself a guarantee of appointment, but selection will be made solely with reference to equipment and availability for appointment.'"—*Good Government, Oct.*, 1909.

COLOMBIA: A. D. 1898-1903.—Castro, of Venezuela, and the Liberals (Yellows) of Colombia.—How they helped one another.—The following passages are from an article in the *American Review of Reviews* on "South American War Issues," by Edwin Emerson, Jr., who spent some time with the Colombian insurgents in 1903 and acquired a good knowledge of the troubled political conditions in that republic and its near neighbors. It adds something to what is told in Volume VI. of this work concerning the revolt started in 1899 by Rafael Uribe-Uribe, and about its relation to the beginnings of the career of Cipriano Castro, in Venezuela (see, in that vol., COLOMBIA, and VENEZUELA):

"At the time when Spain was losing Cuba, the last Congress of Colombia sat in Bogotá. The Liberal party had but one spokesman in the Congress—to wit, Rafael Uribe-Uribe. The government majority championed the cause of Spain. Many of the more ardent Liberals were fighting in the field for 'Cuba Libre.' Uribe-Uribe was the only man in the Congress who spoke for America as against Spain. He was hissed down. Next, the Panama Canal question came up. The French concession was to be extended for ten years. Again Uribe-Uribe spoke for America as against France. The project was voted down. The Congress was dissolved. President San Clemente, on his own motion, extended the French concession. For this he is said to have received one million dollars, cash. Then the revolution broke out, and Uribe-Uribe took the field, in Santandér, the richest coffee-growing state of Colombia. He fell upon the town of Cúcuta and took it, only to be driven out again after a disastrous rout at Palo Negro. To make things worse for the rebels, the Bishop of Santandér ordered the excommunication of those who would not renounce liberalism or all connection with Liberals. It was a crushing blow, aimed at the wives and daughters of the fighting insurgents.

"While affairs were thus disturbed in Santandér, Cipriano Castro, a Venezuelan exile living in Cúcuta, profited by the occasion to lead a small band of Colombian Liberals into Venezuela. They dashed across the border by night, and fell into Castro's native town, Capechlo Viejo. Castro's father and five brothers, with other townsfolk, joined his standard and helped him win his first battle over a small detachment of Venezuelan government troops. Now the number of his adherents grew, especially as he won battle after battle or bought over his rival leaders. After a crushing defeat at Valencia, President Andrade fled the country, and Castro entered Carácas in triumph. His early Colombian adherents got Venezuelan government jobs.

"All went well for a while, especially after the prompt suppression of a counter-revolution, until Castro's sympathies with the Colombian Liberals in the field began to tell on his foreign policy. Uribe-Uribe had been badly beaten in Colombia. He was made welcome by Castro in Venezuela, and was intrusted with the command of a division on the Colombian frontier. The command was recruited from Colombians across the border. At the same time, Castro arbitrarily stopped all navigation on the Zulia and Catacumbo rivers, running from Colombian Cordillera to the Lake of Maracaibo, in Venezuela. This was a death-blow to the coffee industry of the Colombian state of Santandér, which has no other outlet to the sea. Cúcuta was ruined. A German house failed for half a million dollars, an American hacienda lost $200,000, and other foreign merchants suffered in proportion. All commerce in Cúcuta and Maracaibo coffee almost came to a standstill. Then it was that the government forces in Santandér, to bring relief to the stricken district, tried to open the closed rivers by a sudden armed invasion into that region. For the sake of appearances, they were led by Ranjel Garbiras, a Venezuelan revolutionist. They made for the prosperous town of San Cristóbal, but Uribe-Uribe had managed to gather his corps of insurgents, and beat off the attack in a three days' battle. Some two thousand men fell on both sides. Uribe-Uribe promptly prepared a counter-invasion. He was aided in this by Castro, who practically put all Venezuelan forces in the Cordillera at his disposal.

"President Castro, who was furious at so overt an act of war on the part of his old enemies, the Colombian Clericals, furthermore sent another expedition across the Goajira desert to aid his Colombian insurgent friends in that peninsula to take the Colombian port of Rio Hacha. Venezuelan gunboats appeared before Rio Hacha to do their part in the capture. Unfortunately for the Liberal cause, the Venezuelan army in the Goajira was taken unawares while on the march, and was all but annihilated. The gunboats chose to retire without firing a shot. Castro never recovered from this reverse. The expenses of his various armed expeditions ate up all his ready finances. When he could no longer maintain Uribe-Uribe's troops, Uribe cut loose and recrossed the border, to join forces with other insurgent leaders in the interior of Colombia. Uribe's cousin proceeded to Panama, and the civil war there broke out with fresh vigor. By their recent brilliant stroke in the harbor of Panama, the Colombian Liberals have won the command of the sea on the Pacific side. To assist them in doing the same on the Atlantic side, Castro has now supplied them with a torpedo-boat and a small gunboat."

These last mentioned successes of Uribe-Uribe had no permanent effectiveness, for his surrender, with 1300 men and 10 pieces of artillery, was announced presently as having occurred on the 25th of October, 1902. It seemed unfortunate that he did not succeed in overthrowing the Conservatives, or "Blues," who held the government, since most accounts of their rule represented it as hopelessly bad; but a change for the better came without revolution after no long time.

The state of civil war was closed by a treaty of peace, signed on board the U. S. battleship *Wisconsin*, November 21.

A. D. 1903-1906. — Feeling toward the United States. — Of the feeling in Colombia toward the United States, consequent on what occurred in Panama, Mr. Barrett, American Minister at Bogotá, reported in 1906 as follows: "The question is continually asked me: What is the attitude of the Colombian Government and people toward Americans and American interests on account of the Panama affair? Without entering upon any political discussion, I wish, in answering this pertinent inquiry, to take advantage of the opportunity to pay a just and frank tribute to Colombia. Speaking in the first place for myself as minister I can truthfully say that, ever since my arrival here seven months ago, I have been treated with a generous kindness and sincere hospitality that have made a deep impression on me and increased my respect for Colombians in particular and Latin Americans in general. The United States minister has been extended invitations official and personal, and the United States legation in turn has been continually frequented by leading men of all parties, as if nothing had ever happened to mar the *entente cordiale* of the two countries.

"In the granting of concessions and in the hearing of claims the Government has treated Americans with as much consideration as Europeans. During my stay here, and up to this writing, there has not been one complaint lodged by Americans in this legation of unkind treatment by Colombians due to any political anti-American feeling. In my own travels in various parts of the country, officials and peons alike have everywhere accorded me polite and even gracious attention. To let it be known that I was United States minister has always led to extra courtesies rather than to any lack of them.

"I could not, however, have it understood abroad that there is not still strong feeling against the United States. It does exist, but the passing of years, and generous, fair treatment of Colombia and Colombians by the United States and its citizens, in international relations and friendly social and commercial intercourse, can effect its gradual disappearance. Such feeling does not take the attitude of personal enmity toward Americans. The Colombians, high and low, are too polite and sensible for that. It is a feeling in the minds and hearts, based on high political and patriotic grounds, which, however, with commendable philosophy, recognizes the inevitable and now turns to the future to bring blessings that will counterbalance the losses and sorrows of the past. The very courage and nobility of this attitude of Colombia is one of the chief reasons why I predict for her a magnificent future. Already this policy — if I may call it a policy — is bearing fruit in the development of a greater and more friendly and sympathetic interest throughout the United States in Colombia, which is destined to lead to a mutually favorable understanding and settlement of all differences in the near future."

A. D. 1905-1906. — A New Era, under President Reyes. — "The New Era in Colombia" is the title of an article in the *American Review of Reviews*, May, 1906, by Francis P. Savinien, writing from the country in question.

"By judicious, if not generous, action," says the writer, "President Rafael Reyes [who became President in the previous year] has succeeded in harmonizing nearly all elements of the population. His administration is neither Liberal nor Conservative. It is Nationalist. Placed in power by Conservatives and sustained by Liberals, his favors to the former preserve order in the center of the country, and his implicit trust in the latter insures peace on the frontiers. He has made General Uribe-Uribe minister to Chile, Argentina, and Brazil, and General Herrera commander along the Venezuelan border, thus bestowing the highest diplomatic and military honors on Liberals. From Conservatives he chose all his ministers (except Dr. Modesto Garces, of the Department of Public Works), the governor of the capital district, and other high officials for the center of government. His government is like that of Panama, the secession of which made a policy of reconciliation predominant in both countries. . . . The Colombian army has become a body of laborers. Troops are converted into sappers and employed in building or improving ways of communication. Idleness, as well as agitation, is beginning to receive general condemnation. It is true that there is little liberty. There is, however, less persecution than formerly. Journals are abject and individuals mute. There is no free speech or press. But there are few persons in prison or exile for political reasons. The policy of the government has become that of abstention rather than restraint."

General Reyes had represented Colombia at the Pan-American Conference in the City of Mexico, in 1902, and had made a most favorable impression on the delegates from the United States. Referring to the occasion long afterwards, Mr. Sylvester Baxter said of him: "It is notable that in that Conference Colombia was represented by General Rafael Reyes, a high type of man — gentleman by birth and education, of scientific attainments, a natural leader, one of the strong characters of Spanish America; a man whose existence makes things seem hopeful when else they might look hopeless; a soldier-

statesman in whom many see the potentialities of a second Diaz."

A similar expression of admiration appears in an interesting special report, entitled "Colombia, a Land of Great Possibilities," made in June, 1906, by the Hon. John Barrett, then American Minister to Colombia, more recently the Director of the International Bureau of American Republics. "Great credit," wrote Mr. Barrett, "is due to General Rafael Reyes, President of this Republic, for his untiring efforts to restore the prosperity of his country to the position it occupied before the last civil war and the loss of Panama. If he succeeds, he will deserve a place in history like that of President Diaz in Mexico. He has so far effectually stopped revolutions, and, if his life and health are spared, Colombia would seem to be assured of peace at least during his administration."

A. D. 1905-1909. — Troubles with Venezuela over the navigation of rivers flowing through both countries.—The arbitrary action begun by the ill-tempered and arrogant Castro, of Venezuela, in 1902, when he stopped navigation on the rivers which flow from Colombia to Lake Maracaibo, in Venezuela, and thus open communication to the sea (see above), was continued or resumed in subsequent years, and was a distressing trouble to his Colombian neighbors. In July, 1905, the Colombian Government appealed to that of the United States for its good offices in maintaining the principle of free navigation on rivers that are common to neighboring countries. "From the time of the award which decided the boundary dispute between the two countries," said the Colombian Minister to the United States, in a communication to the American Secretary of State, "the policy of Venezuela in matters relating to the transit trade of Colombia and the navigation of the common rivers, has been marked by a conspicuous spirit of hostility. . . . Neither logical arguments nor historic precedents, such as those submitted by the Colombian chancellery to the Government of Venezuela for the recognition by the latter of the principle of free trade over the natural waterways placed by God at the disposal of all nations, have availed."

The writer then reviewed at considerable length the arguments with which the Government of the United States had contended in the past with Spain and Great Britain for the free navigation of the Mississippi and the St. Lawrence, and said in conclusion: "It would be desirable, and I would ask that it be done if this note were favorably received by the Government of the United States, that the American minister at Caracas be appropriately instructed in the sense of declaring on behalf of the commercial interests of the citizens of the United States his desire that the Government of Venezuela make the navigation of the Zulia and Orinoco rivers free, and urging, by persuasion, that the principle be solemnly consecrated in its public treaties. My Government will join in such an action, which comes within its traditional policy in the matter, and will interpose no obstacle or delay to the meeting of an international mixed commission for the framing of regulations concerning the use of the above-named rivers without detriment to the legitimate interests of the countries through which they flow."

To this request the then Acting Secretary of State, Mr. Adee, made a favorable reply, August 5, saying: "The principle of the free navigation of rivers has been advocated by the United States and maintained in its relations with its neighbors for many years. This government is ready, therefore, to use its good offices in the sense requested, and Mr. Russell has been instructed upon arriving at his new post in Venezuela to take advantage of fitting occasion to express to the minister for foreign affairs the great satisfaction with which the United States would view the adoption and proclamation by Venezuela of the general principle of the free navigation of rivers and fluvial arteries of communication common to neighboring countries.

"It is of course to be understood that in touching upon this matter this government does not seek to intervene or mediate in any way in the relations between Colombia and Venezuela, but is merely interested in the universal recognition of a policy beneficial to the commerce of the world."

In the following December, the endeavor seemed promising; for the American Minister to Colombia was able to report the signing, at Bogotá, of a protocol, preparatory to a new treaty of amity, commerce, and navigation, to be concluded at Caracas. Four months later, on the 27th of April, 1906, Minister Russell, at Caracas, announced the arrival there of the Colombian plenipotentiary, General Benjamin Herrera, appointed for the negotiation of the treaty agreed upon, but reported further that the Venezuelan Government had refused to receive him, demanding that somebody else be sent. No settlement of the matter could be obtained while Castro controlled Venezuela. Since his elimination it has been reported that President Gomez, his successor, has annulled his decrees of hostility to Colombian commerce.

A. D. 1906-1909. — Efficient but arbitrary Government produces discontent. — Opposition to treaty with Panama and the United States. — Vacation of President Reyes which ends in resignation. — Revolt. — Elections. — While the Government organized under President Reyes was undoubtedly efficient and effective in restoring order and prosperity to the country, it was not satisfactory to the people; and perhaps it speaks well for them that they showed discontent. It was not a representative government, the existing Congress not being an elective body, but a provisional legislature made up by appointment. As admitted in the quotation above from a friendly Colombian writer, the citizens under it were tongue-tied subjects, having no free speech or Press. The political situation and the differing states of feeling produced by it were discussed in April, 1909, by a special correspondent of the New York *Evening Post*, who wrote from Bogotá:

"It seems to be confessed by the great majority of the people here that the country has not entered on that stage of political development in which the people can govern themselves by parliamentary methods. The history of their nearly one hundred years of independent national life has been that of almost continual civil strife, and of frequent civil wars, which have interrupted and almost destroyed all efforts at self government; so that the present system of government by executive decrees, to be ratified by an ap-

pointed 'Constitutional and Legislative Assembly,' is about the only one that can preserve the peace and direct the country into the line of prosperity and progress.

"Under this system of government the country has enjoyed almost perfect internal peace during the year. This is the political theory that is most widely accepted at the present time in Colombia. Of course, there are those who do not agree with this theory, which they consider as the natural action of men who are more anxious to preserve order than they are to establish truth and justice, and there are not lacking those who say that in the long run it will be found to be a foolish system.

"It is pointed out that the idea that grievances can be done away with by forbidding men to complain, or that the criticisms can be met by excommunicating the critics, or that changes can be prevented by putting the troublers to silence, is contradicted by the experience of the rest of the world. The kind of effort that is being made in Colombia to prevent the liberty of the press, of public speech, and of personal opinion, is like the effort to prevent the escape of steam by the safety valve, and is very likely result in an explosion."

The state of public feeling in Colombia became further complicated, no doubt, when, early in January, 1909, a tripartite treaty was negotiated, with Panama and the United States, for the settlement of questions connected with the secession of Panama in 1903. Panama, in this treaty, agreed to pay Colombia the sum of $2,500,000, as her share of the Colombian public debt, receiving recognition of her independence in return. The treaty was submitted to the Colombian Congress by President Reyes on the 24th of February, with a special message of recommendation; but public feeling was said to be bitterly against it, for the reasons that no wrongfulness in the transaction was recognized and the indemnity was insufficient. Disturbances which broke out at Bogotá and in the provinces about the middle of March were attributed mostly to this cause of discontent. For some reason of discouragement or disgust, the President was reported to have resigned his office on the 13th, but was persuaded to resume it next day.

It was now decided to suspend consideration of the tripartite treaty, until it could be submitted to an elected National Congress, the election for which would be held on the 20th of the coming July. In June, a few weeks before the appointed election, President Reyes made a sudden departure for Europe. Rumors that he had gone because tired of political strife and would not return were contradicted by the Colombian Consul at New York, in a published note which said: "His departure, the causes of which are well known throughout Colombia, was due to the fact that after five years' strenuous labor he desired a rest, and last March to the National Assembly expressed his desire to retire temporarily from the Presidency, but, owing to the opposition of public sentiment and the strong desire of the people to have him remain, he determined not to leave the Presidency until elections to the coming Congress had been made. To this Congress, about to be convened, and in which all parties are represented, President Reyes confides many of the cares of government, left by law under his jurisdiction until Congress should assemble, and withdraws, temporarily only, from the discharge of his Presidential duties, leaving in his stead Gen. Jorge Holguin, his most intimate friend and former minister of war, who will continue to pursue in all matters the same policy as that adopted by his predecessor. Gen. Reyes during his stay in Europe, whence he has gone, will perfect plans for developing railroad and other industries in Colombia. There is absolute peace and tranquillity in all parts of the country."

But the "absolute peace and tranquillity" of the country was shaken in the first week of July by a revolutionary outbreak at Barranquilla, soon suppressed, and the resignation of President Reyes was received soon thereafter, from abroad. The election of his successor now devolved on the new National Congress, elected by the people on the 20th of July. It gave the office, for the remainder of the unfinished term (which expires August 7, 1910) to Señor Gonzales Valencia, who had been proclaimed by the Barranquilla revolutionists the month before, though he disavowed their movement.

COMBINATIONS, INDUSTRIAL AND COMMERCIAL.

Australia: A. D. 1909. — Decision of the Federal High Court on the Anti-Trust Law. — Prosecutions by the Government. — "The first case brought under the Federal Anti-Trust Law ended in June last in a decision of the High Court to the effect that two important sections of the Act were *ultra vires*, as the Constitution only empowered the Commonwealth to regulate foreign and inter State trade and gave it no authority to interfere with trade within a State. The Federal Government is now instituting proceedings against 27 firms which are alleged to belong to a coal combine trading with other countries and among the States of the Commonwealth. Each firm has been called upon to answer certain questions under the Act in question." — *Reuter Telegram, Melbourne, September* 27, 1909.

Canada: A. D. 1909. — Merger of Dominion Iron, Steel, and Coal Companies. — Cement

Combination. — The following is a Press despatch from Halifax, N. S., Nov. 18, 1909: "The formation of the Canada Steel Corporation, the proposed $70,000,000 merger of the Dominion Iron and Steel Company and the Dominion Coal Company, was made possible by the agreement of James Ross of Montreal, president of the Dominion Coal Company, to transfer to a syndicate of Toronto capitalists a portion of his holdings of the coal company stock. Final arrangements regarding the stock transfer will be made here to-day. President Ross owns coal company stock of a par value of $5,000,000, and, although he does not dispose of all this, he is to transfer enough to give control of the coal company to the Toronto capitalists, who have already acquired a controlling interest in the steel company. The plants of the Dominion Iron and Steel Company and the Dominion Coal Company are in Cape Breton, where they give employment to thousands of men, and where they have caused little fishing villages to spring up into flourishing cities." Announcement of the completion of the merger was made in December.

A. D. 1910. — Anti-Trust Bill in the Dominion Parliament. — A strongly constructed measure for controlling and regulating commercial and industrial combinations, to check restraints of trade and undue enhancement of prices, was brought into the Dominion House of Commons on the 18th of January, 1910, by the Minister of Labor, Mr. Mackenzie King, and its passage was said to be assured. Mr King's explanation of the Bill, as summarized for the Associated Press, was as follows:

"The Bill, Mr. King stated, was not designed to interfere with trade, but to protect the public from the operation of monopolies. The bill provides that if six or more persons show prima facie evidence to a superior court judge that a combine exists, which has unduly enhanced the price of a manufactured article, unduly limited the production of any commodity, or unduly restricted trade in any way, the judge shall order the minister of labor to have an investigation made. This shall be done by a board of three, one member to be appointed by those who complain, one by those complained against, and a chairman by the first two, and if they fail to select the judge who has heard the complaint shall act.

"This board has the full powers of a court to compel the attendance of witnesses and the production of evidence. The board must report to the minister and he must give the report the fullest publicity.

Two remedies are provided where a combination is reported to exist. The government may withdraw the tariff protection from the articles produced by the combine and bring the manufacturers into competition with the world.

"The other remedy is a provision that if the combine persists in its course after ten days there shall be a fine of $1,000 a day imposed until the abuse is remedied. There is also provision that when a patentee makes use of the protection of the patent act to restrict trade or unduly enhance prices his patent may be revoked.

"The act provides for its expeditious and thorough enforcement, and all expenses of investigation are to be borne by the goverment.

"Where question is raised as to the scope of the investigation, the board shall make it as thorough and complete as public interest requires. Boards are to conduct their investigations in public and the decision of two members shall be the decision of the board. Whenever the minister of labor believes that counsel should aid the investigation, the board may retain the services of a lawyer upon the consent of the minister of justice. Witnesses are to be allowed the same fees and traveling expenses allowed at the present in civil suits. With the consent of the minister of labor a board may employ experts to examine books and to report upon technical questions."

Germany: Corporation Reform as the Germans have handled it. — "Thirty years ago the German people went through corporation experiences much like our own. There, as here, the corporation, as originally designed, was a mere shell. There, as here, under the shelter of that shell, the property of the country was being transferred from the German people at large, even the little they had, to the few. There, thirty years ago, as here now, great corporate scandals were exposed. And there, as here, the human nature that is everywhere behind civilization eventually began to recoil. It began there before it began here, only because conditions reached a climax there earlier than here, and because we as a people were too prosperous and too busy to look even a little way beneath the surface of things.

"But when the work of reform did come there, it was a genuine reform. It did not content itself with indiscriminate denunciation, or with mere lawsuits. Nor did it die out, leaving the door still open to every character of corporation the cunning of men might conceive. Before a corporation can be organized in that country, it must prove, as in a court proceeding, its rightful title to a corporate existence. In the same way it must establish the amount and the character of the capitalization it is allowed to put out. When property is turned in, its value must be judicially ascertained. Upon officers and directors is not conferred supreme power; in the German corporation the shareholders' meeting is the counterpart of our New England town meetings — a genuine assembly intended to do something more than pass resolutions of approval. And every violation of trust, not merely to the public, but to the shareholder as well, is quickly punished with punishment that smarts. There is in the German corporation no room for one to do, with impunity, in his capacity as a corporation officer or promoter, what if done individually would land him in the penitentiary." — Judge Peter S. Grosscup, *The Corporation and the People* (*The Outlook*, *Jan.* 12, 1907).

The Cartels. — Industrial combinations, quite as effective as the Trusts of the United States, have been created in Germany on a wholly different plan. The constituent organizations in them, of capital and industry, are simply knitted or tied together by hard and fast agreements, instead of being fused into huge corporations, as the Trusts are. For the kind of covenant which unites them a military term has been borrowed, and they are called Cartels. The difference between the Cartel and the Trust is described by a Scottish writer, D. H. Macgregor, in his work on Industrial Combinations, as follows:

"The Cartel is an agreement for a time, the Trust is a permanent structure; the former is

therefore a factor in industry full of speculative possibilities, both as regards its actual operation, and because the 'residual' competition of parties who break away at the end of the period is considerably to be feared. . . . The principle of the pure Cartel is compensatory action. It is an organization in which certain producers deal with themselves, and exist for that purpose in a double relation; they are producers of goods, and purchasers of their own produce. What they stand to lose in one aspect they stand to gain in the other. . . .

"The operation is broadly as follows. The members of the Cartel, meeting as producers in general assembly, determine a price for their product which covers cost of production, being in fact practically a competitive price. This is the base or normal price (*Richtpreis*). Thus they assure themselves, in this capacity, of adequate remuneration. They then sell to the Syndicate, that is to themselves as members of the Syndicate, for what is called the 'taking over' or 'accounting' price (*Verrechnungspreis*) which is usually on the average higher than the base price, so that they have now created for themselves as producers a 'Cartel advantage.' The Syndicate then resells to the consumer, for a price which will be as high as it can get, but which varies with the competition to be met in different parts of the market; this price (*Verkaufspreis*) may not in some cases be so high as the taking-over price, or may not exceed it by more than the margin necessary to cover the Syndicate's expenses of management. . . . It is the Syndicate which figures in the public eye; and while it itself offers no sign of monopoly profit it shelters the companies which gain by its handling of their goods. It conceals monopoly dividends."—D. H. Macgregor, *Industrial Combination* (*G. Bell & Sons, Lond.*, 1906).

The Coal and Coke Cartels. — Their influence. — An elaborate history and description of the "Monopolistic Combinations in the German Coal Industry," by Francis Walker, was published for the American Economic Association in 1904. These are treated as representative, because, says Mr. Walker, "the most important and fundamental of all German cartelled industries" are those in mining and metallurgy. He traces their development from a beginning in 1858, when an association of the mining interests of the mining district of Dormund was founded In part, his conclusions as to the effect of the coal cartels are as follows:

"The German coal cartels have not had an injurious influence, in general, on the production of coal. More particularly they cannot be accused, justly, of unduly limiting production among themselves. Nor have they attempted to accomplish the same end by crushing outside competition, by unfair methods. It would be preposterous to say that they have hindered technical progress. The cost of production, on the other hand, probably has been somewhat increased by the preservation of weak and costly mines through participation in the cartels. In regard to prices, the policy of the coal cartels, on the whole, has been moderate, taking circumstances into consideration, while the policy of the coke cartel may be fairly pronounced extortionate. The prices of coal have been more stable than they would have been under free competition; during the *hausse* they were not screwed up so high as they might easily have been, but, on the other hand, they have not declined so quickly with the *baisse*. The like may be said of the coke prices, but, at the same time, they were exorbitant considered from the point of view of costs and profits. . . . The *déroute* of the iron industry was not due to the coal or coke cartels in any important degree, *i. e.*, even with low prices, disaster to the iron industry would have been inevitable. No other industry was affected so much as iron, and it is at least very questionable whether the cartels in general (excluding the coal cartels in particular) are to be blamed for the crisis. . . . That they are to be blamed for the ill-judged over-development of certain industries, which was apparently the real cause of the crisis, does not seem to be a just conclusion. On the other hand, the cartels may be accused, with more probability of truth, of retarding the convalescence of German industry by not reducing prices, and if this is true, the coal and coke cartels are specially to blame."—F. Walker, *Monopolistic Combinations in the German Coal Industry* (*Am. Economic Association*), 1904.

Growing magnitude of companies. — Industrial concentration. — "The tendency to industrial concentration is shown by the returns of public companies, which point to the growing domination of large undertakings. Of 4,749 registered public companies in 1895, 13.6 per cent. had a share capital not exceeding £5,000, but in 1906, of 5,000 such companies, only 9.6 per cent. had a capital of that amount; the companies with a capital of from £5,000 to £12,500 decreased from 14.0 to 10.4 per cent., and those with a capital of from £12,500 to £25,000 decreased from 16.9 to 14.2 per cent. On the other hand the companies with a capital of from £25,000 to £50,000 increased from 20.7 to 21.3 per cent.; those with a capital of from £50,000 to £250,000 increased from 28.5 to 35.0 per cent.; those with a capital of from £250,000 to £500,000 increased from 3.4 to 5.4 per cent., and those with a capital exceeding £500,000 increased from 2.9 to 4.1 per cent. In 1896 there were only two companies with a capital exceeding five millions; in 1906 there were nine such companies, and their combined capital was over seventy millions, having been more than doubled since 1896. In spite of this tendency towards the concentration of capital and the multiplication of large undertakings, however, Germany is still an interesting illustration of an industrial country which has not yet entirely gone over to the factory system of production. The handicrafts, the characteristic feature of which is the small, independent master-workman, surrounded by his handful of journeymen and apprentices, contend tenaciously, yet unfortunately with only partial success, against the on-coming tide of 'great capitalism' (private joint stock, and coöperative), and the house industries continue to afford employment to a multitude of workers of both sexes, estimated at half a million."—William H. Dawson, *The Evolution of Modern Germany*, *pp.* 59–60 (*Unwin, London; Scribner's, N. Y.*, 1909).

"Among the home interests of the country nothing loomed up so large last year [1904] as the subject of industrial combinations. The process of consolidating industries and banks into powerful organizations again made gigantic

strides; and the public mind, dazed and disquieted, is wondering what will be its final outcome. All the largest steel manufacturers have united in an association that shall have complete control of the steel and iron products of the country; and it is already effecting agreements with manufacturers of other countries for parceling out the world's markets. At the same time the Coal Syndicate was reorganized to include all the independent producers of the West; and in connection with it, a great shipping and selling company was formed for the purpose of controlling the retail trade and eliminating recalcitrant dealers. These steel and coal combinations are working in complete harmony, and no independent manufacturer can exist against their will.

"In that great industrial region many large iron companies had come into possession of coal mines. In order to induce these to put their mines into the Syndicate, they were given the right to produce, over and above their allotments, all the coal that they might need for their own furnaces. A new impetus was thus given to the process of consolidation. Strong coal companies hastened to absorb iron establishments, in order to earn larger profits by consuming their own coal in indefinite quantities. Furthermore, as the allotments were fixed absolutely for a long period, the strongest companies proceeded to buy weaker, less economically worked collieries, in order to shut them down and produce their allotments elsewhere at lower cost. This movement assumed large proportions. Miners by the thousand had to betake themselves to other parts of the country, and entire communities were threatened with depopulation. Industrial towns held indignation meetings, to protest, and to demand the nationalization of the mines; and excited operatives are still holding conferences to discuss a general strike. The Government has sent a commission to inquire into the movement; and the Minister of Commerce has urged the coal magnates to proceed as mildly as possible.

"This powerful concentric movement of industries has taken a strong hold upon the thoughts of people and Government alike. The public is deeply concerned at the growth of private monopolies, and many persons who had hitherto favored letting economic development take its own course now call for drastic measures of prevention and repression. Country squires of the most conservative type advocate the nationalization of all coal deposits; and it is already asserted that a majority of the Prussian Di[illegible] would vote for such a measure. This convergence of the views of extreme Conservatism and radical Socialism is certainly one of the odd results of the movement under discussion, — and one of the most instructive. The natural trend of events is unquestionably in the direction of some form of socialism. The Social Democracy clearly perceives this, and so hails every industrial consolidation as but another milestone on the way to state collectivism." — W. C. Dreher, *Recent Events in Germany* (*Atlantic Monthly, March*, 1903).

International: of Transatlantic Shipping Companies. — Agreements with the British Government. — Announcement was made in October, 1902, of the incorporation on the 1st of that month, under a New Jersey charter, of the International Mercantile Marine Company, with a capital of $120,000,000, and an issue of 4½ per cent. bonds to the amount of $75,000,000. The combination included the American, the Red Star, the White, the Atlantic Transport, the Leyland and the Dominion lines. Both American and British capitalists were represented in the board of directors, the former in the majority. Several partners in the firm of J. Pierpont Morgan & Co. were included, and Mr. Morgan was understood to be the architect of the combination; but he did not appear personally in its organization.

The first step towards such a shipping combination had been taken sixteen years before, when the British Inman steamship line was taken over by the International Navigation Company, made up of Americans, at the head of whom was Mr. Clement A. Griscom, of Philadelphia. "The British Government promptly withdrew the liberal subsidy which it had been paying to the Inman liners; but Mr. Griscom and his comrades brought the *New York* and *Paris* beneath the Stars and Stripes, built the *St. Louis* and *St. Paul*, secured a subsidy from the United States and gave the first-class British lines a most formidable competitor. Indeed, commercial rivalry in high grade ships on the North Atlantic soon became too keen to permit of reasonable dividends and Mr. Griscom found British ship-owners in a responsive mood when he broached anew the great idea of an international combination.

"This union was made all the easier by the fact that meanwhile another important British steamship concern, the Leyland line, had been acquired by Mr. J. Pierpont Morgan in the spring of 1901. This line, itself the fruit of several consolidations, controlled the largest British tonnage in the North Atlantic trade. It owned no fast mail ships, no greyhounds. But it did possess forty or fifty good, useful steamships of moderate speed, many of them of large tonnage, and fit for passengers as well as freight. The main Leyland service lay between Boston or New York on this side, and Liverpool or London on the other, and the business of the company had been so profitable for a long term of years that its shares were quoted at a handsome premium. Mr. Morgan paid a generous price for his maritime investment. It is said that he gave £14 10s. for each £10 share, or a bonus of 45 per cent. But amazement at Mr. Morgan's 'liberality' ceased when the next stage in the great, far-sighted negotiation was unfolded

"This was the dramatic uniting of the Leyland [illegible] with the American and Red Star lines of the [illegible]rnational Navigation Company, and the Atlantic Transport line, another British steam fleet [illegible]wned by American capital. Later still it transpired that the famous White Star line of fast mail, passenger, and freight ships and the smaller but excellent Dominion line were embraced in the huge consolidation. The White Star was one of the two lines — the Cunard was the other — which performed the British mail service between Queenstown and New York. Its fleet included the great liners *Oceanic* and *Celtic*, the swift *Teutonic* and *Majestic*, and the favorite *Britannic* and *Germanic* which had held ocean records in their day, together with a considerable number of large and efficient freighters. The American purchase of the White Star line was long disputed, and when it was finally confirmed, something like

consternation seized the British press and people, for the White Star fleet had been regarded as distinctively a British institution as the Bank of England. Its fast ships received not only the mail pay of the post-office, but the subventions of the Admiralty, and were enrolled on the 'merchant cruiser' list." — Winthrop L. Marvin, *The Great Ship "Combine"* (*American Review of Reviews, Dec.*, 1902).

The anxieties with which the combination was regarded at first in Great Britain were allayed materially by Mr. G. Balfour, President of the Board of Trade, who made public, in a speech at Sheffield, the terms of an arrangement that had been made by the Government with the Cunard Company, on one hand, and the Combination on the other. The Cunard Company, he said, "pledged themselves to remain in every respect a British company, managed by British directors — the shares not to be transferred to any but British subjects. Their ships were to be officered by British officers. They also engaged to construct two vessels of twenty-four to twenty-five knots which, as well as the entire Cunard fleet, the Admiralty would have the right to charter or purchase at any time on terms fixed in the agreement. The money for the construction of the fast steamers would be advanced to the company at the rate of 2½ per cent. interest, while in lieu of the present Admiralty subvention — £28,000 a year for the contingent use of three ships — the company would receive £150,000 a year. With Mr. Pierpont Morgan, the head of the Shipping Combination, who had shown the utmost readiness to meet the wishes of His Majesty's Government, it had been agreed that the British companies in the Combination should remain British, not merely in name but in reality. The majority of their directors were to be British subjects. All their ships now flying the British flag were to continue to fly it, and at least one-half of those hereafter to be built for the Combination would likewise fly British colours, be commanded by British officers, and manned in reasonable proportion by British sailors. On the other hand, the combined companies would continue to be treated, as heretofore, on a footing of equality with other British companies in respect of any services, whether postal, or military, or naval, which His Majesty's Government might require from the British mercantile marine. It had been further stipulated that in the event of the Combination pursuing a policy hostile to our mercantile marine or to British trade, the King's Government should have the right to terminate the agreement."

United States: A. D. 1900. — Definition of the term Industrial Combination formulated at the Census Bureau. — Statistics as collected in 1900. — "The officials of the Census Office, in order to prevent misconceptions and insure consistency in the plan and system of tabulation, formulated the following definition of the term 'industrial combination':

"'For the purpose of the Census, the rule has been adopted to consider no aggregation of mills an industrial combination, unless it consists of a number of formerly independent mills which have been brought together into one company under a charter obtained for that purpose. We therefore exclude from this category many large establishments comprising a number of mills, which have grown up, not by combination with other mills, but by the erection of new plants or the purchase of old ones.' . . .

"So far as can be ascertained from the data in the Census Office, the number of these industrial consolidations is 183. They control 2203 separate plants, scattered throughout the United States, 2029 being active and 174 idle during the census year. For 56 of the idle plants no returns could be obtained, making the total number of reporting plants 2147. The 183 combinations extend to almost all lines of industry, producing articles of luxury, materials essential to the upbuilding and growth of the country, and even the very necessities of life. Fully 50 per cent. of these combinations were chartered just prior to or during the census year; and it is noteworthy that the epidemic of industrial consolidation, as far as the so-called monopolies are concerned, has been practically confined to the past four years. It is evident, therefore, that the disease — if it be regarded as such — has spread very rapidly.

"Naturally enough, iron and steel, with 69 combinations, heads the list. The number of reporting plants engaged in this industry is 469, and the capital invested, consisting of land, buildings, machinery, tools and implements, and cash and sundries, is valued at $848,000,000." — W. R. Merriam, "*Trusts" in the Light of Census Returns* (*Atlantic Monthly, March*, 1902).

A. D. 1901-1903. — The question of Federal Control and Regulation. — Urgency of President Roosevelt for effective legislation. — In his first Message to Congress, three months after his succession to the Presidency, President Roosevelt expressed his mind frankly and clearly on the then increasing demand in the country for more stringent measures of government, to control and regulate the exercise of the power which great aggregations of incorporated capital have created in recent times. In part, he then said:

"The tremendous and highly complex industrial development which went on with ever accelerated rapidity during the latter half of the nineteenth century brings us face to face, at the beginning of the twentieth, with very serious social problems. The old laws, and the old customs which had almost the binding force of law, were once quite sufficient to regulate the accumulation and distribution of wealth. Since the industrial changes which have so enormously increased the productive power of mankind, they are no longer sufficient. The growth of cities has gone on beyond comparison faster than the growth of the country, and the upbuilding of the great industrial centers has meant a startling increase, not merely in the aggregate of wealth, but in the number of very large individual, and especially of very large corporate, fortunes. . . . The process has aroused much antagonism, a great part of which is wholly without warrant. It is not true that as the rich have grown richer the poor have grown poorer. On the contrary, never before has the average man, the wage-worker, the farmer, the small trader, been so well off as in this country and at the present time. There have been abuses connected with the accumulation of wealth; yet it remains true that a fortune accumulated in legitimate business can be accumulated by the person specially benefited only on condition of conferring immense incidental benefits upon others. . . . The captains of industry who have

driven the railway systems across this continent, who have built up our commerce, who have developed our manufactures, have on the whole done great good to our people. Without them the material development of which we are so justly proud could never have taken place. . . . It cannot too often be pointed out that to strike with ignorant violence at the interests of one set of men almost inevitably endangers the interests of all. . . . Much of the legislation directed at the trusts would have been exceedingly mischievous had it not also been entirely ineffective. In accordance with a well-known sociological law, the ignorant or reckless agitator has been the really effective friend of the evils which he has been nominally opposing.

"All this is true; and yet it is also true that there are real and grave evils, one of the chief being over-capitalization because of its many baleful consequences; and a resolute and practical effort must be made to correct these evils. There is a widespread conviction in the minds of the American people that the great corporations known as trusts are in certain of their features and tendencies hurtful to the general welfare. This springs from no spirit of envy or uncharitableness, nor lack of pride in the great industrial achievements that have placed this country at the head of the nations struggling for commercial supremacy. . . . It is based upon sincere conviction that combination and concentration should be, not prohibited, but supervised and within reasonable limits controlled; and in my judgment this conviction is right. . . . The first essential in determining how to deal with the great industrial combinations is knowledge of the facts — publicity. In the interests of the public, the Government should have the right to inspect and examine the workings of the great corporations engaged in interstate business. . . .

"When the Constitution was adopted, at the end of the eighteenth century, no human wisdom could foretell the sweeping changes, alike in industrial and political conditions, which were to take place by the beginning of the twentieth century. At that time it was accepted as a matter of course that the several States were the proper authorities to regulate so far as was then necessary, the comparatively insignificant and strictly localized corporate bodies of the day. The conditions are now wholly different and wholly different action is called for. I believe that a law can be framed which will enable the National Government to exercise control along the lines above indicated; profiting by the experience gained through the passage and administration of the Interstate-Commerce Act. If, however, the judgment of the Congress is that it lacks the constitutional power to pass such an act, then a constitutional amendment should be submitted to confer the power." — *President's Message to Congress, Dec.* 3, 1901.

In the following summer, during a tour which he made through some of the New England States the President gave prominence to the same subject in his addresses, emphasizing the necessity of federal legislation to arm the General Government with more effective authority for regulating the action of corporations engaged in interstate trade. In speaking at Providence especially, his remarks caused a great stir of feeling in the country, and seem to have signalled the beginning of an open array of hostile corporate interests against him. On that occasion he spoke partly as follows:

"Those great corporations containing some tendency to monopoly, which we have grown to speak of rather loosely as trusts, are the creatures of the State, and the State not only has the right to control them, but is in duty bound to control them wherever the need for such control is shown. There is clearly a need of supervision — need to exercise the power of regulation on the part of the representatives of the public, wherever, as in our own country at the present time, business corporations become so very strong, both for beneficent work and for work that is not always beneficent. It is idle to say that there is no need for such supervision. A sufficient warrant for it is to be found over and over again in any of the various evils resulting from the present system, or, rather, lack of system.

"There is in our country a peculiar difficulty in the way of exercising such supervision and control because of the peculiar division of governmental power. When the industrial conditions were simple, very little control was needed, and no trouble was caused by the doubt as to where power was lodged under the constitution. Now the conditions are complicated, and we find it difficult to frame national legislation which shall be adequate, while as a matter of practical experience State action has proved entirely insufficient, and in all human probability cannot or will not be made sufficient, to meet the needs of the case. Some of our States have excellent laws — laws which it would be well indeed to have enacted by the national legislature. But the wide differences in these laws, even between adjacent States, and the uncertainty of the power of enforcement result practically in altogether insufficient control.

"I believe that the nation must assume this power of control by legislation, and if it becomes evident that the constitution will not permit needed legislation, then by constitutional amendment. The immediate need of dealing with trusts is to place them under the real, not nominal, control of some sovereign to which, as its creature, the trusts shall owe allegiance, and in whose courts the sovereign's orders may with certainty be enforced. That is not the case with the ordinary so-called 'trust' to-day, for the trust is a large State corporation, generally doing business in other States also, and often with a tendency to monopoly. Such a trust is an artificial creature not wholly responsible to or controllable by any legislature, nor wholly subject to the jurisdiction of any one court. Some governmental sovereign must be given full power over these artificial and very powerful corporate beings. In my judgment this sovereign must be the national government. When it has been given full power, then this full power can be used to control any evil influence, exactly as the government is now using the power conferred upon it under the Sherman Anti-Trust law.

"Even when the full power has been conferred it would be highly undesirable to attempt too much or to begin by stringent legislation. The mechanism of modern business is as delicate and complicated as it is vast, and nothing would be more productive of evil to all of us, and especially to those least well off in this world's

goods, than ignorant meddling with this mechanism, and, above all, if the meddling was done in a spirit of class or sectional rancor. It is desirable that this power should be possessed by the nation, but it is quite as desirable that the power should be exercised with moderation and self-restraint. The first exercise of that power should be the securing of publicity among all great corporations doing an interstate business. The publicity, though non-inquisitorial, should be real and thorough as to all important facts with which the public has concern. The full light of day is a great discourager of evil. Such publicity would by itself tend to cure the evils of which there is just complaint, and where the alleged evils are imaginary, it would tend to show that such is the case. When publicity is attained it would then be possible to see what further should be done in the way of regulation.

"Above all, it behooves us to remember not only that we ought to try to do what we can, but that our success in doing it depends very much upon our neither attempting nor expecting the impossible. . . .

"I see no promise of a complete solution for all the problems we group together when we speak of the trust question. But we can make a beginning in solving these problems, and a good beginning if only we approach the subject with a sufficiency of resolution, of honesty and of that hard common sense which is one of the most valuable, and, unfortunately, not one of the most common, assets in the equipment of any people. I think the national administration has shown its firm intention to enforce the laws as they now stand on the statute books without regard to persons, and I think that good has come from this enforcement. I think, furthermore, that additional legislation should be had, and can be had, which will enable us to accomplish much more than has been accomplished along these same lines." — Theodore Roosevelt, *Address at Providence, Aug.* 23, 1902 (*New York Tribune, Aug.* 24, 1902).

In his next Message to Congress, President Roosevelt renewed his urgency for the needed legislation. "No more important subject can come before the Congress," he said, "than this of the regulation of interstate business. This country cannot afford to sit supine on the plea that under our peculiar system of government we are helpless in the presence of the new conditions, and unable to grapple with them or to cut out whatever of evil has arisen in connection with them. The power of the Congress to regulate interstate commerce is an absolute and unqualified grant, and without limitations other than those prescribed by the Constitution. The Congress has constitutional authority to make all laws necessary and proper for executing this power, and I am satisfied that this power has not been exhausted by any legislation now on the statute books."— *President's Message to Congress, Dec.* 2, 1902.

A year later, when the President addressed his Message to the next Congress, at the opening of its first session, he was able to say: "The country is especially to be congratulated on what has been accomplished in the direction of providing for the exercise of supervision over the great corporations and combinations of corporations engaged in interstate commerce. The Congress has created the Department of Commerce and Labor, including the Bureau of Corporations, with for the first time authority to secure proper publicity of such proceedings of these great corporations as the public has the right to know. It has provided for the expediting of suits for the enforcement of the Federal anti-trust law; and by another law it has secured equal treatment to all producers in the transportation of their goods, thus taking a long stride forward in making effective the work of the Interstate Commerce Commission."—*President's Message to Congress, Dec.* 7, 1903.

A. D. 1901-1906. — A summary of governmental action against corporate wrongdoers, by Elihu Root. — Legislation. — Litigation. — Court decisions. — "The act creating the bureau of corporations, the act expediting the trial of trust cases, the anti-rebate act, the act for the regulation of railroad rates, have made possible redress which was impossible before. Under the direction of two successive Attorney Generals of the first order of ability, sincerity and devotion, in hundreds of courts, incessant warfare has been waged and is being waged under the federal laws against corporate wrongdoers.

"The Northern Securities Company, which sought to combine and prevent competition between two great continental railroads, has been forced to dissolve by the judgment of the Supreme Court of the United States. The methods of the Beef Trust in combining to suppress competition in the purchase of livestock and the sale of meat have been tried and condemned, and the trust has been placed under injunction to abandon these practices by judgment of the Supreme Court. The combination of paper manufacturers in the territory from Chicago to the Rocky Mountains has been dissolved by the judgment of the Supreme Court, and the combination has been abandoned, and the price of white paper in that territory has gone down 30 per cent. The Retail Grocers' Association in this country has been dissolved by decree of the court. The elevator combination in the West has been dissolved in like manner. The salt combination west of the Rocky Mountains has been dissolved by decree of the court. The Wholesale Grocers' Association in the South, the meat combination and the lumber combination in the West, the combination of railroads entering the city of St. Louis to suppress competition between the bridges and ferries reaching that city; the Drug Trust, which suppresses competition all over the country, are being vigorously pressed in suits brought by the federal government for their dissolution. The salt combination has been indicted and convicted and fined for failing to obey the judgment of dissolution. The Beef Trust has been indicted for failing to obey the injunction against them, and have been saved so far only by a decision that they had secured temporary immunity by giving evidence against themselves. One branch of the Tobacco Trust is facing an indictment of its corporations and their officers in the federal court in New York, and the other branches are undergoing investigation. The lumber combination in Oklahoma is under indictment. The Fertilizer Trust, a combination of thirty-one corporations and twenty-five individuals to support and fix prices, has been indicted, the indictments have been sustained by the courts, and the combination has been dissolved. The ice combination of the

District of Columbia is facing criminal trial. Special counsel are investigating the coal combination, and special counsel are investigating the Standard Oil combination.

"Three of the causes won in the Supreme Court of the United States have furnished decisions of the utmost importance. In the Tobacco Trust case of Hale agt. Henkel, the Supreme Court denied the claim of the trust corporations to be exempt under the Constitution from furnishing testimony against themselves by the production of their books and papers before a federal grand jury. Thus, the protection of secrecy for corporate wrongdoing is beaten down. In the Northern Securities case the Supreme Court held that a wrong accomplished by means of incorporating in accordance with the express provision of the New Jersey statute was just as much a violation of federal law as if there had been no incorporation. Thus, the state rights defence of protection from favoring state statutes is beaten down. In the Beef Trust case the Supreme Court held that, although the business of manufacture was carried on within the limits of a single state, yet the purchase of the raw material in different states and the sale of the finished product in different states brought the business within the interstate commerce clause of the Constitution and gave the federal government authority over it. Thus, the defence that the state alone can deal with manufacturing corporations, however widespread their business, is beaten down.

"The obstacles to the enforcement of the federal anti-trust act thus removed are obstacles which stood in the way of all proceedings, and they had to be cleared away before any proceedings of the same character against the same classes of corporations could be successfully maintained. They have been removed, not by newspaper headlines and denunciation, but by skill, ability, and energy of the highest order.

"After the Elkins anti-rebate law was passed by Congress in 1903 it was supposed, and the Interstate Commerce Commission reported, that the railroads had substantially abandoned giving rebates. Their good resolutions do not seem, however, to have lasted. The struggle for business enabled the shippers soon to secure a renewal of rebates, or, by ingenious devices advantages equivalent to rebates. Thereupon the Department of Justice began active prosecutions for the enforcement of the law. Fifty-three indictments have been found against hundreds of defendants and covering many hundreds of transactions. There have been fourteen criminal convictions. Fourteen individuals have been fined, to the gross amount of $66,125. Nine corporations have been fined to the amount of $253,000. Thirty-five indictments are ready for trial in their regular order upon the court calendar. The original statute provided only for punishment by fine. Last winter it was amended by providing for punishment by imprisonment, and, if the fines imposed under the original law shall not prove to have stopped the practice, we shall see whether fear of the penitentiary under the amendment will not do so.

"Under this statute also it was necessary to sweep away defences which stood as barriers to general prosecution, and in the New York, New Haven & Hartford Railroad case, decided by the Supreme Court February 19 of this year, and the Milwaukee Refrigerator Transit case, decided in the Seventh Circuit on May 31 of this year, the courts have held that the substance and not the form is to control in the application of the statute, and that, however the transaction may be disguised, an unlawful discrimination can be reached and punished. The way is therefore cleared for all other prosecutions.

"The Railroad Rates act, which was the subject of such excited discussion during the last session of Congress, has already justified itself. Since the passage of the act, less than five months ago, there have been more voluntary reductions of rates by our railroads than during the entire nineteen years of the previous life of the Interstate Commerce Commission. On the single day of the 29th of August, 1906, two days before the act went into force, over five thousand notices of voluntary reduction of rates were filed with the Interstate Commerce Commission by the railroads of the United States."—Elihu Root, *Speech at Utica, Nov.* 1, 1906 (*New-York Tribune, Nov.* 2, 1906).

A. D. 1903-1906.—The "Beef Trust" suits and investigations.—The United States *v.* Swift & Co. et al.—Commissioner Garfield's investigation.—Indictment of Armour & Co. and others.—Immunity decision of Judge Humphrey.—Fines for receiving rebates from railways.—In the case known as that of the United States *v.* Swift & Co. et al., the defendants were seven corporations, one copartnership, and twenty-three other persons (commonly styled "the Beef Trust"), charged with violations of the anti-trust law, by combination in restraint of the trade which they conducted, namely, the buying of live stock, slaughtering the same in different states and selling the meats thus produced. It was affirmed by the Government that they, together, controlled about sixty per cent. of the total volume of that trade in the country, and that if the alleged combination among them did not exist they "would be and remain in competition with each other"; but that by such "unlawful combination and conspiracy" they were directing and requiring their agents (1) not to bid against one another in the live-stock markets of the different States; (2) to bid up prices for a few days so as to induce cattlemen to send their stock to the stock-yards; (3) to fix prices at which they would sell, and hence, when necessary, to restrict shipments of meat; (4) to establish a uniform rule of credit to dealers and to keep a blacklist; (5) to make uniform and improper charges for cartage; and (6) to obtain less than lawful rates from the railways to the exclusion of all competitors.

The case, on motion for injunction, was tried first in the Circuit Court of the Northern District of Illinois, Judge Peter S. Grosscup. The Opinion of the Court, given April 18, 1903, held that, under the definition of the term by the Supreme Court in the Trans-Missouri Freight Association Case (see, in this vol., RAILWAYS: UNITED STATES: A. D. 1890-1902), "there can be no doubt that the agreement of the defendants to refrain from bidding against each other in the purchase of cattle is combination in restraint of trade: so also their agreement to bid up prices to stimulate shipments, intending to cease from bidding when the shipments have arrived. The same result," continued the judge,

"follows when we turn to the combination of defendants to fix prices upon and restrict the quantities of meat shipped to their agents or their customers. Such agreements can be nothing less than restriction upon competition, and, therefore, combination in restraint of trade; and thus viewed, the petition, as an entirety, makes out a case under the Sherman Act. . . . The demurrer is overruled, and the motion for preliminary injunction granted."

On appeal, the case went to the Supreme Court, where it was argued in January, 1905, and decided on the 30th of the same month. The Opinion of the Court, rendered by Justice Holmes, with no dissent, affirmed, but modified, the decree of injunction issued by Judge Grosscup; the aim of the modifications being to give more definiteness to the decree. "The defendants," said Justice Holmes, for example, "cannot be ordered to compete, but they properly can be forbidden to give directions or to make agreements not to compete. The injunction follows the charge. No objection was made on the ground that it is not confined to the places specified in the bill. It seems to us, however, that it ought to set forth more exactly the transactions in which such directions and agreements are forbidden. The trade in fresh meat referred to should be defined somewhat as it is in the bill, and the sales of stock should be confined to sales of stock at the stock-yards named, which stock is sent from other States to the stock-yards for sale or is bought at those yards for transport to another State." — *Federal Anti-Trust Decisions, 1900–1908, v. 2, prepared and edited by James A. Finch, by direction of the Attorney-General (Washington: Gov't Printing Office, 1907).*

Investigation by the Commissioner of Corporations. — On the 7th of March, 1904, the House of Representatives adopted a resolution requesting the Secretary of Commerce and Labor to "investigate the causes of the low prices of beef cattle in the United States since July 1st, 1903, and the unusually large margins between the prices of beef cattle and the selling prices of fresh beef, and whether the said conditions have resulted in whole or in part from any contract, combination, in the form of trust or otherwise, or conspiracy, in restraint of commerce among the several States and Territories or with foreign countries; also, whether said prices have been controlled in whole or in part by any corporation, joint stock company, or corporate combination engaged in commerce among the several States or with foreign nations; and, if so, to investigate the organization, capitalization, profits, conduct and management of the business of such corporations, companies, and corporate combinations, and to make early report of his findings according to law."

In compliance with this resolution, the Commissioner of Corporations, Mr. James R. Garfield, went to Chicago in April and began the requested investigation, which was prosecuted throughout most of the ensuing year. "The inquiries of the Bureau of Corporations were naturally concerned chiefly with the six great concerns which, by the injunction of 1902, were grouped together, and which were popularly considered as the Beef Trust. The 'Big Six,' in the approximate order of their magnitude as indicated by the number of animals slaughtered, are: Swift & Co., with seven large plants; Armour & Co., and the Armour Packing Company, which have the same stockholders, and which together operate five packing-houses; the National Packing Company, with eight comparatively large plants and two or three minor ones; Morris & Co., operating three plants; the Cudahy Packing Company, with three plants in the middle West and a minor one at Los Angeles; and the Schwarzschild & Sulzberger Company, operating three plants. Nearly all of the important packing-houses of these six companies are situated in the eight great live-stock markets, — Chicago, Kansas City, South Omaha, East St Louis, South St. Joseph, Fort Worth, South St. Paul, and Sioux City."

As for the National Packing Company, it grew, apparently, out of an abortive scheme for the consolidation of the other five concerns which was rumored in 1902. "Shortly prior to the formation of this company the Armour interests had acquired control of the G. H. Hammond Company and the Omaha Packing Company, the Swifts had secured the Anglo-American Provision Company and the Fowler Packing Association, and the Morris family had become dominant in the United Dressed Beef Company of New York. The National Packing Company, organized in 1903, took over the control of the various corporations thus previously acquired by the three packing interests named, and has since absorbed two or three other smaller concerns. The directorate of the National Company consists almost wholly of representatives of the Armour, Swift, and Morris companies. Aside from this community of interest, the bureau finds that there is no important inter-ownership of securities among the six leading packing companies."

"The 'Big Six' are by no means the only slaughterers of cattle in the United States. They, with a few minor affiliated concerns, killed 5,521,697 cattle in 1903, while, from the best available data, the Bureau of Corporations computes the total slaughter of the country at about 12,500,000. But the proportion of 45 per cent, thus indicated by no means measures the full economic significance of the six great packers. Their importance lies in the fact that they are the only concerns which do an extensive business in shipping dressed beef. . . . The 'Big Six' kill about 98 per cent. of the cattle slaughtered at the eight leading Western markets above named." — Edward Dana Durand, *The Beef Industry and the Government Investigation (American Review of Reviews, April, 1905).*

Early in March, 1905, just before the adjournment of Congress, his report of it, in part, was transmitted by the President to Congress. The following summary of important facts set forth in the extended report was published in *The Outlook* of the following week:

"The report as sent to Congress deals with the prices of cattle and dressed beef, the margins between such prices, and the organization, conduct, and profits of the corporations engaged in the beef-packing business. In some respects the conclusions presented are distinctly favorable to the packers; in others, quite as unfavorable. It appears that the profits of the six great companies whose operations were covered by the investigation were very much smaller during the years 1902 and 1903 than the public had been led

to suppose, — that, in fact, for a part of that period the business was conducted at an actual loss. The percentage of profit on the gross volume of business during the years 1902–4 was comparatively low. That realized by Swift & Co. is placed at two per cent. This, however, we repeat, is the percentage on total sales, which is a very different thing from profit on the investment. It is a well-known fact that the actual capitalization of the packing companies is very much less than the annual volume of business. From statements made by the six companies to the Bureau of Corporations it appears that their gross business is not less than [illegible],000,000 per year, while their nominal capitalization is only $88,000,000, exclusive of $5,000,000 bonds of Swift & Co. On the other hand, it is practically impossible, as the report shows, to determine accurately just what proportion of the total investment represents plants and properties concerned with the beef industry exclusively. Still, it is obvious that Swift & Co.'s net profit of two per cent. on their sales would amount to very much more than two per cent. on their investment. The report makes an approximate estimate of twelve per cent.

"On one other count the report is favorable to the companies. It declares that they are apparently not overcapitalized. This conclusion, it is true, is robbed of some of its exculpatory force when the private-car system is taken into consideration. It is shown that the companies' profits on refrigerator cars, derived from mileage paid by the railroads, has ranged from 14 to 22 per cent. The report gives clear and definite information as to the trust's field of operations. It shows that the six companies slaughtered in 1903 only about 45 per cent. of all the cattle killed in that year, but that these companies slaughter nearly 98 per cent. of all the cattle killed in the leading Western packing centers, and that they control a large percentage of the trade in beef in many large cities — 75 per cent. in New York, 85 per cent. in Boston, 95 per cent. in Providence, and in a number of other important cities from 50 to 90 per cent. In all these centers of population the consumer is now paying more for meats than ever before, while the cattle-grower on the Western plains is receiving less for his beeves. These two facts are doubtless capable of explanation, but the published results of the investigation ordered by Congress throw little light on the matter."

Case of the United States v. Armour & Co. et al. — Soon after the publication of the report of the Bureau of Corporations a special Federal Grand Jury at Chicago began the investigation of charges brought by the Attorney-General of the United States against five of the corporations engaged in the meat-packing business and seventeen of their officials. An indictment was returned by the Grand Jury on the 1st of July, 1905, charging, in a number of counts, persistent violation of the injunction laid on these corporations and their officials by Judge Grosscup with affirmation by the Supreme Court, and continued combination in restraint of trade, — by requiring their purchasing agents to refrain from bidding in good faith against one another; by agreements that fixed the prices of beef; by restricting sales to maintain prices, etc. On the trial of the indictment, which was begun on the 29th of January and concluded on the 21st of March, 1906, the defendants claimed immunity, under that clause of the Fifth Amendment to the Constitution of the United States which reads: "Nor shall any person be compelled in any criminal case to be a witness against himself." Their claim for immunity under this constitutional prescription was founded on the fact that "upon the lawful requirement of the Commissioner of Corporations" they "had furnished evidence, documentary and otherwise, of and concerning the matters charged in the indictment"; and that a section of the Act creating the Department of Commerce and Labor provides that persons testifying or producing evidence before the Commissioner shall be entitled to the immunities conferred by the Act in relation to testimony before the Interstate Commerce Commission of February 11, 1893. Judge Humphrey, of the U. S. District Court, before whom the case was tried, sustained the plea in his charge to the jury, so far as concerned the individual defendants, saying: "Under the law of this case, the immunity pleas filed by the defendants will be sustained as to the individual defendants, the natural persons, and denied as to the corporations, the artificial persons, and your verdict will be in favor of the defendants as to the individuals, and in favor of the Government as to the corporations."

Fines for accepting rebates. — The same Federal Grand Jury at Chicago which returned the indictments dealt with in the case mentioned above brought another indictment against four men in the employ of one of the meat-packing companies, who were accused of unlawfully combining and agreeing to solicit rebates for their corporation from the Michigan Central, the Chicago, Rock Island and Pacific, the Grand Trunk Western, the Lehigh Valley, the Boston and Maine, and the Mobile and Ohio railroads. It was charged that the defendants conspired with one another in presenting to the railroad companies pretended claims for damages which were in fact claims for rebates. They were brought for trial before Judge Humphrey in September, 1905, and pleaded guilty. The Judge then pronounced sentence on them as follows: "Punishment for this offense as fixed by Congress has a wide range, giving the Court unusual latitude, ranging from a nominal fine without imprisonment to a heavy fine and two years' imprisonment, all in the discretion of the Court. I am disposed to consider this case with reasonable moderation. The sentence of the Court in the case of the defendant Weil will be a fine of $10,000 and costs, and commitment to the county jail until the fine is paid, and in the cases of Todd, Skipworth, and Cusey a fine of $5,000 and costs, with the same provision in regard to payment."

A. D. 1904-1909. — The Standard Oil Company. — Federal Goverment investigation of its methods of business. — Criminal prosecutions for violation of the law against rebates. — The $29,000,000 fine and its annulment. — Acquittal of the Company. — After a dozen years or more of slight oil production in Kansas, that state became quite suddenly, in 1904, one of the important sources of petroleum supply. The Standard Oil Company had taken care to be prepared for whatever development might occur, and had organized its operations in this western field under the name of the Prairie Oil and Gas Company, of Kansas. Its refineries were

ready to furnish a market to the Kansas producers of crude oil, and they had no other. Independent enterprises in oil refining were made quite impossible, and the Prairie Oil and Gas Company was complete master of the situation. The Kansas oil producers were soon writhing under its dictation of prices and rules of dealing, as the Pennsylvanians had been years before, and the Kansas Legislature came promptly to their rescue. In the winter of 1904–5 it passed five vigorous acts; authorizing the establishment of a State oil refinery; making pipe lines common carriers within the State; placing them under the jurisdiction of the State board of railroad commissioners; fixing maximum rates for the transportation of oil by freight or pipe line; and, finally, prohibiting discrimination between localities in the sale of any commodities. Furthermore, the anti-trust laws of the State were brought into action against the Standard Oil Company and the railroads accused of giving it special rates and privileges.

At the same time, the Kansas situation was brought to the attention of Congress and the Federal Executive. On motion of a Kansas representative, the lower House of Congress, in February, adopted a resolution calling on the President for an investigation of the methods of business pursued by the Standard Oil Company. The desired investigation was conducted in the following year by Commissioner Garfield, the head of the Bureau of Corporations, and his report was communicated to Congress on the 5th of May, 1906, with an accompanying special message, by the President. Nothing of the detail of facts in the report can be given here; but the conclusions drawn from them by the Commissioner were summed up by him, as follows:

"Upon the request of its attorney, all the essential facts discovered by this Bureau were presented to the company at the close of the investigation, and an exhaustive statement relating thereto was made by its chief traffic officer. There was no denial of the facts found, but explanations of particular situations were offered, and it was urged that the facts did not show any violation by the Standard of the letter or spirit of the interstate-commerce law. A most careful review of the facts and the explanations leads to the following conclusions:

"The Standard Oil Company has habitually received from the railroads, and is now receiving, secret rates and other unjust and illegal discriminations.

"During 1904 the Standard saved about three-quarters of a million dollars through the secret rates discovered by the Bureau of Corporations, of course there may be other secret rates the Bureau has not discovered. This represents the difference between the and the rates actually paid. Many criminations were clearly in violation of interstate-commerce law, and others, whether technically illegal or not, had the same effect upon competitors. On some State business secret rates were applied by means of rebates.

"These discriminations have been so long continued, so secret, so ingeniously applied to new conditions of trade, and so large in amount as to make it certain that they were due to concerted action by the Standard and the railroads.

"The Standard Oil Company is receiving unjust discriminations in open rates.

"The published rates from the leading Standard shipping points are relatively much lower than rates from the shipping points of its competitors. The advantage to the Standard over its competitors from such open discriminations is enormous, probably as important as that obtained through the secret rates.

"If an unfair discrimination be obtained by one shipper through a device which in itself is seemingly not prohibited by law, that fact shows that the law is defective and should be strengthened; it does not show that the discrimination is proper or just.

"The following are a few of the most important discriminations and the methods by which they were obtained:

"(1) For about ten years the New England territory has been in control of the Standard Oil Company by reason of the refusal of the New York, New Haven and Hartford road and of the Boston and Maine road, on all but a few divisions, to pro-rate—*i. e.*, to join in through rates—on oil shipped from west of the Hudson River, and by means of the adjustment of published rates. . . .

"(2) The Standard Oil Company has been able to absolutely control for many years the sale of oil in the northeastern part of New York and in a portion of Vermont by means of secret rates from its refineries at Olean and Rochester. . . .

"The saving to the Standard during 1904 by the secret rate from Olean to Rochester alone was $115,000. This and other less important rates from Olean were unknown to the independent refiners, and were not published on the ground that they were wholly State rates; yet in fact they were used for oil consigned to points beyond the State boundary of New York. Furthermore, all shipments from Olean on these secret rates were blind-billed—*i. e.*, the rates were not shown on the waybills.

"(3) The Standard Oil Company has maintained absolute control of almost the whole section of the country south of the Ohio River and east of the Mississippi by means of secret rates and open discriminations in rates from Whiting, Ind. . . .

"(4) The Standard Oil Company has for at least ten years shipped oil from Whiting to East St. Louis, Ill., at a rate of 6 or 6½ cents on three of the five railroads running between those places, while the only duly published rate on all roads has been 18 cents during all that period. This discrimination saved the Standard about $240,000 in 1904. . . .

"Whiting is located in Indiana, about two miles from the Illinois line. East St. Louis is in Illinois, just across the river from St. Louis. The secret low rates were given by the Chicago, Burlington and Quincy, Chicago and Alton, and Chicago and Eastern Illinois railroads. They were not published, on the ground that they were State rates. . . .

"(5) In the Kansas-Territory field there were some unfair open rates. . . .

"(6) In California direct rebates, as well as discriminations by the use of secret rates, have been given on oil. . . .

"(7) Open published rates from Whiting into a large part of the United States have given the Standard Oil Company an unfair advantage of from 1 to 20 cents per hundred pounds.

"This discrimination seriously limits independ-

ent refiners in some markets, and shuts them out completely from other markets. It is accomplished by the use of commodity rates — that is, rates which apply only to petroleum and its products — and by refusal to pro-rate." — *Report of the Commissioner of Corporations on the Transportation of Petroleum, May 3, 1906, Letter of Submittal, pp. xxi–xxv. (59th Congress, 1st Sess. House Doc. no. 812).*

Consequent on the information secured by this investigation, criminal proceedings against the Standard Oil Company in its various State organizations were instituted in 1906-7. The number and character of the indictments found in these cases are set forth in tabular form, in an article on "The Oil Trust and the Government," by Francis Walker, published in the *Political Science Quarterly*, March, 1908. The following statement of them is summarized from that table:

In the Northern District of Illinois, Aug. 27, 1906, against the Standard Oil Co. of Indiana, 1903 and 134 indictments on shipments over the Chicago and Alton Railway, from Whiting, Ind., to East St. Louis, Ill., and from Chappell, Ill., to St. Louis, Mo.

In same Dist., same date, against same Co., 2124 and 220 indictments on shipments over the Chicago, Burlington and Quincy Railway, from Whiting to E. St. Louis and St. Louis.

In same Dist., same date, against same Co., 1818 and 597 indictments on shipments over the Chicago and Eastern Illinois and the Evansville and Terre Haute railways, from Whiting to Evansville.

In same Dist., same date, against same Co., 103 indictments, on shipments over the Chicago and Eastern Illinois and the Evansville and Terre Haute railways from Whiting, via Grand Junction, Tennessee, to various points in the South.

In the Eastern Division of the Western Dist. of Tennessee, Oct. 16, 1906, against the Standard Oil Co. of Indiana, 1524 indictments, on shipments over the Illinois Central and Southern railways, from Evansville, via Grand Junction, to various points.

In the Eastern District of Missouri, Nov. 18, 1906, against the Waters Pierce Oil Co., 76 indictments, on shipments over the St. Louis, Iron Mountain and Southern Railway, to various points.

In the Western District of La., Jan. 28, 1907, against the Waters-Pierce Oil Co., 80 indictments, on shipments over the St. L., Iron Mt. and S. R'y, to various points.

In the Western Dist. of N. Y., Aug. 10, 1907, ag'st the Vacuum Oil Co., 23 indictments, on shipments from Olean to Vermont.

In the Western Dist. of N. Y., August 24, 1906, ag'st the Standard Oil Co. of New York, 23 and 123 indictments, on shipments from Olean to Vt.

In same Dist., Aug. 9, 1907, ag'st same Co., 188 and 40 indictments, on shipments from Olean, N. Y., to Burlington, Vt., over N. Y. Central and Rutland and Vermont Central railways.

In same Dist., same date, ag'st the Vacuum Oil Co., 188 and 40 indictments on shipments from Olean to Burlington and to Rutland and Burlington.

In same Dist., Sept. 6, 1907, ag'st the Standard Oil Company of New York, 54 indictments, on shipments from Olean and Rochester to points in Vermont.

The most notable of these criminal prosecutions has been the one described first in the list above. The opening chapter of its history is sketched as follows by Mr. Walker, in the article already referred to:

"The only important case which, up to December, 1907, had come to trial, was the indictment against the Standard Oil Company of Indiana for accepting a secret rate on shipments over the Chicago and Alton Railway, from Whiting, Indiana, to East St. Louis, Illinois, and from Chappell, Illinois, to St. Louis, Missouri. The published rate on this traffic was eighteen cents per hundred pounds (as far as East St. Louis, a bridge toll of one and a half cents being added on shipments to St. Louis); while the rate paid by the Standard Oil Company of Indiana, during the period of about three years covered by the indictment and for many years before, was only six cents per hundred pounds. On this rate, the Standard had transported, as charged in the indictment, 1903 carloads of oil, each carload being made the subject of a distinct count and separate proof. The trial of this case began in Chicago, on March 4, 1907.

"The defence not only exhausted every device of technical objection and obstruction but also attacked the constitutionality of the 'Elkins' law forbidding rate discrimination, alleging the right of the railroads and shippers to make private contract rates, an impudent assertion which the court justly characterized as an 'abhorrent heresy.' The question of guilt in the matter of technical proof depended to a large extent on the requirements of the law that carriers must file rates, and the argument of the prosecution was that shippers must be charged with the knowledge as to whether such rates were lawfully filed or not. The defendant pretended ignorance of the fact that the six-cent rate had not been filed by the Alton and alleged that it was an unreasonable requirement to charge it with such knowledge. On this point the court said in rendering judgment:

"'The honest man who tenders a commodity for transportation by a railway company will not be fraudulently misled by that company into allowing it to haul his property for less than the law authorizes it to collect. For the carrier thus to deceive the shipper would be to deliberately incriminate itself, to its own pecuniary detriment, which it may safely be trusted not to do. The only man liable to get into trouble is he who, being in control of the routing of large volumes of traffic, conceives a scheme for the evasion of the law, and connives with railway officials in its execution.'

"The jury returned a verdict of guilty on 1462 counts, on April 14, 1907: a considerable number of counts, namely 441, were thrown out on technical grounds. In the matter of penalty, the Standard's counsel argued (1) that there were only three offences shown, namely, one for each year in which the law was in force; (2) that there were only 85 offences shown, namely, one for each monthly settlement of freight charges; and (3) that each train load constituted a separate offence. The court held, however, that the unlawful rate was made on a carload basis, and that each carload unlawfully transported constituted a distinct offence. In considering the amount of the

fine to be levied, the court demanded information from the officials of the Standard Oil Company regarding the net earnings and dividends of the chief holding company of the trust — the Standard Oil Company of New Jersey. Their attendance and testimony were obtained only by writ of subpœna; and it was admitted that the net profits during the years 1903 to 1905 (when these rebates existed) amounted to $81,336,994, $61,570,110, and $57,459,356 respectively.

"In view of the fact that the counsel of the defendant openly maintained the right of the railways and shippers to make private contracts for rates, the court declared that it was 'unable to indulge the presumption that in this case the defendant was convicted of its virgin offence.' The defendant also claimed that, as there were no other shippers of oil over the Chicago and Alton Railway, no one was injured by the secret rate. On this matter the court said:

"'It is novel, indeed, for a convicted defendant to urge the complete triumph of a dishonest course as a reason why such a course should go unpunished.

"'Of course, there was no other shipper of oil, nor could there be, so long as, by secret arrangement, the property of the Standard Oil Company was hauled by railway common carriers for one-third of what anybody else would have to pay.'

"Moved by these considerations, the court adjudged, on August 3, 1907, that the defendant should pay the maximum penalty and fined the Standard Oil Company $20,000 for each offence, that is, for each of the 1462 counts in the indictment upon which conviction was obtained. The total fine, therefore, amounted to $29,240,000."— Francis Walker, *The Oil Trust and the Government* (*Political Science Quarterly, March*, 1908).

On a writ of error the case went now to the United States Circuit Court of Appeals for the Seventh Circuit, where it was argued at the April session, 1908, and the opinion, by Judge Peter S. Grosscup, Circuit Judge, delivered on the 22d of the following July. In this opinion the District Court was held to have erred in deciding that each single carload of oil was to be dealt with as a separate offence, and that it reasoned erroneously in determining the fine imposed. On this latter point Judge Grosscup said:

"Did the court, in the fine imposed, abuse its discretion? The defendant indicted, tried, and convicted, was the Standard Oil Company, a corporation in Indiana. The capital stock of this corporation is one million dollars. There is nothing in the record, in the way of evidence, either before conviction, or after conviction and before sentence, that shows that the assets of this corporation were in excess of one million dollars. There is nothing in the record, either before conviction, or after conviction and before sentence, that shows that the defendant, before the court, had ever before been guilty of an offence of this character. It may, therefore, be safely assumed, that but for the relation of the defendant before the court to another corporation, not before the court — a relation to be presently stated — the court would have measured out punishment on the basis of the facts just stated.

"That under such circumstances the punishment would have been the maximum punishment, does not seem possible; for the maximum sentence, put into execution against the defendant before the court, would wipe out, many times, and for its first offence, all the property of the defendant. . . .

"Briefly stated, the reason of the trial court for imposing this sentence was because, after conviction and before sentence, it was brought out, on an examination of some of the officers and stockholders of the Standard Oil Company of New Jersey, that the capital stock of the Standard Oil Company of Indiana, the defendants before the court, was principally owned by the New Jersey corporation, a corporation not before the court — the trial court adding (upon no evidence however to be found in the record, and upon no information specially referred to) that in concessions of the character for which the defendant before the court had been indicted, tried, and convicted, the New Jersey corporation was not a 'virgin' offender.

"Is a sentence such as this, based on reasoning such as that, sound? Passing over the fact that no word of evidence or other information supporting the trial court's comment is to be found in the record, would the comment, if duly proven, justify a sentence such as this — one that otherwise would not have been imposed? Can a court, without abuse of judicial discretion, wipe out all the property of the defendant before the court, and all the assets to which its creditors look, in an effort to reach and punish a party that is not before the court — a party that has not been convicted, has not been tried, has not been indicted even? Can an American judge, without abuse of judicial discretion, condemn any one who has not had his day in court?

"That, to our mind, is strange doctrine in Anglo-Saxon jurisprudence. . . .

"The judgment of the District Court is reversed and the case remanded with instructions to grant a new trial, and proceed further in accordance with this opinion."

The Government failed in attempts to secure a rehearing before the Appellate Court, as well as in an application for the reviewing of the case by the Supreme Court.

On the new trial to which the case was remanded Judge Landis, whose judgment had been set aside, declined to sit, and Judge A. B. Anderson, of Indianapolis, was called to Chicago to occupy his bench. The trial was opened on the 23d of February, 1909. On the 2d of March Judge Anderson sustained the motion of the defence that the government must proceed on the theory that there were thirty-six alleged offences — that is, that each settlement on which an alleged rebate was paid instead of each carload, constituted a separate offence. This made it impossible to claim a penalty beyond $720,000, being at the rate of $20,000 for each offence. But even that was put out of the question by the ultimate decision of the Judge, that the law, as laid down by the U. S. Court of Appeals, required him to direct the jury to find the Standard Oil Company not guilty on the charge of accepting rebates from the Chicago and Alton Railroad. This instruction he gave on the 10th of March, thus bringing the case to an end.

The outcome in this case was said to mean that all but two of the pending indictments against the Standard Oil Company of Indiana, as recapitulated above, are void and would be abandoned

by the Government. The two cases not affected are cases involving the shipment of 1915 carloads of oil from Whiting, Ind., to Evansville, Ind., via Dolton Junction, over the Chicago and Eastern Illinois Railroad.

On the 15th of March, five days after the acquittal of the Company in Illinois, a fine of $20,000 was imposed upon it by the United States District Court of the Western District of New York, on one of the indictments founded on shipments from Rochester and Olean to points in Vermont. Previously the New York Central Railroad had paid a heavy fine for granting rebates on those shipments.

Numerous State prosecutions, under State laws in Missouri, Texas, Minnesota, Ohio, and elsewhere, had been assailing the monopolistic corporation simultaneously with the proceedings of the General Government against it, and some of them with greater seriousness of effect than the Federal prosecutors had accomplished. The more important of these were in Texas, against the subsidiary Waters-Pierce Oil Company of Missouri, and in Missouri, against that Company in association with the Standard of Indiana, and with another of the same Trust family. The Texas suit, after making its slow way through the State courts and to the U. S. Supreme Court, came to its conclusion early in 1909, with the result of a fine of $1,623,500, and the exclusion of the Company from business in the State. The suit in Missouri, as decided at about the same time by the Supreme Court of the State, resulted in an order for the dissolution of the Waters-Pierce Company and for the perpetual exclusion of the other companies, chartered elsewhere, from operations within the State. The outcome of this vindication of the law of the State is understood to have been an arrangement under which the business of the Waters-Pierce Company is taken over by a new company, the stock of which is held by trustees approved by the Supreme Court of the State and acting as officers of the Court.

A. D. 1905-1906. — The Tobacco Trust Case of Hale *v.* Henkel. — Denial by the Supreme Court of the claim of corporations to be exempt from the production of books and papers before a Grand Jury. — A proceeding begun by the Government of the United States, in the spring of 1905, to ascertain the lawfulness or unlawfulness of the methods of business pursued by the so-called Tobacco Trust, was embarrassed by the refusal of a witness to give evidence for which he was summoned before the grand jury of the Circuit Court of the United States for the Southern District of New York. The case pending was between the United States and the American Tobacco Company and MacAndrews & Forbes Company. The witness, Hale, was secretary and treasurer of the MacAndrews & Forbes Company. He refused to answer any questions that were put to him concerning the business of that company, or to produce any of the books, accounts, contracts, correspondence, etc., that were demanded, being advised by counsel that he was under no legal obligation to do so, and that the evidence given or produced by him might tend to incriminate himself. He was held to be in contempt of Court and was committed to the custody of the U. S. Marshal. Being then, on a writ of *habeas corpus*, brought before another judge of the same Court, after a hearing, the writ was discharged and he was remanded to custody (June 18, 1905). An appeal to the Supreme Court followed, which was argued in the early days of January, 1906, and decided on the 12th of March following.

The decision of the Court, rendered by Justice Brown, was on two issues which it found to be presented in the case: The first involving "the immunity of the witness from oral examination; the second the legality of his action in refusing to produce the documents called for by the *subpœna duces tecum*." The witness justified his refusal to answer questions, "1st upon the ground that there was no specific 'charge' pending before the grand jury against any particular person; 2d that the answers would tend to criminate him." On the first point the Court found it "entirely clear that under the practice in this country, at least, the examination of witnesses need not be preceded by a presentment or indictment formally drawn up, but that the grand jury may proceed, either upon their own knowledge or upon the examination of witnesses, to inquire for themselves whether a crime cognizable by the Court has been committed." As to the plea of an apprehended self-incrimination, the Court held that the witness was protected by the act which provides that no person shall be prosecuted on account of anything concerning which he may testify or produce evidence. But it was further insisted that while the immunity statute may protect individual witnesses it would not protect the corporation of which the appellant was the agent and representative. "This is true," says the Court, "but the answer is that it was not designed to do so. The right of a person under the Fifth Amendment to refuse to incriminate himself is purely a personal privilege of the witness. It was never intended to permit him to plead the fact that some third person might be incriminated by his testimony, even though he were the agent of such person."

On the second issue in the case, the substance of the decision is in the following passages from it: "Having already held that, by reason of the immunity act of 1903, the witness could not avail himself of the Fifth Amendment, it follows that he cannot set up that Amendment as against the production of the books and papers, since in respect to these he would also be protected by the immunity act. . . . We are of the opinion that there is a clear distinction in this particular between an individual and a corporation, and that the latter has no right to refuse to submit its books and papers for an examination at the suit of the State. . . . The individual may stand upon his constitutional rights as a citizen. He is entitled to carry on his private business in his own way. . . . Among his rights are a refusal to incriminate himself, and the immunity of himself and his property from arrest or seizure except under a warrant of the law. . . . Upon the other hand, the corporation is a creature of the State. It is presumed to be incorporated for the benefit of the public. . . . Its rights to act as a corporation are only preserved to it so long as it obeys the laws of its creation. There is a reserved right in the Legislature to investigate its contracts and to find out whether it has exceeded its powers. . . . The defense amounts to this: That an officer of a corporation, which is charged with a criminal violation of the statute, may plead the criminality of such corporation as a refusal to produce its books.

To state this proposition is to answer it. While an individual may lawfully refuse to answer incriminating questions unless protected by an immunity statute, it does not follow that a corporation, vested with special privileges and franchises, may refuse to show its hand when charged with an abuse of such privileges."

Taking note of the fact that the franchises of the corporation in this case were derived from one of the States, the Court proceeds to say: "Such franchises, so far as they involve questions of inter-State commerce, must also be exercised in subordination to the power of Congress to regulate such commerce, and in respect to this the General Government may also assert a sovereign authority to ascertain whether such franchises have been exercised in a lawful manner, with due regard to its own laws. . . . The powers of the General Government in this particular, in vindication of its own laws, are the same as if the corporation had been created by an act of Congress."

Justices Harlan and McKenna dissented from some of the views set forth in the opinion of the majority, as declared by Justice Brown, but concurred in the final judgment, which affirmed the order of the Circuit Court, remanding the prisoner to the custody of the Marshal. Justice Brewer and the Chief Justice dissented from the conclusions relative to corporations, and from the judgment, holding that "the order of the Circuit Court should be reversed and the case remanded with instructions to discharge the petitioner, leaving the grand jury to initiate new proceedings not subject to the objections to this."— *Federal Anti-Trust Decisions*, 1900–1906, *prepared and edited by James A. Finch by direction of the Attorney-General*, v. 2, p. 874 (*Washington: Gov't. Printing Office*, 1907).

A. D. 1906-1910. — The Standard Oil Company. — Suit of the Government for its dissolution. — Decree for its dissolution by the Circuit Court. — Appeal to the Supreme Court. — Entirely distinct from the criminal prosecutions of the Standard Oil Company by the United States Government, as reviewed above was a suit begun in November, 1906, in the U. S. Circuit Court for the Eastern Division of Missouri. The former actions were to penalize the Company for violations of the Elkins Act, by the procuring of railway rebates. The later suit was to dissolve the combination in restraint of trade which the Company was alleged to be, and therefore illegally existing, in the view of the Sherman Anti-Trust Law. The complaint was directed against the parent organization, known as the Standard Oil Company of New Jersey, with its various subsidiary corporations. It was also directed against seven individuals namely, John D. Rockefeller, William Rockefeller, Henry M. Flagler, Henry H. Rogers (now deceased), John D. Archbold, Oliver H. Payne, and Charles M. Pratt. The main company, its branches, and these individuals were charged in the complaint with having entered into an agreement, combination, and conspiracy to restrain trade and commerce among the several States, to monopolize the trade in petroleum, both in its purchase and its shipment and transportation by pipe-line steamships and by rail, also in the manufacture and refining of petroleum.

One of the evidences of its monopoly adduced by the Government was the enormity of its earnings which were summarized thus: The Standard Oil Trust and the Standard Oil Company, on an investment of $69,024,480, had earned up to the end of 1906, $838,783,783. Adding the estimated profits of 1907 and 1908, we have substantially, the brief states, a billion dollars earned by this company in twenty-seven years, with an original investment of about $69,000,000.

The United States asked for a perpetual injunction, and for the dissolution of the Standard Oil combination. Hearings were held in New York, Washington, Chicago, Cleveland, and St. Louis, about four hundred witnesses being examined. It was not until the 5th of April, 1909, that the case reached the stage of argument, before Judges Walter H. Sanborn, Willis Van Devanter, William C. Hook and Elmer B. Adams, constituting the U. S. Circuit Court at St. Louis. The decision of the Court was announced on the 20th of the following November, the four judges concurring in the opinion, written by Judge Sanborn, which held the Standard Oil Company to be an illegal corporation and decreed its dissolution. The character of the decision appears from the syllabus of Judge Sanborn's opinion, which reads:

"Congress has power under the commercial clause of the Constitution to regulate and restrict the use in commerce among the several States, and with foreign nations, of contracts, of the method of holding title to property and of every other instrumentality employed in that commerce, so far as it may be necessary to do so, in order to prevent the restraint thereof denounced by the Anti-Trust Act of July 2, 1890 (26 Stat. 29).

"Test of the legality of a combination under this act is its necessary effect upon competition in commerce among the States or with foreign nations. If its necessary effect is only incidentally or indirectly to restrict the competition, while its chief result is to foster the trade and increase the business of those who make and operate it, it does not violate that law. But if its necessary effect is to stifle or directly and substantially to restrict free competition in commerce among the States, or with foreign nations, it is illegal within the meaning of that statute.

"The power to restrict competition in commerce among the several States, or with foreign nations, vested in a person or an association of persons by a combination, is indicative of the character of the combination, because it is to the interest of the parties that such a power should be exercised, and the presumption is that it will be.

"The combination in a single corporation or person, by an exchange of stock, of the power of many stockholders holding the same proportions, respectively, of the majority of the stock of each of the several corporations engaged in commerce in the same articles among the States, or with foreign nations, to restrict competition therein, renders the power thus vested in the former greater, more easily exercised, more durable, and more effective than that previously held by the stockholders, and it is illegal.

"In 1899 the stockholders of the Standard Oil Company of New Jersey owned a majority of the stock of nineteen other corporations in the same proportions that they owned the stock of the Standard Company, and those twenty corporations controlled by the owners of the majority of

their stock or otherwise many other corporations. Each of these corporations was engaged in some part of the business of producing, buying, refining, transporting, and selling petroleum and its products, and they were conducting about 30 per cent. of the production of the crude oil and more than 75 per cent. of the business of the purchasing, refining, transporting, and selling petroleum and its products in this country. Many of them were engaged in commerce in these articles among the several States and with foreign nations, and were naturally competitive.

"During the ten years prior to 1879 the seven individual defendants had acquired control of many corporations, partnerships, and refiners that had been competing in this business, had placed the majority of the stock of those corporations and the interests in property in business thus obtained in various trustees to be held and operated by them for the stockholders of the Standard Oil Company, one of the nineteen companies in which the individual defendants were principal stockholders, and had thereby suppressed competition among these corporations and partnerships.

"In 1879, they and their associates caused all the trustees to convey their interests in the stock, property and business of these corporations to five trustees, to be held, operated and distributed by them for the stockholders of the Standard Company of Ohio. From 1879, until 1892, they prevented these corporations and others engaged in this business, of which they secured control, from competing in this commerce by causing the control of their operations and generally of a majority of their stocks, to be held in trust for the stockholders of the Standard Company of Ohio, and, from 1892, until 1899, they accomplished the same result by a similar stock-holding device, and by the joint equitable ownership of the majority of the stocks of the corporations."

Appeal from the decree has been taken to the Supreme Court, where it was preceded by the appeal of the Tobacco Trust from a similar decree, involving substantially the same questions, according to which it seems to be the general view of the Bench. On the 17th of January, 1910, the Supreme Court of the United States granted the motion of the Government for the advancement on the docket of the Standard Oil case, and set the hearing for March 14.

A. D. 1907. — The chief existing combinations. — Their operation through stock ownership. — "Passing the matter of railroad combinations, as to which it may be said that through stock ownership the control of all American lines is now concentrated in seven groups of parent properties, we are chiefly concerned with the practical use that has been made of the new corporate power by the largest and strongest of our manufacturing and industrial enterprises.

"The United States Steel Corporation, organized under the laws of New Jersey, with a capital stock of $1,100,000,000 owns a majority of the stock of eleven subsidiary companies, and controls industries scattered over the entire country under different styles and corporate names. This corporation owns or manages 213 manufacturing and transportation plants and forty-one mines located in eighteen different States; it has more than 1,000 miles of railroad tracks to ore, coke and manufacturing properties, and a lake fleet of 112 vessels. This stock ownership gives it control of hundreds of millions of capital that is not represented by its own billion dollars of stock.

"The Amalgamated Copper Company, incorporated in New Jersey, has no asset whatever except the stocks of other corporations. It owns all the stock of four operating companies and a controlling interest in seven others, and has taken them over by an issue of $155,000,000 of its own stock.

"The American Smelting and Refining Company, organized under the laws of New Jersey, controls the business of thirteen corporations, in which it either owns the entire stock or a majority interest. Associated with it are the American Linseed Company, the National Lead Company and the United Lead Company, and they together control twenty-eight concerns and ninety-three affiliated corporations.

"The Standard Oil Company, incorporated in New Jersey, with a capital stock of $110,000,000, controls, directs and manages more than seventy corporations through its possession of a majority of their stock. Some of these companies own stock in still other corporations, and all together the combine operates more than 400 separate and distinct properties, thus monopolizing 90 per cent. of the export oil trade and 84 per cent. of the domestic trade. The market value of its capitalization is about $650,000,000, and all this vast property was brought together under one head without the payment of a single dollar of cash, the whole consolidation being effected through the issue of stock in the holding company in payment of stock in the companies that are held.

"The United Gas Improvement Company, incorporated in Pennsylvania, own stock in thirty corporations doing the character of business for which it was organized, and in addition to this is interested in numerous street railway properties, including the New York City surface railways. With it is allied the Public Service Corporation of New Jersey and the Rhode Island Securities Company, which last named owns all the stock of the Rhode Island Company, which again has leased for 999 years several of the most important railroad companies doing business in that State. The power of this corporation, through this system of stock ownership, is scarcely calculable, and the value of properties controlled would equal hundreds of millions, although its own capital stock is but $36,000,000.

"The American Tobacco Company, organized under the laws of New Jersey, with a capital stock of $40,000,000, practically controls the whole market through its ownership of the stock of innumerable other corporations.

"The International Harvester Company, incorporated in New Jersey, with a capital stock of $120,000,000, while probably not a holding company, maintains most, if not all, the corporations which it has bought out, and they are operated as if they were distinct and competing concerns.

"The American Sugar Refining Company, incorporated in New Jersey, with a common stock of $40,000,000, controls fifty-three other corporations.

"The American Telegraph and Telephone

Company, incorporated in New York, with a capital stock of $250,000,000 controls, through stock ownership, thirty-five subsidiary corporations.

"The Western Union Telegraph Company owns stock in twenty-four other corporations; the Distillers' Security Company owns 90 per cent. of the stocks of the Distilling Company of America, and has acquired ninety-three plants, representing 60 per cent. of the industry; the Philadelphia Rapid Transit Company owns the stock of twelve elevated and street railway companies; the Brooklyn Rapid Transit Company owns the stock of seven others; the Metropolitan Securities Company of New York owns the stock of many traction companies, and the controlling interest in others; the Inter-State Railways of New Jersey own all the stock of the United Power and Transportation Company, which latter company controls the capital and franchises of about forty other projected companies in New Jersey and Pennsylvania; while the International Mercantile Marine Company of New Jersey owns a majority of the shares of many of the most important steamship companies whose vessels cross the Atlantic Ocean.

"These are but a few instances of the promotion of combinations through stock ownership." — Wade H. Ellis, Attorney-General of Ohio, *Paper read at National Conference on Trusts and Combinations, Chicago, Oct. 22, 1907.*

A. D. 1907. — National Conference on the Trust Question, invited by the National Civic Federation. — A remarkably representative and impressive assembly at Chicago, of delegates from all parts of the country, and voicing all interests, was brought about by the invitation of the National Civic Federation, in October, 1907, for a thorough discussion of the questions which troubled the country and confused its attitude toward Trusts and Combinations, as subjects of regulation by law. There had been a similar conference at Chicago in 1899, at the call of the Civic Federation of that city; but no common ground of agreement could then be found. The subject, as was afterwards said, "was too new, too vaguely understood for men to be of one mind in regard to it." But eight years later, in 1907, "it appeared to the leaders of the National Civic Federation not improbable that a new conference might lead to some definite pronouncement of opinion. . . . Leaders of opinion in all walks of life gave the project their hearty endorsement. . . . The matter was taken up with great interest by the Governors of the several States and by the presidents of commercial bodies, who named delegates in response to the invitation of the National Civic Federation. A significant evidence of this greater interest is found in the larger number of delegations appointed in 1907 than in 1899. The records show the following:

Delegations.	1899.	1907.
Appointed by Governors	33	39
Appointed by national and State organizations	22	33
Appointed by labor organizations . .	7	14
Appointed by local commercial bodies	33	58
Total	95	144

"Furthermore, the attendance of 492 delegates in 1907 might be contrasted with that of 238 delegates at the earlier conference.

"The conference of 1907, though larger in numbers, was much more of a unit in sentiment. It developed at an early stage of the discussion that there was no important element antagonizing the trust and combination as such. There were few speakers who failed to dwell upon the advantages which had accrued to the nation from some combinations, and from the spirit of association which, after all, cannot be separated from them. On the other hand, there was no lack of emphasis in dwelling upon the evils which had been disclosed among trusts and combinations.

"The resolutions of the conference, adopted by a unanimous vote, reveal these tendencies. They are a call for further examination and more light, but a call for such examination along certain pretty well-defined lines. They should receive the attention of Congress as an expression of the popular will on this pressing question."

The Conference held nine sessions, extending over four days, focusing the thought of the best minds of the country, and the counsels of the largest practical experience, on all points in the many-sided problem before it. On all that appear most important among those points it came to a full and clear agreement in its conclusions, as embodied in the following resolutions, which were adopted by unanimous vote, a committee being appointed to present them to Congress and to the President:

"After twenty years of Federal legislation as interpreted by the courts, directed against the evils of trusts and combinations, and against railroad rebates, beginning with the interstate commerce act of 1887 and the anti-trust act of 1890, a general and just conviction exists that the experience gained in enforcing these federal acts and others succeeding them demonstrates the necessity of legislation which shall render more secure the benefits already gained and better meet the changed conditions which have arisen during a long period of active progress, both in the enforcement of statute law and in the removal of grave abuses in the management of railroads and corporations. These changes now demanded are:

"First — Immediate legislation is required, following the recommendation of President Roosevelt and the Interstate Commerce Commission, permitting agreements between railroad corporations on reasonable freight and passenger rates, subject in all respects to the approval, supervision, and action of the Interstate Commerce Commission.

"Second — The enforcement of the Sherman act and the proceedings under it during the administrations of Presidents Harrison, Cleveland, McKinley, and Roosevelt have accomplished great national results in awakening the moral sense of the American people and in asserting the supremacy and majesty of the law, thus effectually refuting the impression that great wealth and large corporations were too powerful for the impartial execution of law. This great advance has rendered more secure all property rights, resting, as they must, under a popular government, on universal respect for and obedience to law. But now that this work is accomplished, it has revealed the necessity for legislation which shall maintain all that the Sherman act was intended to secure and safeguard interests it was never expected to affect.

"As the next step in executing the determination of the American people to secure in all industrial and commercial relations justice and equality of opportunity for all, with full sympathy and loyal support for every effort to enforce the laws in the past, we urge upon Congress without delay to pass legislation providing for a non-partisan commission, in which the interests of capital, of labor, and of the general public shall be represented. This commission, like a similar commission, which proved most successful in Germany in 1870, shall consider the entire subject of business and industrial combinations and report such proposals, as to the formation, capitalization, management and regulation of corporations (so far as the same may be subject to federal jurisdiction) as shall preserve individual initiative competition, and the free exercise of a free contract in all business and industrial relations. Any proposed legislation should also include modification of the prohibition now existing upon combinations on the following subjects:

"1. National and local organizations of labor and their trade agreements with employers relating to wages, hours of labor, and conditions of employment.

"2. Associations made up of farmers, intended to secure a stable and equitable market for the products of the soil free from fluctuations due to speculation.

"3. Business and industrial agreements of combinations whose objects are in the public interest as distinguished from objects determined to be contrary to the public interest.

"4. Such commission should make a thorough inquiry into the advisability of inaugurating a system of federal license or incorporation as a condition for the entrance of certain classes of corporations upon interstate commerce and also into the relation to the public interest of the purchase by one corporation of the franchises or corporate stock of another.

"On no one of these subjects must what has been gained be sacrificed until something better appears for enactment. On each, this conference recognizes differences between good men. On all, it asks a national non-partisan commission to be appointed next winter to consider the question and report at the second session of the approaching Congress for such action as the national legislature, in the light of this full investigation, may enact.

"Third — The examination, inspection and supervision of great producing and manufacturing corporations, already begun by the Department of Commerce and Labor and accepted by these corporations, should be enlarged by legislation requiring, through the appropriate bureaus of the Department of Commerce and Labor, complete publicity in the capitalization, accounts, operations, transportation charges paid, and selling prices of all such producing and manufacturing corporations whose operations are large enough to have a monopolistic influence. This should be determined and decided by some rule and classification to be devised by the commission already proposed.

"Fourth — The conflicts between State and Federal authorities raised in many States over railroad rates being now under adjudication and under way to a final and ultimate decision by the Federal Supreme Court, this conference deems the expression of an opinion on these issues unfitting, and confidently leaves this great issue to a tribunal which for 118 years has successfully preserved the balance between an indissoluble union and indestructible State, defining the supreme and national powers of the one and protecting the sovereign and individual powers of the other." — *Proceedings of the National Conference on Trusts and Combinations, Chicago, October* 22-25, 1907 (*New York: National Civic Federation*, 1908).

A. D. 1907-1909. — Thievery of the Sugar Trust. — In the fall of 1907 disclosures were made to the Government which led to an investigation of the methods whereby imports of raw sugar for the American Sugar Refining Company, known commonly as the Sugar Trust, were weighed for the payment of Customs duties, at the Company's docks in Williamsburgh and Jersey City. The result of the investigation was to prove that this enormously wealthy corporation, not satisfied with extortions of profit from the public by its monopoly of the vast sugar trade of the country, had stooped to practices of systematic theft from the Government, by devices that would almost shame the professional players of a thimble-rigging game. Several ingenious inventions of trickery with the weighing scales had been employed at the sugar docks prior to 1904, but the crowning one appears to have been brought to use in that year. "This," said the New York *Evening Post* of April 29, 1909, in a full rehearsal of the story of the Sugar Trust larcenies, "consisted of a thin steel corset spring, which was inserted through a hole drilled in the uprights or stanchions supporting the scales. If inserted at a time when there was a load on the platform, its pressure against the walking beam of the scale resulted in creating a false balance, and in making the load appear considerably lighter than it really was. This little device proved to be so satisfactory for the purposes for which it was designed that it was fitted to all the seventeen government scales at the Havemeyer & Elder refinery. Holes were drilled in the stanchions of each of the scales — hence the 'case of the seventeen holes' to which Mr. Stimson called attention. So successful was the operation of this mechanism that it was used constantly down to the very day, November 20, 1907, when a United States Treasury agent found it in use.

"The method of use was simple. The scales were placed with the stanchions in a dark corner, next to the wall, and close beside this stanchion sat the company's checker, whose ostensible duty it was to record in a little book the weight of each load as it was read off to him by the government weigher standing at the other end of the scale. The checker's really important duty seems to have been, however, to manipulate the steel spring through the hole in the stanchion, so that on each truck load, the company which employed him was saved the payment of duty on some fourteen pounds of sugar.

"Evidence was adduced at the subsequent trial to show that the company considered this special service on the part of its checkers worthy of additional compensation. For although there were seventeen scales, all of which could be used for this purpose, practically all the weighing was done on six, and the six reliable checkers who, year in and year out, operated the little

steel springs, all received extra pay in their weekly pay envelopes for this service."

Consequent on the discovery of these facts, "several indictments were found against the Sugar Trust's employees, and with that discovery as a basis the government began to work up its case. . . . When the government came to work up its case and to fix approximately the amount out of which it had been defrauded, it was found possible to present a piece of evidence which so thoroughly clinched the case that defence, when it came to be made, was so weak as to be negligible. This evidence consisted of a tabulation comparing the weights of sugar on which duty was paid and the weights for which the company paid the planters between the time the first cargo of sugar of December, 1901, arrived at the refinery and the discovery of the fraud in November, 1907.

"It took a score or more of accountants working steadily for six months to complete the tabulation, but when it was finished the astonishing corroborative story it told made it well worth all the time and trouble expended. Never was there a better example of the deadly parallel. For every entry the weights on which duties were levied was set alongside of the weights for which the company paid the planters."

The first result of the proceedings of the Government against the thievish Trust was a pecuniary settlement with it, concerning which the following official statement was given out at Washington, by Attorney-General Wickersham, on the 29th of April, 1909:

"The Attorney-General, with the concurrence of the Secretary of the Treasury, has just approved a settlement between the American Sugar Refining Company and the United States Government of all the claims which the latter has against it arising out of the fraudulent weighing on the docks of its refineries at Brooklyn and Jersey City. In making this settlement the sugar company pays in full the recent judgment for the penalty in the amount of $134,411.03, which was awarded against it by the jury in the case tried in the federal court last March, with interest, and agrees to take no appeal from the judgment.

"In addition to this, it pays into the United States treasury $2,000,000 more, representing the duties which have been unpaid during the last twelve years, owing to the fraudulent practices; $1,239,088.97 of this amount has already been paid in under protest to Collector Loeb on his reliquidation, as a result of the trial above mentioned, of the duties upon the cargoes entered at the Havemeyer & Elder refineries between the years 1901 and 1907, when the frauds were discovered.

"The sugar company abandons its protests on these payments and gives up its right to appeal from Mr. Loeb's reliquidation and in addition to this pays into the United States treasury the above judgment and over $760,000 more to cover the duties unpaid at the Havemeyer & Elder docks prior to 1901 and at the Jersey City refinery between 1896 and 1906.

"This settlement with the sugar company in nowise affects the criminal prosecution of the individuals who are responsible for the perpetration of these frauds, and such prosecutions will be pressed to a finish by the government."

[Soon after this settlement with the Government by the Sugar Trust for shortage in payment of duties, the firm of Arbuckle Brothers made a similar settlement, paying $695,573.19.]

A few days after the above announcement of a pecuniary settlement with the American Sugar Refining Company, the Grand Jury of the Circuit Court in the New York District presented indictments against Oliver Spitzer, who was superintendent on the company's docks, Thomas Kehoe, Eugene M. Voelker, Edward A. Boyle, J. R. Coyle, J. M. Halligan, Jr. and Patrick J. Hennessy.

In November, further indictments were found against these employees of the company, and James F. Bendernagel, general superintendent of the Williamsburgh refinery for many years past, was arrested on an indictment found by the same grand jury. The trial of the accused, in the United States District Court, was opened on the 30th of November.

On the 17th of January, 1910, Charles R. Heike, secretary and treasurer of the American Sugar Refining Company, was arraigned before Judge Hough in the criminal branch of the United States Circuit Court, charged with making false entries and conspiring to defraud the government.

A. D. 1907-1909.—Suit of the Government against the Tobacco Trust. — Decree of Circuit Court restraining the combined companies from interstate and foreign trade. — On the 10th of July, 1907, the Government began suit at New York against the so-called Tobacco Trust. The defendants in the case included 65 corporations and 27 individuals, the principals, however, being six companies, namely, the American Tobacco Company, the British-American Tobacco Company, the Imperial Tobacco Company, the American Snuff Company, the American Cigar Company, and the United American Cigarette Company. Of these the parent organization, dominating all the others, is the American Tobacco Company, which began the finally gigantic combination in a small way in 1890. The object sought in the Government's suit was an injunction to restrain the combination as such from engaging in interstate and foreign trade, or for the appointment of receivers to take the management of the business concerned.

The case was argued before the Second Circuit Court of the United States in May, 1908, and the decision of the Court was announced on the 7th of November following, Judges Lacombe, Noyes, and Coxe agreeing and Judge Ward dissenting. The Court found that an injunction should issue against some, but not all, of the principal defendants, to prevent the continuance of their violation of the Sherman Anti-Trust Law. It acquitted the Trust, however, of the charge of dishonest and oppressive practices, and it denied the application for receiverships. The final decree of the Court was filed on the 15th of December, 1908.

Appeals to the Supreme Court of the United States were taken, both by the Government and by the defendants, and the case was pending in that Court at the close of the year 1909. Mean time the decree has been in suspense.

A. D. 1907-1909. — Suit to dissolve the alleged Anthracite Coal Combination. — The following statements were made in an Associated Press despatch from Philadelphia, March 8, 1909: "Testimony of the Government in its suit against

the anthracite coal-carrying railroads and several coal companies, to dissolve a so-called Trust agreement, alleged to be existing among them, has been filed in the Circuit Court of the United States for the Eastern District of Pennsylvania.

"Suit was begun here on June 12, 1907, and in the course of three months all the defendants made answer, denying the allegations of the Government. Subsequently, the court appointed an examiner to take testimony, and a great part of last year was taken up in hearing witnesses, sessions being held mainly in Philadelphia and New York.

"The Government closed its case in New York several weeks ago, having taken more than its allotted time, and the next move will be for the Government to file a motion apportioning a certain amount of time to the defendant companies to present their witnesses for examination. Much of the testimony thus far has been documentary, and it is believed this will be the case with the defendants. After all the testimony is filed with the court for review, arguments will be had on the case.

"It is impossible at this time to indicate when the case will be ended, but it seems probable that a year or more will have elapsed before it is legally decided whether a hard coal monopoly, as alleged, exists in Pennsylvania."

A. D. 1908-1909.—Amending the Sherman Anti-Trust Law.—Action of the National Civic Federation.—The resolutions adopted at the great National Conference of 1907 on the Trust Question, as recited above, were duly presented to Congress at its next session, and to the President, with results which were stated at the annual meeting of the National Civic Federation in December, 1908, by its President, the Hon. Seth Low, as follows: "When these resolutions were presented to the two Houses, the Conference Committee was asked to submit a definite Bill in legislative form to carry out its proposals. The Conference itself had given no such authority to any Committee; but, in view of the situation as it had developed, the Executive Committee of the Federation took the matter up. The result of its action was the preparation of a Bill, which was submitted in due time to Congress, and which became the subject of numerous hearings before the Judiciary Committees both of the House and of the Senate, but especially of the House. The Bill of last spring was based upon the belief that at that time, and before the approaching Presidential election, it would be impossible to change the substantive law as embodied in the Sherman Anti-Trust Act. This being taken for granted, it became impossible to do more than propose a method by which, without changing the law, certain restraints of trade, if not disapproved in advance by some government authority, might be assured freedom from prosecution. The hearings before the Congressional Committees made it evident that no relief from the embarrassments caused by the Sherman Anti-Trust Law can be looked for along this line of procedure. Perhaps it ought also to be said that none ought to be looked for, because the situation really calls for a change in the substantive provisions of the law. Let no one imagine, however, that it is an easy thing to say what such changes in the law ought to be. Your Committee last spring began its work in the hope that it would be able to submit a law which would command very large support, not only from employers but also from organized labor. After working upon the subject for many weeks, the Bill which it actually presented commanded no large measure of support from either. The mercantile classes favor amendments to the law which, instead of forbidding all restraints of trade, will forbid only unreasonable restraints of trade; and which will provide amnesty for the past, (1) on the theoretical ground that what has been done has often been done without any realization that it was contrary to the law; and (2) on the practical ground that to attempt to rip up what has already been done will destroy the industry of the country. The representatives of organized labor, on the other hand, ask to be omitted altogether from the provisions of the Sherman Act. It is evident to your Committee that the changes desired by the mercantile classes are going to meet with very serious objection, unless they are combined with some positive legislation which will provide some effective method of assuring to the country, in the future, the power to protect itself in advance from new combinations in the industrial sphere, such as have been made in the past, and which originally created the sentiment which placed the Sherman Anti-Trust Law upon the statute books.

"In other words, precisely as a city may desire to limit the height of buildings, for the future, without taking down those that are already erected, so many persons believe that the right to make commercial combinations, in the future, should be under some sort of governmental control, even though those already formed be left unmolested; and such persons, also, believe that there is the same inherent right in the body politic to do the one as the other. On the other hand, the demand of organized labor to be exempted altogether from the operations of this Act has been objected to in the past, and is likely to be objected to in the future, as class legislation of a kind that has no place on American soil, because organized labor is believed to be capable of exercising restraint of trade no less than commercial corporations.

"These being the terms of the problem, it is apparent, on the face of things, that the effort to amend the Sherman Anti-Trust Law in any effective way is beset by difficulties at every turn. . . . The whole subject is made infinitely difficult by the Constitutional limitations upon the power of Congress, which have led the United States Supreme Court to decide, in effect, that Congress can regulate inter-State commerce, but cannot regulate the corporation that does it; because the corporation that does inter-State commerce is a creature of the State and not of the United States. The separate States, on the other hand, can regulate the corporations that do inter State commerce, because they create them; but the States cannot regulate the inter-State commerce that is done, because under the United States Constitution, inter-State commerce is under National control. It cannot be too clearly apprehended that the effect of this

situation is, that neither sovereignty — neither the National sovereignty nor the State sovereignty — can regulate both the agent that does inter-State commerce and the inter-State commerce that is done."

In the *National Civic Federation Review* of March, 1909, it was announced that "the Executive Council of the National Civic Federation has appointed a committee to draft proposed amendments to the Sherman Anti-Trust act. By request of the lawyers upon the committee Seth Low will serve as chairman. The other members are Frederick P. Fish, of Boston; Frederick N. Judson, of St. Louis; Reuben D. Silliman, of New York, and Henry W. Taft, of New York.

"No attempt will be made to submit anything to the present session of Congress. It is proposed to draft a tentative bill as soon as a careful study of the problems will permit. This will then be submitted for examination and suggestion to various representative bodies in all parts of the country, and with the aid of the comments thus received the final draft of the bill to be submitted will be prepared."

A. D. 1909. — Report of the Commissioner of Corporations on the Tobacco Combination, or so-called Trust. — Parts of an elaborate report on the organization of the Tobacco Combination were published in February, 1909, by the Comissioner of Corporations, Herbert Knox Smith. It showed the combination to be composed of "the American Tobacco Company and its three great subsidiary combinations, the American Snuff Company, the American Cigar Company, and the British-American Company, besides eighty two other subsidiary concerns doing business in the United States, Porto Rico, and Cuba. The combination represents a total net capitalization of over $816,000,000. A very small group of ten stockholders controls 60 per cent. of the outstanding voting stock of the American Tobacco Company, through which company the entire combination is controlled."

A list of the subsidiary companies controlled, "including over twenty hitherto secretly controlled, so-called 'bogus independent concerns,'" is given in the report. It is shown also that the combination is practically the only important exporter of tobacco manufactures from this country. In 1891 the combination controlled 89 per cent. of the business of cigarette manufactures, and this proportion practically is maintained. In cigars its output increased fr . 4 per cent. of the business in 1897 to 14 7 10 per cent. in 1906; while in manufactured tobacco (chewing, smoking, fine-cut, and snuff) "the combination's output increased from 7 per cent. of the total in 1891 to 77 per cent. in 1906. Finally, in 1906, the combination controlled of these separate products, respectively, plug, 82 per cent.; smoking, 71 per cent.; fine-cut, 81 per cent., and snuff, 96 per cent." In the year 1906 the combination used in the manufacture of its various products nearly 300,000,000 pounds of leaf tobacco. The report adds:

"An idea of the absorption of competing plants and of the changes through combination within the last decade may be had from the fact that in 1897 the combination had ten plants, each producing over 50,000 pounds of manufactured tobacco or snuff per year, while there were 243 independent plants of the same class. In 1906, on the other hand, the combination had 45 plants of this class, and independent manufacturers 140. Especially conspicuous has been the absorption of the large plants. In 1897 the combination had eight plants, each producing over 1,000,000 pounds of these products per year, while its competitors had forty-six such plants. In 1906 the combination had thirty-four plants of this size, and independent concerns only seventeen."

A. D. 1909. — Merger of Telephone and Telegraph Corporations. — Announcement of one of the most important financial mergers of recent years was made Nov. 16, 1909, when the American Telephone and Telegraph Company disclosed its acquirement of control of the Western Union Telegraph Company. "The American Telephone and Telegraph Company has obtained the control of a substantial minority interest in the shares of the Western Union Telegraph Company," was the wording of the official statement, but it became known that sufficient voting rights of other stock had been obtained to give the telephone interests control of the telegraph company.

According to a statement issued on May 1, 1909, the total capital and outstanding interest-bearing obligations of the American Telephone and Telegraph Company and allied systems was $592,475,400 This amount included capital stock aggregating $361,636,800, subdivided as follows: American Telephone and Telegraph Company, $208,393,500; associated operating companies in the United States and Canada, about thirty-five in number, $142,674,400; associated holding and manufacturing companies, $10 868,900. The Western Union has a capitalization of $125,000,000 in stock and $40,000,000 in bonds.

A. D. 1909. — Threatened combination to control the Water Power of the country. — Speaking at the National Irrigation Congress, convened at Spokane, Washington, in August, 1909, the National Forester, Gifford Pinchot, declared that, notwithstanding the contradictions issued by the parties in interest, a gigantic combination was forming to seize the sources of the country's water power, and be in a position later to dominate all industry.

"There could be no better illustration," he said, "of the eager, rapid, unwearied absorption by capital of the rights which belong to all the people than the Water Power Trust, not yet formed, but in rapid progress of formation. This statement is true, but not unchallenged. We are met at every turn by the indignant denial of the water power interests. They tell us that there is no community of interest among them, and yet they appear year after year at these Congresses by their paid attorneys, asking for your influence to help them remove the few remaining obstacles to their perpetual and complete absorption of the remaining water powers. They tell us it has no significance that the General Electric interests are acquiring great groups of water powers in various parts of the United States, and dominating the power market in the region of each group. And whoever dominates power, dominates all industry. . . . The time for us to agitate this question is now, before the separate circles of centralized control spread into the uniform, unbroken, nation-wide covering of a single gigantic Trust. There will be little chance for mere agitation after that. No man at all familiar with the situation can doubt that the time for effective protest is very short."

The same warning has been given by others who are in a position to speak with knowledge, and heed has been given to them by the Government. The annual report of the Secretary of the Interior, the Hon. Richard A. Ballinger, made public November 28, 1909, contained the following important announcement: "In anticipation of new legislation by Congress to prevent the acquisition of power sites on the public domain by private persons or corporations with the view of monopolizing or adversely controlling them against the public interest, there have been temporarily withdrawn from all forms of entry approximately 603,355 acres, covering all locations known to possess power possibilities on unappropriated lands outside of national forests. Without such withdrawals these sites would be enterable under existing laws, and their patenting would leave the general government powerless to impose any limitations as to their use.

"If the Federal government desires to exercise control or supervision over water-power development on the public domain, it can only do so by limitations imposed upon the disposal of power and reservoir sites upon the public lands, the waters of the streams being subject to State jurisdiction in their appropriation and beneficial use. I would, therefore, advise that the Congress be asked to enact a measure that will authorize the classification of all lands capable of being used for water-power development, and to direct their disposal, through this department. . . .

"Unreasonable or narrow restrictions beyond the necessity of public protection against monopoly, or extortion in charges, will, of course, defeat development and serve no useful purpose. The statute should, therefore, while giving full protection against the abuses of the privileges extended, so far as consistent, encourage investment in these projects; and it must always be borne in mind that excessive charges for the franchise will fall upon the consumer. Legislation of this character proceeds upon the theory that Congress can impose such contractual terms and conditions as it sees fit in the sale or use permitted of government lands so long as such limitations do not conflict with the powers properly exercised by the State wherein they may be situated."

A. D. 1909.— The Sugar Trust settles a conspiracy charge.—While the American Sugar Refining Company, in the spring of 1909, was being forced to make good to the Government its long cheating of the Custom House, it was being compelled, at the same time, to indemnify a competitor in business, whom it had ruined by means which the Sherman Anti-Trust Law forbade. Its victim was the Pennsylvania Sugar Refining Company, whose refinery had been established by Mr. Adolph Segal, of Philadelphia, in 1903. Segal became financially embarrassed, and was lured into taking a loan of $1,250,000, from a person who acted secretly in the transaction for the American Sugar Refining Company. The loan was made on terms which gave the lender control of a majority of the stock of the Pennsylvania Sugar Refining Company, and Mr. Segal found, when too late, that the real lender was the Sugar Trust. It used its power to shut down the plant, which was said to be the most perfect of its kind, and the Pennsylvania Company was wrecked. It brought a suit for damages to the amount of $30,000,000, inflicted upon it in contravention of the Anti-Trust Law. Before the trial ended, the defendants found so much reason to fear its outcome that negotiations were opened which resulted (June 8, 1909) in a settlement of the claim outside of court. The settlement was said to involve a cash payment by the American Company to the Pennsylvania Company of $750,000, the cancellation of the $1,250,000 loan made by the trust to Adolph Segal, of Philadelphia, and the return of the securities given by Segal as collateral for the loan.

Subsequently the Government procured indictments of certain of the officials of the American Sugar Refining Company for their participation in the conspiracy; but the prosecution was blocked in October by a decision from Judge Holt, of the United States Circuit Court, that the acts charged were outlawed by the statute of limitations. Later, in November, it was reported that the Government was preparing an appeal to the Supreme Court.

A. D. 1909. — Dissolution of a Paper-making Combination. — By a decree of the United States Circuit Court, Judge Hough, at New York, in May, 1909, the Fiber and Manila Association, a combination of 25 paper manufacturers, located in many parts of the country, East and West, was adjudged to be an illegal combination in restraint of trade, and perpetually enjoined from further operations in such combination. The members were enjoined further from fixing prices or the qualities that shall be manufactured or to maintain any pool or fund made up of contributions from its members. Counsel for the Association announced that no appeal would be made.

A. D. 1909. — Chartering of the United Dry Goods Companies. — "Details of the greatest dry goods combination ever attempted in this country were available to-day for the first time since the United Dry Goods Companies took out a Delaware charter last Friday [April 21, 1909]. The concern will control many of the largest dry goods stores in this city and at important commercial centres of the South and West, acting first as a holding company and later possibly as an operating concern, with headquarters here. John Claflin will be the head of the combination. The present managers of the various absorbed stores will be continued. J. P. Morgan & Co. are financing the deal, and public announcement will be made immediately.

"The United Dry Goods Companies will have a capital of $51,000,000. Of this only $20,000,000 will be immediately issued in the form of $10,000,000 7 per cent. cumulative preferred stock and $10,000,000 common stock. The preferred stock has preference as to both assets and dividends. The new combination will purchase $8,650,000 of the outstanding $17,250,000 capital stock of the Associated Merchants' Company. . . .

"John Claflin said this afternoon that the new company would not buy any mills, as it was not the purpose of the combination to control the sources of production. All the stores — there are more than forty, which the United Companies and its allies will own in whole or in part — will be free to purchase from whatever interests they wish, without being restricted to any one market or to the product of any special mills. The general business will be directed from the city, but resident directors at different centres will have full charge of the detail work." — *New York Evening Post, May, 25–6, 1909.*

COMBINATIONS

A. D. 1909. — The illegality of a Trust invalidates a debt to it. — In a suit brought by the Continental Wall Paper Company to recover a debt, payment of which was resisted on the ground that the Company was an illegal combination in restraint of trade, the Supreme Court of the United States, on the 1st of February, 1909, affirmed a judgment of the Circuit Court of Appeals which had dismissed the suit. The case was so decided by a bare majority of one. The opinion of the majority, delivered by Justice Harlan, held that a judgment in favor of the Company would give effect to agreements constituting the illegal combination. "Upon the whole case," said Justice Harlan, "and without further citation of authority, we adjudge upon the admitted facts that the combination represented by the plaintiff in this case was illegal under the anti-trust act of 1890; is to be taken as one intended, and which would have the effect, directly to restrain and monopolize trade among the several states and with foreign states; and that the plaintiff cannot have a judgment for the amount of the account sued on because such a judgment would, in effect, be in aid of the execution of agreements constituting that illegal combination. We consequently hold that the circuit court of appeals properly sustained the third defense in the case and rightly dismissed the suit."

In the dissenting opinion by Justice Holmes and others it was set forth that "whenever a party knows that he is buying from an illegal trust, and still more when he buys at a price that he thinks unreasonable, but is compelled to pay in order to get the goods he needs, he knows that he is doing an act in furtherance of the unlawful purpose of the trust, which always is to get the most it can for its wares. But that knowledge makes no difference, because the policy of not furthering the purposes of the trust is less important than the policy of preventing people from getting other people's property for nothing when they purport to be buying it."

A. D. 1909-1910. — Morgan & Co. Banking Combination. See (in this vol.) FINANCE AND TRADE: UNITED STATES.

A. D. 1910. — Special Message of President Taft on Legislation touching "Trusts." — An important special Message, recommendatory of legislation on the two subjects of interstate commerce and the combinations called "Trusts," was addressed to Congress by President Taft on the 7th of January, 1910. It had been expected that the Executive would advise amendments to the Sherman Anti-Trust Law, so-called, but he did not. On the contrary he favored the policy of leaving that law untouched, on the ground that its defects have been cured already to a great extent by judicial decisions, and that it is safer and better for the business interests of the country to trust the law to the gradual molding which the courts are giving it, than to undertake amendments which would start a new series of judicial interpretations. But the President's conclusions on this point were supplemented by the advocacy of an enactment to provide for the federal chartering of corporations engaged in interstate commerce, as a means of substituting continuous regulation of such organizations for the spasmodic and disturbing investigations which the Government is now compelled frequently to institute.

In part, the President's discussion of these questions is as follows: — "The statute has been on the statute book now for two decades, and the Supreme Court in more than a dozen opinions has construed it in application to various phases of business combinations and in reference to various subjects-matter. It has applied it to the union under one control of two competing interstate railroads, to joint traffic arrangements between several interstate railroads, to private manufacturers engaged in a plain attempt to control prices and suppress competition in a part of the country, including a dozen States, and to many other combinations affecting interstate trade. The value of a statute which is rendered more and more certain in its meaning by a series of decisions of the Supreme Court furnishes a strong reason for leaving the act as it is, to accomplish its useful purpose, even though if it were being newly enacted useful suggestions as to change of phrase might be made.

"It is the duty and the purpose of the Executive to direct an investigation by the Department of Justice, through the grand jury or otherwise, into the history, organization, and purposes of all the industrial companies with respect to which there is any reasonable ground for suspicion that they have been organized for a purpose, and are conducting business on a plan which is in violation of the Anti-Trust law. The work is a heavy one, but is not beyond the power of the Department of Justice, if sufficient funds are furnished, to carry on the investigations and to pay the counsel engaged in the work. But such an investigation and possible prosecution of corporations whose prosperity or destruction affects the comfort not only of stockholders, but of millions of wage-earners, employees, and associated tradesmen, must necessarily tend to disturb the confidence of the business community, to dry up the now flowing sources of capital from its places of hoarding, and produce a halt in our present prosperity that will cause suffering and strained circumstances among the innocent many for the faults of the guilty few. The question which I wish in this message to bring clearly to the consideration and discussion of Congress is whether in order to avoid such a possible business danger something cannot be done by which these business combinations may be offered a means, without great financial disturbance, of changing the character, organization, and extent of their business into one within the lines of the law under Federal control and supervision, securing compliance with the anti-trust statute.

"Generally, in the industrial combinations called 'Trusts,' the principal business is the sale of goods in many States and in foreign markets; in other words, the interstate and foreign business far exceeds the business done in any one State. This fact will justify the Federal government in granting a Federal charter to such a combination to make and sell in interstate and foreign commerce the products of useful manufacture under such limitations as will secure a compliance with the Anti-Trust law. It is possible so to frame a statute that while it offers protection to a Federal company against harmful, vexatious, and unnecessary invasion by the States, it shall subject it to reasonable taxation and control by the States, with respect to its purely local business.

"Many people conducting great businesses have cherished a hope and a belief that in some way or other a line may be drawn between 'good Trusts' and 'bad Trusts,' and that it is possible, by amendment to the Anti-Trust law, to make a distinction under which good combinations may be permitted to organize, suppress competition, control prices, and do it all legally, if only they do not abuse the power by taking too great profit out of the business. . . . Now, the public, and especially the business public, ought to rid themselves of the idea that such a distinction is practicable or can be introduced into the statute. Certainly under the present Anti-Trust law no such distinction exists. It has been proposed, however, that the word 'reasonable' should be made a part of the statute, and then that it should be left to the court to say what is a reasonable restraint of trade, what is a reasonable suppression of competition, what is a reasonable monopoly. I venture to think that this is to put into the hands of the court a power impossible to exercise on any consistent principle which will insure the uniformity of decision essential to just judgment. It is to thrust upon the courts a burden that they have no precedents to enable them to carry, and to give them a power approaching the arbitrary, the abuse of which might involve our whole judicial system in disaster.

"In considering violations of the Anti-Trust law, we ought, of course, not to forget that that law makes unlawful, methods of carrying on business which before its passage were regarded as evidence of business sagacity and success, and that they were denounced in this act, not because of their intrinsic immorality, but because of the dangerous results toward which they tended, the concentration of industrial power in the hands of the few, leading to oppression and injustice. In dealing, therefore, with many of the men who have used the methods condemned by the statute for the purpose of maintaining a profitable business, we may well facilitate a change by them in the method of doing business. . . .

"To the suggestion that this proposal of Federal incorporation for industrial combinations is intended to furnish them a refuge in which to continue industrial abuses under Federal protection, it should be said that the measure contemplated does not repeal the Sherman Anti-Trust law, and is not to be framed so as to permit the doing of the wrongs which it is the purpose of that law to prevent, but only to foster a continuance and advance of the highest industrial efficiency without permitting industrial abuses. . . .

"A Federal compulsory license law, urged as a substitute for a Federal incorporation law, is unnecessary except to reach that kind of corporation which, by virtue of the considerations already advanced, will take advantage voluntarily of an incorporation law, while the other State corporations doing an interstate business do not need the supervision or the regulation of a Federal license and would only be unnecessarily burdened thereby.

"The attorney-general, at my suggestion, has drafted a Federal incorporation bill embodying the views I have attempted to set forth, and it will be at the disposition of the appropriate committees of Congress."

A. D. 1910. — Renewed investigation of the Beef Trust. — A renewed investigation of the business methods of the great meat-packing concerns at Chicago, by the grand jury of the United States District Court, Judge K. M. Landis, was begun on the 24th of January, 1910. It is understood to have special reference to the causes of the rising prices of meats. The firms against which the Government is thus preparing to proceed are: Swift & Co., Armour & Co., and Morris & Co., who, it is alleged, control the National Packing Company, for their common benefit.

CONGO STATE.

How the natives 'ave been enslaved and oppressed. — The "Domaine Privé." — "The Berlin Conference laid it down that no import dues should be established in the mouth of the Congo for twe 'ty years. But in 1890 King Leopold, alleging the heavy expenses to which he had been put by the campaign against the Arabs in the Upper Congo, applied for permission to levy import duties. It was the first disillusionment; and the British Chambers of Commerce began to wonder whether their opposition to the Anglo-Portuguese Convention had not been mistaken. The King's request was granted (the Powers merely reserving to themselves the right to revert to the original arrangement in fifteen years), but not without the bitter opposition of the Dutch, who had very important commercial interests in the Congo, backed by the British Chambers of Commerce and all the traders in the Congo, irrespective of nationality. A representative gathering was held in London on November 4th, 1900, presided over by Sir Albert Rollit, to protest against the imposition of import duties and to denounce the hypocrisy which attributed to philanthropic motives the desire on the part of the Congo State so to impose upon them. . . .

"They were able to show that . . . King Leopold, notwithstanding his formal assurances to the commercial world that the Congo State would never directly or indirectly itself trade within its dominions, was buying, or rather stealing, ivory from the natives in the Upper Congo and retaining the proceeds of the sale on the European market. They proved that, profiting by the silence of the Berlin Treaty on the subject of export duties, the Congo State had already imposed taxes amounting to 17½ per cent. on ivory, 13 per cent. on rubber and 5 per cent. on palm kernels, palm-oil and ground-nuts, the total taxation amounting to no less than 33 per cent. of the value of the whole of the trade. Finally they had no difficulty in demonstrating that, with all his professed wish to stamp out the slave-raiding carried on by the half-caste Arabs in the Upper Congo, His Majesty was himself tacitly encouraging the slave trade by receiving tribute from conquered Chiefs in the shape of slaves, who were promptly enrolled as soldiers in the State army. . . .

"Five months after the termination of the Berlin Conference King Leopold issued a decree (July, 1885) whereby the State asserted rights of proprietorship over all *vacant lands* throughout the Congo territory. It was intended that the term vacant lands should apply in the broadest sense to lands not *actually occupied* by the natives at the time the decree was issued. By successive decrees, promulgated in 1886, 1887 and 1888, the King reduced the rights of the natives in their land to the narrowest limits, with the result that the whole of the odd 1,000,000 square miles assigned to the Congo State, except such infinitesimal proportions thereof as were covered by native villages or native farms, became '*terres domaniales*.' On October 17th, 1889, the King also issued a decree ordering merchants to limit their commercial operations in rubber to bartering with the natives. This decree was interesting merely as a forewarning of what came later, because at that time the rubber trade was very small. In July, 1890, the same year as the Brussels Conference, the Congo State went a step further. A decree issued in that month confirmed all that was advanced in November of the same year by the speakers at the London Conference held to protest against the imposition of import duties by the State. By its terms King Leopold asserted that the State was entitled to trade on its own account in ivory — the first open violation of his pledges. Moreover the decree imposed sundry extra taxes upon all ivory bought by merchants from the natives, which, since the State had become itself a trading concern, constituted an equally direct violation of the Berlin Act, by establishing differential treatment in matters of trade. Such were the plans King Leopold made, preparatory to obtaining from the Powers the power to impose import duties. Everything was ready for the great *coup*, which should also inaugurate the Fifth Stage of His Majesty's African policy.

"The Brussels Conference met. The Powers with inconceivable fatuity allowed themselves to be completely hoodwinked, and within a year the greatest injury perpetrated upon the unfortunate natives of Africa since the Portuguese in the XVth century conceived the idea of expatriating them for labour purposes had been committed, and committed too by a Monarch who had not ceased for fifteen years to pose as their self-appointed regenerator. On September 21st, 1891, King Leopold drafted, in secret, a decree which he caused to be forwarded to the Commissioners of the State in the Uban-ghi-Welle and Aruwimi-Welle districts, and to the Chiefs of the military expeditions operating in the Upper Ubanghi district. This decree never having been published in the official Bulletin of the State, its exact terms can only be a matter of conjecture, but we know that it instructed the officials to whom it was addressed 'to take urgent and necessary measures to preserve the fruits of the domain to the State, especially ivory and rubber.' By 'fruits of the domain' King Leopold meant the products of the soil throughout the 'vacant lands' which he had attributed to himself, as already explained, by the decree of 1885. The King's instructions were immediately followed, and three circulars, dated respectively Bangala, 15th December, 1891, Basankusu, 8th May, 1892, and Yokoma, 14th February, 1892, were issued by the officials in question. Circular No. 1 forbade the natives to hunt elephants unless they brought the tusks to the State's officers. Circular No. 2 forbade the natives to collect rubber unless they brought it to the State's officers. Circular No. 3 forbade the natives to collect either ivory or rubber unless they brought the articles to the State's officers, and added that 'merchants purchasing such articles from the natives, whose right to collect them the State only recognised provided that they were brought to it, would be looked upon as receivers of stolen goods and denounced to the judicial authorities.' Thus did the Sovereign of the Congo State avail himself of the additional prestige conferred upon him by the Brussels Conference. . . .

"In theory, then, the decrees of September, 1891, and October, 1892, made of the native throughout the *Domaine Privé* a serf. In theory

a serf he remained, for a little while. But as the grip of Africa's regenerator tightened upon the *Domaine Privé*, as the drilled and officered cannibal army, armed with repeating rifles, gradually grew and grew until it was larger than the native forces kept up by any of the great Powers of Europe on African soil, as the radius of the rubber taxes was extended, as portions of the country began to be farmed out to so called 'Companies' whose agents were also officials of the King, the native of the *Domaine Privé* became a serf not in theory only but in fact, ground down, exploited, forced to collect rubber at the bayonet's point, compelled to pay onerous tribute to men whose salaries depend upon the produce returns from their respective stations — the punishment for disobedience, slothfulness or inability to comply with demands ever growing in extortion, being anything from mutilation to death, accompanied by the destruction of villages and crops." — E. D. Morel, *The Belgian Curse in Africa* (*Contemporary Review*, *March*, 1902).

A. D. 1903-1905. — The alleged oppressiveness, barbarity, and rapacity of its administration under King Leopold. — Observations of Lord Cromer on the Nile border. — Reports of a British Consular Officer, and of King Leopold's Belgian Commission. — Action of the British Government. — Serious accusations of oppression and barbarity in the exploitation of the natural wealth of the so-called Independent Congo State, under the administration of its royal proprietor, King Leopold, of Belgium, were beginning to be made a dozen years ago, as will be seen by reference to the subject in Volume VI. of this work. The King and the companies which operated in the region under his grants were reputed to be taking enormous profits from it. Of one of those concession-ire companies, sometimes referred to as the A. B. I. R. Co. and sometimes as "the Abir," it was stated in 1901 that its £40,000 of shares could have been sold for £2 160,000, and that half of its profits went to Leopold. But, as was said later by a member of the British Parliament who wrote on the subject in one of the reviews, "meanwhile Europe was becoming aware of the price that was being paid in Africa for these profits in Belgium. Travellers, missionaries of various nationalities, administrators in the neighbouring territories belonging to England and France, sent home graphic reports of the cruel oppression that was being practised on the helpless population. In England especially, through the efforts of Sir Charles Dilke, of Mr Fox-Bourne, the secretary of the Aborigines Protection Society, of Mr. E. D. Morel and of other disinterested men, public opinion was informed of the truth. In May, 1903, a resolution, which I had the honor of moving in the House of Commons, calling upon the Government to take action with a view to the abatement of the evils prevalent in the Congo Free State, was accepted by Mr. Balfour and unanimously passed. A diplomatic correspondence ensued between the two governments. The British Consul in the Lower Congo, Mr. Roger Casement, was sent on a tour of inquiry into the interior, and his lengthy and detailed report fully confirmed — in some respect extending — the indictment that had been drawn. A Congo Reform Association was founded, and immediately secured influential support. . . . At last King Leopold, pressed by the despatches of the British Government and bowing to the storm of public opinion, yielded so far as to authorise further inquiry into the charges that had been made. The investigation by an International Commission, which had been proposed, he rejected. He nominated three Commissioners of his selection, one a legal officer in the service of the Belgian Government, one a judge in the service of the Congo State, and the third a Swiss jurist of repute. In October, 1904, the Commission reached the Congo. It stayed for five months and made an extended journey into the interior. After an unexplained delay of eight months its report was published on the 6th of November of this year [1905] . . .

"Had the report embodied an acquittal of the Congo State it would not, under the circumstances, have been surprising. The Commissioners, however, have to a great degree risen superior to their natural prepossessions. . . . It is most regrettable . . that they present no minutes of the evidence taken before them — a circumstance which deprives the report of actuality and force, and prevents outside observers from drawing their own conclusions from the facts which had been ascertained. But the inquiry was painstaking. The case was fairly tried. The judgment is an honest judgment.

"Being honest, it is necessarily a condemnation. The Belgian defenders of the Congo Government, who were led by a conception of patriotic duty as profoundly false as that of the anti-Dreyfusards in France to deny everything and to meet the critics merely with unceasing torrents of abuse, now have their answer. A tribunal, not of our choosing, selected by the defendant in their cause, has shown that those who denounced Congo misrule were in the right, that the atrocities were not imaginary, that a cruel oppression of the natives has been proceeding unchecked for years."— *Herbert Samuel, The Congo State* (*Contemporary Review*, *Dec.*, 1905).

Before this report appeared many witnesses had testified for and against the impeached Government and its commercial monopoly of the Congo State. Atrocities of slaughter, mutilation and flogging, committed by the soldiery, the sentries and other extortioners of a labor tax from the helpless natives, were asserted and denied. It is best, perhaps, to drop these blackest counts from the Congo indictment, because of the controversy over them; and enough remains in the Report of the King's own Commission of Inquiry, and in general conditions which are flagrantly in evidence, to convict King Leopold and his agents of soulless rapacity, in their treatment of the vast African country that was entrusted to him by the Conference of Powers assembled at Berlin in 1884–5.

There is great weight of meaning, for example, in a few words that were written, in January, 1903, by Lord Cromer, while returning from a long trip up the Nile, in which his steamer passed along about eighty miles of Congolese shore. Before reaching that border of Leopold's domain he had traversed 1100 miles of the country lately wrested by the British from dervishes and slave dealers, where, he remarks, "it might well have been expected that much time would be required to inspire confidence in the intentions of the new Government." But, "except in the uninhabitable 'Sudd' region," he wrote, "nu-

merous villages are dotted along the banks of the river. The people, far from flying at the approach of white men, as was formerly the case, run along the banks, making signs for the steamer to stop. It is clear that the Baris, Shilluks, and Dinkas place the utmost trust and confidence in the British officers with whom they are brought in contact. . . .

"The contrast when once Congolese territory is entered is remarkable. From the frontier to Gondokoro is about 80 miles. The proper left, or western, bank of the river is Belgian. The opposite bank is either under the Soudanese or the Uganda Government. There are numerous islands, and as all these are under British rule — for the thalweg which, under Treaty, is the Belgian frontier, skirts the western bank of the river — I cannot say that I had an opportunity of seeing a full 80 miles of Belgian territory. At the same time, I saw a good deal, and I noticed that, whereas there were numerous villages and huts on the eastern bank and on the islands, on the Belgian side not a sign of a village existed. Indeed, I do not think that any one of our party saw a single human being in Belgian territory, except the Belgian officers and men and the wives and children of the latter. Moreover not a single native was to be seen either at Kiro or Lado. I asked the Swedish officer at Kiro whether he saw much of the natives. He replied in the negative, adding that the nearest Bari village was situated at some distance in the interior. The Italian officer at Lado, in reply to the same question, stated that the nearest native village was seven hours distant. The reason of all this is obvious enough. The Belgians are disliked. The people fly from them, and it is no wonder they should do so, for I am informed that the soldiers are allowed full liberty to plunder, and that payments are rarely made for supplies. The British officers wander, practically alone, over most parts of the country, either on tours of inspection or on shooting expeditions. I understand that no Belgian officer can move outside the settlements without a strong guard."

This is in line with some parts of the experience of Mr. Casement, the British Consular Officer referred to in the article quoted above, who travelled for about ten weeks on the Upper Congo in 1903, and whose report of what he saw includes such accounts as the following, of conditions around Lake Matumba: "Each village I visited around the lake, save that of Q. and one other, had been abandoned by its inhabitants. To some of these villages the people have only just returned; to others they are only now returning. In one I found the bare and burnt poles of what had been dwellings left standing, and at another — that of R — the people had fled at the approach of my steamer, and despite the loud cries of my native guides on board, nothing could induce them to return, and it was impossible to hold any intercourse with them. At the three succeeding villages I visited beyond R., in traversing the lake towards the south, the inhabitants all fled at the approach of the steamer, and it was only when they found whose the vessel was that they could be induced to return."

An incident related by Mr. Casement is this: "Steaming up a small tributary of the Lulongo, I arrived, unpreceded by any rumour of my coming, at the village of A. In an open shed I found two sentries of the La Lulanga Company guarding fifteen native women, five of whom had infants at the breast, and three of whom were about to become mothers. The chief of these sentries, a man called S—— who was bearing a double-barelled shot-gun, for which he had a belt of cartridges — at once volunteered an explanation of the reason for these women's detention. Four of them, he said, were hostages who were being held to insure the peaceful settlement of a dispute between two neighbouring towns, which had already cost the life of a man. . . . The remaining eleven women, whom he indicated, he said he had caught and was detaining as prisoners to compel their husbands to bring in the right amount of india-rubber required of them on next market day.. When I asked if it was a woman's work to collect india-rubber, he said, 'No; that, of course, it was man's work.' 'Then why do you catch the women and not the men?' I asked. 'Don't you see,' was the answer, 'if I caught and kept the men, who would work the rubber? But if I catch their wives, the husbands are anxious to have them home again, and so the rubber is brought in quickly and quite up to the mark.' When I asked what would become of these women if their husbands failed to bring in the right quantity of rubber on the next market day, he said at once that then they would be kept there until their husbands had redeemed them." — *Parliamentary Papers, Africa, No.* 1 (1904), *Cd.* 1933.

But the facts which condemn the Congo administration most conclusively are found in the report of the Commission of Inquiry appointed by King Leopold himself, — especially in what it represents of the heartless oppression of the labor tax, or labor imposed on the natives, in their compulsory carrying of goods or collection of rubber, food and wood, for the State and for the companies that operate under the King's grants. As to the labor tax exacted in food, for example, the Commission expresses itself as follows:

"The decree fixes at forty hours per month the work which each native owes to the State. This time, considered as a maximum, is certainly not excessive, especially if one takes account of the fact that the work ought to be remunerated; but as in the immense majority of cases . . . it is not precisely the work which is demanded of the native, but rather a quantity of products equivalent to forty hours of work, the criterion of time disappears in reality and is replaced by an equivalent established by the Commissioner of the district after diverse methods. . . .

"*Chikwangue* (kwanga) is nothing but manioc bread. . . . The preparation of this food requires many operations: the clearing of the forest, the planting of manioc, the digging up of the root and its transformation into *chikwangue*, which comprises the operations of separating the fibers and stripping the bark, pulverizing, washing, making it into bundles, and cooking it. All these operations, except clearing the land, fall to the women. The *chikwangues* so prepared are carried by the natives to the neighboring post and served for the food supply of the personnel of the State — soldiers and laborers. . . . As the *chikwangue* keeps only a few days, the native, even by redoubling his activity, cannot succeed in freeing himself from his obligations for any length of time. The requirement, even if it does not take all his time, oppresses him continually

by the weight of its recurrent demands, which deprive the tax of its true character and transform it into an incessant *corvée*. . . . Doubtless the adage, 'time is money,' cannot be applied to the natives of the Congo: . . it is none the less inadmissible that a taxpayer should be obliged to travel over ninety-three miles to carry to the place of collection a tax which represents about the value of twenty-nine cents. . . .

"Natives inhabiting the environs of Lulonga were forced to journey in canoes to Nouvelle-Anvers, which represents a distance of forty to fifty miles, every two weeks, to carry their fish; and taxpayers have been seen to submit to imprisonment for delays which were perhaps not chargeable to them, if we take into account the considerable distances to be covered periodically to satisfy the requirements of the tax."

As applied to the collection of rubber, the so-called labor tax was found by the commission to consume so much of the time of the natives subjected to it that it practically made slaves of them, and nothing less.

When the abused native is pretendedly paid for his labor or its product, it is by some trifle in metal or flimsy woven stuff, which costs the State and its tributary companies next to nothing and is next to worthless to the recipient.

And not only does the State exercise over the unfortunate subjects that were delivered to it an authority of Government which appears to be little else than a power of extortion, but it has taken all their lands from them, substantially, and left them next to nothing on which to perform any labor for themselves. It has decreed to itself the ownership of all land not included in the native villages or not under cultivation. Concerning which decree the Commission remarks:

"As the greater part of the land in the Congo has never been under cultivation, this interpretation gives to the State a proprietary right, absolute and exclusive, to almost all the land, and as a consequence it can grant to itself all the product of the soil and prosecute as robbers those who gather the smallest fruit and as accomplices those who buy the same. . . . It thus happens sometimes that not only have the natives been prohibited from moving their villages, but they have been refused permission to go, even for a time, to a neighboring village without a special permit."

In the summer of 1903 the British Government was moved to address a formal communication to all the Powers which had been parties to the Act of the Berlin Conference of 1884–5, whereby the Congo State was created and entrusted to King Leopold, asking them to consider whether the system of government and of trade monopoly established in that State was in conformity with the provisions of the Act. The British Foreign Secretary, Lord Lansdowne, in his despatch (August 8, 1903), rehearsed at length the charges that were brought against the Congo administration, concerning its extortion of labor from the natives by a method "but little different from that formerly employed to obtain slaves," saying: "His Majesty's Government do not know precisely to what extent these accusations may be true; but they have been so repeatedly made, and have received such wide credence, that it is no longer possible to ignore them, and the question has now arisen, whether the Congo State can be considered to have fulfilled the special pledges, given under the Berlin Act, to watch over the preservation of the native tribes, and to care for their moral and material advancement."

At the same time, the dispatch called the attention of the Powers to the question of rights of trade in the Congo, saying: "Article I of the Berlin Act provides that the trade of all nations shall enjoy complete freedom in the basin of the Congo; and Article V provides that no Power which exercises sovereign rights in the basin shall be allowed to grant therein a monopoly or favour of any kind in matters of trade. In the opinion of His Majesty's Government, the system of trade now existing in the Independent State of the Congo is not in harmony with these provisions. . . . In these circumstances, His Majesty's Government consider that the time has come when the Powers parties to the Berlin Act should consider whether the system of trade now prevailing in the Independent State is in harmony with the provisions of the Act; and, in particular, whether the system of making grants of vast areas of territory is permissible under the Act if the effect of such grants is in practice to create a monopoly of trade." — *Parliamentary Papers, Africa, No.* 14 (1903). *Cd.* 1809.

A. D. 1904. — Feeling in Belgium concerning the charges of oppression and inhumanity to the natives. See (in this vol.) BELGIUM: A. D. 1904.

A. D. 1906-1909. — Reform Decrees and their small effect. — Continued reports of rapacious exploitation. — Concession secured by American capitalists. — Annexation of the State by Belgium. — Recognition of the annexation withheld by Great Britain and the United States. — Apparently the endeavor of the British Government to set in motion some action of the Powers which had been parties to the creation of the Congo State, for the purpose of ascertaining whether the provisions of the Berlin Act were being complied with in the administration of that great trust, had no practical result. During the next two years the Congo Government was persistent in denying and attempting to refute some parts of the reports sent home by British consular officers in the Congo; but after the publication of the report of its own investigating Commission, in 1905, there seems to have been more reticence observed. In June, 1906, a series of new decrees, supposed to embody the recommendations of the Reforms Commission, was sanctioned by the King. But the Consuls who reported to London from the Congo country do not seem to have found the wretched natives much relieved by these decrees. Vice-Consul Armstrong, writing from Boma December, 1907, after a prolonged journey through rubber-collecting regions, declared his conviction that "the people worked from twenty to twenty-five days a month" to satisfy their labor tax. He added: "The improvement that has been made by the application of the Reform Decrees of June 1906 is solely in the withdrawal of armed sentries, a reform which the serious decimation of the population by the sentries demanded. . . . I saw nothing which led me to view the occupation of this country in the light of an Administration. The undertakings of the Government are solely commercial, with a sufficient administrative power to insure the safety of its personnel and the suc-

cess of its enterprise. . . . The following is an estimate of the profits of the State on their rubber tax. I take the village of N'gongo as being a large one, and one of the few villages that supply the amount actually assessed:—

Amount assessed yearly. 1,440 kilog. of rubber.	£	s.	d.
1,440 kilog. of rubber at 10 fr. .	576	0	0
Amount paid to natives at 50 c. per kilog.	28	16	0

"I calculate the rubber at 10 fr. per kilog., the value placed upon it by the State in the Commercial Report issued this year. The market value in Antwerp is from 12 fr. to 13 fr. per kilog. From this amount of 576*l.* must be deducted the cost of transport, which cannot be more than 2 fr. per kilog. rendered at Antwerp, so that the net profits derived from this one village would be a little more than 456*l.* per annum. One hundred and twenty natives, together with their wives and children, which would bring the population of the town to about 400 souls, share this amount of 28*l.* 16*s.*, and as this is paid in cloth at 7½*d.* per yard and salt at 1*s.* 7½*d.* per kilog., it is evident that they cannot receive very much each, and that they complain of their remuneration."

These were not the only official witnesses now testifying to the barbarities of commercial exploitation that were perpetrated in the Congo country under pretences of administering the Government of a State. Reports to the same effect were coming to the Government of the United States from its Consuls in the Congo. Consul-General C. R. Slocum wrote on the 1st of December, 1906, to the Department of State at Washington: "I have the honour to report that I find the Congo Free State, under the present *régime*, to be nothing but a vast commercial enterprise for the exploitation of the products of the country, particularly that of ivory and rubber. Admitted by Belgian officials and other foreigners here, the State, as I find it, is not open to trade in the intended sense of article 5 of the Berlin Act under which the State was formed."

A year later, the succeeding Consul-General of the United States in the Congo State, Mr. James A. Smith, made a similar report: "In excluding the native," he wrote, "from any proprietary right in the only commodities he possessed which would serve as a trade medium —that is, the products of the soil—and in claiming for itself and granting to a few concessionary companies in which it holds an interest exclusive ownership of these products, the Administration, in its commercial capacity, has effectively shut the door to free trade and created a vast monopoly in all articles the freedom of buying and selling which alone could form a proper basis for legitimate trade transactions between the native and independent purchasers. Competition, by which alone can a healthy condition of trade be maintained, has been entirely eliminated. The Government is but one tremendous commercial organization; its administrative machinery is worked to bar out all outside trade and to absolutely control for its own benefit and the concessionary companies the natural resources of the country."

In the same report Mr. Smith gave details of an experiment he had made, in conjunction with the *chef de secteur* at Yambata, to test the truth of the assertions made by the natives as to the length of time necessary to gather the rubber which they are compelled to furnish. The place for the experiment was selected by the *chef de secteur*, and he chose the five natives who were employed in the experiment, and who were promised rewards as an incentive to do their best. The men worked for four hours, and although Mr. Smith vouches for the fact that they did not lose a minute, they only succeeded in gathering 650 grammes. From this, as Mr. Smith argues, the amount of time they would have to spend in collecting the rubber tax works out at 93 hours a month, or, counting eight hours a day, at 140 days a year. This did not include the time spent in travelling to and from the rubber-bearing districts.

Before this time, American interest in the Congo State had become more than humanitarian, and more than a commercial interest in the general opportunities of trade; for heavy American capitalists had secured concessions from King Leopold in a large territory for the development of railways, rubber production and mines. The fact was announced in the fall of 1906, and the names of John D. Rockefeller, Jr., Thomas F. Ryan, Harry Payne Whitney, Edward B. Aldrich and the Messrs. Guggenheim were mentioned as prominent in the group to which the grant was made.

Under the Convention of 1890 between King Leopold and the Congo State, as one party, and the Kingdom of Belgium as the other, it became the right of the latter, on the expiration of ten years, in 1900, to annex the Congo State to itself (see, in Volume VI. of this work, CONGO STATE: A. D. 1900). The right was not then exercised; but the question of taking over the sovereignty of that great African domain came under warm discussion in Belgium before many years, and, finally, in 1908, it reached the point of a keen negotiation of terms with the King, attended by lively conflicts in the Belgian Chambers. While the question was thus pending in Belgium, the British Government took occasion to express its views to the Belgian Government, as to the obligations which such an annexation would involve. This was done on the 27th of March, 1908, in a despatch from the Foreign Minister, Sir Edward Grey, communicating an extended "Memorandum respecting Taxation and Currency in the Congo Free State." The language of the despatch, in part, was as follows:

"His Majesty's Government fully recognize that the choice of the means by which the administration of the Congo may be brought into line by the Berlin Act rests exclusively with Belgium. Nevertheless, while disclaiming all idea of interference, His Majesty's Government feel that in fairness they should leave the Belgian Government in no doubt that in their opinion the existing administration of the Congo State has not fulfilled the objects for which the State was originally recognized, or the conditions of Treaties, and that changes are therefore required, which should effect the following objects: 1. Relief of the natives from excessive taxation. 2. The grant to the natives of sufficient land to ensure their ability to obtain not only the food they require, but also sufficient produce of the soil to enable them to buy and sell as in other European Colonies. 3. The possibility for traders whatever their nationality may be to acquire plots of

land of reasonable dimensions in any part of the Congo for the erection of factories so as to enable them to establish direct trade relations with the natives. . . .

"Taking the three points enumerated above in order, it appears to His Majesty's Government that —

"1. As regards the question of taxation in labour, the abuses to which the system has given rise have only been rendered possible by the absence of a proper standard of value. They believe, therefore, that the only sure and efficacious means of precluding the existence of such abuses in the future is the introduction of currency throughout the State at the earliest possible date. Both the Reports of the Commission of Inquiry and the experience of His Majesty's Consular officers agree in the conclusion that the native has learnt the use of money, and that currency would be welcomed by all classes, native and European alike.

"2. The natives in the concessionary areas should not be compelled, by either direct or indirect means, to render their labour to the Companies without remuneration. The introduction of currency should contribute greatly to the protection of the native against the illicit and excessive exactions on the part of private individuals Such protection, however, cannot be adequately secured unless the latter be compelled to pay the native in specie at a fair rate to be fixed by law

"3. They would urge that a large increase should be made in the land allotted to the natives."

The exceptional failure of the Congo State, among African colonies, to introduce the use of currency in transactions with the natives, and the connection of this failure with the state of things existing there, is discussed at length in the Memorandum, with a practical summing up in these sentences: "The Secretaries-General said the native in the Congo had no specie. True, but why has he no specie? Because, as already explained, during the twenty-three years that the Congo State has been in existence no serious attempt, in spite of all assertions to the contrary, has ever been made by the State to introduce currency on a sufficiently large scale. In every other European Colony in Africa has the native come to learn the practical value of a medium of exchange. What are the reasons that the Congo State should stand in an exceptional position in this respect? They are unfortunately obvious enough. The truth is that it is precisely owing to the absence of a proper standard of value that the Congo Government and the Concessionary Companies have been able to abuse the system of taxation in labour, and realize enormous profits out of the incessant labour wrung from the population in the guise of taxation."

This communication from Great Britain to the Belgian Government was followed soon (in April) by memoranda from the Government of the United States, setting forth the hopes and expectations of administrative reform with which it contemplated the proposed annexation of the Congo State.

A few months later the treaty of annexation was agreed upon, and the annexation consummated by an Act of the Belgian Parliament, promulgated on the 20th of October, 1908. To an announcement of the fact by the Belgian Minister at Washington, Secretary Root replied at considerable length, in a communication which bears the date of June 11, 1909: "The Government of the United States," said the Secretary, "has observed with much interest the progress of the negotiations looking to such a transfer, in the expectation that under the control of Belgium the condition of the natives might be beneficially improved and the engagements of the treaties to which the United States is a party, as well as the high aims set forth in the American memoranda of April 7 and 16, 1908, and declared in the Belgium replies thereto, might be fully realized.

"The United States would also be gratified by the assurance that the Belgian Government will consider itself specifically bound to discharge the obligations assumed by the Independent State of the Congo in the Brussels Convention of July 2, 1890, an assurance which the expressions already made by the Government of Belgium in regard to its own course as a party to that convention leave no doubt is in entire accordance with the sentiments of that Government. Among the particular clauses of the Brussels Convention which seem to the United States to be specially relevant to existing conditions in the Congo region are the clauses of Article II., which include among the objects of the convention:

"'To diminish intestine wars between tribes by means of arbitration; to initiate them in agricultural labour and in the industrial arts so as to increase their welfare; to raise them to civilization and bring about the extinction of barbarous customs. . . .

"'To give aid and protection to commercial enterprises; to watch over their legality by especially controlling contracts for service with natives; and to prepare the way for the foundation of permanent centres of cultivation and of commercial settlements.'

"The United States has been forced to the conclusion that in several respects the system inaugurated by the Independent State of the Congo has, in its practical operation, worked out results inconsistent with these conventional obligations and calling for very substantial and even radical changes in order to attain conformity therewith." Moreover, it renders nugatory the provisions of the successive declarations and conventions, cited by the Secretary, which have given such rights in the Congo State to citizens of the United States and others as must be maintained.

"It should always be remembered," wrote Mr. Root, "that the basis of the sovereignty of the Independent State of the Congo over all its territory was in the treaties made by the native Sovereigns who ceded the territory for the use and benefit of free States established and being established there under the care and supervision of the International Association, so that the very nature of the title forbids the destruction of the tribal rights upon which it rests without securing to the natives an enjoyment of their land which shall be a full and adequate equivalent for the tribal rights destroyed."

Referring to a statement made in the Belgian reply given to his memorandum of April 16, which he quotes as in these words: — "When it annexes the possessions of the Independent State Belgium will inherit its obligations as well as its rights; it will be able to fulfil all the engagements made with the United States by the declarations of April 22, 1884" — Mr. Root closes his

letter with these remarks: "It would be gratifying to the United States to know that the last clause of the statement just quoted is not intended to confine the rights of the United States in the Independent State to the declarations of the Commercial Association which preceded the creation of the Congo State as a sovereign power, but includes the conventional rights conferred upon the United States by the treaty concluded with the Independent State immediately after its recognition.

"In the absence of a fuller understanding on all these points, I confine myself for the present to acknowledging your note of November 4 last and taking note of the announcement therein made."

Thus no recognition was given to the Belgian annexation. Recognition was held in abeyance, awaiting further information and evidence of reform in the administration of the Congo State. And this is the attitude assumed by the British Government, which waited long and with growing impatience for assurances from Belgium, with proceedings that would give sign of making them good. On the 24th of February, 1909, the subject came up in Parliament, with assertions that "oppression of the natives was still going on just as before the annexation," and that "Great Britain had waited for months while the cruelties against which she had protested still continued." In the debate, Sir Charles Dilke referred to the harmony of action in the matter by the United States and Great Britain, and expressed his conviction that "the coöperation of two such powerful Governments in the cause of humanity would be irresistible." Sir Edward Grey, speaking for the Ministry, said:

"I am glad that in the course of the debate it has been emphasized that this attitude is not ours alone, but that the United States has spoken with equal emphasis and taken up the same position. I am sorry that no other Power has taken up the same position so strongly; but as there is only one Power which has declared itself so definitely on the question as ourselves, I should like to say that I am glad it is the United States."

Alluding to a remark made by one of the speakers in the debate, that the Government might have prevented the annexation of the State by Belgium, Sir Edward said: "I do not think we should have prevented the annexation, but in any case I should not have tried to prevent the annexation. And for this reason among others — that if Belgium was not going to take the Congo State in hand and put it right, who was? I have never been able to answer that question. Certainly not ourselves, because we have always denied the intention of assuming any responsibility over an enormous tract of [illegible]d where we have sufficient responsibility already."

The Foreign Secretary concluded his speech by saying: "If Belgium makes the administration of the Congo humane and brings it into accord, in practice and spirit, with the administration which exists in our own and neighbouring African colonies, no country will more cordially welcome that state of things than this or more warmly congratulate Belgium. But we cannot commit ourselves to countersign, so to say, by recognition a second time, the system of administration which has existed under the old *régime*."

Again, in May, the question came up in Parliament, with impatient criticism of the Government for not taking peremptory measures to compel a reformation of Belgian rule in the Congo State, one speaker suggesting a "peaceful blockade" of the mouth of the Congo. Sir Edward Grey replied:

"If this question were rashly managed it might make a European question compared to which those which we have had to deal with in the last few months might be child's play. Take, for instance, the question of peaceful blockade. It is no good talking of peaceful blockade. Blockade is blockade. It is the use of force. If you are to have blockade you must be prepared to go to war, and a blockade of the mouth of the Congo means blockading a river which is not the property of the Congo or Belgian Government. They have one bank of the river. It is a river which by international treaty must be opened to navigation, and if you are to blockade to any effect you must be prepared to stop every ship going in or out of the Congo, whether under the French, Belgian, German, or whatever flag it is. Surely if you are going to pledge yourself to take steps of that kind, and to accept the responsibility for them, it is not too much to say that you must be prepared to raise a European question which would be of the gravest kind. I do not say there are not circumstances which might justify a question of that kind, but do not let the House think that by smooth words, such as by applying the adjective 'peaceful' to blockade, you are going to minimize what will be the ultimate consequences of the step you are taking."

A. D. 1909 (Oct.). — Programme of reforms promised by the Belgian Government. — The programme of long promised reforms to be instituted by the Belgian Government in its administration of the now annexed Congo State was announced in the Belgian Chamber on the 28th of October, 1909, by the Minister for the Colonies, M. Renkin. "He repeated his solemn assurance that the charges of cruelty or oppression made against the Belgian Colonial Administration were false. He had questioned missionaries, officials, chiefs, and other natives during his visit, and heard nothing to justify the accusation. Individual breaches of the law might possibly have occurred, but every abuse brought to the notice of the authorities was immediately made the object of inquiry.

"It was useless, he said, to refer to the past; the situation had been radically altered by the annexation. As regards the land system, the assignment of vacant lands to the State was juridically unassailable, but they must also have regard to the development of the natives. The natives would therefore be granted the right to take the produce of the soil in the Domain. This would be accomplished in three stages. On July 1, 1910, the Lower Congo, Stanley Pool, Ubangi, Bangala, Kwango, Kasai, Katanga, the southern portion of the Eastern Province, Aruwimi, and the banks of the river as far as Stanleyville would be opened to freedom of trade. On July 1, 1911, the Domain of the Crown, and on July 1, 1912, the Welle district would also be thrown open. Furthermore, the Government would levy taxes in money, and the system of the provisioning of the agents would be abolished."

M. Renkin said furthermore that in regard to the territories held by *concessionnaires* in the

Congo the Government would make an investigation with a view to ascertaining whether it would not be advisable to make fresh arrangements in agreement with the persons interested.

Writing from Brussels a month later, an English correspondent represents the Belgian Reformers, who had most bitterly denounced the atrocities of the Leopold régime in the Congo State, as believing that M. Renkin's scheme is on the whole a reasonable and satisfactory scheme, and above all a practical scheme, that the Belgian Government are sincerely determined to carry it through, and that, even if there were any sufficient reason for doubting their sincerity, the Belgian nation is in earnest and has the means of enforcing the execution of the reforms by the exercise of the Parliamentary control with which it is now for the first time invested over the affairs of the Congo as a consequence of annexation.

On the other hand, English opinion, which had been roused to much heat on the Congo question, is far from satisfied with the Belgian proposals, and criticises them with a sharpness which the Belgians resent.

CONSERVATION OF NATURAL RESOURCES.

Australia: Undertakings of Irrigation and Forestry. — During a brief visit to the United States in 1902, Sir Edmund Barton, then Premier of the Commonwealth of Australia, contributed to *The Independent* an article on "Australia and her Problems," in which he wrote:

"Another great problem with which we are struggling is that of irrigation, and a joint irrigation scheme is afoot for using the waters of the Murray, our greatest river, to fertilize lands in New South Wales and Victoria. The Murray forms the boundary of those two States and afterward flows through South Australia. It is to the interest of New South Wales and Victoria to use the waters of the Murray for irrigation purposes, and it is to the interest of South Australia to use the Murray for navigation. We hope to harmonize those interests and are working to that end.

"Just before I left Australia I attended a conference, held on the border, between representatives of the various States as a result of which each has appointed a hydraulic engineer to a joint commission on irrigation. These will make an investigation and report their opinion in regard to the best practicable system for conserving, storing and distributing the Murray's waters without interfering with its navigation. We have good reason to believe that by means of a system of locks and weirs it is quite possible to irrigate a very large extent of dry country by means of the Murray without injuring its navigability. Later we will take up the problem of using the waters of the Darling in a similar way. It is a very long river, which during the rainy season sends an immense volume of water into the Murray.

"Another of our problems is in regard to forestry. We have planted some trees but not nearly enough of them, and cannot yet tell anything about results. Along with this tree planting, also, denudation of our timber has been going on, for Australian hard woods, being impervious to water, are now used all over the world for street paving purposes. Great harm has been done, and the waste is still going on, for our national Government cannot interfere in the matter, and the land owners are in many instances reckless. The remedy must come from the common sense of the people."

Since the above was written, progress has been made in carrying out the projects of irrigation, as was stated in a speech by Lord Northcote after his return to England, in the autumn of 1909, from five years of service as Governor-General of Australia. "Both in New South Wales and Victoria," he said, "very large irrigation works are in progress, and will be completed in a very short time, adding enormously to the acreage of land fit for cultivation."

Canada: The Dominion Forest Reserves Act. — Irrigation in the Northwest. — A Dominion Act of 1906, thus short-titled, provides as follows: "All Dominion lands within the respective boundaries of the reserves mentioned in the schedule to this Act are hereby withdrawn from sale, settlement and occupancy under the provisions of the Dominion Lands Act, or of any other Act, or of any regulations made under the said Act or any such Act, with respect to mines or mining or timber or timber licenses or leases or any other matter whatsoever; and after the passing of this Act no Dominion lands within the boundaries of the said reserves shall be sold, leased or otherwise disposed of, or be located or settled upon, and no person shall use or occupy any part of such lands, except under the provisions of this Act or of regulations made thereunder."

The schedule referred to lists 21 Forest Reserves in British Columbia, Manitoba, Saskatchewan, and Alberta. They are placed under the management of the Superintendent of Forestry, for the maintenance and protection of the growing timber, the animals and birds in them, the fish in their waters and their water supply, the Governor in Council to make the needed regulations.

In a paper read before the Royal Colonial Institute at London, England, in January, 1910, Mr. C. W. Peterson, Manager of the Canadian Pacific Irrigation Colonization Company, gave the following account of what is being done in the Arid Belt, so called, near Calgary, in the Canadian Northwest: "The irrigated land in Alberta and Saskatchewan nearly equalled half of the total irrigated area of the United States. In the year 1894 the Dominion Government withdrew from sale and homestead entry a tract of land containing some millions of acres located east of the city of Calgary, along the main line of the Canadian Pacific Railway. The object of that reservation was to provide for the construction, ultimately, of an irrigation scheme to cover the fertile Bow River Valley. The Canadian Pacific Railway Company undertook to construct the gigantic irrigation system in question, and selected as part of its land grant a block comprising three million acres of the best agricultural lands. It had now been opened for

colonization, and this project — the greatest of the kind on the American continent — was being pushed to its completion. The tract had an average width of forty miles from north to south, and extended eastwards from Calgary 150 miles."

Egypt: A. D. 1909. — Completion of the Esneh Barrage. — An important addition to the irrigation works in Egypt, supplementing the great dam at Assouan and the Assiout barrage, was completed in February, 1909, when the Esneh barrage was formally opened, on the 9th of that month. Esneh is a town of some 25,000 inhabitants, situated in Upper Egypt, on the west bank of the Nile, and the work now completed will, even in the lowest of floods, ensure a plentiful supply of water to a great tract of land in the Nile valley from Esneh northwards. In deciding to undertake the construction of this latest barrage, at a point about 100 miles north of the Assouan reservoir, the Government were influenced by the great success of the Assiout barrage, but that work differs from the new barrage in being designed as a low-water summer regulator, whereas the function of the Esneh barrage is to hold up the water in low floods.

Germany: The work begun a century ago, and its result. — "Germany, a century ago, faced just such a situation as now confronts us [the United States]. Then there began the work which we must now undertake. New forests were planted, wherever the land was unsuitable for other purposes. This planting was done year after year, so that each year a new tract would come to maturity. Forest wardens watched for fires, and laws forbade careless hunters setting fires in the woods. Timbermen were forced to gather and burn what twigs from the slashings could not be used in the still or burned for charcoal, and broad lanes were left through the forests as stops for fires. In this way there arose those magnificent German forests which now return the empire an average net annual profit of two dollars and a half for each acre, on land which is otherwise unusable; and, besides, give their services free for the storage of water and for the retention of the soil.

"In our own land something of this sort has already been done. New York has nearly two million acres of land in forest reserves which are being carefully tended. Pennsylvania has half as much. Minnesota is already securing considerable profit from the management of its white pine reserves and is seeding down large areas; and the other lake states are also moving, but all this is being done slowly, and lacks much of the energy and coöperation which should accompany it." — J. L. Mathews, *The Conservation of our National Resources* (*Atlantic Monthly*, *May*, 1908).

Great Britain: Outline of undertakings by the Government in 1909. — Development and Road Improvement Act. — In his Budget speech to the House of Commons April 29, 1909, the Chancellor of the Exchequer, Mr. David Lloyd-George, gave a broad indication of undertakings contemplated by the Government, in forestry work (afforestation, or reafforestation) and on other lines directed toward a more effective preservation and development of the natural resources of the country. In the afforestation of the waste lands of the country, he said, "We are far behind every other civilized country in the world. I have figures which are very interesting on this point. In Germany, for instance, out of a total area of 133 million acres, 34 millions, or nearly 26 per cent., are wooded; in France, out of 130 million acres, 17 per cent.; even in a small and densely-populated country such as Belgium, 1,260,000 acres are wooded, or 17 per cent. In the United Kingdom, on the other hand, out of 77 million acres, only 3 millions, or 4 per cent., are under wood. Sir Herbert Maxwell, who has made a study of this question for a good many years, and whose moderation of statement is beyond challenge, estimates that, in 1906, 'eight millions were paid annually in salaries for the administration, formation, and preservation of German forests, representing the maintenance of about 200,000 families, or about 1,000,000 souls; and that in working up the raw material yielded by the forests wages were earned annually to the amount of 80 millions sterling, maintaining about 600,000 families, or 3,000,000 souls.' The Committee will there perceive what an important element this is in the labour and employment of a country. Any one who will take the trouble to search out the census returns will find that the number of people directly employed in forest work in this country is only 16,000. And yet the soil and the climate of this country are just as well adapted for the growth of marketable trees as that of the States of Germany. Recently we have been favoured with a striking report of a Royal Commission, very ably presided over by my hon. friend the member for Cardiff. A perusal of the names attached to that report will secure for it respectful and favourable consideration. It outlines a very comprehensive and far-reaching scheme for planting the wastes of this country. The systematic operation which the Commission recommend is a gigantic one, and, before the Government can commit themselves to it in all its details, it will require very careful consideration by a body of experts skilled in forestry. I am inform d by men whom I have consulted, and whose opinion on this subject I highly value, that there is a good deal of preliminary work which ought to be undertaken in this country before the Government could safely begin planting on the large scale indicated in that report. . . . I am also told that we cannot command the services in this country of a sufficient number of skilled foresters to direct planting. . . .

"I doubt whether there is a great industrial country in the world which spends less money directly on work connected with the development of its resources than we do. Take the case of agriculture alone. Examine the Budgets of foreign countries — I have done it with great advantage in other directions — examine them from this particular point of view, and hon. members, I think, will be rather ashamed at the contrast between the wise and lavish generosity of countries much poorer than ours and the short-sighted and niggardly parsimony with which we dole out small sums of money for the encouragement of agriculture in our country. . . .

"I will tell the House what we propose. There is a certain amount of money, not very much, spent in this country in a spasmodic kind of way on what I will call the work of national development — in light railways, in harbours, in indirect but very meagre assistance to agriculture. I propose to gather all these grants together into one grant that I propose to call a development grant, and

this year to add a sum of £200,000 to that grant for these purposes. . . . The grant will be utilized in the promotion of schemes which have for their purpose the development of the resources of the country, and will include such objects as the institution of schools of forestry, the purchase and preparation of land for afforestation, the setting up of a number of experimental forests on a large scale, expenditure upon scientific research in the interests of agriculture, experimental farms, the improvement of stock — in respect of which I have had a good many representations from the agricultural community — the equipment of agencies for disseminating agricultural instruction, the encouragement and promotion of co-operation, the improvement of rural transport so as to make markets more accessible, the facilitation of all well-considered schemes and measures for attracting labour back to the land by small holdings or reclamation of wastes."

In realization of this programme an important "Development and Road Improvement Funds Act" was introduced by Mr. Lloyd-George in August, and passed, after considerable amendment of its administrative details in Committee of the Commons and in the House of Lords. It is divided into two parts, the first dealing with development, or the aiding and encouraging of agriculture and other rural industries, inclusive of forestry, reclamation and drainage of land, improvement of rural transport, construction and improvement of inland navigation and harbors, and the development and improvement of fisheries. The Act enables the Treasury to make free grants and loans, from a Development Fund fed by an annual Parliamentary vote and by a charge on the Consolidated Fund. An independent Development Commission is to be appointed by the Treasury, consisting of five members appointed for ten years, whose recommendation for the rejection of applications shall be final, though not that for their acceptance. The second part of the Act sets up a Road Board to carry out schemes of road improvement, either under its own direct control or through the existing highway authorities.

North America: International Conference of Delegates from Canada, Mexico, and the United States. — The movement instituted in the United States for a better conservation of the natural resources of the country was broadened, early in 1909, into a continental and international movement, by an invitation from President Roosevelt to the Governments of Canada and Mexico to send delegates to a general conference on the subject at Washington, for the purpose of arranging some coöperative and harmonious plans of action in the three countries. The invitation was cordially accepted in both of the neighboring countries, and the delegates sent were met, on the 18th of February, by many of the leaders of the conservation movement in the United States, including the National Conservation Commission. After being received and addressed by the President at the White House, a two days session of the Conference was held in the diplomatic room of the State Department, with good results.

Turkey: A. D. 1909. — Reclamation projects in the Tigris-Euphrates Delta. See (in this vol.) TURKEY: A. D. 1909-1911.

United States: The Great Movement for an Arresting of Waste. — An organized National care-taking of Forests, Waters, Lands, and Minerals. — Forest Service, Irrigation, Development of Waterways. — It is more than possible that the administration of Government in the United States under President Roosevelt will be distinguished, in the judgment of coming generations, most highly by the impulse and the organization it gave to measures for conserving the natural resources of the country, in woods, water sources, mineral deposits and fertile or fertilizable soils, — rescuing them from a hitherto unrestrained recklessness of waste. The key-note of a new determination in governmental policy, pointed to this end, was sounded by the President in his first Message to Congress, on the 3d of December, 1901, when he opened the subject largely and earnestly, saying, among other things, this

"The preservation of our forests is an imperative business necessity. We have come to see clearly that whatever destroys the forest, except to make way for agriculture, threatens our well-being. At present the protection of the forest reserves rests with the General Land Office, the mapping and description of their timber with the United States Geological Survey, and the preparation of plans for their conservative use with the Bureau of Forestry, which is also charged with the general advancement of practical forestry in the United States. These various functions should be united in the Bureau of Forestry, to which they properly belong. The present diffusion of responsibility is bad from every standpoint. It prevents that effective coöperation between the Government and the men who utilize the resources of the reserves, without which the interests of both must suffer. The scientific bureaus generally should be put under the Department of Agriculture. The President should have by law the power of transferring lands for use as forest reserves to the Department of Agriculture. He already has such power in the case of lands needed by the Departments of War and the Navy. . . .

"The wise administration of the forest reserves will be not less helpful to the interests which depend on water than to those which depend on wood and grass. The water supply itself depends upon the forest. In the arid region it is water, not land, which measures production. The western half of the United States would sustain a population greater than that of our whole country to-day if the waters that now run to waste were saved and used for irrigation. The forest and water problems are perhaps the most vital internal questions of the United States. . . .

"The forests alone cannot, however, fully regulate and conserve the waters of the arid region. Great storage works are necessary to equalize the flow of streams and to save the flood waters. Their construction has been conclusively shown to be an undertaking too vast for private effort. Nor can it be best accomplished by the individual States acting alone. Far-reaching interstate problems are involved; and the resources of single States would often be inadequate. It is properly a national function, at least in some of its features. . . .

"The reclamation of the unsettled arid public lands presents a different problem. Here it is not enough to regulate the flow of streams. The object of the Government is to dispose of the

CONSERVATION

land to settlers who will build homes upon it. To accomplish this object water must be brought within their reach. . . . Whatever the Nation does for the extension of irrigation should harmonize with, and tend to improve, the condition of those now living on irrigated land. We are not at the starting-point of this development. Over two hundred millions of private capital have already been expended in the construction of irrigation works, and many million acres of arid land reclaimed. A high degree of enterprise and ability has been shown in the work itself; but as much cannot be said in reference to the laws relating thereto. The security and value of the homes created depend largely on the stability of titles to water; but the majority of these rest on the uncertain foundation of court decisions rendered in ordinary suits at law. With a few creditable exceptions, the arid States have failed to provide for the certain and just division of streams in times of scarcity. Lax and uncertain laws have made it possible to establish rights to water in excess of actual uses or necessities, and many streams have already passed into private ownership, or a control equivalent to ownership." — *President's Message to Congress, Dec.* 3, 1901.

The Nationalizing of Irrigation Works. — The highest quality of statesmanship is represented by such recommendations as these. So far as concerned the proposed nationalization of irrigation works, to reclaim the arid lands of the West, they bore fruit within a year, in the passage by Congress of the Reclamation Act of June 17, 1902. It devoted most of the proceeds of the sale of public lands, in Arizona, California, Colorado, Idaho, Kansas, Montana, Nevada, New Mexico, North and South Dakota, Oklahoma, Utah, Washington, and Wyoming, to a special Reclamation Fund in the Treasury, for the creation and maintenance of irrigation works. This was a measure for which the late Major John W. Powell, Director of the United States Geological Survey, had labored incessantly for many years. In his book on "The Lands of the Arid Regions" he was the first to show the possibility of redemption for most of the waste spaces of land then supposed to be hopeless desert, and he pleaded with Congress, session after session, for some national undertaking to store and distribute the waters from the mountains that would give life to their soil. In 1888 he succeeded so far as to win authority and means for investigating the water supply for the region, and from that time he had kept an efficient small corps of engineers at work in the survey and measurement of streams, accumulating information that was ready for immediate use when actual constructive work was taken in hand. At once, on the passage of the Reclamation Act, the Director of the Geological Survey, acting under the Secretary of the Interior, began the execution of plans already well matured, for irrigation in Arizona and Nevada; and was able three years later to report similar undertakings in progress within three of the ten Territories and thirteen States.

In May, 1908, the following statement of the reclamation work then in progress appeared in *The Outlook:* "The work as a whole rivals the Panama Canal in the labor and expense involved. The employment of 16,000 men and the expenditure of $1,250,000 every month are but incidents in the service. Already the canals completed reach a total of 1,815 miles — as far as from New York to Denver. Homes have been made for ten thousand families where before was desert. In the past five years $33,000,000 has been spent, and the enterprises already planned will add more than a hundred millions to this sum. Nor is this money spent in one locality. In New Mexico one of the largest dams in the world is being constructed. In California and Nevada great reservoirs and irrigation plants are being built. In western Kansas the beet-sugar raisers are to have a $250,000 plant for pumping the 'underflow,' or the sheet water found a few feet beneath the top-soil, of the Arkansas River Valley to the surface, that ditches may be filled and crops made certain. On seven great projects, involving the expenditure of $51,000,000 and the reclamation of over a million acres, the benefit is directly to the Northwest. These projects lie in North and South Dakota, Montana, and Washington. In these States lands that have been considered as worthless except for the coarsest kind of grazing are being transformed into productive farms. In South Dakota the largest earth dam in the world is being constructed, that ninety thousand acres of land may be made fertile; while just east of the Yellowstone Park is being built a solid wall of masonry 310 feet high to hold back the waters of the Shoshone River until a reservoir of ten square miles, capable of irrigating a hundred thousand acres, is formed. The production of these irrigated lands is marvelous."

The latest official statistics that are available represent the total of acres irrigated at the end of the year 1907 as being 11,000,000, in 167,200 farms, at an average cost (of constructive work) of $13.46 per acre.

A National Forest Policy. — Less promptitude of action followed the President's urging of measures for forest preservation, and his warnings to Congress and the country, against the consequences of this inaction, were repeated from year to year. His Message of December, 1904, carried a specially urgent plea for legislation to unify the national forest work. "I have repeatedly," he said, "called attention to the confusion which exists in Government forest matters because the work is scattered among three independent organizations. The United States is the only one of the great nations in which the forest work of the Government is not concentrated under one department, in consonance with the plainest dictates of good administration and common sense. The present arrangement is bad from every point of view. Merely to mention it is to prove that it should be terminated at once. As I have repeatedly recommended, all the forest work of the Government should be concentrated in the Department of Agriculture, where the larger part of that work is already done, where practically all of the trained foresters of the Government are employed, where chiefly in Washington there is comprehensive first-hand knowledge of the problems of the reserves acquired on the ground, where all problems relating to growth from the soil are already gathered, and where all the sciences auxiliary to forestry are at hand for prompt and effective coöperation."

During its following session Congress took the desired action, and the whole forest service

was transferred to the Department of Agriculture in February, 1905.

Early in June of that year the efforts of the President to waken attention to the seriousness of the forest destruction in the country were greatly helped by a notable convention at Washington of about twelve hundred men, having both interest and knowledge in the matter, who came together to discuss the problems involved. They were mostly practical foresters, intelligent lumbermen, railway men, ranch-owners, engineers and miners, and their urgency of a systematic conservative treatment of the surviving forest wealth of the country carried great weight. The convention was under the direction of the Secretary of Agriculture, and was addressed by the President

During a journey through parts of the Southern States, in October, 1905, the President took occasion, in some of his speeches, to urge that a large part, at least, of the rapidly disappearing forests on the Atlantic side of the country should be nationalized, for preservation in the manner of the forest reserves of the Far West. In his Message of 1906 he submitted this to Congress, as a specific recommendation, saying that the forests of the White Mountains and the Southern Appalachian regions need to be preserved, and "cannot be unless the people of the States in which they lie, through their representatives in the Congress, secure vigorous action by the National Government." This proposal encountered strong opposition from selfish interests, and Congress was prevailed upon with difficulty to authorize a survey of the forests of the White Mountains and the Southern Appalachians, which resulted in a recommendation by the Secretary of Agriculture that 600,000 acres in the former region and 5,000,000 in the latter be purchased for a National Reserve. A bill responsive to this recommendation was passed by the Senate, but rejected by the House, which appointed a commission, instead, to make further investigations in the matter. Meantime, in the White Mountains alone, busy slaughterers of the forests were said to be stripping three hundred acres per day.

On the eve of the adjournment of Congress in March, 1907, the President issued a proclamation adding some seventeen millions of acres of forest lands to the National Forest Reserves already established. This was just before he signed an Act of Congress which abridged his authority to create reserves in Colorado, Wyoming, Montana, Idaho, Oregon, and Washington. It was a characteristic proceeding, for which the President had ample power under a statute of 1891, and it simply held the forests designated in safety from destruction until the question of their treatment was more carefully considered. The next Congress, or the next President, could give them up to private ownership, in whole or in part, if the one or the other found reason for doing so. Meantime they were sheltered from the axeman, while undergoing study. As a matter of fact, Mr. Roosevelt's successor, President Taft, did conclude that some of the lands reserved should be released for sale, and so ordered soon after he entered the executive office.

The Inland Waterways Commission. — In his annual Message of December, 1907, the President enlarged the range of considerations

CONSERVATION

that connect themselves with the question of economic forestry, by directing attention to the importance of the waterways of the country and their claim to a more systematic development. "For the last few years," he said, "through several agencies, the Government has been endeavoring to get our people to look ahead, and to substitute a planned and orderly development of our resources in place of a haphazard striving for immediate profit. Our great river systems should be developed as National water highways; the Mississippi, with its tributaries, standing first in importance, and the Columbia second, although there are many others of importance on the Pacific, the Atlantic and the Gulf slopes. The National Government should undertake this work, and I hope a beginning will be made in the present Congress; and the greatest of all our rivers, the Mississippi, should receive especial attention. From the Great Lakes to the mouth of the Mississippi there should be a deep waterway, with deep waterways leading from it to the East and the West. Such a waterway would practically mean the extension of our coast line into the very heart of our country. It would be of incalculable benefit to our people. If begun at once it can be carried through in time appreciably to relieve the congestion of our great freight-carrying lines of railroads. . . .

"The inland waterways which lie just back of the whole eastern and southern coasts should likewise be developed. Moreover, the development of our waterways involves many other important water problems, all of which should be considered as part of the same general scheme. The Government dams should be used to produce hundreds of thousands of horsepower as an incident to improving navigation; for the annual value of the unused water-power of the United States perhaps exceeds the annual value of the products of all our mines. As an incident to creating the deep waterway down the Mississippi, the Government should build along its whole lower length levees which taken together with the control of the headwaters, will at once and forever put a complete stop to all threat of floods in the immensely fertile Delta region. The territory lying adjacent to the Mississippi along its lower course will thereby become one of the most prosperous and populous, as it already is one of the most fertile, farming regions in all the world. I have appointed an Inland Waterways Commission to study and outline a comprehensive scheme of development along all the lines indicated. Later I shall lay its report before the Congress."

The Inland Waterways Commission thus appointed by the President in March, 1907, gave its attention first to the project of a "Lakes-to-the-Gulf Deep Water Way," which had been commanding wide interest in the Mississippi Valley for some years. What the project, in its full magnitude, contemplated, was stated as follows in the resolutions of a great convention, of 4000 delegates, from 44 States, assembled at Chicago in October, 1908: "Any plan for the inland waterway development so imperatively necessary to the material welfare of the valley should comprise a main trunk line in the form of a strait connecting Lake Michigan with the Gulf of Mexico by way of the Illinois and Mississippi rivers. The development of this trunk

line should begin at once. The improvement of the branches of this main line, such as the upper Mississippi, with its tributaries; the Ohio, with its leading tributaries, including the Tennessee and Cumberland; the Missouri, the Arkansas, the Red, the White, and other rivers, and the interstate inland waterway of Louisiana and Texas, should proceed simultaneously with the development of the principal line

"The deep waterway is practica[illegible] complete from Chicago to Joliet through the courage and enterprise of the single city of Chicago, which has by the expenditure of $55,000,000 created a deep waterway across the main divide between the waters of Lake Michigan and those of the Mississippi. A special board of survey, composed of United States engineers, reported to Congress in 1905 that the continuation of the deep waterway from Joliet to St. Louis was feasible and would cost only $31,000,000. The State of Illinois, assuming that the Federal Government will take the responsibility of completing the waterway to the Gulf, is about to coöperate to the extent of $20,000,000."

The waterway here mentioned as being "practically complete from Chicago to Joliet" is that known as the Chicago Drainage Canal. The $20,000,000 with which the State of Illinois would coöperate in carrying out the whole project was voted by that State in November, 1908, for building an extension of the Drainage Canal from Joliet to Utica, Illinois, sixty-one miles, for a development of water power. The depth of these channels is and is to be twenty-four feet, and the project of the Lakes-to-the-Gulf Deep Waterway contemplated that depth throughout. The Board of Engineers to which the project was referred reported, however, in June, 1909, against the desirability of a waterway of such depth. Its cost from St. Louis to the Gulf is estimated to be $128,000,000 for construction, and $6,000,000 yearly for maintenance. In the judgment of the board, the present demands of commerce between St. Louis and the Gulf will be adequately met by an eight-foot channel from St. Louis to the mouth of the Ohio and a channel of not less than nine feet in depth below the mouth of the Ohio. The board's belief is that an eight-foot channel from Chicago to St. Louis corresponding with the eight-foot project from St. Louis to Cairo is the least that would adequately meet the demands of commerce. It adds that such a waterway would be desirable, provided its cost is reasonable. Present and prospective demands of commerce between Chicago and the Gulf would be adequately served, the board reports, by a through nine-foot channel to the Gulf.

In the States bordering on the Atlantic a "Deeper Waterways Association" is pressing long-mooted plans for uniting the bays, sounds, and navigable rivers along the Atlantic coast by canals, thus affording safe deep-water communication from Boston on the east to Florida at the far south.

Conference of Governors at Washington. — In all his endeavors to establish a national policy directed, systematically and scientifically, to [illegible]arresting of waste in the use and treatment [illegible] the natural resources of the country, President Roosevelt was assisted very greatly by the knowledge and the energetic public spirit of the chief of the National Forest Service, Mr. Gifford Pinchot. It is understood to have been on the

initative of Mr. Pinchot that the crowning expedient for stirring and determining public feeling on the subject was planned, early in the winter of 1908, when the President invited the Governors of all the States and Territories to a Conference in Washington, for considering the whole question of an economic conservation of natural resources and concerting measures to that end. It was said, indeed by the President, in addressing the meeting of Governors, that if it had not been for Mr. Pinchot "this convention neither would nor could have been called." The invitation went to others than Governors, — to men of national prominence in public life, in scientific pursuits, in business experience, and to heads of great associations. The resulting assembly at the White House, on the 13th, 14th, and 15th of May, 1908, marked an epoch in American history. There were Governors from forty of the forty-six States of the Union, with the President and members of his Cabinet, the Justices of the Supreme Court, many Senators and Representatives from the Congress, and a distinguished gathering of such citizens as William Jennings Bryan, Seth Low, James J. Hill, Andrew Carnegie, John Mitchell and Samuel Gompers. All sides of the national thriftlessness that needed correction were discussed by men who could best describe the evils produced and best indicate the methods of remedy. Before adjourning their meeting the Governors present adopted with unanimity a declaration in which they say

"We agree that our country's future is involved in this: that the great natural resources supply the material basis upon which our civilization must continue to depend, and upon which the perpetuity of the nation itself rests. We agree, in the light of the facts brought to our knowledge and from the information received from sources which we cannot doubt, that this material basis is threatened with exhaustion. . .

"We declare our firm conviction that this conservation of our natural resources is a subject of transcendent importance which should engage unremittingly the attention of the nation, the States, and the people in earnest coöperation. These natural resources include the land on which we live and which yields our food; the living waters which fertilize the soil, supply power and form great avenues of commerce; the forests which yield the materials for our homes, prevent [illegible]on of the soil, and conserve the navigat[illegible] and other uses of the streams; and the mi[illegible]s which form the basis of our industrial life and supply us with heat, light, and power. . . .

"We commend the wise forethought of the President in sounding the note of warning as to the waste and exhaustion of the natural resources of the country, and signify our high appreciation of his action in calling this Conference to consider the same and to seek remedies therefor through coöperation of the nation and the States. . . .

"We agree in the wisdom of future conferences between the President, Members of Congress, and the governors of States on the conservation of our natural resources with a view of continued coöperation and action on the lines suggested; and to this end we advise that from time to time, as in his judgment may seem wise, the President call the governors of States and Members of Congress and others into conference.

"We agree that further action is advisable to ascertain the present condition of our natural resources and to promote the conservation of the same; and to that end we recommend the appointment by each State of a commission on the conservation of natural resources, to coöperate with each other and with any similar commission of the Federal Government."

The National Conservation Commission and its Report.—The President acted with promptitude on the suggestion of a National Commission on the Conservation of Natural Resources, to coöperate with kindred State Commissions. Within a month he announced the appointment of such a Commission, composed of nearly fifty men of special qualification for the inquiries to be pursued, the recommendations to be made, and the action to be taken. All sections of the country are represented on the Commission, including such authorities on waters as Professor Swain, of the Massachusetts Institute of Technology; on forests, as Professor Graves, of the Yale Forestry School, and Mr. Charles Lathrop Pack, of New Jersey; on lands, as Ex-Governor Pardee, of California, and Mr. James J. Hill, the eminent railway president; on minerals, as Messrs. Andrew Carnegie, of New York, John Hays Hammond, of Massachusetts, and John Mitchell, of Illinois

The Commission is divided into four sections, one to consider forests, another waters, a third minerals, and the fourth lands. Over these divisions is an executive committee, of which Mr. Gifford Pinchot is chairman. In each section there are representatives from the Senate and House of Representatives, and officials of Government from the Department which has to do with the subject referred to it.

State action on the lines commended by the Conference of Governors had already been instituted in a number of States, and in many others it was promptly set on foot; so that the desired coöperative organization of effort was soon well under way, and contributing to the first undertaking planned by the Executive Committee of the National Commission, which was the making of an inventory of the natural resources of the United States. So effective was the work done in the summer and fall of 1908 that a Second Conference of State Governors, jointly with the State and National Commissions, was found desirable, for consideration of the mass of facts collected as a basis for definite plans. The Second Conference, like the First, was in Washington, and it was opened on the 8th of December, under the chairmanship of the then President-elect of the United States, the Hon. William H. Taft. The draft of a report prepared to be made by the National Conservation Commission to the President of the United States was submitted confidentially to this Conference, and was sent to Congress a little later with its approval, as well as with that of the President. The Conference adopted, furthermore, two important resolutions, as follows:

Resolved, That a joint committee be appointed by the chairman, to consist of six members of state conservation commissions and three members of the National Conservation Commission, whose duty it shall be to prepare and present to the state and national commissions and through them to the governors and the President, a plan for united action by all organizations concerned with the conservation of natural resources. (On motion of Governor Noel, of Mississippi, the chairman and secretary of the conference were added to and constituted a part of this committee.)"

"We also especially urge on the Congress of the United States the high desirability of maintaining a National Commission on the Conservation of the Resources of the Country, empowered to coöperate with State Commissions, to the end that every sovereign commonwealth and every section of the country may attain the high degree of prosperity and the sureness of perpetuity naturally arising in the abundant resources and the vigor, intelligence and patriotism of our people."

In subsequently communicating to Congress, on the 22d of January, 1909, the report of the National Conservation Commission, the President said: "With the statements and conclusions of this report I heartily concur, and I commend it to the thoughtful consideration both of the Congress and of our people generally. It is one of the most fundamentally important documents ever laid before the American people. It contains the first inventory of its natural resources ever made by any nation."

The report of the Commission was prefaced by a brief explanatory statement from the Chairman of its Executive Committee, partly as follows: "The executive committee designated in your letter creating the commission organized on June 19 and outlined a plan for making an inventory of the natural resources of the United States. On July 1 work was undertaken, accordingly, with the coöperation of the bureaus of the federal departments, authorities of the different States, and representative bodies of the national industries. The results of this cooperative work are herewith submitted as appendices of the commission's report. . . . In its coöperation with other bodies created for similar purposes by States and the National Conservation Commission has rendered most valuable assistance. Within the first month after the creation of the commission, the governors of 5 States had appointed conservation commissions, and an equal number of organizations of national scope had named conservation committees. At the time of the recent joint conservation conference 33 States and Territories had formed conservation commissions. The number has now increased to 36, with indications that nearly all of the remaining States will soon take similar action. The number of national organizations which have appointed conservation committees is 41."

An Inventory of Natural Resources.—From the report itself it is only possible, in this place, to glean a few of its most impressive and significant disclosures of fact. For example:

CONCERNING FORESTS.

"Forests privately owned cover three-fourths of the total forest area and contain four-fifths of the standing timber. The timber privately owned is not only four times that publicly owned, but is generally more valuable. Forestry is now practiced on 70 per cent. of the forests publicly owned, and on less than 1 per cent. of the forests privately owned, or on only 18 per cent. of the total area of forests.

"The yearly growth of wood in our forests does not average more than 12 cubic feet per acre. This gives a total yearly growth of less than 7,000,000,000 cubic feet.

"We have 200,000,000 acres of mature forests, in which yearly growth is balanced by decay. 350,000,000 acres partly cut over or burned over, but restocking naturally with enough young growth to produce a merchantable crop, and 100,000,000 acres cut over and burned over, upon which young growth is lacking or too scanty to make merchantable timber.

"We take from our forests yearly, including waste in logging and in manufacture, 23,000,000,000 cubic feet of wood. We use each year 100,000,000 cords of firewood; 40,000,000,000 feet of lumber; more than 1,000,000,000 posts, poles, and fence rails; 114,000,000 hewn ties; 1,500,000,000 staves, over 138,000,000 sets of heading; nearly 500,000,000 barrel hoops; 3,000,000 cords of native pulp wood; 165,000,000 cubic feet of round mine timbers and 1,250,000 cords of wood for distillation.

"Since 1870 forest fires have destroyed a yearly average of 50 lives and $50,000,000 worth of timber. More than 50,000,000 acres of forest land burn over yearly. The young growth destroyed every year is worth far more than the merchantable timber.

"One fourth of the standing timber is lost in logging. The boring of long-leaf pine for turpentine has destroyed one-fifth of the forests worked. The loss in the mill is from one-third to two-thirds of the timber sawed. The loss of mill product in assorting and fitting for use is from one-seventh to one-fourth. Of each 1000 feet, which stood in the forest, an average of only 320 feet of lumber is used.

"We take from our forests each year, not counting the loss by fire, three and a half times their yearly growth. We take 40 cubic feet per acre for each 12 cubic feet grown; we take 260 cubic feet per capita, while Germany uses 37 and France 25 cubic feet.

"We tax our forests under the general property tax, a method abandoned long ago by every other great nation. Present tax laws prevent reforestation of cut-over land and the perpetuation of existing forests by use.

"Great damage is done to standing timber by injurious forest insects. Much of this damage can be prevented at small expense.

"To protect our farms from wind and to reforest land best suited for forest growth will require tree planting on an area larger than Pennsylvania, Ohio, and West Virginia combined. Lands so far successfully planted make a total area smaller than Rhode Island; and year by year, through careless cutting and fires, we lower the capacity of existing forests to produce their like again, or else totally destroy them. . . .

"By reasonable thrift we can produce a constant timber supply beyond our present need, and with it conserve the usefulness of our streams for irrigation, water supply, navigation and power. Under right management, our forests will yield over four times as much as now. We can reduce waste in the woods and in the mill at least one third, with present as well as future profit. . . . We can practically stop forest fires at a cost yearly of one fifth of the value of the merchantable timber burned.

"We shall suffer for timber to meet our needs until our forests have had time to grow again. But if we act vigorously and at once, we shall escape permanent timber scarcity." The report adds much of interest on this subject.

CONCERNING WATERS.

"Our mean annual rainfall is about 30 inches, the quantity about 215,000,000,000,000 cubic feet per year, equivalent to ten Mississippi rivers. Of the total rainfall over half is evaporated; about a third flows into the sea, the remaining sixth is either consumed or absorbed. These portions are sometimes called, respectively, the fly-off, the run-off and the cut-off. They are partly interchangeable. About a third of the run-off, or a tenth of the entire rainfall, passes through the Mississippi. The run-off is increasing with deforestation and cultivation.

"Of the 70,000,000,000,000 cubic feet annually flowing into the sea, less than 1 per cent. is restrained and utilized for municipal and community supply; less than 2 per cent. (or some 10 per cent. of that in the arid and semi-arid regions) is used for irrigation; perhaps 5 per cent. is used for navigation, and less than 5 per cent. for power. . . .

"For irrigation it is estimated that there are $200,000,000 invested in dams, ditches, reservoirs, and other works for the partial control of the waters; and that 1,500,000,000,000 cubic feet are annually diverted to irrigable lands, aggregating some 90,000 square miles. Except in some cases through forestry, few catchment areas are controlled, and few reservoirs are large enough to hold the storm waters. The waste in the public and private projects exceeds 60 per cent. while no more than 25 per cent. of the water actually available for irrigation of the arid lands is restrained and diverted.

"There are in continental United States 282 streams navigated for an aggregate of 26,115 miles, and as much more navigable if improved. There are 45 canals, aggregating 2,189 miles, besides numerous abandoned canals. Except through forestry in recent years, together with a few reservoirs and canal locks and movable dams, there has been little effort to control headwaters or catchment areas in the interests of navigation, and none of our rivers are navigated to more than a small fraction even of their effective low-water capacity.

"The water power now in use is 5,250,000 horse-power; the amount running over government dams and not used is about 1,400,000 horse-power; the amount reasonably available equals or exceeds the entire mechanical power now in use, or enough to operate every mill, drive every spindle, propel every train and boat, and light every city, town, and village in the country. . . . Nearly all the freshet and flood waters run to waste, and the low waters which limit the efficiency of power plants are increasing in frequency and duration with the increasing flood run-off. . . . The direct yearly damage by floods since 1900 has increased steadily from $45,000,000 to over $238,000,000. . . .

"A large part of that half of the annual rainfall not evaporated lodges temporarily in the soil and earth. It is estimated that the ground water to the depth of 100 feet averages 16½ per cent. of the earth-volume, or over 1,400,000,000,000,000 cubic feet, equivalent to seven years' rainfall or twenty years' run-off. This subsurface reservoir is the essential basis of agriculture and other industries and is the chief natural resource of the country. It sustains forests and all other crops and supplies the perennial springs and streams and wells used by four-fifths of our population.

and nearly all our domestic animals. Its quantity is diminished by the increased run-off due to deforestation and injudicious farming."

CONCERNING LAND

"The total land area of continental United States is 1,900,000,000 acres. Of this but little more than two-fifths is in farms, and less than one half of the farm area is improved and made a source of crop production. We have nearly 6,000,000 farms, they average 146 acres each. The value of the farms is nearly one fourth the wealth of the United States. There are more than 300,000,000 acres of public grazing land. The number of persons engaged in agricultural pursuits is more than 10,000,000.

"There has been a slight increase in the average yield of our great staple farm products, but neither the increase in acreage nor the yield per acre has kept pace with our increase in population. Within a century we shall probably have to feed three times as many people as now; and the main bulk of our food supply must be grown on our own soil.

"The area of cultivated land may possibly be doubled. In addition to the land awaiting the plow, 75,000,000 acres of swamp land can be reclaimed, 40,000,000 acres of desert land irrigated, and millions of acres of brush and wooded land cleared. Our population will increase continuously, but there is a definite limit to the increase of our cultivated acreage. Hence we must greatly increase the yield per acre. The average yield of wheat in the United States is less than 14 bushels per acre, in Germany 28 bushels and in England 32 bushels. We get 30 bushels of oats per acre, England nearly 45 and Germany more than 47. Our soils are fertile, but our mode of farming neither conserves the soil nor secures full crop returns. The greatest unnecessary loss of our soil is preventable erosion, second only to this is the waste, nonuse, and misuse of fertilizer derived from animals and fish.

CONCERNING MINERALS.

"The available and easily accessible supplies of coal in the United States aggregate approximately 1,400,000,000,000 tons. At the present increasing rate of production this supply will be subjected as to approach exhaustion before the middle of the next century.

"The known supply of high-grade iron ores in the United States approximates 3,840,000,000 tons, which at the present increasing rate of consumption can not be expected to last beyond the middle of the present century. In addition to this, there are assumed to be 59,000,000,000 tons of lower grade iron ores which are not available for use under existing conditions.

"The supply of stone, clay, cement, lime, sand, and salt is ample, while the stock of the precious metals and of copper, lead, zinc, sulphur, asbestos, graphite, quicksilver, mica, and the rare minerals can not well be estimated but is certainly not sufficient to last more than one to three centuries unless unexpected deposits be found.

"The known supply of petroleum is estimated at 5,000,000,000 to 20,000,000,000 barrels. It is located through six separate fields having an aggregate area of 8,900 square miles. The consumption is rapidly increasing, while the wastes and the loss through misuse are enormous. The

supply can not be expected to last beyond the middle of the present century.

"The known natural-gas fields aggregate an area of 9,000 square miles, distributed through 22 States. Of the total yield from these fields during 1907, 400,000,000,000 cubic feet, valued at $72,000,000, were utilized, while an equal quantity was allowed to escape into the air. The daily waste of natural gas — the most perfect known fuel — is over 1,000,000,000 cubic feet, or enough to supply every city in the United States of over 100,000 population.

"Phosphate rock, used for fertilizer, represents the slow accumulation of organic matter during past ages. In most countries it is scrupulously preserved; in this country it is extensively exported, and largely for this reason its production is increasing rapidly. The original supply can not long withstand the increasing demand.

"The National Government should exercise such control of the mineral fuels and phosphate rocks now in its possession as to check waste and prolong our supply."

CONCERNING LIFE AND HEALTH

"Since the greatest of our national assets is the health and vigor of the American people, our efficiency must depend on national vitality even more than on the resources of the mines, lands, forests, and waters. . . .

"Our annual mortality from tuberculosis is about 150,000. Stopping three-fourths of the loss of life from this cause, and from typhoid and other prevalent and preventable diseases, would increase our average length of life over fifteen years. There are constantly about 3,000,000 persons seriously ill in the United States, of whom 500,000 are consumptives. More than half this illness is preventable.

"The National Government has now several agencies exercising health functions which only need to be concentrated to become coördinated parts of a greater health service worthy of the nation."

FINAL WORDS.

"The inventory of our natural resources made by your commission, with the vigorous aid of all federal agencies concerned, of many States, and of a great number of associated and individual operators, furnishes a safe basis for general conclusions as to what we have, what we use and waste, and what may be the possible saving. But for none of the great resources of the farm, the mine, the forest, and the stream do we yet possess knowledge definite or wide enough to insure methods of use which will best conserve them all. The pressing need is for a general plan under which citizens, States and Nation may unite in an effort to achieve this great end. The lack of coöperation between the States and the nation, and between the agencies of the National Government, is a potent cause of the neglect of conservation among the people. An organization through which all agencies, state, national, municipal, associate, and individual, may unite in a common effort to conserve the foundations of our prosperity is indispensable to the welfare and progress of the nation. To that end the immediate creation of a national agency is essential.

Beginnings of a General Organization of

all Conservation Agencies. — The Joint Committee which the Chairman of the Second Conference of Governors was instructed to appoint, for the preparation of "a plan for united action by all organizations concerned with the conservation of natural resources," met at Washington on the 5th of March, 1909, for its first consultation. The Committee, of eleven members, consists of six chairmen of State Conservation Commissions, and five who are members of the National Conservation Commission. In preparation for the meeting the various conservation bodies which have been actively at work for several months are sending in suggestions based on their own experience.

Action for the preservation and increase of forests has been stimulated in many if not all of the States of the Union by the national agitation of the subject in these late years. Nowhere has the influence been more effective than in New York, which has not only greatly enlarged its control and improved its care and treatment of the extensive forest tracts in the Adirondack region, but has done even more important reforesting work in other parts of its territory. "James S. Whipple, forest, fish and game commissioner, has not only planted more trees in this State than have been planted in any other State, or even by the national government, but this year he has made another great advance in the reforesting movement. The commission has sold to private land owners at cost 1,034,050 pine and spruce trees for reforesting land within the State."— *N. Y. Eve. Post, April* 24, 1909. — These trees went to every county of the State, in numbers ranging from 50 to 200,000.

Threatened Monopoly of Water Power. See (in this vol.) COMBINATIONS, INDUSTRIAL, &c.: UNITED STATES: A. D. 1909.

Withdrawal of Water Power Sites from Land Office Entry. — What is said to be the largest number of acres of land withdrawn for temporary water power sites in the history of the Interior Department was made August 18, 1909, when Acting Secretary Wilson withdrew 87,360 acres along the Colorado River, in Utah. The land in question was withdrawn to prevent "monopolies," and with a view to procure legislation from Congress to preserve them to the Government.

The National Conservation Association. — "Great significance," said a Press despatch from Washington, September 16, 1906, "is attached here to-day to the announcement from Chicago of the formation of the National Conservation Association, with Charles W. Eliot, ex-president of Harvard University, as president. Friends of conservation interpret the launching of the new organization to mean that a national organization of the widest possible membership and the greatest possible scope is to supplant the American Forestry Association in administration favor as the educational branch of the conservation movement."

Not long after its formation the Association issued an earnest appeal to the country to bring the pressure of its opinion on Congress for needed legislation. The special subject of this appeal was the vast coal field in Alaska, which can only be saved from monopoly by speedy amendment of existing laws. "We, therefore," said the Association, "appeal to the American people to bring the urgent needs of the situation to the attention of their representatives in Congress, in order that comprehensive legislation upon this vital matter may be enacted at the next session of Congress. To this end, every individual citizen is urged to do his part, and to act at once."

On the request of Dr. Eliot, Mr. Gifford Pinchot, after the withdrawal of the latter from the office of Chief Forester of the United States, was made President of the Association, in January, 1910, but Dr. Eliot was named Honorary President.

Legislation recommended by President Taft. — Earnestly upholding the Conservation policy instituted by his predecessor, President Taft, in a Special Message to Congress, January 14, 1910, recommended several measures of legislation, for which suggested bills had been drafted by the Secretary of the Interior.

"One of the most pressing needs," said the Message, "in the matter of public-land reform is that lands should be classified according to their principal value or use. . . .

"It is now proposed to dispose of agricultural lands as such, and at the same time to reserve for other disposition the treasure of coal, oil, asphaltum, natural gas, and phosphate contained therein. This may be best accomplished by separating the right to mine from the title to the surface, giving the necessary use of so much of the latter as may be required for the extraction of the deposits. The surface might be disposed of as agricultural land under the general agricultural statutes, while the coal or other mineral could be disposed of by lease on a royalty basis."

The importance of an enlargement of the undertakings of the Government in the line of irrigation works, for reclaiming arid lands, is urged by the President with great force, and he recommends "that authority be given to issue not exceeding $30,000,000 of bonds from time to time, as the secretary of the interior shall find it necessary, the proceeds to be applied to the completion of the projects already begun and their proper extension, and the bonds running ten years or more to be taken up by the proceeds of returns to the reclamation fund, which returns, as the years go on, will increase rapidly in amount."

The Message gives approval to a Bill which passed the lower House of the late Congress, directing that "the national government appropriate a certain amount each year out of the receipts from the forestry business of the government to institute reforestation at the sources of certain navigable streams to be selected by the Geological Survey with a view to determining the practicability of thus improving and protecting the streams for Federal purposes."

Finally, on the subject of waterway improvement, the Message recommends the project of dams in the Ohio River from Pittsburg to Cairo, and in the Upper Mississippi from St. Paul to St. Louis.

A. D. 1910. — Removal from office of Chief Forester Pinchot. — Investigation of charges against Secretary Ballinger. Unfortunate differences between the Secretary of the Interior, Mr. Ballinger, and the head of the Bureau of Forestry, Mr. Pinchot, led to the removal of the latter from office early in January, 1910. As a further result, formal charges of unfaithfulness

to public interests, in conducting national measures of conservation, were brought against Secretary Ballinger, and are undergoing investigation by a Congressional Committee at the time of the passing of the matter to the printers (March, 1910).

CONSTITUTION OF OKLAHOMA. — Some of the more radical features of the Constitution under which Oklahoma was admitted to the American Union are summarized in the following:

"Legislative authority is vested in a legislature, but the people reserve to themselves the power to propose laws and amendments to the constitution and to enact or reject the same at the polls independent of the legislature, and also reserve power at their own option to approve or reject at the polls any act of the legislature.

"Eight per cent of the legal voters have the right to propose any legislative measure and 15 per cent of the legal voters have the right to propose amendments to the constitution by petition. A referendum may be ordered, except as to laws necessary for the immediate preservation of the public peace, health or safety, either by petition signed by 5 per cent of the legal voters or by the legislature as other bills are enacted. The veto power of the governor does not extend to measures voted on by the people. The powers of the initiative and referendum are also reserved to the legal voters of every county and district as to local legislation or action.

"Every railroad, car or express company is required to receive and transport without delay or discrimination each other's cars, loaded or empty, and passengers under such regulations as shall be prescribed by law or any commission created for that purpose. All oil-pipe companies are made subject to the reasonable control and regulation of the corporation commission, to which telephone and telegraph lines are also subject in the same manner. No public-service corporation may consolidate with any other like corporation having under its control a parallel or competing line except by enactment of the legislature upon the recommendation of the corporation commission. The legislature, however, shall never enact any law permitting any public-service corporation to consolidate with any other public-service corporation organized under the laws of any other state or of the United States owning or controlling a parallel or competing line in the state. The giving of passes by railroad or transportation companies is forbidden except in the case of employés and other specified persons.

"A corporation commission is created, to be composed of three persons, elected by the people for terms of six years. The commission shall have power to supervise and control all transportation and transmission companies in the state in all matters relating to the performance of their public duties and their charges therefor and of correcting abuses and preventing unjust discrimination and extortion by such companies; and to that end the commission shall from time to time prescribe and enforce such rates, charges, classification of charges and rules and regulations and shall require the companies to establish and maintain until amended all such public service, facilities and conveniences as may be reasonable and just.

"Railroads, other than street or electric roads, are forbidden to charge more than 2 cents a mile for the transportation of passengers. The corporation commission may, however exempt those roads which submit proof that they cannot earn a just compensation for the services rendered by them to the public if not permitted to charge more than 2 cents a mile.

"No corporation may issue stock except for money, labor done or property actually received to the amount of the par value thereof and all fictitious increase of stock or indebtedness shall be void.

"No corporation doing business in the state may be permitted to influence elections or official duty by contributions of money or anything of value.

"Every license issued or charter granted to a mining or public service corporation, foreign or domestic, must contain a stipulation that such corporation will submit any difference it may have with employés in reference to labor to arbitration.

"The selling by firms or corporations of commodities at a lower rate in one locality than in another for the purpose of creating a monopoly or for destroying competition is prohibited.

"Municipal corporations may not be created by special but by general laws, and every corporation now existing shall continue with its present rights and powers until otherwise provided by law. The powers of the initiative and referendum are reserved to the people of every municipal corporation. No municipal corporation may ever grant, extend or renew a franchise without the approval of a majority of the qualified electors residing within its limits, and no

franchise may be granted, extended or renewed for more than twenty-five years.

Women are qualified to vote at school-district elections only.

CONSTITUTION OF PERSIA.

A Constitution for Persia was signed by the Shah, Muzaffer-ed Deen, December 30, 1906, of which the following is, in part, the text:

In the name of God the all Merciful! Whereas by our Firman of the 5th August, 1906, we commanded the constitution of a National Assembly [Medjliss] for the progress and welfare of the State and nation, the strengthening of the foundations of the kingdom, and the carrying out of the laws of Islam; and whereas, in accordance with the clause by which it is provided that, as each individual member of the State has a right to take part in the superintendence and decision of public affairs, we therefore have permitted the election and appointment of Deputies on behalf of the nation; and whereas the National Assembly has been opened through our gracious benevolence, we have decreed the following Articles of constitutional Regulations for the National Assembly, including the duties and business of the Assembly and its limitations and relations toward Government Departments:

The Institution of the Assembly.

[Articles 1–14 declare the National Assembly to be "composed of members elected at Tehran and in the provinces"; their place of meeting to be at Tehran; their number 160, but may if necessary be increased to 200; their term of service two years; they are "representative of the whole Persian nation"; the Tehran deputies to have "the option of instituting the Assembly and starting discussion and debates," and "their decisions by majority during the absence of the provincial deputies will be valid and are to be carried out." The Assembly itself is given the right to fix the time of its recess and its sitting; its members cannot be proceeded against by any person; its proceedings must be public and open to newspaper reporting, but false reporting shall be punished.]

The Duties of the Assembly, its Limitations and Rights.

Art. 15. The National Assembly has the right to discuss truthfully and sincerely all matters it considers to be desirable in the interests of the State and nation to investigate; and, subject to the approval of a majority, to submit them, in the enjoyment of the utmost safety and confidence, with the approval of the Senate, to His Imperial Majesty the Shah, through the first person of the Government, for His Majesty's signature, and to be then put into execution.

Art. 16. In general, all laws necessary for the strengthening of the Government and kingdom, and the regulation of State affairs, and for the Constitution of Ministries, must receive the sanction of the National Assembly.

Art. 17. The necessary Bills for making new laws, or for the alteration, amplification, or cancellation of existing laws, will, when desirable, be prepared by the National Assembly to be submitted to His Imperial Majesty the Shah for signature with the approval of the Senate, and to be then put into execution.

Art. 18. The regulation of financial matters, the modification of the Budget, the alteration of the arrangement of taxation, the refusal or acceptance of impositions, as well as the inspections which will be undertaken by the Government, will be done with the approval of the Assembly.

Art. 19. The Assembly will have the right, for the purpose of reforming financial matters and facilitating the relations of the Governors and the apportioning of the provinces of Persia, and the reappointment of Governors, after the Senate has given its approval, to demand from the Government authorities that the decision arrived at should be carried out.

Art. 20. The Budget of each Ministry must be finished for the succeeding year in the last half of each year, and must be ready fifteen days before the 20th March.

Art. 21. Should it be necessary with regard to the constitutional laws of the Ministries to make a new law, or to alter or cancel existing laws, it will be done with the consent of the National Assembly, whether its necessity be first pointed out by the Assembly or by the responsible Minister.

Art. 22. Whenever a part of the revenue or property of the Government or State is to be sold, or a change of frontier or border becomes necessary, it will be done with the approval of the National Assembly.

Art. 23. Without the approval of the National Assembly no concession whatever for the formation of Companies or Associations shall be granted by the Government.

Art. 24. Treaties, Conventions, the granting of concessions, monopolies, either commercial, industrial, or agricultural, whether the other party be a native or a foreigner, can only be done with the approval of the National Assembly. Treaties which it may be in the interests of the Government or nation to keep secret are excepted.

Art. 25. All Government loans of any nature whatsoever, whether internal or foreign, will be made with the knowledge and approval of the National Assembly.

Art. 26. The construction of railways or roads, whether the cost be defrayed by the Government, by Associations or Companies, whether native or foreign, can only be undertaken with the approval of the National Assembly.

Art. 27. Should the Assembly find in any place a fault in the laws or an irregularity in their fulfilment, it will draw the attention of the responsible Minister to the same, and he will have to give the necessary explanations.

Art. 28. Should a Minister, in contravention of one of the laws which have received the Imperial sanction, by misrepresentations obtain the issue of a written or verbal order from His Imperial Majesty the Shah, and excuse himself thereby for his delay and negligence, he will by law be responsible to His Imperial Majesty the Shah.

Art. 29. Whichever Minister who in a matter or matters should not be able to answer for his

actions in accordance with the laws approved by His Imperial Majesty, and if it should be apparent that he has broken the law and transgressed the stipulated limitations, the Assembly will petition His Imperial Majesty for his dismissal, and when his fault has been determined by the Courts of Justice he will not again be allowed to serve the Government.

Art. 30. The National Assembly has the right whenever it considers it desirable to make petitions direct to His Imperial Majesty by the means of a body composed of the President and six Members elected by the six classes. The time for the audience must be arranged for through the Minister of Court.

Art. 31. The Ministers have the right to be present at the sittings of the National Assembly, and to sit in the place set apart for them, and to hear the debates of the Assembly; and should they think it necessary, they may ask the President for permission to speak and give the necessary explanations for the discussion and investigation of affairs.

Art. 32. Any individual member of the public may make a statement of his case, or complaints or criticisms, to the office of the Assembly, and, if the matter concerns the Assembly itself, a satisfying answer will be given to him; but should the matter concern one of the Ministries, it will be sent to that Ministry for investigation, and in order that a satisfying answer be given.

Art. 33. New laws which are necessary will be prepared at the responsible Ministries, and will be given to the National Assembly by the responsible Minister or by the Sadr Azam, and after receiving the approval of the Assembly will receive His Imperial Majesty's sign-manual and be put into execution.

Art. 34. The President of the Assembly can, if necessary, of his own initiative or by the desire of ten Members of the Assembly or of a Minister, form a Secret Committee, without the presence of newspaper reporters or spectators, composed of a number of persons chosen from among the Members of the Assembly, at which the other Members of the Assembly will not have the right to attend. The result of the deliberations of the Secret Committee can, however, only be put into execution when the Secret Committee in the presence of three quarters of the persons elected accept the point at issue by a majority of votes, and if the matter be not passed by the Secret Committee, it will not be stated in the Assembly and will remain secret.

Art. 35. Should the Secret Committee be instituted by the President of the Assembly, he has the right to inform the public of any part of it he thinks fit; but if the Secret Committee is instituted by a Minister, the publication of the debate can only be subject to that Minister's permission.

[Articles 36–42 are regulative of the transaction of business between the Assembly and the Ministries of the Government in matters of debate, inquiry, action on bills, etc.]

The Institution of the Senate.

Art. 43. Another Assembly, called the Senate, will be constituted, composed of sixty Members, whose sittings will coincide, after its constitution, with those of the National Assembly.

Art. 44. The Regulations of the Senate must receive the approval of the National Assembly.

Art. 45. The Members of the Assembly will be chosen from among the enlightened, intelligent, orthodox, and respectable persons of the State, thirty persons on behalf of His Imperial Majesty, of whom fifteen from among the inhabitants of Tehran and fifteen from the inhabitants of the provinces, and thirty persons on behalf of the nation, of whom fifteen persons elected by the people of Tehran and fifteen persons elected by the people of the provinces.

Art. 46. After the constitution of the Senate all affairs must receive the approval of both Assemblies. If those affairs are initiated by the Senate or by the body of Ministers, they must first be determined in the Senate and passed by a majority, and then be sent to the National Assembly for approval; but affairs initiated in the National Assembly will, on the contrary, pass from that Assembly to the Senate, with the exception of financial matters, which will be the prerogative of the National Assembly, and the Senate will be informed of the arrangements made by the Assembly regarding these affairs in order that the Senate should make its observations on the same to the National Assembly, which is, however, at liberty, after the necessary investigations, either to accept or to refuse the proposals of the Senate.

Art. 47. So long as the Senate is not constituted affairs will require only the approval of the National Assembly and the sign-manual of His Imperial Majesty to be put into execution.

[Article 48 provides for the constituting of a "third assembly," composed of an equal number of members from the National Assembly and the Senate, to deal with cases in which those two bodies are in disagreement, and for the ultimate dissolution of the National Assembly, preparatory to the election of a new one, in case no settlement of the disagreement is reached.

Article 49 allows the new Tehran deputies then elected to begin their labors, outside of the points at issue, as soon as they are ready.]

The conclusion of the Constitution is as follows.

Art. 50. During each term of election — that is to say, during two years — a general election will not be called more than once.

Art. 51. It is decreed that the Sovereign who succeeds us should protect these limitations and Articles, which aim at the strengthening of the State and of the foundations of the kingdom, and the protection of justice and contentment of the nation, which we have decreed and put into execution, and which they must look upon as their duty to fulfil.

In the month of Zilkade the Unclean, 1324.

O God the Almighty!

The Constitutional Laws of the National Assembly and the Senate, containing fifty-one Articles, are correct.

14th of the month of Zilkade, 1324 (30th December, 1906).

In the handwriting of Muzaffer-ed-Deen Shah:

It is correct.

(Sealed) Valiahd (Mohammed Ali Shah).

(Sealed) Mushir-ed-Dowleh (the Grand Vizier)

The Constitutional Law, as passed by the National Assembly and signed by the Shah on October 8, 1907. — One hundred and seven articles "to complete the fundamental laws of the Constitution of Persia" were "added to the Constitional law" by the signature of the Shah

on the 30th of December, 1906. The first two are as follows.

Article 1. The official religion of Persia is the branch of the Twelve Imams of the Shia Sect of Islam. The Sovereign of Persia must be of, and contribute to the spread of, this religion.

Art. 2. The National Assembly has been founded by the help of the Twelfth Imam, the bounty of His Islamic Majesty, the watchfulness of the Mujtcheds and the common people. The laws passed by it must never to all ages be contrary to the sacred precepts of Islam, and the laws laid down by the Prophet. It is obvious that the decision as to whether the laws passed by the Assembly are in opposition to the precepts of Islam rests with the Ulema. It is therefore officially decreed that for all ages a Committee composed of five persons, who shall be Mujteheds and religious doctors, and who also must be acquainted with the requirements of the times, shall be elected in the following manner. The Ulema and doctors of Islam who are recognized by the Shias as the centre of imitation shall make known to the National Assembly the names of twenty of the Ulema possessing the above-mentioned qualities. The National Assembly shall, by agreement on casting of lots, elect five of them or more, according to the requirements of the age, and admit them as members. This Committee shall discuss and thoroughly investigate the Bills brought in by the National Assembly, and reject every one of these Bills which is contrary to the sacred precepts of Islam, in order that it may not become law. The decision of this Committee is final. This Article will not be liable to change until the advent of the Twelfth Imam.

[Articles 3–7 relate to boundaries of the Kingdom, its capital, its flag, protection of the lives and property of foreigners, and the integrity of the Constitution.

Articles 8–25 are in the nature of a "bill of rights," affirming equality of rights to all; immunity from arbitrary arrest, punishment, exile or sequestration of property; freedom of "the study of teaching of arts, letters and sciences" "except in so far as they are forbidden by the Sheri"; freedom of publication for all "except heretical works"; freedom of "societies and associations which do not provoke religious or civil strife"; inviolability of postal and telegraphic communications, except under authority of law. All primary and secondary schools are placed under the direction and surveillance of the Ministry of Education.

Articles 26–29 define, as follows:]

The Powers of the Realm.

Art. 26. The powers of the realm spring from the people. The Constitutional Law defines the method of using those powers.

Art. 27. The powers of the realm are divided into three parts: —

Firstly, legislative power, whose province it is to make and amend laws. This power emanates from His Imperial Majesty the Shah, the National Assembly, and the Senate. Each one of these three sources possesses the right of originating laws; but their passing is conditional to their not being contrary to the laws of the Sheri, and to the approval of the two Assemblies, and to their receiving the Imperial signature. But the making and approval of laws relating to the revenue and expenditure of the realm belong to the National Assembly alone. The interpretation and commentary of laws is the peculiar duty of the National Assembly.

Secondly, the judicial power, which consists in the distinguishing of rights. This power belongs to the Sheri Tribunals in matters appertaining to the Sheri, and to the Courts of Justice in matters appertaining to the civil law ("urf").

Thirdly, the executive power, which rests with the Sovereign. That is to say, the Laws and Decrees will be executed by the Ministers and Government officials in the name of His Imperial Majesty in the manner defined by law.

Art. 28. The three above-mentioned powers shall always be differentiated and separated from one another.

Art. 29. The particular revenues of each province, department, and commune shall be regulated by the Provincial and Departmental Assemblies in accordance with their own particular laws.

[Articles 30–34 define the status of the members of the National Assembly.]

Rights and Powers of the Crown.

[Articles 35–57 set forth the rights and powers of the Crown. The sovereignty of Persia is declared to be "a trust which, by the grace of God, has been conferred on the person of the Sovereign by the people." The succession is vested in Muhammed Ali Shah Kajar and his descendants; the Crown Prince to be "the eldest son of the Sovereign whose mother is a Persian and a princess." Provision is made for the election by a joint committee of the Senate and the National Assembly on the succession of a minor, who cannot govern personally till his age is eighteen. The powers of the sovereign are thus defined:]

Art. 43. The Sovereign cannot, without the approval and sanction of the National Assembly and the Senate, interfere in the affairs of another country.

Art. 44. The Sovereign is absolved from all responsibility. The Ministers of State are responsible in all matters.

Art. 45. All the Decrees and Rescripts of the Sovereign shall only be put into execution when they have been signed by the responsible Minister, who is responsible for the accuracy of the contents of that Firman or Rescript.

Art. 46. The dismissal and appointment of Ministers are by order of the Sovereign.

Art. 47. The conferring of commissions in the army and orders and honorary distinctions, with due observance of law, is vested in the person of the Sovereign.

Art. 48. The Sovereign has the right, with the approval of the responsible Minister, to choose the important officials of the Government Departments, either at home or abroad, except in cases excepted by law. But the appointment of the other officials does not concern the Sovereign, except in cases defined by law.

Art. 49. The issuing of Firmans for the execution of laws is one of the rights of the Sovereign, but he may not delay or suspend the execution of those laws.

Art. 50. The supreme command of the military and naval forces is vested in the person of the Sovereign.

Art. 51. The declaration of war and the conclusion of peace rest with the Sovereign.

Art. 52. Treaties which, in accordance with Article 24 of the Constitutional Law of the 14th Ziliadeh, 1325 (30th December, 1906), must be kept secret, must, on the removal of this necessity, and provided that the interests and security of the country demand it, be communicated by the Sovereign to the National Assembly and the Senate, with the necessary explanations.

Art. 53. The secret clauses of any Treaty cannot annul the public clauses of that Treaty.

Art. 54. The Sovereign can summon the National Assembly and the Senate to an extraordinary Session.

Art. 55. Coins shall be struck, according to law, in the name of the Sovereign.

Art. 56. The expenses of the Imperial household must be defined by law.

Art. 57. The powers and prerogatives of the Sovereign are only such as have been defined by the existing constitutional laws.

[Articles 58–70 relate to the Ministers, who must be Mussulmans and native Persian subjects, princes of the first rank not eligible. They are severally and jointly responsible to both Assemblies. Commands of the sovereign cannot divest them of responsibility, which is to be defined by law. The Assembly or the Senate can accuse and prosecute them for offenses before the High Court of Appeal.]

Judicial Tribunals.

[The Judicial Tribunals of the Kingdom are the subject of Articles 71–89. "The Supreme Court of Justice and the subsidiary Courts" are declared to be "the official centres to which all suits must be referred, and judgment in matters appertaining to the Sheri rests with the fully qualified Mujtcheds." Suits relating to political rights concern the Courts of Justice, excepting those which are excepted by law. No Court of Law can be instituted except by law. One Court of Appeal for the whole Kingdom is to be instituted at the Capital. The sittings of all tribunals shall be public, except in cases when the tribunal judges that this would be prejudicial to order or decency. "The Presidents and the members of the Courts of Justice will be chosen in the manner decreed by the law of the Ministry of Justice, and will be appointed by virtue of a royal Firman." No judge may be suspended, temporarily, or permanently, without a trial or proof of offence. Military tribunals will be instituted according to a special law.]

Miscellaneous.

[Provincial Assemblies of elected representatives are provided for in Articles 90–93.

Articles 94–103 have relation to finances. They declare that no taxes may be levied or exemptions from them allowed except by law; that no favor to individuals shall be shown in taxation; that nothing shall, on any pretext, be demanded from the people, otherwise than by law; and provision is made for the creation of a State Accounts Department, to be chosen by the National Assembly.

The last four articles relate to the Army, which is required to be in all particulars under regulation of law. "The army vote must pass the National Assembly every year."]

CONSTITUTION OF RUSSIA, The so-called. See (in this vol.) RUSSIA, A. D. 1904–1905.

CONSTITUTION OF SOUTH AFRICA.

Omitting the preamble, which sets forth the desirability and expediency, "for the welfare and future progress of South Africa, that the several British Colonies therein shall be united under one Government in a legislative union under the Crown of Great Britain and Ireland," the provisions of the enactment for that purpose by the Parliament of the United Kingdom, approved September 20, 1909, are as follows:

I. — Preliminary.

1. This Act may be cited as the South Africa Act, 1909.

2. In this Act, unless it is otherwise expressed or implied, the words "the Union" shall be taken to mean the Union of South Africa as constituted under this Act, and the words "Houses of Parliament," "House of Parliament," or "Parliament," shall be taken to mean the Parliament of the Union.

3. The provisions of this Act referring to the King shall extend to His Majesty's heirs and successors in the sovereignty of the United Kingdom of Great Britian and Ireland.

II. — The Union.

4. It shall be lawful for the King, with the advice of the Privy Council, to declare by proclamation that, on and after a day therein appointed, not being later than one year after the passing of this Act, the Colonies of the Cape of Good Hope, Natal, the Transvaal, and the Orange River Colony, hereinafter called the Colonies shall be united in a Legislative Union under one Government under the name of the Union of South Africa. On and after the day appointed by such proclamation the Government and Parliament of the Union shall have full power and authority within the limits of the Colonies, but the King may at any time after the proclamation appoint a governor-general for the Union.

5. The provisions of this Act shall, unless it is otherwise expressed or implied, take effect on and after the day so appointed.

6. The colonies mentioned in section four shall become original provinces of the Union under the names of Cape of Good Hope, Natal, Transvaal, and Orange Free State, as the case may be. The original provinces shall have the same limits as the respective colonies at the establishment of the Union.

7. Upon any colony entering the Union, the Colonial Boundaries Act, 1895, and every other Act applying to any of the Colonies as being self-governing colonies or colonies with responsible government, shall cease to apply to that colony, but as from the date when this Act takes effect every such Act of Parliament shall apply to the Union.

III. — Executive Government.

8. The Executive Government of the Union is vested in the King, and shall be administered by His Majesty in person or by a governor-general as His representative.

9. The Governor-General shall be appointed by the King, and shall have and may exercise in

the Union during the King's pleasure, but subject to this Act, such powers and functions of the King as His Majesty may be pleased to assign to him.

10. There shall be payable to the King out of the Consolidated Revenue Fund of the Union for the salary of the Governor-General an annual sum of ten thousand pounds. The salary of the Governor-General shall not be altered during his continuance in office.

11. The provisions of this Act relating to the Governor-General extend and apply to the Governor-General for the time being or such person as the King may appoint to administer the government of the Union. The King may authorise the Governor-General to appoint any person to be his deputy within the Union during his temporary absence, and in that capacity to exercise for and on behalf of the Governor-General during such absence all such powers and authorities vested in the Governor-General as the Governor-General may assign to him, subject to any limitations expressed or directions given by the King; but the appointment of such deputy shall not affect the exercise by the Governor-General himself of any power or function.

12. There shall be an Executive Council to advise the Governor-General in the government of the Union, and the members of the council shall be chosen and summoned by the Governor-General and sworn as executive councillors, and shall hold office during his pleasure.

13. The provisions of this Act referring to the Governor-General in Council shall be construed as referring to the Governor-General acting with the advice of the Executive Council.

14. The Governor-General may appoint officers not exceeding ten in number to administer such departments of State of the Union as the Governor-General in Council may establish; such officers shall hold office during the pleasure of the Governor-General. They shall be members of the Executive Council and shall be the King's ministers of State for the Union. After the first general election of members of the House of Assembly, as hereinafter provided, no minister shall hold office for a longer period than three months unless he is or becomes a member of either House of Parliament.

15. The appointment and removal of all officers of the public service of the Union shall be vested in the Governor-General in Council, unless the appointment is delegated by the Governor-General in Council or by this Act or by a law of Parliament to some other authority.

16. All powers, authorities, and functions which at the establishment of the Union are in any of the Colonies vested in the Governor or in the Governor in Council, or in any authority of the Colony, shall, as far as the same continue in existence and are capable of being exercised after the establishment of the Union, be vested in the Governor-General or in the Governor-General in Council, or in the authority exercising similar powers under the Union, as the case may be, except such powers and functions as are by this Act or may by a law of Parliament be vested in some other authority.

17. The command in chief of the naval and military forces within the Union is vested in the King or in the Governor-General as His representative.

18. Save as in section twenty-three excepted, Pretoria shall be the seat of Government of the Union.

IV. — Parliament.

19. The legislative power of the Union shall be vested in the Parliament of the Union, herein called Parliament, which shall consist of the King, a Senate, and a House of Assembly.

20. The Governor-General may appoint such times for holding the sessions of Parliament as he thinks fit, and may also from time to time, by proclamation or otherwise, prorogue Parliament, and may in like manner dissolve the Senate and the House of Assembly simultaneously, or the House of Assembly alone: provided that the Senate shall not be dissolved within a period of ten years after the establishment of the Union, and provided further that the dissolution of the Senate shall not affect any senators nominated by the Governor-General in Council.

21. Parliament shall be summoned to meet not later than six months after the establishment of the Union.

22. There shall be a session of Parliament once at least in every year, so that a period of twelve months shall not intervene between the last sitting of Parliament in one session and its first sitting in the next session.

23. Cape Town shall be the seat of the Legislature of the Union.

SENATE

24. For ten years after the establishment of the Union the constitution of the Senate shall, in respect of the original provinces, be as follows: (i) Eight senators shall be nominated by the Governor-General in Council, and for each original province eight senators shall be elected in the manner hereinafter provided: (ii) The senators to be nominated by the Governor-General in Council shall hold their seats for ten years. One-half of their number shall be selected on the ground mainly of their thorough acquaintance, by reason of their official experience or otherwise, with the reasonable wants and wishes of the coloured races in South Africa. If the seat of a senator so nominated shall become vacant, the Governor-General in Council shall nominate another person to be a senator, who shall hold his seat for ten years: (iii) After the passing of this Act, and before the day appointed for the establishment of the Union, the Governor of each of the Colonies shall summon a special sitting of both Houses of the Legislature, and the two Houses sitting together as one body and presided over by the Speaker of the Legislative Assembly shall elect eight persons to be senators for the province. Such senators shall hold their seats for ten years. If the seat of a senator so elected shall become vacant, the provincial council of the province for which such senator has been elected shall choose a person to hold the seat until the completion of the period for which the person in whose stead he is elected would have held his seat.

25. Parliament may provide for the manner in which the Senate shall be constituted after the expiration of ten years, and unless and until such provision shall have been made — (i) the provisions of the last preceding section with regard to nominated senators shall continue to have effect; (ii) eight senators for each province shall be elected by the members

of the provincial council of such province together with the members of the House of Assembly elected for such province. Such senators shall hold their seats for ten years unless the Senate be sooner dissolved. If the seat of an elected senator shall become vacant, the members of the provincial council of the province, together with the members of the House of Assembly elected for such province, shall choose a person to hold the seat until the completion of the period for which the person in whose stead he is elected would have held his seat. The Governor-General in Council shall make regulations for the joint election of senators prescribed in this section.

26. The qualifications of a senator shall be as follows:—He must—(*a*) be not less than thirty years of age; (*b*) be qualified to be registered as a voter for the election of members of the House of Assembly in one of the provinces; (*c*) have resided for five years within the limits of the Union as existing at the time when he is elected or nominated, as the case may be; (*d*) be a British subject of European descent; (*e*) in the case of an elected senator, be the registered owner of immovable property within the Union of the value of not less than five hundred pounds over and above any special mortgages thereon. For the purposes of this section, residence in, and property situated within, a colony before its incorporation in the Union shall be treated as residence in and property situated within the Union.

27. The Senate shall, before proceeding to the dispatch of any other business, choose a senator to be the President of the Senate, and as often as the office of President becomes vacant the Senate shall again choose a senator to be the President. The President shall cease to hold office if he ceases to be a senator. He may be removed from office by a vote of the Senate, or he may resign his office by writing under his hand addressed to the Governor-General.

28. Prior to or during any absence of the President the Senate may choose a senator to perform his duties in his absence.

29. A senator may, by writing under his hand addressed to the Governor-General, resign his seat, which thereupon shall become vacant. The Governor-General shall as soon as practicable cause steps to be taken to have the vacancy filled.

30. The presence of at least twelve senators shall be necessary to constitute a meeting of the Senate for the exercise of its powers.

31. All questions in the Senate shall be determined by a majority of votes of senators present other than the President or the presiding senator, who shall, however, have and exercise a casting vote in the case of an equality of votes.

HOUSE OF ASSEMBLY.

32. The House of Assembly shall be composed of members directly chosen by the voters of the Union in electoral divisions delimited as hereinafter provided.

33. The number of members to be elected in the original provinces at the first election and until the number is altered in accordance with the provisions of this Act shall be as follows: Cape of Good Hope, fifty-one; Natal, seventeen; Transvaal, thirty-six; Orange Free State, seventeen. These numbers may be increased as provided in the next succeeding section, but shall not, in the case of any original province, be diminished until the total number of members of the House of Assembly in respect of the provinces herein provided for reaches one hundred and fifty, or until a period of ten years has elapsed after the establishment of the Union, whichever is the longer period.

34. The number of members to be elected in each province, as provided in section thirty-three, shall be increased from time to time as may be necessary in accordance with the following provisions: (i) The quota of the Union shall be obtained by dividing the total number of European male adults in the Union, as ascertained at the census of nineteen hundred and four, by the total number of members of the House of Assembly as constituted at the establishment of the Union: (ii) In nineteen hundred and eleven, and every five years thereafter, a census of the European population of the Union shall be taken for the purposes of this Act: (iii) After any such census the number of European male adults in each province shall be compared with the number of European male adults as ascertained at the census of nineteen hundred and four, and, in the case of any province where an increase is shown, as compared with the census of nineteen hundred and four, equal to the quota of the Union or any multiple thereof, the number of members allotted to such province in the last preceding section shall be increased by an additional member or an additional number of members equal to such multiple, as the case may be: (iv) Notwithstanding anything herein contained, no additional member shall be allotted to any province until the total number of European male adults in such province exceeds the quota of the Union multiplied by the number of members allotted to such province for the time being, and thereupon additional members shall be allotted to such province in respect only of such excess: (v) As soon as the number of members of the House of Assembly to be elected in the original provinces in accordance with the preceding subsections reaches the total of one hundred and fifty, such total shall not be further increased unless and until Parliament otherwise provides; and subject to the provisions of the last preceding section the distribution of members among the provinces shall be such that the proportion between the number of members to be elected at any time in each province and the number of European male adults in such province, as ascertained at the last preceding census, shall as far as possible be identical throughout the Union: (vi) "Male adults" in this Act shall be taken to mean males of twenty-one years of age or upwards not being members of His Majesty's regular forces on full pay: (vii) For the purposes of this Act the number of European male adults, as ascertained at the census of nineteen hundred and four, shall be taken to be—For the Cape of Good Hope, 167,546; for Natal, 34,784; for the Transvaal, 106,498; For the Orange Free State, 41,014.

35. (1) Parliament may by law prescribe the qualifications which shall be necessary to entitle persons to vote at the election of members of the House of Assembly, but no such law shall disqualify any person in the province of the Cape of Good Hope who, under the laws existing in the Colony of the Cape of Good Hope at the estab-

lishment of the Union, is or may become capable of being registered as a voter from being so registered in the province of the Cape of Good Hope by reason of his race or colour only, unless the Bill be passed by both Houses of Parliament sitting together, and at the third reading be agreed to by not less than two-thirds of the total number of members of both Houses. A Bill so passed at such joint sitting shall be taken to have been duly passed by both Houses of Parliament. (2) No person who at the passing of any such law is registered as a voter in any province shall be removed from the register by reason only of any disqualification based on race or colour.

36. Subject to the provisions of the last preceding section, the qualifications of parliamentary voters, as existing in the several Colonies at the establishment of the Union, shall be the qualifications necessary to entitle persons in the corresponding provinces to vote for the election of members of the House of Assembly: Provided that no member of His Majesty's regular forces on full pay shall be entitled to be registered as a voter.

[Section 37 of the Act applies to the elections of members of the House of Assembly all existing election laws in the respective provinces relating to the elections for their more numerous Houses of Parliament, excepting that it requires all polls to be taken on one and the same day throughout the Union.

Sections 38 to 43 inclusive provide for the creation of a joint commission to determine the first division of the provinces into equalized electoral divisions, and for subsequent commissions of three judges of the Supreme Court of South Africa for re-divisions, as they may become necessary.]

44. The qualifications of a member of the House of Assembly shall be as follows:—He must—(*a*) be qualified to be registered as a voter for the election of members of the House of Assembly in one of the provinces; (*b*) have resided for five years within the limits of the Union as existing at the time when he is elected; (*c*) be a British subject of European descent. For the purposes of this section, residence in a colony before its incorporation in the Union shall be treated as residence in the Union.

45. Every House of Assembly shall continue for five years from the first meeting thereof, and no longer, but may be sooner dissolved by the Governor-General.

46. The House of Assembly shall, before proceeding to the despatch of any other business, choose a member to be the Speaker of the House, and, as often as the office of Speaker becomes vacant, the House shall again choose a member to be the Speaker. The Speaker shall cease to hold his office if he ceases to be a member. He may be removed from office by a vote of the House, or he may resign his office or his seat by writing under his hand addressed to the Governor-General.

47. Prior to or during the absence of the Speaker, the House of Assembly may choose a member to perform his duties in his absence.

48. A member may, by writing under his hand addressed to the Speaker, or, if there is no Speaker, or if the Speaker is absent from the Union, to the Governor-General, resign his seat, which shall thereupon become vacant.

49. The presence of at least thirty members of the House of Assembly shall be necessary to constitute a meeting of the House for the exercise of its powers.

50. All questions in the House of Assembly shall be determined by a majority of votes of members present other than the Speaker or the presiding member, who shall, however, have and exercise a casting vote in the case of an equality of votes.

BOTH HOUSES OF PARLIAMENT.

[Section 51 prescribes the oath or affirmation of allegiance to the British Sovereign which each senator and member of the House of Assembly must subscribe to before taking his seat.]

52. A member of either House of Parliament shall be incapable of being chosen or of sitting as a member of the other House: Provided that every minister of State who is a member of either House of Parliament shall have the right to sit and speak in the Senate and the House of Assembly, but shall vote only in the House of which he is a member.

53. No person shall be capable of being chosen or of sitting as a senator or as a member of the House of Assembly who—(*a*) has been at any time convicted of any crime or offence for which he shall have been sentenced to imprisonment without the option of a fine for a term of not less than twelve months, unless he shall have received a grant of amnesty or a free pardon, or unless such imprisonment shall have expired at least five years before the date of his election; or (*b*) is an unrehabilitated insolvent; or (*c*) is of unsound mind, and has been so declared by a competent court; or (*d*) holds any office of profit under the Crown within the Union: Provided that the following persons shall not be deemed to hold an office of profit under the Crown for the purposes of this subsection. (1) a minister of State for the Union; (2) a person in receipt of a pension from the Crown; (3) an officer or member of His Majesty's naval or military forces on retired or half pay, or an officer or member of the naval or military forces of the Union whose services are not wholly employed by the Union.

54. If a senator or member of the House of Assembly—(*a*) becomes subject to any of the disabilities mentioned in the last preceding section; or (*b*) ceases to be qualified as required by law; or (*c*) fails for a whole ordinary session to attend without the special leave of the Senate or the House of Assembly, as the case may be; his seat shall thereupon become vacant.

[Section 55 imposes a penalty of £100 for each day on which any disqualified person may knowingly sit in Parliament.]

56. Each senator and each member of the House of Assembly shall, under such rules as shall be framed by Parliament, receive an allowance of four hundred pounds a year, to be reckoned from the date on which he takes his seat: Provided that for every day of the session on which he is absent there shall be deducted from such allowance the sum of three pounds: Provided further that no such allowance shall be paid to a Minister receiving a salary under the Crown or to the President of the Senate or the Speaker of the House of Assembly. A day of the session shall mean in respect of a member any day during a session on which the House of which he is a member or any committee of which he is a member meets.

[Sections 57–58 relate to the privileges of each House of Parliament and its right to make rules and orders of procedure for the conduct of its business.]

POWERS OF PARLIAMENT.

59. Parliament shall have full power to make laws for the peace, order, and good government of the Union.

60. — (1) Bills appropriating revenue or moneys or imposing taxation shall originate only in the House of Assembly. But a Bill shall not be taken to appropriate revenue or moneys or to impose taxation by reason only of its containing provisions for the imposition or appropriation of fines or other pecuniary penalties. (2) The Senate may not amend any Bills so far as they impose taxation or appropriate revenue or moneys for the services of the Government. (3) The Senate may not amend any Bill so as to increase any proposed charges or burden on the people.

61. Any Bill which appropriates revenue or moneys for the ordinary annual services of the Government shall deal only with such appropriation.

62. The House of Assembly shall not originate or pass any vote, resolution, address, or Bill for the appropriation of any part of the public revenue or of any tax or impost to any purpose unless such appropriation has been recommended by message from the Governor-General during the Session in which such vote, resolution, address, or Bill is proposed.

63. If the House of Assembly passes any Bill and the Senate rejects or fails to pass it or passes it with amendments to which the House of Assembly will not agree, and if the House of Assembly in the next session again passes the Bill with or without any amendments which have been made or agreed to by the Senate and the Senate rejects or fails to pass it or passes it with amendments to which the House of Assembly will not agree, the Governor-General may during that session convene a joint sitting of the members of the Senate and House of Assembly. The members present at any such joint sitting may deliberate and shall vote together upon the Bill as last proposed by the House of Assembly and upon amendments, if any, which have been made therein by one House of Parliament and not agreed to by the other; and any such amendments which are affirmed by a majority of the total number of members of the Senate and House of Assembly present at such sitting shall be taken to have been carried, and if the Bill with the amendments, if any, is affirmed by a majority of the members of the Senate and House of Assembly present at such sitting, it shall be taken to have been duly passed by both Houses of Parliament: Provided that, if the Senate shall reject or fail to pass any Bill dealing with the appropriation of revenue or moneys for the public service, such joint sitting may be convened during the same session in which the Senate so rejects or fails to pass such Bill.

64. When a Bill is presented to the Governor-General for the King's Assent, he shall declare according to his discretion, but subject to the provisions of this Act, and to such instructions as may from time to time be given in that behalf by the King, that he assents in the King's name, or that he withholds assent, or that he reserves the Bill for the signification of the King's pleasure. All Bills repealing or amending this section or any of the provisions of Chapter IV. under the heading "House of Assembly," and all Bills abolishing provincial councils or abridging the powers conferred on provincial councils under section eighty-five, otherwise than in accordance with the provisions of that section, shall be so reserved. The Governor-General may return to the House in which it originated any Bill so presented to him, and may transmit therewith any amendments which he may recommend, and the House may deal with the recommendation.

65. The King may disallow any law within one year after it has been assented to by the Governor General, and such disallowance, on being made known by the Governor-General by speech or message to each of the Houses of Parliament or by proclamation, shall annul the law from the day when the disallowance is so made known.

66. A Bill reserved for the King's pleasure shall not have any force unless and until, within one year from the day on which it was presented to the Governor-General for the King's Assent, the Governor-General makes known by speech or message to each of the Houses of Parliament or by proclamation that it has received the King's Assent.

67. As soon as may be after any law shall have been assented to in the King's name by the Governor General, or having been reserved for the King's pleasure shall have received his assent, the Clerk of the House of Assembly shall cause two fair copies of such law, one being in the English and the other in the Dutch language (one of which copies shall be signed by the Governor-General), to be enrolled of record in the office of the Registrar of the Appellate Division of the Supreme Court of South Africa; and such copies shall be conclusive evidence as to the provisions of every such law, and in case of conflict between the two copies thus deposited that signed by the Governor-General shall prevail.

V. — The Provinces.

ADMINISTRATORS.

68. — (1) In each province there shall be a chief executive officer appointed by the Governor-General in Council, who shall be styled the administrator of the province, and in whose name all executive acts relating to provincial affairs therein shall be done. (2) In the appointment of the administrator of any province, the Governor-General in Council shall, as far as practicable, give preference to persons resident in such province. (3) Such administrator shall hold office for a term of five years and shall not be removed before the expiration thereof except by the Governor-General in Council for cause assigned, which shall be communicated by message to both Houses of Parliament within one week after the removal, if Parliament be then sitting, or, if Parliament be not sitting, then within one week after the commencement of the next ensuing session. (4) The Governor-General in Council may from time to time appoint a deputy administrator to execute the office and functions of the administrator during his absence, illness, or other inability.

69. The salaries of the administrators shall be fixed and provided by Parliament, and shall not be reduced during their respective terms of office.

CONSTITUTION OF SOUTH AFRICA

PROVINCIAL COUNCILS.

70. — (1) There shall be a provincial council in each province consisting of the same number of members as are elected in the province for the House of Assembly: Provided that, in any province whose representatives in the House of Assembly shall be less than twenty-five in number, the provincial council shall consist of twenty-five members. (2) Any person qualified to vote for the election of members of the provincial council shall be qualified to be a member of such council.

[Sections 71–77 are regulative of the elections, the terms (three years), and the sittings of the Provincial Councils.

Sections 78–84 are creative of Executive Committees, for which each Provincial Council shall elect "from among its members, or otherwise," four persons, to be joined with the administrator of the Province, the latter being chairman of the Executive Committee thus constituted. This Committee, "on behalf of the Provincial Council," being appointed to "carry on the administration of provincial affairs," and, "subject to the provisions of this Act," to be invested with "all powers, authorities, and functions which at the establishment of the Union are vested in or exercised by the Governor in Council, or any minister of the Colony."]

POWERS OF PROVINCIAL COUNCILS.

85. Subject to the provisions of this Act and the assent of the Governor-General in Council as hereinafter provided, the provincial council may make ordinances in relation to matters coming within the following classes of subjects (that is to say): — (i) Direct taxation within the province in order to raise a revenue for provincial purposes: (ii) The borrowing of money on the sole credit of the province with the consent of the Governor-General in Council and in accordance with regulations to be framed by Parliament: (iii) Education, other than higher education, for a period of five years and thereafter until Parliament otherwise provides: (iv) Agriculture to the extent and subject to the conditions to be defined by Parliament: (v) The establishment, maintenance, and management of hospitals and charitable institutions: (vi) Municipal institutions, divisional councils, and other local institutions of a similar nature: (vii) Local works and undertakings within the province, other than railways and harbours and other than such works as extend beyond the borders of the province, and subject to the power of Parliament to declare any work a national work and to provide for its construction by arrangement with the provincial council or otherwise: (viii) Roads, outspans, ponts, and bridges, other than bridges connecting two provinces: (ix) Markets and pounds: (x) Fish and game preservation: (xi) The imposition of punishment by fine, penalty, or imprisonment for enforcing any law or any ordinance of the province made in relation to any matter coming within any of the classes of subjects enumerated in this section: (xii) Generally all matters which, in the opinion of the Governor-General in Council, are of a merely local or private nature in the province: (xiii) All other subjects in respect of which Parliament shall by any law delegate the power of making ordinances to the provincial council.

[Sections 86–93 are regulative of the exercise of the powers thus conferred.]

94. The seats of provincial government shall be — For the Cape of Good Hope, Cape Town; for Natal, Pietermaritzburg; for the Transvaal, Pretoria; for the Orange Free State, Bloemfontein.

VI. — The Supreme Court of South Africa.

95. There shall be a Supreme Court of South Africa consisting of a Chief Justice of South Africa, the ordinary judges of appeal, and the other judges of the several divisions of the Supreme Court of South Africa in the provinces.

96. There shall be an Appellate Division of the Supreme Court of South Africa, consisting of the Chief Justice of South Africa, two ordinary judges of appeal, and two additional judges of appeal. Such additional judges of appeal shall be assigned by the Governor-General in Council to the Appellate Division from any of the provincial or local divisions of the Supreme Court of South Africa, but shall continue to perform their duties as judges of their respective divisions when their attendance is not required in the Appellate Division.

97. The Governor-General in Council may, during the absence, illness, or other incapacity of the Chief Justice of South Africa, or of any ordinary or additional judge of appeal, appoint another judge of the Supreme Court of South Africa to act temporarily as such chief justice, ordinary judge of appeal, or additional judge of appeal, as the case may be.

98. — (1) The several supreme courts of the Cape of Good Hope, Natal, and the Transvaal, and the High Court of the Orange River Colony shall, on the establishment of the Union, become provincial divisions of the Supreme Court of South Africa within their respective provinces, and shall each be presided over by a judge-president.

[Further prescriptions on the same subject are contained in this and the next section of the Act.]

100. The Chief Justice of South Africa, the ordinary judges of appeal, and all other judges of the Supreme Court of South Africa to be appointed after the establishment of the Union shall be appointed by the Governor-General in Council, and shall receive such remuneration as Parliament shall prescribe, and their remuneration shall not be diminished during their continuance in office.

101. The Chief Justice of South Africa and other judges of the Supreme Court of South Africa shall not be removed from office except by the Governor-General in Council on an address from both Houses of Parliament in the same session praying for such removal on the ground of misbehaviour or incapacity.

102. Upon any vacancy occuring in any division of the Supreme Court of South Africa, other than the Appellate Division, the Governor-General in Council may, in case he shall consider that the number of judges of such court may with advantage to the public interest be reduced, postpone filling the vacancy until Parliament shall have determined whether such reduction shall take place.

[Rules concerning the cases, civil and criminal, which may be appealed from inferior courts to the Appellate Division, and not to the Supreme Court, are laid down in sections 103–105.]

106. There shall be no appeal from the Supreme Court of South Africa or from any division thereof to the King in Council, but nothing

herein contained shall be construed to impair any right which the King in Council may be pleased to exercise to grant special leave to appeal from the Appellate Division to the King in Council. Parliament may make laws limiting the matters in respect of which such special leave may be asked, but Bills containing any such limitation shall be reserved by the Governor-General for the signification of His Majesty's pleasure: Provided that nothing in this section shall affect any right of appeal to His Majesty in Council from any judgment given by the Appellate Division of the Supreme Court under or in virtue of the Colonial Courts of Admiralty Act, 1890.

107. The Chief Justice of South Africa and the ordinary judges of appeal may, subject to the approval of the Governor-General in Council, make rules for the conduct of the proceedings of the Appellate Division and prescribing the time and manner of making appeals thereto. Until such rules shall have been promulgated, the rules in force in the Supreme Court of the Cape of Good Hope at the establishment of the Union shall mutatis mutandis apply.

[Other details concerning the rules and the sessions of the several provincial and local divisions of the Supreme Court, the execution of their writs and other processes, etc., are set forth in sections 108–116.]

VII. — Finance and Railways.

117. All revenues, from whatever source arising, over which the several Colonies have at the establishment of the Union power of appropriation, shall vest in the Governor-General in Council. There shall be formed a Railway and Harbour Fund, into which shall be paid all revenues raised or received by the Governor-General in Council from the administration of the railways, ports, and harbours, and such fund shall be appropriated by Parliament to the purposes of the railways, ports, and harbours in the manner prescribed by this Act. There shall also be formed a Consolidated Revenue Fund, into which shall be paid all other revenues raised or received by the Governor-General in Council, and such fund shall be appropriated by Parliament for the purposes of the Union in the manner prescribed by this Act, and subject to the charges imposed thereby.

[Sections 118–123 provide for a commission "to institute an inquiry into the financial relations which should exist between the Union and the provinces"; prescribe the division to be made meantime of the Consolidated Revenue Fund; make the interest of the public debts a first charge on that fund; transfer to the Union all stocks, moneys, and securities, all crown lands, public works, etc., and all rights in mines and minerals that belonged to each of the colonies at the establishment of the Union.]

124. The Union shall assume all debts and liabilities of the Colonies existing at its establishment, subject, notwithstanding any other provision contained in this Act, to the conditions imposed by any law under which such debts or liabilities were raised or incurred, and without prejudice to any rights of security or priority in respect of the payment of principal, interest, sinking fund, and other charges conferred on the creditors of any of the Colonies, and may, subject to such conditions and rights, convert, renew, or consolidate such debts.

CONSTITUTION OF SOUTH AFRICA

125. All ports, harbours, and railways belonging to the several Colonies at the establishment of the Union shall from the date thereof vest in the Governor-General in Council. No railway for the conveyance of public traffic, and no port, harbour, or similar work, shall be constructed without the sanction of Parliament.

126. Subject to the authority of the Governor-General in Council, the control and management of the railways, ports, and harbours of the Union shall be exercised through a board consisting of not more than three commissioners, who shall be appointed by the Governor-General in Council, and a minister of State, who shall be chairman. . . .

[Of the remaining sections of the Act (127–152) the following are the more important or the more significant.]

133. In order to compensate Pietermaritzburg and Bloemfontein for any loss sustained by them in the form of diminution of prosperity or decreased rateable value by reason of their ceasing to be the seats of government of their respective colonies, there shall be paid from the Consolidated Revenue Fund for a period not exceeding twenty-five years to the municipal councils of such towns a grant of two per centum per annum on their municipal debts, as existing on the thirty-first day of January nineteen hundred and nine, and as ascertained by the Controller and Auditor-General. The Commission appointed under section one hundred and eighteen shall, after due inquiry, report to the Governor-General in Council what compensation should be paid to the municipal councils of Cape Town and Pretoria for the losses, if any, similarly sustained by them. Such compensation shall be paid out of the Consolidated Revenue Fund for a period not exceeding twenty-five years, and shall not exceed one per centum per annum on the respective municipal debts of such towns as existing on the thirty-first January nineteen hundred and nine, and as ascertained by the Controller and Auditor-General.

134. The election of senators and of members of the executive committees of the provincial councils as provided in this Act shall, whenever such election is contested, be according to the principle of proportional representation, each voter having one transferable vote. The Governor-General in Council, or, in the case of the first election of the Senate, the Governor in Council of each of the Colonies, shall frame regulations prescribing the method of voting and of transferring and counting votes and the duties of returning officers in connection therewith, and such regulations or any amendments thereof after being duly promulgated shall have full force and effect unless and until Parliament shall otherwise provide.

136. There shall be free trade throughout the Union, but until Parliament otherwise provides the duties of custom and of excise leviable under the laws existing in any of the Colonies at the establishment of the Union shall remain in force.

137. Both the English and Dutch languages shall be official languages of the Union, and shall be treated on a footing of equality, and possess and enjoy equal freedom, rights, and privileges; all records, journals, and proceedings of Parliament shall be kept in both languages, and all Bills, Acts, and notices of general public im-

portance or interest issued by the Government of the Union shall be in both languages.

138. All persons who have been naturalised in any of the Colonies shall be deemed to be naturalised throughout the Union.

140. Subject to the provisions of the next succeeding section, all officers of the public service of the Colonies shall at the establishment of the Union become officers of the Union.

141. (1) As soon as possible after the establishment of the Union, the Governor-General in Council shall appoint a public service commission to make recommendations for such reorganisation and readjustment of the departments of the public service as may be necessary. The commission shall also make recommendations in regard to the assignment of officers to the several provinces. . . .

142. After the establishment of the Union the Governor-General in Council shall appoint a permanent public service commission with such powers and duties relating to the appointment, discipline, retirement, and superannuation of public officers as Parliament shall determine.

143. Any officer of the public service of any of the Colonies at the establishment of the Union who is not retained in the service of the Union or assigned to that of a province shall be entitled to receive such pension, gratuity, or other compensation as he would have received in like circumstances if the Union had not been established.

147. The control and administration of native affairs and of matters specially or differentially affecting Asiatics throughout the Union shall vest in the Governor-General in Council, who shall exercise all special powers in regard to native administration hitherto vested in the Governors of the Colonies or exercised by them as supreme chiefs, and any lands vested in the Governor or Governor and Executive Council of any colony for the purpose of reserves for native locations shall vest in the Governor-General in Council, who shall exercise all special powers in relation to such reserves as may hitherto have been exercisable by any such Governor or Governor and Executive Council, and no lands set aside for the occupation of natives which cannot at the establishment of the Union be alienated except by an Act of the Colonial Legislature shall be alienated or in any way diverted from the purposes for which they are set apart except under the authority of an Act of Parliament.

148. — (1) All rights and obligations under any conventions or agreements which are binding on any of the Colonies shall devolve upon the Union at its establishment.

(2) The provisions of the railway agreement between the Governments of the Transvaal, the Cape of Good Hope, and Natal, dated the second of February, nineteen hundred and nine, shall, as far as practicable, be given effect to by the Government of the Union.

IX. — New Provinces and Territories.

149. Parliament may alter the boundaries of any province, divide a province into two or more provinces, or form a new province out of provinces within the Union, on the petition of the provincial council of every province whose boundaries are affected thereby.

150. The King, with the advice of the Privy Council, may on addresses from the Houses of Parliament of the Union admit into the Union the territories administered by the British South Africa Company on such terms and conditions as to representation and otherwise in each case as are expressed in the addresses and approved by the King, and the provisions of any Order in Council in that behalf shall have effect as if they had been enacted by the Parliament of the United Kingdom of Great Britain and Ireland.

151. The King, with the advice of the Privy Council, may, on addresses from the Houses of Parliament of the Union, transfer to the Union the government of any territories, other than the territories administered by the British South Africa Company, belonging to or under the protection of His Majesty, and inhabited wholly or in part by natives, and upon such transfer the Governor-General in Council may undertake the government of such territory upon the terms and conditions embodied in the Schedule to this Act.

X. - Amendment of Act.

Parliament may by law repeal or alter any of the provisions of this Act: Provided that no provision thereof, for the operation of which a definite period of time is prescribed, shall during such period be repealed or altered: And provided further that no repeal or alteration of the provisions contained in this section, or in sections thirty-three and thirty-four (until the number of members of the House of Assembly has reached the limit therein prescribed, or until a period of ten years has elapsed after the establishment of the Union, whichever is the longer period), or in sections thirty five and one hundred and thirty-seven, shall be valid unless the Bill embodying such repeal or alteration shall be passed by both Houses of Parliament sitting together, and at the third reading be agreed to by not less than two-thirds of the total number of members of both Houses. A Bill so passed at such joint sitting shall be taken to have been duly passed by both Houses of Parliament.

Schedule.

1. After the transfer of the government of any territory belonging to or under the protection of His Majesty, the Governor-General in Council shall be the legislative authority, and may by proclamation make laws for the peace, order, and good government of such territory. Provided that all such laws shall be laid before both Houses of Parliament within seven days after the issue of the proclamation or, if Parliament be not then sitting, within seven days after the beginning of the next session, and shall be effectual unless and until both Houses of Parliament shall by resolutions passed in the same session request the Governor-General in Council to repeal the same, in which case they shall be repealed by proclamation.

2. The Prime Minister shall be charged with the administration of any territory thus transferred, and he shall be advised in the general conduct of such administration by a commission consisting of not fewer than three members with a secretary, to be appointed by the Governor-General in Council, who shall take the instructions of the Prime Minister in conducting all correspondence relating to the territories, and shall also under the like control have custody of all official papers relating to the territories.

3. The members of the commission shall be appointed by the Governor-General in Council,

and shall be entitled to hold office for a period of ten years, but such period may be extended to successive further terms of five years.

14. It shall not be lawful to alienate any land in Basutoland or any land forming part of the native reserves in the Bechuanaland Protectorate and Swaziland from the native tribes inhabiting those territories.

15. The sale of intoxicating liquor to natives shall be prohibited in the territories, and no provision giving facilities for introducing, obtaining, or possessing such liquor in any part of the territories less stringent than those existing at the time of transfer shall be allowed.

4. The custom, where it exists, of holding chiefs or other recognised forms of native assembly shall be maintained in the territories.

17. No differential duties or imposts on the produce of the territories shall be levied. The laws of the Union relating to customs and excise shall be made to apply to the territories.

18. There shall be free intercourse for the inhabitants of the territories with the rest of South Africa subject to the laws, including the pass laws, of the Union.

19. Subject to the provisions of this Schedule, all revenues derived from any territory shall be expended for and on behalf of such territory. . . .

CONSTITUTION OF TURKEY.—The following is a synopsis of the Constitution promulgated December 23, 1876, the first year of the reign of Abd ul Hamid, then soon... It drawn, and practically forgotten for thirty-two years, but brought to light by the revolution of 1908 and promulgated anew, on the 24th of July in that memorable year;—see, in this vol., TURKEY: A. D. 1908 (JULY-DEC.):

The indivisibility of the Ottoman Empire. The Sultan, the supreme Caliph of the Mussulmans and sovereign of all Ottoman subjects, is irresponsible and inviolable. His prerogatives are those of the constitutional sovereigns of the West. The subjects of the empire are called, without distinction, Ottomans. Individual liberty is inviolable, and is guaranteed by the laws. Islam is the religion of the state, but the free exercise of all recognized creeds is guaranteed, and the religious privileges of the communities are maintained. No provision establishing the institutions of the state with a theocratic character exists in the constitution.

The constitution establishes liberty of the press, the right of petition to both chambers for all Ottomans, liberty of education, and the equality of all Ottomans before the law. They all enjoy the same rights, and have the same duties toward the country. Ottoman subjects, without distinction of religion, are admitted to the service of the state. Taxation will be equally distributed; property is guaranteed, and the domicile is declared inviolable. No person can be taken from the jurisdiction of his natural judges.

The Council of Ministers will deliberate under the presidency of the Grand-Vizier. Each minister is responsible for the conduct of the affairs of his department. The Chamber of Deputies may demand the impeachment of the ministers, and a high court is instituted to try them. In the event of the Chamber adopting a vote hostile to the ministry on any important question, the Sultan will change the ministers or dissolve the Chamber. The ministers are entitled to be present at the sittings of both Chambers, and to take part in the debates. Interpellations may be addressed to the ministers. Public functionaries will be appointed in conformity with the conditions fixed by law, and cannot be dismissed without legal and sufficient cause. They are not discharged from responsibility by any orders contrary to law which they may receive from a superior.

The General Assembly of the Ottomans is composed of two Chambers, the Senate and the Chamber of Deputies, who will meet on the 1st of November in each year, the session lasting four months. A message from the Sultan will be sent to both Chambers at the opening of each session. The members of both Chambers are free with regard to their vote and in the expression of their opinions. Electors are prohibited from imposing binding engagements upon their representatives. The initiative in proposing laws belongs in the first place to the ministry, and next to the Chambers, in the form of propositions. Laws must be first submitted to the Chamber of Deputies, then to the Senate, and finally to the imperial sanction. The Senate is composed of members nominated by the Sultan and chosen from among the most eminent personages in the country. The Senate votes the laws already passed by the Chamber of Deputies and returns to the latter, or rejects, any provisions contrary to the constitution or to the integrity or safety of the state. In the event of a dissolution of the Chamber of Deputies, the general election shall be held and the new Chamber meet within six months from the date of dissolution. The sittings of the Chamber of Deputies are public. The deputies may not be arrested or prosecuted during the session without authority from the Chamber. The Chamber votes the laws article by article, and the budget by chapters. There is to be one deputy for every fifty thousand inhabitants, and the elections will be made by secret ballot. A special law will determine the mode of election. The mandate of a deputy will render him ineligible for any public office, except for a ministry. Each legislature will continue for a period of four years. The deputies will receive 4,600 francs for every session, which will last from November... The senators are appointed for life by the Sultan, and will receive 2,300 francs... Judges are irremovable.

The sittings of the tribunals are public. The advocates appearing for defendants are free. Sentences may be published. No interference can be permitted in the administration of justice. The jurisdiction of the tribunals will be exactly defined. Any exceptional tribunals or commissions are prohibited. The office of Public Prosecutor is created. The High Court, which will try ministers, members of the Court of Cassation, and other persons charged with the crime of *lese Majeste*, or of conspiracy against the state, will be composed of the most eminent judicial and administrative functionaries.

No tax can be established or levied except by virtue of a law. The budget will be voted at the commencement of each session, and for a period of one year only. The final settlement of the budget for the preceding year will be submitted to the Chamber of Deputies in the form of a bill. The Court of Accounts will send every year to

the Chamber of Deputies a report upon the state of public accounts, and will present to the Sultan, quarterly, a statement showing the financial condition of the country. The members of the Court of Accounts are irremovable. No dismissal can take place except in consequence of a resolution adopted by the Chamber of Deputies.

The provincial administration is based upon the broadest system of decentralization. The Councils-General, which are elective, will deliberate upon and control the affairs of the province. Every canton will have a council, elected by each of the different communities, for the management of its own affairs. The communes will be administered by elective municipal councils. Primary education is obligatory.

The interpretation of the laws belongs, according to their nature, to the Court of Cassation, the Council of State, and the Senate.

The constitution can only be modified on the initiative of the ministry, or of either of the two Chambers, and by a vote of both Chambers, passed by a majority of two-thirds. Such modification must also be sanctioned by the Sultan. — (*Appletons' Annual Cyclopædia*, 1876, pp. 773–774.) See amendments, in this vol., under TURKEY: A. D. 1909 (APRIL–DEC.).

CONSTITUTION ISLAND. — "In the Hudson River opposite West Point lies Constitution Island. It is a wood-covered tract of nearly three hundred acres, and for many years it has been coveted by the authorities of the Military Academy and the War Department. Its owner, Miss Anna Bartlett Warner, was always willing to sell to the Government, but Congress could never be induced to make the necessary appropriation for its purchase. Now Mrs. Russell Sage has joined with Miss Warner in making a gift of the island to the Nation, to be used as a part of the military reservation at West Point." — *The Outlook*, *September* 19, 1908.

COPYRIGHT: The new Law in the United States. — "To the general surprise, the new copyright bill slipped through both houses of Congress yesterday [March 3, 1909]. It consists of one complete and consistent copyright statute, in sixty four sections. The term of copyright is lengthened. The bill leaves the present first term of twenty-eight years unchanged, but provides for a renewal term of twenty-eight years instead of fourteen, thus making possible a period of protection of fifty-six years from the publication of the work. The bill also provides for the extension of subsisting copyrights upon the same basis.

"Copyright may now be secured for all the 'writings' of an author, using the constitutional expression. In enumerating and classifying works protected by copyright, the bill is more explicit than the present statutes, and adds the following new designations: 'Lectures, sermons, and addresses, prepared for oral delivery'; 'dramatico-musical compositions'; 'plastic works of a scientific or technical character'; 'reproductions of a work of art,' and 'prints and pictorial illustrations,' in lieu of 'engravings,' 'cuts,' and 'chromos,' and 'works of art' instead of the present specific designations, 'painting,' 'drawings,' 'statue,' and 'statuary.' Express provision is made that compilations, abridgments, adaptations, arrangements, dramatizations, or translations and works republished with new matter shall be considered new works subject to copyright.

"As regards a musical work, the bill provides, as does the present law, that the author shall have the sole right to perform the work publicly for profit, but adds the sole right to make any arrangement or setting of it or of the melody of it in any system of notation or any form of record from which it may be read or reproduced.' The composer's control of the reproduction of his music by mechanical instruments is qualified as follows: (a) to cover only music published and copyrighted after the act goes into effect; (b) not to include music by a foreign author or composer unless the foreign state or nation of which he is a subject grants to citizens of the United States similar rights; (c) whenever the owner of a musical copyright has used or permitted or acquiesced in the use of his work upon parts of instruments serving to reproduce mechanically the musical work, any other person may make similar use of the work upon the payment of a royalty of two cents on each part manufactured, notice to be filed in the copyright office of such use or license to use by the copyright proprietor.

"American manufacture is required in the case of a book, not only as regards type-setting in the United States, but 'if the text be produced by lithographic or photo-engraving process, then by a process wholly performed within the limits of the United States.' The provision is also extended to illustrations within a book, and to separate lithographs and photo-engravings, 'except where in either case the subjects represented are located in a foreign country.' The printing and binding of the book must also be performed within the United States. Photo

graphs are released from the present requirement that they 'shall be printed from negatives made within the United States or from transfers made therefrom.' The 'original text of a book of foreign origin in a language or languages other than English' is also excepted from the requirements of type-setting in the United States. A new *ad interim* protection is given books printed abroad in the English language. If one complete copy of such book is deposited in the copyright office not later than thirty days after publication abroad, copyright is granted for a period of thirty days from the date of receipt of the copy. If an authorized edition of the book is produced from type set in the United States during this second thirty days, the full term of copyright is secured.

"The much discussed provisions prohibiting the importation of copyrighted books are considerably modified. The importation of *piratical* copies of any work copyrighted is prohibited, and the importation of any books, '*although authorized by the author or proprietor*,' which have not been produced in accordance with the manufacturing provisions, is prohibited. The Act of 1891 permits importation of books in 'the case of persons purchasing for use and not for sale, who import, subject to the duty thereon, not more than *two* copies of such book at any one time.' The new law permits importation, 'not more than *one* copy at one time, for individual use, and not for sale,' and adds the proviso that 'such privilege of importation shall not extend to a foreign reprint of a book by an American author copyrighted in the United States.' The Act of 1891 allows importation in good faith for the use of societies incorporated or established for educational, philosophical, literary, or religious purposes, or for the encouragement of the fine arts, or for any college, academy, school, or seminary of learning. The new law confines the privilege to *incorporated* societies or institutions, but adds scientific societies and 'any State, school, college, university, or free public library'; but while the Act of 1891 permits 'two copies in any one invoice' to be so imported, the new law provides for 'not more than *one* copy of any such book in one invoice' when 'for use and not for sale.'

"In the case of infringement, an injunction may issue, as now, and damages be recovered as well as all the profits due to the infringement." — *New York Evening Post, March* 4, 09.

CRETE: A. D. 1905-1906. — Insurgent demand of Union with Greece. — Investigation of discontent by the Protecting Powers. — Resignation of the High Commissionership by Prince George. — Appointment of Zaimis. — A determined revolutionary movement to secure union with Greece was set on foot in March, 1905. Remonstrance against it by Prince George was unavailing, and the National Assembly, newly elected on the 2d of April, gave support to the insurgents, proclaiming the desired union of Crete with "her mother Greece," and ordering the Greek flag to be raised over the public buildings of the island. The government of Greece, while declaring its sympathy with the feeling which the movement expressed, could not give countenance to it, and urged the insurgents to lay down their arms. The latter, however, continued to hold the interior of the island and to make attacks on the Mohammedan population, until the approach of winter, when, on the 19th of November, they gave up their arms. The four protecting Powers then appointed a commission to investigate the grounds of discontent in the island, and its report made in the following spring justified a good deal of the Cretan complaint of arbitrary rule. In May a new Assembly was elected, in which the Government won 78 seats, the Opposition 36, and the Moslems were represented by 16. In July a resolution in favor of annexation to Greece was voted by acclamation in the Assembly, and its sittings were suspended to await the decision of the Powers. The latter announced a little later the intention to organize a gendarmerie to take the place of foreign troops in the island; and also to extend the operations of the Greek Finance Commission to Crete. Prince George now expressed his unwillingness to continue in the office of High Commissioner, and, on the request of the Powers, the King of Greece nominated M. Zaimis to succeed him. The nomination was accepted, and

Prince George withdrew from the island, after issuing a farewell proclamation, September 25th. M. Zaimis arrived and assumed office on the 14th of October, being warmly received. He was understood to have the powers of a Greek Viceroy, with a mission to prepare the island for annexation to Greece.

"I should not like," said a writer in the summer of 1905, "to speak too positively of Prince George's mistakes; but I have met no European who has lived in the island who had a good word to say for his administration. On the one hand, he played the despot. The local independent newspapers were destroyed, and the right of public meeting withdrawn. Worst of all, the mayors and prefects, who had originally been elected by the inhabitants of their districts, were degraded to the position of mere officials nominated by the Prince. At the same time, he aspired to be a sort of party leader. Quite early in his term of office he contrived to alienate the best men among the leaders who had conducted the insurrection with so much patience and wisdom. The President of the Provisional Government, Dr. Sphakianakis, an extremely able and, what is rarer, a wise and disinterested man, went into retirement when the Prince arrived. . . .

"By the summer of last year, [1904] when the Prince cast Professor Jannaris, a philologist of European reputation, into Canea gaol, the rift between himself and his people had become desperate. . . . It was now quite clear that no solution remained save union with Greece. To Prince George it provided an honorable and graceful path of retreat. He could retire and bring with him in his withdrawal a great gift to the Greek nation, and confer, at the same time, contentment on Crete. . . . Prince George, accordingly, devoted the closing months of 1904 to a tour among the European courts. The Powers had never intended to make him the permanent sovereign of Crete. His mandate was only for three years, and it had already been prolonged for a second term. He urged that the time had at length arrived for a definite solution, which could only be a union with Greece. But either his pleading was half-hearted or the Powers were deaf. His term was once more extended, and he was weak enough, or vain enough, to accept the dangerous mission. He returned to Crete and reported his failure.

"What followed is recent history. For a month or two the Cretans were passive, and then suddenly they rose in arms. A sort of provisional government was established at Therisso, a stronghold in the mountains, near enough to Canea to threaten the Prince's administration, far enough from the sea to be out of range of the European war-ships. Dr. Sphakianakis and MM. Venizelos and Foumis are at its head, and it soon received the allegiance of the whole interior. Simultaneously, under very strained conditions, a general election was held; and, though the members were probably drawn for the most part from the Prince's party, the Chamber adopted the programme of the insurgents and solemnly proclaimed the annexation of the island to Greece. The Prince threatened, but he had no force behind him; and he too could only reiterate his prayer that Europe should assent to union. It is a whimsical display of unanimity. In other lands, subjects rebel to emphasize some difference of opinion with their rulers. The Cretans have taken up arms to prove how violently they all agree." — H. N. Brailsford, *The Future of Crete* (*North American Review*, *Aug.*, 1905).

A. D. 1907-1909. — How and why the Cretans have been restrained by the Four Protecting Powers. — In February, 1907, the Cretans framed and adopted a new Constitution, providing for an Assembly of sixty-four Deputies, elected every two years, and continuing the executive office of High Commissioner, with a Council of three. They were fully exercising all the rights of independent self-government, under the protection of the four Powers which still maintained the old "Concert," namely, Great Britain, France, Russia, and Italy. The Turkish Government touched them in no other way than through the theoretical, intangible suzerainty which the Sultan claimed. But that claim, acknowledged by their potent protectors, barred them from annexation to the kingdom of their fellow Greeks, which was their heart's desire. If Turkey had continued in the condition to which it had sunk when the Powers set them free from all but a fiction of feudal law (see in Volume VI. of this work, TURKEY: A. D. 1897-1899) there seems little doubt that they would have won their wish in no long time, with the help of those Powers; but the great change in Turkish conditions which came about in 1908 was not favorable to Cretan hopes.

To the Cretans, in October, 1908, the Turkish Revolution appeared to have brought them the best of opportunities for breaking the irksome thread of an unexercised Ottoman sovereignty. Bulgaria snapped the thread; why should not they? But Bulgaria had no responsible guardians to look after her conduct; while Crete was, unfortunately at this juncture, the ward of an international trust company, whose responsibilities for her were made immeasurably more serious by the very circumstances which invited her to an escapade. The revolutionary undertaking of the Young Turks, to reform their own nation, claimed the sympathy and good will of every right feeling government in the world. Great Britain, France, and Italy, at least, could not afford to lay, or consent to the laying, of a straw of difficulty in its way. A declaration of Cretan independence and annexation to Greece, countenanced by the Powers, would have raised excitements in Turkey more than likely to wreck the reform movement in a catastrophe of war, which might involve much larger fields than those that lie between Turkey and Greece. The action of Bulgaria and that of Austria in annexing Bosnia and Herzegovina had put a dangerous strain on the situation; but neither of these had tried Turkish feeling as it would have been tried if Crete and Greece had been suffered to follow their example by the four protecting Powers.

The attempt was made in Crete on the 12th of October, 1908, when the Assembly voted union with Greece, and elected a committee of six members to conduct the Government in the name of the King of Greece, under Greek laws. The four Powers intervened in a soothing way, agreeing to treat with the Turkish Government on the subject, provided that order in the island should be maintained and protection afforded to the Mohammedan population. In the previous May they had decided to withdraw the forces they were jointly keeping in Crete, and had announced that their evacuation of the island should

be completed by the end of July, 1909. When the time thus appointed drew near there was some anxiety as to what might follow the withdrawal of troops; but the Powers adhered to their agreement. Meantime the Turkish Government was giving plain expression to its determination to "maintain Ottoman rights in Crete." Early in July, 1909, the intentions of the four Powers were made known by an announcement to the French Chamber of Deputies from the Foreign Minister of that Government. The international contingents of troops, he stated, would be recalled by the contemplated date of July 27 but four war ships (*stationnaires*) would be sent, one by each Power, "to guard the Ottoman flag and the flags of the four Powers, as well as to ensure, in case of trouble, the protection of the population. A declaration would be addressed to the people of Crete promising, in particular, that the Powers will continue to occupy themselves with the Cretan question in a benevolent spirit, but adding that it is their duty to see that order is maintained and the safety of the Mussulmans in Crete assured; that with this object they reserve the right of adopting such measures as may be expedient for the restoration of tranquillity, in case disturbances should break out which the local authorities were unable to quell. The declaration addressed to the Cretans to be communicated to the Porte and a declaration to be made at Constantinople, in order to give an exact account of the spirit in which the foregoing measures have been adopted."

This decision was communicated formally to the Greek and Turkish governments a little later. The latter, in reply, thanked the four Powers for their promise to safeguard Ottoman interests in the island, but declared that it could not tolerate "any extension of the privileges of the Cretans beyond those guaranteed by their autonomy, least of all any such extension as might give rise to the supposition that Crete was in any way politically connected or dependent on the Hellenic kingdom."

The attitude of the four Powers in their action was stated very distinctly to the British House of Commons on the 22d of July, by Sir Edward Grey, Secretary for Foreign Affairs, as follows: "The *status quo* maintained in Crete is that Crete remains in trust to the four Powers who hold the island in trust, and continue to maintain the obligations of preserving the supreme rights of Turkey. That is the *status quo*, and to put any other interpretation upon it and say that it means this or that, or that it amounts to virtual annexation, is misleading and is not true. That is not intended. The question of Crete has been exceedingly difficult, partly for the very reasons which I have already named, that it was raised at a time when the Turkish Government itself was passing through a stage exceedingly difficult, but exceedingly hopeful. What we have desired to do with regard to Crete is to secure that nothing shall happen which will be damaging to the prestige of the new *régime* in Turkey, and by being damaging to that prestige make the prospects of reform and of the increasing welfare of Turkey less hopeful."

The last of the international contingents left Crete on the 26th of July; whereupon the Cretans ran up the Greek flag on the fortress evacuated. Some days passed before the naval *stationnaires* of the four Powers arrived on the scene, and Turkey opened a somewhat sharp correspondence with Greece. The Powers intervened, assuming responsibility for conditions in Crete, and asking that communications on the subject be addressed to them. At the same time, the Cretans were admonished to take down the Greek flag. As they did not do so, sailors from the war ships were landed on the 18th of August, who lowered the flag and cut the flag-staff down. Sixty were left on guard to prevent further demonstrations of a provocative kind. To the time of this writing (February 1, 1910) nothing has occurred since to disturb the quiet in Crete. In November, however, the Turkish Government addressed to the four Powers a request for a definite settlement of the status of Crete. The reply, given on the 9th of December, was as follows:

"The protecting Powers do not deem the moment opportune for diplomatic negotiations tending to establish a definite *régime* in the island. The circumstances have not changed since the date of evacuation of the island by the international troops. Though infractions of the *status quo* had been committed, they were at once suppressed, and if more serious infractions occurred the Powers would meet them in accordance with the standpoint expressed in their Notes of July last with regard to the supreme rights of the Sultan. In present conditions negotiations on the Cretan question might excite public opinion in Turkey and elsewhere, and lead to dangerous complications."

CRIME AND CRIMINOLOGY: THEIR PROBLEMS.

"Black Hand," The: Sicilian Blackmail Terrorism brought to the United States. — "Toward the end of the last century the Sicilian gangs which made their living by blackmail became aware that not a few Italians who had left their home country as peasants had acquired wealth across the Atlantic. Even the ordinary workman, they learnt, who could gain only 40 cents a day in Sicily, could make about four times that wage in New York. Accordingly they hastened to exploit by their familiar methods the rich field of the Italian colony in that city. It was not long before the American police found themselves faced by an elaborate machinery of crime far more ingenious and complicated than anything with which they had previously had to deal. The Black Hand, as the society called itself, proceeded normally to extort what it wanted by frank demands and threats, and it did not hesitate at kidnapping, outrage, and murder when these means seemed necessary to its ends." — *N. Y. Cor. London Times, March* 16, 1909.

Cleveland's Farm Colony. — "A City in the Life Saving Business" is the title given by Mr Frederick C. Howe to an article in *The Outlook* of January 18, 1908, descriptive of the Farm Colony which the City of Cleveland, Ohio, has substituted for the old time "work house" or "penitentiary" for the detention and treatment of its vagabonds and petty offenders. The change

has been wrought within the past seven years by the City Director of Charities and Corrections, Dr. Harris R. Cooley. The following facts of it are summarized from Mr. Howe's article:

The colony occupies the larger part of a 1900 acre farm, on which some other institutions, such as a city infirmary, are to be placed; but the ex-workhouse-prisoners are, so far, the interesting occupants of the farm. They are prisoners with no prison. They wear no convict garb, drag no ball and chain, are surrounded by no wall or stockade, are watched by no armed guards. They are working a quarry, making roads and sewers, gathering stone, doing all descriptions of farm work, as free in their movements as farm laborers who work for hire. And out of hundreds on whom this treatment has been tried for nearly seven years "only a handful," it is said, "have ever taken advantage of their liberty. And it was the other prisoners who were most incensed at their escape."

These unimprisoned prisoners are put on honor; they are treated as men to whom society would like to do good. It gives them a few weeks or months of healthful, honestly laborious life, in the midst of wholesome and beautiful surroundings (for the farm is nobly situated); and when they are dismissed from it they do not go dispirited and weakened and marked with a prison brand, as they would go from a workhouse, but strengthened in body, helped to self-respect, and encouraged to a change of life by the experience they have had. It is not punishment they have received, but a revelation, in most cases, of a better side of life than they had known. And this treatment is proving its success.

There are classes for instruction, on various lines, at the farm, and some come back, for evening study, after their release. Two years ago one of the released colonists began the formation of a Brotherhood among those who came out, to assist their fellows and take care of them till they got a new footing in the world; and no less than 427 had received that helping hand of fellowship when Mr. Howe wrote his account. The Brotherhood was then occupying a rented house, on the furnishing of which it had expended over $2000, made up within its own ranks.

Besides its Farm Colony, Cleveland has established another, somewhat similar, farm for boys. This, called Boyville, is 285 acres in extent, and the young delinquents sent to it live in cottages, named Washington Cottage, Lincoln Cottage, etc., each with a motherly woman in charge. They are kept in attendance at a school pursuing the same studies as in the city schools; their big playground affords them all kinds of healthful sports. They have horses, cattle, goats and dogs to take care of, and they are drilled in a fire company which is expected to protect the property of Boyville.

The Convict Lease System: Its abolition in Georgia. — During the Civil War the Penitentiary buildings of the State of Georgia, at Milledgeville, were destroyed, and for many years subsequently the prevailing conditions were not favorable to their replacement. There grew up, in consequence, an evil practice of working convicts in chain-gangs, leading finally to the leasing of such gangs to contractors. A frightful brutalizing of all concerned in the operation of the vicious system — convicts, overseers, and lessees alike — is said to have been the result, as it could hardly fail to be. Within late years public attention, in Georgia and outside of the State, was increasingly drawn to the treatment and condition of the chain-gangs, by shocking stories of barbarity and depravity; yet the evil was hard to reform, because of the profit which the State derived from the hire of its criminals. Years of agitation and exertion by right-minded people in Georgia were required to overcome the sordid influence of this fact, and it was not until September, 1908, that the Legislature, called in special session by Governor Hoke Smith to deal with the question, passed an Act which brought the lease system to an end on the 31st of March, 1909. Provision was made at this important session for an establishment of State farms on which convicts can be employed; for introducing a parole system into the penological policy of the State, and for the institution of juvenile courts. The legislative session was a memorable one.

English Court of Criminal Appeal. See (in this vol.) LAW AND ITS COURTS: ENGLAND.

The English Prevention of Corruption Act. — The object of the English Prevention of Corruption Act, passed in 1906, is to check the practice of giving and taking secret commissions, which, as the late Lord Russell of Killowen caused the country to realize, was widely prevalent in commercial and professional circles, as well as in the humbler sphere of the "servants' hall." Before the passing of the Act, of course, it was illegal to give and receive secret commissions. After the Act came into force, it became criminal. The provisions of the measure make it a misdemeanour, punishable, on summary conviction or on indictment, with fine or imprisonment —

(1) For any agent corruptly to receive any gift or consideration for doing or not doing any act, or showing or not showing favour or disfavour, in relation to his principal's affairs;

(2) For any person corruptly to offer such gift or consideration to any agent;

(3) For any person to give to an agent, or for any agent to use, any false or defective receipt or other business document with intent to deceive the principal.

Two years after the Act came into force its effects were discussed by a writer in the London *Times*, who said: "The circumstances that the *fiat* of the Attorney-General must be obtained before any prosecution can be instituted under the Act, and that, until recently, there was no organization qualified to take active steps to prevent the Act from becoming a dead letter, account for the comparatively small number of cases in which proceedings have been taken under the Act during the past two years. Fifteen prosecutions have been authorized by the Attorney-General. In 12 cases there have been convictions, one case has been abandoned, and two are still pending. These figures show, at any rate, that prosecutions are not lightly instituted, and that the charges which have been preferred against offenders have been, as a rule, well founded.

"It is undoubtedly true, in this matter as in others, that 'everybody's business is nobody's.' Soon after the passing of the Act it was realized that, if it was to prove effective 'for the better prevention of corruption,' some organization must be formed to give effect to the measure — to furnish information in respect to its provi-

CRIME AND CRIMINOLOGY

sions, to investigate complaints, and, if necessary, to institute prosecutions. A society was formed, therefore, with the title of 'The Secret Commissions and Bribery Prevention League,' to work on lines similar to those of the societies which strengthen the arm of the law so effectively in respect of cruelty to children and cruelty to animals. . . . The committee have investigated a large number of cases which have been brought to their knowledge, they have given advice freely to members and others interested in the working of the Act, they have issued thousands of circulars and letters, as well as occasional 'news sheets,' they have made representations to the War Office and other public bodies as opportunities occurred, and have summoned various trade conferences for the consideration of points of importance arising out of the Act. The value of the League's work is emphasized by the fact that the members include many important limited liability companies and trade associations, and that the League is becoming in a special sense representative of the commercial community as a whole."

Indeterminate Sentence and the Parole System of New York State.—The first provision in New York for indeterminate sentences was by Section 74, Chapter 382 of the Laws of 1889, as follows: "Whenever any male person over sixteen years of age, shall be convicted of a felony which is punishable by imprisonment in a State prison, for a term to be fixed within certain limits by the court pronouncing sentence, the court authorized to pronounce judgment upon such offender, instead of pronouncing upon such offender a definite sentence of imprisonment in a State prison for a fixed term, may pronounce upon such offender an indeterminate sentence of imprisonment in a State prison for a term with minimum and maximum limits only specified, without fixing a definite term of sentence within such limits named in the sentence, but the maximum limit so specified in the sentence shall not exceed the longest period for which such offender might have been sentenced, and the minimum limit in said sentence specified shall not be less than the shortest term for which such offender might have been sentenced. The maximum term specified in such indeterminate sentence shall be limited in the same manner as a definite sentence in compliance with the provisions of section six hundred and ninety-seven of the Penal Code."

A Parole Board was constituted under this Act, composed of the Superintendent of Prisons and the chief officers of the four State Prisons.

"It will be noted that this law permitted the indeterminate but did not abolish the definite sentence. Its provisions applied to all classes of male felons over sixteen years of age. No distinction was made between the first offenders and the professional and persistent criminals. The court in its discretion could impose either form of sentence on any convicted male felon provided he was more than sixteen years old. How general the preference of the judges was for the definite sentence is shown by the fact that during the twelve years that this law was in force approximately 13,000 prisoners were received at the prisons, only 115 of whom had indeterminate terms. . . .

"As there were but 60 men paroled during the life of this statute (1889 to 1901), there was naturally but slight progress made during that period toward organizing, systematizing and perfecting the parole system; but some experience was gained and data secured that has since been useful. . . .

"The Legislature of 1901 passed two important and effective laws relative to the parole of prisoners which became operative September 1, 1901. The first amended Section 74 of Chapter 382, Laws of 1889, to read as follows:—'Every person now confined in a state prison, or in the Eastern New York Reformatory, under sentence for a definite term for a felony, the maximum penalty for which is imprisonment for five years or less, exclusive of fines, who has never before been convicted of a crime punishable by imprisonment in a state prison shall be subject to the jurisdiction of the board of commissioners of paroled prisoners and may be paroled in the same manner and subject to the same conditions and penalties as prisoners confined under indeterminate sentences. The minimum and maximum terms of the sentences of said prisoners are hereby fixed and determined to be as follows: The definite term for which each person is sentenced shall be the maximum limit of his term, and one-third of the definite term of his sentence shall be the minimum limit of his term." (*As amended by ch.* 260, *L.* 1901, *and by ch.* 508, *L.* 1902.)

"By this Act the members of the State Commission of Prisons were constituted a Board of Commissioners for Paroled Prisoners and they were to meet at each of the prisons four times a year. The Superintendent of State Prisons was authorized to appoint a parole officer for each prison

"The other law amended the Penal Code by adding a new section, § 687 a.—A person never before convicted of a crime punishable by imprisonment in a state prison, who is convicted in any court in this state of a felony, the maximum penalty for which, exclusive of fines, is imprisonment for five years or less, and sentenced to a state prison, shall be sentenced thereto under an indeterminate sentence, the minimum of which shall not be less than one year; or in case a minimum is fixed by law, not less than such minimum, and the maximum of which shall not be more than the longest period fixed by law for which the crime is punishable of which the offender is convicted. The maximum limit of such sentence shall be so fixed as to comply with the provisions of section 697 of the Penal Code."

"This Act was amended in 1902 to provide also that any first offender convicted of a felony other than murder first and second degrees, the maximum penalty for which exceeded five years, might be sentenced to an indeterminate term. Few prisoners, however, were so sentenced for crimes that carried a penalty of more than five years.

"The passage of these Acts put the parole system in active operation in 1901. Many prisoners then in the prisons whose terms thus became indeterminate were immediately eligible for parole. Others became eligible from month to month. . . . In the first year under this law the Board considered the applications of 588 prisoners and granted parole to 272.

"The scope of the parole system was materially enlarged and the work of the Board vastly increased by the legislation of 1907. Chapter

CRIME AND CRIMINOLOGY

737, Laws of 1907, provides, that all first offenders convicted of felonies other than murder first and second degrees and sentenced to a state prison *must* be sentenced to indeterminate terms. As a result of this law the class of prisoners subject to the jurisdiction of the Board will gradually increase to more than double the present number. . . .

"Chapter 738, Laws of 1907, changed the penalty for murder second degree from life imprisonment to an indeterminate term having a minimum of 20 years and a maximum of life. Also, by this Act the sentences of all prisoners then in the prisons serving life sentences for murder second degree were made indeterminate terms with limits as above given [and 12, out of 17, were soon released on parole].

"Chapter 645, Laws of 1907, provides, that a person convicted for the fourth time for felony shall be sentenced to an indeterminate term, the maximum of which shall be life.

"It is the intent of this law that the man who has demonstrated the fact that he is a persistent criminal shall be kept under supervision during life. That the counties shall be saved the expense of repeatedly trying him and, more important still, that the baneful effects of his association with, and influence over, prisoners in the jails, shall be avoided. If at any time after he has served his minimum term there is a reasonable probability that he will remain at liberty without violating the law, the Board may parole him."

The Act of 1907, which became effective June 10, in that year, provides that "the board of parole for state prisons shall be composed of the superintendent of state prisons and two citizens appointed by the governor and confirmed by the senate; and that said board shall meet at each of the prisons every month. It shall also make examination and report to the governor with its recommendations on all applications for pardon referred to them by the governor." — *Report of the Board of Parole for State Prisons*, 1907.

To serve with the Superintendent of Prisons as the Board of Parole the Governor of New York appointed the Hon. George A. Lewis and the Hon. Albion V. Wadhams, for five years.

In the annual report of the Superintendent of Prisons for 1908 he discusses the working of the law, in part as follows: "The results attained with State prison convicts under the indeterminate sentence law have been satisfactory so far as the term limits fixed by the courts have permitted the proper application of the parole features of the law. In many cases, however, the terms of the sentences have been so inconsistent with the evident purpose and intent of the law as to render its parole provisions wholly, or to a good degree, inoperative.

"In several sentences imposed by the courts, the maximum and minimum terms have been identical as 'Not less than three years or more than three years.' As will be seen, this is really a definite sentence and no parole period is provided for. In a very great number of cases, the margin between the minimum and maximum terms is but one, two or three months. While prisoners so sentenced may be paroled, the period of their probation is so limited that there is little opportunity to influence and train the man. . . .

"The Superintendent is satisfied that the indeterminate has many advantages over the definite sentence, but its full benefit cannot be had under the law as it now stands and is applied. It should be amended so as to provide for longer parole periods and for minimum sentences never exceeding the maximum penalty for the crime of which the prisoner is convicted less the commutation allowed on definite sentences."

In May, 1909, Governor Hughes signed a retro-active law which extends to all convicts now in prison, who, being first offenders, have been sentenced for crimes committed prior to September 1st, 1907.

Pan-American Extradition Convention. See (in this vol.) AMERICAN REPUBLICS.

Preventive Detention in Great Britain. — The Borstal System of Discipline and Training for Young Offenders. — An Act entitled The Prevention of Crime Act, passed by the British Parliament in December, 1908, came into force on the 1st of August, 1909. It is described in the preamble as an "Act to make better provision for the prevention of crime, and for that purpose to provide for the reformation of young offenders, and the prolonged detention of habitual criminals, and for other purposes incidental thereto." "The principle of 'preventive detention' is accepted and embodied in the Act, such detention to continue until the offender gives sufficient assurance that he will take to an honest life, or until by age or infirmity he becomes physically incapable of resuming a life of crime. In no case is life imprisonment contemplated, but when a man is convicted on indictment of a crime and is sentenced to penal servitude, if the jury find that he is an habitual criminal the Court may pass a further sentence. They must first be satisfied, however, that by reason of his criminal antecedents and his mode of life it is expedient for the protection of the public that he should be kept in detention for an extended period. The jury will have to be satisfied, first that the man just convicted of an offence has been convicted of at least three serious crimes, and, secondly, that when convicted he was leading an habitually dishonest life. The charge of being an habitual criminal cannot be made except by the consent of the Director of Public Prosecutions. The accused man will have an unqualified right of appeal. After serving his term of penal servitude he will be committed to a place of detention which will be a prison specially adapted for the purposes of the Act. The prison discipline will be less rigorous than that now prevailing, alike as regards hours, talking, recreation, occupations, and food.

"The Act provides that the Secretary of State [the Home Secretary] shall once at least in every three years during which the person is detained in custody under a sentence of preventive detention, take into consideration the condition, history, and circumstances of that person with a view to determining whether he shall be placed out on license, and if so, on what conditions. Directors of convict prisons are to report periodically to the Secretary of State upon the conduct and industry of persons undergoing preventive detention, and their prospects and probable behaviour on release. For this purpose they are to be assisted by a committee at each prison, consisting of such members of the board of visitors and such other persons of either sex as the

CRIME AND CRIMINOLOGY

Secretary of State may from time to time appoint. Every such committee is to hold meetings at intervals of not more than six months, as may be prescribed, for the purpose of personally interviewing persons undergoing preventive detention in the prison and preparing reports for the assistance of the directors."

The part of the Act which relates to the reformation of young offenders provides for the establishment and regulation of what are named "Borstal institutions." "These are places in which young offenders may be given during their detention such industrial training and other instruction and be subjected to such disciplinary and moral influences as will conduce to their reformation and the prevention of crime. The Act will apply to persons of not less than 16 or more than 21 years of age who may be convicted on indictment of an offence for which they are liable to be sentenced to penal servitude or imprisonment. In such cases . . . it will be lawful for the Court, instead of passing a sentence of penal servitude or imprisonment, to pass one of detention under penal discipline in a Borstal institution. Such detention will not be less than for one year or more than three years. Power is given to detain in Borstal institutions youthful offenders sentenced to detention in reformatory schools. . . Powers are also given to the Secretary of State to transfer persons in certain cases from prison to Borstal institutions.

"Subject to regulations by the Secretary of State, the Prison Commissioners may, after six months, or in the case of a female three months, from the commencement of the term of detention, if satisfied that there is reasonable probability that the offender will abstain from crime and lead a useful and industrious life, by license permit him to be discharged from the Borstal institution, on condition that he be placed under the supervision or authority of any society or person named in the license who may be willing to take charge of the case. Every person sentenced to detention in a Borstal institution shall, on the expiration of the term of his sentence, remain for a further period of six months under the supervision of the Prison Commissioners."

The introduction of this system has been brought about by the efforts of an organization which bears the name of the Borstal Association, concerning whose experimental undertakings the London *Times* said, lately, in an editorial article: "Those who have hitherto been sceptical as to effective treatment of the criminal classes would do well to consult the report for 1909 of the Borstal Association. They can scarcely fail to admit that new and powerful agencies for good are at work. The experiment, which has been more successful than its authors anticipated, began in a small way at Bedford Prison, and has been gradually extended. At first it was applied to selected offenders in the metropolitan prisons between the ages of sixteen and twenty-one who had been committed for six months. It was soon discovered that little good could be done with criminals under successive short sentences. This has been rectified. . . . Speaking lately of the Borstal methods, the Bishop of Wakefield said truly that the problem is how to combine in the treatment of young criminals 'tenderness and strength,' to 'draw the line between sternness and sympathy.' In the past the tendency was to be punctiliously severe. . . . To-day the tendency, the danger, is to forget that the prison is not a place of recreation; to dwell too much on the hardships of its inmates; to plead a little too much for their comforts; to ask and expect too much; to be unduly critical of prison authorities. The advocates of the Borstal system claim to have avoided these mistakes. 'It is not,' they say, 'a namby-pamby system; only those who accept its strong incentive and reformative methods find it tolerable; those who do not, entreat for removal to other prisons where less development and improvement of their latent capacities are demanded.' It seeks to inure to hard work the lads subject to its discipline; it would make them strong and fit to handle tools intelligently; it would turn them into healthy and well set-up men. The fact that they may quit Borstal with some proficiency in a trade counts for much."

Probation System, as established by recent legislation in New York.—"Probation, as authorized by the laws of New York State, is a system of discipline and correction, or, in some cases, of moral guardianship, applied by courts to suitable offenders, after conviction, for the purpose of improving their conduct and circumstances without committing them to institutions. The defendants are released conditionally on their good behavior, under suspended sentence, and under the friendly but authoritative supervision of a representative of the court, known as a probation officer. The probation law contemplates that in placing a defendant on probation certain terms and conditions shall be imposed, and it provides that if the probationer violate these conditions, his probation officer may return him to court for the execution of sentence. Besides usually requiring each probationer to report to him from time to time, the probation officer is expected to visit the probationer at frequent intervals and to do whatever seems essential to improve his surroundings and habits. The probation officer should report regularly to the court concerning the progress of each probationer. When so directed by the court, the probation officer also investigates cases, particularly with reference to the history, circumstances and character of the defendants, in order to lay before the court facts which may be important in determining whether they should be placed on probation.

"It is desirable to keep the distinction between probation and parole clearly in mind. Under the New York laws the word probation refers to the supervision of defendants who, after conviction, are released under suspended sentence. The suspension of sentence alone does not constitute probation: there must also be oversight by a probation officer. The word parole, on the other hand, is applied to two entirely different systems. In some courts before convictions are found, cases are adjourned from time to time and the defendants conditionally released; and this is called parole. There is no authority to apply the term probation to this practice, because under the New York State laws a person cannot be placed on probation until after conviction. Parole is the appropriate word to use also in connection with the conditional release of inmates from penal or reformatory institutions before the expiration of their term of commitment. . . .

"Twenty-seven hundred and fifty-four boys

and girls, and 7,660 adults, making a total of 10,434 persons, were reported by probation officers as on probation during 1908. Of these 8,762 were placed on probation during the year. On December 31, 1908, there were 2,378 persons remaining on probation. The corresponding number for December 31, 1907, was 1,672. Three hundred and twenty probation officers supervised probationers during the year, which is more than double the number of active probation officers reported in the last report of this Commission. During 1908 the probation system was used in the courts of 26 cities as against 16 cities reported in 1907, in 8 town and village courts in 1908 as against 1 village court in 1907, in 28 county courts as against 11 in 1907, and, as far as the reports of probation officers indicate, in the Supreme Court in 6 counties as against none in 1907." — *Second Rept. of N. Y. State Probation Commission, March* 15, 1909.

As amended in May, 1909, "the law creates the position of county probation officer, and makes the services of such an officer available not only in the county court, but also in the Supreme Court and the courts of all towns, villages and third class cities within the county."

The English "Probation of Offenders Act." — This Act, which became law in August, 1907, provides that, "where any person is charged before a court of summary jurisdiction with an offence punishable by such court, and the court thinks that the charge is proved, but is of opinion that, having regard to the character, antecedents, age, health, or mental condition of the person charged, or to the trivial nature of the offence, or to the extenuating circumstances under which the offence was committed, it is inexpedient to inflict any punishment or any other than a nominal punishment, or that it is expedient to release the offender on probation, the court may, without proceeding to conviction, make an order either — (i) dismissing the information or charge; or (ii) discharging the offender conditionally on his entering into a recognizance, with or without sureties, to be of good behaviour and to appear for conviction and sentence when called on at any time during such period, not exceeding three years, as may be specified in the order."

Similarly after conviction of the offender, when a court deems punishment inexpedient, it may, "in lieu of imposing a sentence of imprisonment, make an order discharging the offender conditionally on his entering into a recognizance, with or without sureties, to be of good behaviour and to appear for sentence when called on at any time during such period, not exceeding three years, as may be specified in the order;" and it may, in addition, order the offender to pay damages for injury or compensation for loss that is consequent on his offence.

The Act provides further that a recognizance ordered in such a case may contain a condition that the offender shall be under the supervision of such person as shall be named, during the specified period of probation; that certain persons of either sex may be appointed as probation officers, — some such, when circumstances permit, to be specially "children's probation officers," — and that salaries in the discretion of the courts may be paid to these officers.

A. D. 1901-1902. — Organization of Free Government under a Republican Constitution. — Transfer of Executive Authority from the provisional Military Governor to the President-elect. — Official correspondence of the occasion. — Events in and relating to Cuba, after the surrender of the island by Spain and the organization of a provisional military government by the United States are narrated in Volume VI of this work, down to the adoption by the Congress of the United States of the stipulations known as "The Platt Amendment" (see pages 189-190 in that volume), which the constitutional government for Cuba then in process of formation was asked to agree to, in order to define the future relation of the proposed new republic with the United States. This enactment was approved by the President on the 2d of March, 1901, and communicated, through the provisional Military Governor of the island, General Leonard Wood, to the Cuban Constitutional Convention. Doubt as to possible interpretations of the third clause of the Platt Amendment having then arisen in the Convention, the following despatch went from Washington to the Military Governor April 3d:

"You are authorized to state officially that in view of the President the intervention described in the third clause of the Platt amendment is not synonymous with intermeddling or interference with the affairs of the Cuban Government, but the formal action of the United States, based upon just and substantial grounds, for the preservation of Cuban independence and the maintenance of a government adequate for the protection of life, property, and individual liberty, and adequate for discharging the obligations with respect to Cuba imposed by the treaty of Paris on the United States." — *Elihu Root, Secretary of War.*

On the 12th of June, 1901, the convention adopted an ordinance making provisions identical with those of the Platt Amendment, a part of the constitution of Cuba.

"On October 1, 1901, the convention performed its remaining duty by adopting an elec-

toral law providing for a general election throughout the island, to be held on the 31st day of December, 1901, to choose governors of provinces, provincial councilors, members of the house of representatives, and presidential and senatorial electors. The law also provided that on the 24th day of February, 1902, the several bodies of electors thus chosen should meet and elect a president, vice-president and senators. The elections were to be held under the direct supervision of a central board of scrutiny, composed of the president of the convention and four other members selected for that purpose. The law was promulgated by a general order of the military governor on the 14th of October, 1901.

"The constitution thus adopted and perfected was treated by the United States as an acceptable basis for the formation of the new government to which, when organized and installed, the control of the island was to be transferred.

"In conformity to the Cuban constitution and electoral law, elections were held by the Cuban people on the 31st of December, 1901, and by the electoral college on the 24th of February, 1902, when a president [T. Estrada Palma], vice-president, senate, and house of representatives were chosen.

"The situation at this important juncture in the affairs of Cuba is described by Secretary Root in his annual report for 1902 as follows:

"'The whole governmental situation in Cuba was quite unprecedented, with its curious device of a suspended sovereignty given up by Spain, but not in terms vested in anybody else, and if vested remaining dormant, while a practical working government of military occupation in time of peace, deriving its authority from the sovereignty of another country, claimed temporary allegiance, made and enforced laws, and developed a political organization of the Cuban people to take and exercise the suspended or dormant sovereignty. It was important that in inaugurating the new government there should be no break in the continuity of legal obligation, of rights of property and contract, of jurisdiction, or of administrative action. It would not do to wait for the new government to pass laws or to create offices and appoint administrative officers and vest them with powers, for the instant that the new government was created the intervening government ceased, and the period of waiting would be a period of anarchy

"'It was necessary, therefore, to take such steps that the new Government should be created as a going concern, every officer of which should be able to go on with his part of the business of governing under the new sovereignty without waiting for any new authority. That everything necessary to this end should be done, and that it should be done according to a consistent and maintainable legal theory, caused the Department a good deal of solicitude. It is gratifying to report that it was done, and that the Government which, until noon of May 20, was proceeding under the authority of the President of the United States, went on in the afternoon of that day and has ever since continued under the sovereignty which had been abandoned by Spain in April, 1899, without any more break or confusion than accompanies the inauguration of a new President in the United States. This could not have been done without the most perfect good understanding, mutual confidence, and sympathetic coöperation on the part of our officers who were about to retire, and the newly elected officers of Cuba, who were about to take the reins of Government.'"

One of the most interesting pages in history is that which records the peaceful withdrawal of the flag and forces of the United States from Cuba, and the inauguration of the Government of the Republic of Cuba. The story cannot be told in more interesting form or manner than as it is presented in the orders of Secretary Root and the exchange of letters between the President of the United States, the Secretary of War, and the President of the Republic of Cuba. These documents in part are as follows:

"WASHINGTON, D. C., March 24, 1902.

"BRIG. GEN. LEONARD WOOD,
Military Governor of Cuba.

"SIR: You are authorized to provide for the inauguration, on the 20th of May next, of the government elected by the people of Cuba; and, upon the establishment of said government, to leave the government and control of the island of Cuba to its people pursuant to the provisions of the act of Congress entitled 'An act making appropriation for the Army for the fiscal year ending June 30, 1902,' approved March 2, 1901.

"Upon the transfer of government and control to the President and Congress so elected, you will advise them that such transfer is upon the express understanding and condition that the new government does thereupon, and by the acceptance thereof, pursuant to the provisions of the appendix to the constitution of Cuba, adopted by the constitutional convention on the 12th of June, 1901, assume and undertake all and several the obligations assumed by the United States with respect to Cuba by the treaty between the United States of America and Her Majesty the Queen Regent of Spain, signed at Paris on the 10th day of December, 1898

"It is the purpose of the United States Government, forthwith upon the inauguration of the new government of Cuba, to terminate the occupancy of the island by the United States, and to withdraw from that island the military forces now in occupancy thereof; but for the preservation and care of the coast defenses of the island, and to avoid leaving the island entirely defenseless against external attack, you may leave in the coast fortifications such small number of artillerymen as may be necessary, for such reasonable time as may be required to enable the new Government to organize and substitute therefor an adequate military force of its own; by which time it is anticipated that the naval stations referred to in the statute and in the appendix to the constitution above cited, will have been agreed upon, and the said artillerymen may be transferred thereto.

"You will convene the Congress elected by the people of Cuba in joint session at such reasonable time before the 20th of May as shall be necessary therefor, for the purpose of performing the duties of counting and rectifying the electoral vote for President and Vice-President under the fifty-eighth article of the Cuban constitution At the same time you will publish and certify to the people of Cuba the instrument adopted as the constitution of Cuba by the constitutional convention on the 21st day of

CUBA, 1901-1902

February, 1901, together with the appendix added thereto and forming a part thereof adopted by the said convention on the 12th day of June, 1901. It is the understanding of the Government of the United States that the government of the Island will pass to the new President and Congress of Cuba as a going concern; all the laws promulgated by the government of occupation continuing in force and effect, and all the judicial and subordinate executive and administrative officers continuing in the lawful discharge of their present functions until changed by the constitutional officers of the new government. At the same moment the responsibility of the United States for the collection and expenditure of revenues and for the proper performance of duty by the officers and employees of the insular government will end, and the responsibility of the new government of Cuba therefor will commence.

"In order to avoid any embarrassment to the new President, which might arise from his assuming executive responsibility with subordinates whom he does not know, or in whom he has not confidence, and to avoid any occasion for sweeping changes in the civil-service personnel immediately after the inauguration of the new Government, approval is given to the course which you have already proposed of consulting the President-elect, and substituting, before the 20th of May, wherever he shall so desire, for the persons now holding official positions, such persons as he may designate. This method will make it necessary that the new President and yourself should appoint representatives to count and certify the cash and cash balances and the securities for deposits transferred to the new government. The consent of the owner of the securities for deposits to the transfer thereof you will of course obtain.

"The vouchers and accounts in the office of the Auditor and elsewhere, relating to the receipt and disbursement of moneys during the government of occupation, must necessarily remain within the control, and available for the use, of this Department. Access to these papers will, however, undoubtedly be important to the officers of the new government in the conduct of their business subsequent to the 20th of May. You will accordingly appoint an agent to take possession of these papers and retain them at such place in the Island of Cuba as may be agreed upon with the new government until they can be removed to the United States without detriment to the current business of the new government.

"I desire that you communicate the contents of this letter to Mr Palma, the President-elect, and ascertain whether the course above described accords with his views and wishes. Very respectfully, ELIHU ROOT, *Secretary of War*."

On the 20th of May, 1902, the transfer of executive authority from the American Military Governor, General Wood, to President elect Palma was made in due form, and the following correspondence passed between President Palma, General Wood, President Roosevelt, and Secretary Root:

"HABANA, May 20, 1902.

"HON. GEN. LEONARD WOOD.

"SIR: As President of the Republic of Cuba, I hereby receive the Government of the Island of Cuba which you transfer to me in compliance with orders communicated to you by the President of the United States, and take note that by this act the military occupation of Cuba ceases.

Upon accepting this transfer I declare that the Government of the Republic assumes, as provided for in the constitution, each and every one of the obligations concerning Cuba imposed upon the United States by virtue of the treaty entered into on the 10th of December, 1898, between the United States and Her Majesty the Queen Regent of Spain.

"I understand that, as far as possible, all pecuniary responsibilities contracted by the military government up to this date have been paid; that $100,000, or such portion thereof as may be necessary, have been set aside to cover the expenses that may be occasioned by the liquidation and finishing up of the obligations contracted by said government, and that there has been transferred to the Government of the Republic the sum of $689,191 02, which constitutes the cash balance existing to-day in favor of the State. . . .

"I take this solemn occasion, which marks the fulfillment of the honored promise of the Government and people of the United States in regard to the island of Cuba, and in which our country is made a ruling nation, to express to you, the worthy representative of that grand people, the immense gratitude which the people of Cuba feel toward the American nation, toward its illustrious President, Theodore Roosevelt, and toward you for the efforts you have put forth for the successful accomplishment of such a precious ideal.

T. ESTRADA PALMA."

"HABANA, May 20, 1902.

"THEODORE ROOSEVELT, *President, Washington.*

"The government of the island having been just transferred, I, as Chief Magistrate of the Republic, faithfully interpreting the sentiments of the whole people of Cuba, have the honor to send you and the American people testimony of our profound gratitude and the assurance of an enduring friendship, with wishes and prayers to the Almighty for the welfare and prosperity of the United States.

T. ESTRADA PALMA."

"WASHINGTON, May 20, 1902.

"PRESIDENT OF THE REPUBLIC OF CUBA:

"Believe in my heartfelt congratulations upon the inauguration of the Republic which the people of Cuba and the people of the United States have fought and labored together to establish. With confidence in your unselfish patriotism and courage and in the substantial civic virtues of your people, I bid you godspeed and on this happy day wish for Cuba for all time liberty and order, peace and prosperity.

ELIHU ROOT, *Secretary of War*."

"HABANA, May 21, 1902.

"ELIHU ROOT, *Secretary of War, Washington*

"I am deeply moved by your heartfelt message of congratulation on the inauguration of the Republic of Cuba, to the birth of which the people and the Government of the United States have contributed with their blood and treasure. Rest assured that the Cuban people can never forget the debt of gratitude they owe to the great Republic, with which we will always cultivate the closest relations of friendship and for

the prosperity of which we pray to the Almighty.

T. ESTRADA PALMA."

On the 10th of June, General Wood, at Washington, made the following report to the Adjutant-General of the U. S. Army:

"SIR: I have the honor to inform you that the Republic of Cuba was established at 12 o'clock noon, May 20, 1902. The transfer was made upon the lines indicated in the instructions of the honorable the Secretary of War, and the autograph letter of the President read to President Palma and presented to him. President Palma responded, expressing his sincere appreciation of the work done by the United States in Cuba, and the lasting gratitude of himself and the people of Cuba.

"The transfer was made in the main reception hall of the palace of the military governor. There were present the President-elect and his cabinet, the military governor and the officers of his staff, civil and military, the Cuban Congress, the judiciary, officers of the British and Italian navies, the captain and staff of the U. S. S. *Brooklyn*, and the consular representatives of foreign countries. . . .

"I left the palace at twenty five minutes past 12 o'clock, accompanied by the officers of my personal and departmental staff. We were accompanied to the capitania del puerto by President Palma with his cabinet, the Cuban Congress, and all others who had been present at the ceremonies. President Palma bade us farewell at the wharf after again expressing his most sincere and lasting good will and appreciation.

"Accompanied by my personal staff, I immediately embarked upon the U. S. S. *Brooklyn*. The officers of the department staff embarked on the S. S. *Moro Castle*, which sailed at a quarter past 3. The U. S. S. *Brooklyn* sailed at about 3.45.

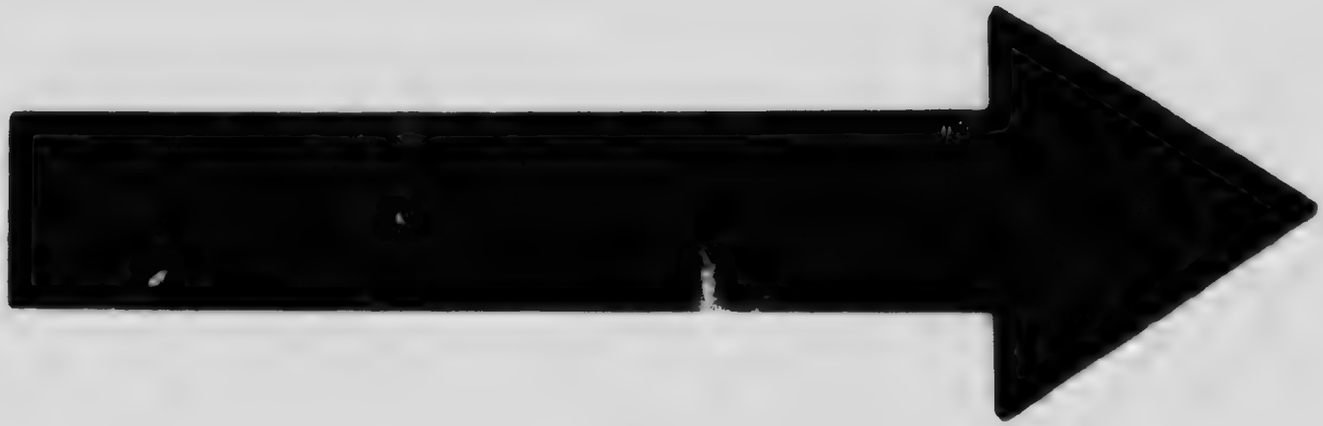
LEONARD WOOD, *Brig. Gen. U. S. Army*."

The above account of the "Establisnment of Free Government in Cuba" is taken wholly from a narrative thus entitled, compiled by the Bureau of Insular Affairs, U. S. War Department, and published as Document No. 312, in Volume 7 of Senate Documents, 58th Congress, 2d Session.

A. D. 1902.—Tomas Estrada Palma, the First President of the Cuban Republic.—"There was such manifest propriety in the selection of Gen. Estrada Palma to be the first president of the Cuban Republic that the attempt to bring forward another candidate was unavailing. There was no excitement at the popular election, and the voting was light, because the result was a foregone conclusion. The two most important men in the last struggle for Cuban freedom were Gen. Maximo Gomez and Gen. Estrada Palma. Gomez commanded the armies in the field, and employed methods which, as we have repeatedly said, entitle him to rank as one of the greatest of all modern commanders. Palma was the agent of the Cuban patriots in the United States, and he, more than any other man, is to be credited with having kept alive the military movement in Cuba by means of material aid and assistance sent from the outside. Most important of all, he addressed himself with success to bringing about that awakening of public opinion in the United States which finally took the form of an irresistible moral crusade on behalf of Cuban freedom. If these two men had died, or were otherwise ineligible, Cuba would not, indeed, have been left without trained and patriotic sons who could have filled the presidential office with ability and success. But since Gomez and Palma were both alive, and available in every sense, they were the two men to whom Cuba might naturally turn, rather than to any others, as candidates for the presidency. The military hero is always the man to be first considered, and Gomez for a time was the candidate whose name was upon all lips. But he declared that he had no ambition for political office, and in due time it appeared that Gomez was shaping things in Cuba for the nomination of Palma. . . .

"Tomas Estrada Palma is sixty-six years of age. His father was a wealthy planter in the easternmost province of Cuba, and the son was well educated in Cuba and in Spain, and became a lawyer, with a view not so much to the practice of his profession as to the better management of the affairs of a large estate. His patriotic sympathies led him to active service in the ten years' struggle for independence which began in 1868 and ended in 1878, and early in that period he became a general in the insurgent army. Toward the end of the war, he became the president of the provisional government, a position which at least indicated the confidence in which he was held by the Cuban people. He was made a prisoner, taken to Spain, at the risk of his life refused to swear allegiance, witnessed, in consequence, the confiscation of his estates, and some time after the final termination of the struggle regained his personal liberty, at the loss, however, of his Cuban property and home. When he goes to Cuba, two or three months hence, to assume the duties and high honors of the presidency, it will be after an absence of twenty four years. After his release, at the end of the Ten Years War, Palma traveled in Spanish-American countries, and settled in Honduras, where he married the daughter of the president of that republic and became postmaster-general. Subsequently he came with his wife and one little child to New York, and saw an opportunity to establish a school for young people from the Spanish-American countries. His institute was located in the little town of Central Valley, in Orange County, N. Y., some forty miles from the metropolis. He has now lived in Central Valley for eighteen years, and his six children, five of whom were born there, have known no other home."—*Am. Review of Reviews, Feb.*, 1902.

A. D. 1903.—Lease of Coaling and Naval Stations to the United States.—Reciprocity with the U. S.—Cession of the Isle of Pines.—In consonance with Article VII. of the so-called "Platt Amendment," which became an Appendix to the Constitution of the Republic of Cuba, an Agreement between the United States and Cuba for the lease to the former, in Guantanamo and Bahia Honda, of lands for coaling and naval stations, was signed in February, 1903. The consequent lease was signed and ratifications exchanged in the following July and October. According to the terms of the Agreement "while, on the one hand, the United States recognizes the continuance of the ultimate sovereignty of the Republic of Cuba over the above



described areas of land and water, on the other hand the Republic of Cuba consents that during the period of the occupation by the United States of said areas under the terms of this agreement the United States shall exercise complete jurisdiction and control over and within said areas with the right to acquire (under conditions to be hereafter agreed upon by the two Governments) for the public purposes of the United States any land or other property therein by purchase or by exercise of eminent domain with full compensation to the owners thereof." The yearly rental to be paid for the use of the lands defined in the Agreement is $2000.

An arrangement of reciprocity between Cuba and the United States, conceding to Cuban sugar a rebate of 20 per cent. from the Dingley tariff rate, and giving 20 to 40 per cent. of reduction in Cuba on American goods, was ratified by the U. S. Senate in December.

A treaty ceding all claims of the United States to the Isle of Pines was signed in December, and awaited ratification by the Senate when the year closed.

A. D. 1906. — Participation in Third International Conference of American Republics. See (in this vol.) AMERICAN REPUBLICS.

A. D. 1906 (Aug.-Oct.). — Outbreak of insurrection. — Appeal of President Palma for American intervention. — The Republic practically without a Government. — Secretary Taft, sent to the Island, establishes a Provisional Government. — Governor Magoon. — The first report to the Government of the United States of an outbreak of insurrection in Cuba was sent from the American Legation at Havana on the 21st of August, 1906. Between 1000 and 1500 men were then said to be in arms in Pinar del Rio, under Colonel Pino Guerra, "a Liberal member of the present Congress and a veteran of the War of Independence." The insurgents represented the political party called Liberal, hostile to the party called Moderate which controlled the Government and enjoyed the favor of President Palma. They complained of unfairness in late elections and demanded a new electoral law with a new election to be held under it. The Government had no effective armed forces to use against them, and some effort by business men of Havana and by "veterans" to mediate between the parties and pacify the revolutionists were without avail. Events, therefore, moved rapidly to the producing of a situation in which President Palma, on the 12th of September, asked for American intervention, and begged "that President Roosevelt send to Havana with rapidity 2000 or 3000 men, to avoid any catastrophe in the capital." Two days later the request was repeated with more urgency, the Consul-General at Havana stating in a telegram to the State Department at Washington: "President Palma has resolved not to continue at the head of the Government, and is ready to present his resignation, even though the present disturbances should cease at once. The vice-president has resolved not to accept the office. Cabinet ministers have declared that they will previously resign. Under these conditions it is impossible that Congress will meet, for the lack of a proper person to convoke same to designate a new president. The consequences will be absence of legal power, and therefore the prevailing state of anarchy will continue unless the United States Government will adopt the measures necessary to avoid this danger."

The action then taken by President Roosevelt was recounted by him in his next annual Message to Congress, as follows: "It was evident that chaos was impending, and there was every probability that if steps were not immediately taken by this Government to try to restore order, the representatives of various European nations in the island would apply to their respective governments for armed intervention in order to protect the lives and property of their citizens. Thanks to the preparedness of our Navy, I was able immediately to send enough ships to Cuba to prevent the situation from becoming hopeless; and I furthermore dispatched to Cuba the Secretary of War and the Assistant Secretary of State, in order that they might grapple with the situation on the ground. All efforts to secure an agreement between the contending factions, by which they should themselves come to an amicable understanding and settle upon some modus vivendi — some provisional government of their own — failed. Finally the President of the Republic resigned. The quorum of Congress assembled failed by deliberate purpose of its members, so that there was no power to act on his resignation, and the Government came to a halt. In accordance with the so-called Platt amendment, which was embodied in the constitution of Cuba, I thereupon proclaimed a provisional government for the island, the Secretary of War acting as provisional governor until he could be replaced by Mr. Magoon, the late minister to Panama and governor of the Canal Zone on the Isthmus; troops were sent to support them and to relieve the Navy, the expedition being handled with most satisfactory speed and efficiency. The insurgent chiefs immediately agreed that their troops should lay down their arms and disband; and the agreement was carried out."

From an "Epitome of events attendant upon the establishment of the Provisional Government of Cuba," published in Part 1 of "Papers relating to the Foreign Relations of the United States," for 1906, the following is taken:

"On Saturday, September 29, 1906, a provisional government exercising Cuban sovereignty under the authority of the President of the United States was established, and a proclamation was issued to the Cuban people setting forth the causes for this action and defining the position of the United States toward Cuba.

"Since the American commissioners understand that the Republic of Cuba is continuous and that they are only the ad interim executives, the various departments continue to function as before with the assistant secretaries as acting heads, the only officials discharged being those taken on to meet the exigencies of the revolution.

"At the time the commissioners assumed control there were many political prisoners in the jails throughout the island. These, of whom several were prominent liberals who had several times been consulted by the commissioners while on parole, were immediately set at liberty

"The disbanding and disarming of the rebel forces and, incidentally, the government militia, enlisted specially for the revolution, has been the chief concern of the provisional government from its establishment until now. It was carried out by a commission of American and Cuban military officers, of which Gen. Frederick

Funston was head, and has been practically completed.

"On the 10th instant [October] Provisional Governor Taft issued a general amnesty proclamation to the people of Cuba, thus indicating that quiet and peace have been restored. Save for sporadic local disturbances, the entire country is tranquil.

"On Tuesday, the 9th instant, Governor Magoon, who has succeeded Mr. Taft as provisional governor, and General Bell, who is to take command of the military forces of the United States in the island, reached Habana, and on Saturday, the 13th, Governor Taft issued a proclamation transferring the provisional governorship to Governor Magoon."

In his proclamation of September 29th, on taking possession of the Government, Secretary Taft used these clear and distinct words: "The provisional government hereby established will be maintained only long enough to restore order, peace, and public confidence, by direction of and in the name of the President of the United States, and then to hold such elections as may be necessary to determine on those persons upon whom the permanent government of the republic should be devolved.

"In so far as is consistent with the nature of a provisional government established under the authority of the United States this will be a Cuban Government, conforming with the constitution of Cuba. The Cuban flag will be hoisted as usual over the government buildings of the island, all the executive departments and provincial and municipal governments, including that of the City of Havana, will continue to be administered as under the Cuban Republic; the courts will continue to administer justice, and all the laws not in their nature inapplicable by reason of the temporary and emergent character of the government will be in force."

A. D. 1906-1909.—Under the Provisional American Government.—Election of a new Congress and a new President.—Restoration of the Republic.—In his Message to Congress, December, 1907, President Roosevelt described the conditions that had prevailed in the island for two years under the provisional government, instituted by Secretary Taft and over which Governor Magoon had presided, in a few words, as follows: "Absolute quiet and prosperity have returned to the island because of this action. We are now taking steps to provide for elections in the island and our expectation is within the coming year to be able to turn the island over again to a government chosen by the people thereof. Cuba is at our doors. It is not possible that this Nation should permit Cuba again to sink into the condition from which we rescued it. All that we ask of the Cuban people is that they be prosperous, that they govern themselves so as to bring content, order and progress to their island, the Queen of the Antilles; and our only interference has been and will be to help them achieve these results."

Provincial elections held in the following August went generally in favor of the Conservative party, and that party was accordingly expected to win the presidential election, appointed to occur in November, 1908; but such was not the result. Three parties were in the field, Conservatives, Miguelistas, and Zayistas. The Miguelistas were political followers of General José Miguel Gomez, whose middle name they took for their party designation; the Zayistas were partisans of Dr. Alfredo Zayas; the Conservatives were reputed to be substantially identical with the party known as Moderates in the politics of the First Republic. Their leader was General Menocal. The Liberals of former contests were now divided between Miguelistas and Zayistas. They were reunited in the national election of November, and swept the Moderates into the background, electing both their leaders, Gomez and Zayas, the one to be President, the other to be Vice-President, of the reconstituted Republic: electing, at the same time, an effective majority in the Congress for their support.

January 28, 1909, was the day fixed for dissolving the provisional government and reinvesting the Cubans with political independence; but the Congress was organized and held its initial session on the 13th. The President and Vice-President elect were inaugurated with simple ceremonies on the 28th. President Roosevelt, on that day, sent a message to the President and the Congress in these words:

"Gov. Magoon will, by my direction, turn over to you on the 28th of this month the control and government of the island of Cuba, and he will thereupon declare the provisional administration of the affairs of the island by the United States to be at an end. Upon the occasion of this final act, I desire to reiterate to you the sincere friendship and good wishes of the United States and our most earnest hopes for the stability and success of your government. Our fondest hope is that you may enjoy the blessing of peace, prosperity, justice, and orderly liberty, and that the friendship which has existed between the republic of the United States and the republic of Cuba, may continue for all time to come."

Governor Magoon, in his brief address, surrendering the reins of government to President Gomez, said, in part:

"It is the understanding of the United States, and it now declares that all the executive and legislative decrees and rulings of the provisional government now in force shall continue in force and effect until such time as the same shall be legally revoked by Cuba.

"All money obligations of the provisional government down to this date have been paid as far as practicable. Such claims and obligations, however, as may remain unpaid are to be regarded as claims and obligations of Cuba, and the United States understands that these claims and obligations will be so treated."

President Gomez replied:

"We receive from you the government of Cuba which you turn over to us in compliance with the instructions of the President of the United States. All acquired rights shall be respected in harmony with the principles of international law, the principles of our constitution and the provisions of the appendix of the constitution. The constitution shall be upheld in all its integrity because our chief concern will be to preserve it inviolate.

"We are indebted to your nation for its generous aid in the maintenance of our institutions and the cordial relations existing will never grow less through any act of ours. Once again we are masters of our fate and there is not a Cuban heart but swears to maintain for all time the

newly-acquired integrity of the nation, and who does not at the same time feel the profoundest gratitude towards those who, after governing them, have faithfully performed their agreement and now leave us in the full enjoyment of our sovereignty."

According to newspaper reports, however, the popular feeling was somewhat different from the sentiment expressed by President Gomez, if the coldness with which the Cuban crowd of that day watched the departure of Governor Magoon and his associates could be taken for a sign. They sailed for home immediately, on the new battleship Maine. About 3000 American troops remained on the island, under command of Major-General Thomas L. Barry, until the 1st of April following. On the departure of these, President Gomez said to General Barry: "It is pleasing to me to acknowledge the great aptitudes and qualities of the Army of Pacification under your command, which has brought to a happy conclusion its honorable mission of watching over our country in the difficult days, now happily past, and in maintaining and reaffirming the most friendly relations with our people, in whose name I assure you your efforts have been crowned with the most flattering success. I pray you, general, to express to your valiant soldiers the extreme gratitude and admiration which the government and the people of Cuba have for them."

Of President Gomez the following account was given at the time of his inauguration by the New York *Evening Post:* "Major-Gen. José Miguel Gomez, the first President of the new Cuban Republic, is fifty-three years of age, and a native of Santa Clara province, where he has always enjoyed extraordinary popularity and influence. He participated in two Cuban revolutions against Spain, in the first of which he reached the rank of major and in the second that of major-general. He was selected as Governor of Santa Clara province by the government of intervention, and when his term expired he was elected Governor.

"In May, 1905, the general was nominated for the Presidency by the National Liberal Convention, but resigned his candidacy four months later, giving as the reason for this action that it was impossible to continue the campaign within the bounds of the law, and laying part of the blame on the United States, owing to the Platt amendment. An uprising in Cuba followed, which ended with the deposition of President Palma and the intervention of the United States.

"In August, 1906, Gen. Gomez was arrested, charged with conspiring against the Administration of the late President Palma, but he denied the allegation, and was released from custody after a month's imprisonment. In December of the same year Gov. Magoon appointed him secretary of a commission to revise the laws of Cuba. These included the drafting of an electoral law, new provincial and municipal laws, a law defining the organization and functions of the judiciary, a civil service law, and also laws on such other subjects as may be referred to it by the provisional Governor."

A. D. 1907. — Population. — Remarkable increase in eight years. — "The population of Cuba on September 30, 1907, was 2,048,980; at the census next preceding, taken under the American administration in 1899, at the close of the Spanish-American War, the population was 1,572,797. The rate of increase in these eight years is not less than 30 per cent, or at the rate of 39 per cent per decade. This is a very rapid rate of increase — greater than that of any other country with which I am acquainted. This increase has not been brought about by immigration, for in the eight years the net immigration (that is, the excess of arrivals over departures) numbered only 75,000, and the element of foreign birth increased from 11 per cent to 11.2 per cent only, but it has been brought about almost entirely by the excess of births over deaths. . . . One peculiar phenomenon of this increase is that the rural population has gained much more rapidly than has the urban — a condition which rarely exists, as in nearly every country in the world the drift of population is toward the cities. The urban population, including all places of 1,000 inhabitants and over, was 43.9 per cent of the total population. In 1899 it was 47.1 per cent. If the urban population be limited to towns of 8,000 inhabitants, the proportion was 30.3 per cent. The chief cities are Habana, with 297,159 inhabitants, or about one-seventh of the population of Cuba; Santiago de Cuba, 45,470; Matanzas, 36,009; Cienfuegos, 30,100; and Camaguey, 29,616. The number of inhabitants per square mile in the island as a whole was 46.5, or about the same as in Missouri, Virginia, or South Carolina. The foreign-born population formed 11.2 per cent of the total. Of this element four-fifths were born in Spain and less than three per cent in the United States; Chinese and Africans were more numerous than United States people. . . .

"As to color, about seven-tenths of the population were white, the remaining three-tenths being colored, including negroes, mixed, and a few thousand Chinese. As in the United States, the colored element is increasing less rapidly than is the white population."— Henry Gannett, *National Geographic Magazine, Feb.*, 1909.

As reported from Washington, nearly 57 per cent. of the population of Cuba, at least ten years of age, can read, the percentage in the large cities being 82.6 and in the rest of the island 47.9 according to figures obtained in the census recently taken. This census shows that in 1907 almost one-third of the children were attending school, as compared with less than one-sixth in 1899. See also (in this vol.) EDUCATION: CUBA.

A. D. 1907 (April). — Decision of Supreme Court of the United States respecting the Isle of Pines. — A decision by the Supreme Court of the United States, rendered on the 8th of April, 1907, determined that the Isle of Pines is foreign territory, in the view of the United States customs laws, and, inferentially, that the United States has practically no title to the island.

A. D. 1909 (June). — Ill conditions along with material prosperity. — "What may prove to be the largest sugar crop in Cuba's history — certainly it is the most profitable she has harvested in many a long year — is almost in. It is estimated at a million and a half tons. It has obtained the very satisfactory average price of 4½ reales, reckoning from January 1 to date. . . . Ordinarily, this condition of affairs as regards her biggest crop would be equivalent to the best of times for Cuba, especially since last year also was a good year for sugar men, and

this year the tobacco crop, too, is fair in quantity and quality and going at satisfactory prices. But, so extraordinary is the present situation, times were never harder in all the history of this island than they are to-day, material evidences of prosperity to the contrary notwithstanding.

"Yet values have not dropped. This is no panic. It is merely a standing still — a waiting for something to happen. Just what it is that is due to occur nobody will say. Asked what he is afraid of, the Spaniard, who is the business man of Cuba, shrugs his shoulders and shifts his eyes; pressed for a reply, he answers enigmatically: 'There is no confidence.' The feeling grows that the present government will be forced into the hands of a receiver, like any other bankrupt concern, before even its liveliest opponents can organize to end it more heroically. . . .

"In 1906, when Cuba's customs receipts, which are almost her sole source of revenue, were at their maximum, her budget stood at $17,915,013.25. In 1909, weakened as she is, she is burdened with a budget of $33,825,448.53 — President Gomez's estimate of expenditure necessary in the first fiscal year of his Administration! In other words, while collections have fallen off, the governmental expenditures they must cover have increased 100 per cent." — *Havana Cor. N. Y. Eve. Post, June* 19, 1909.

"The Senate and House abruptly adjourned this evening. This was the final day of the regular session of Congress, but no definite action was taken on the question of the approval of the budget. . . . The House yesterday approved the budget in its entirety, and it was expected that the Senate would approve it to-day. The latter body, however, after devoting much time to a bill legalizing cockfighting, which was passed, made sundry minor modifications in the budget, sending it again to the House, in the apparent expectation that the modifications would be accepted by the House, which, in the meantime, had adjourned. The adjournment of the House was not known until after the Senate had also adjourned." — *Havana Telegram to Associated Press, June* 30, 1909.

"Owing to the failure of the Cuban Senate to pass the budget, President Gomez, early this morning, issued a decree making effective Gov. Magoon's budget of 1908–09 amounting to $24,285,000. The deficiency to cover the cost of the army and other increased expenses of the republic, amounting to nearly $10,000,000, will be supplied by Presidential decree. This will practially repeat the conditions of the last year of the Palma régime, when, in default of a budget, the decrees to this same end issued by President Palma were declared to violate the Constitution, and precipitated the revolution of August, 1906." — *Havana Telegram, July,* 1.

DAYLIGHT SAVING MOVEMENT. — What is known as the Daylight Saving Movement, which has acquired much strength in England and has gained some favor in the United States and elsewhere, is said to have been first mooted by a builder in London, Mr. Willet, who suggested the possibility of securing a most important general advantage to the whole community by establishing a legal difference between summer and winter in the numbering of the hours. The proposition is to retain the standard clock time for all the year except between a given date in April and a given date in September, within which period the clocks shall be set forward one hour, making six o'clock in the morning, for example, become seven.

At first the proposition excited little but laughter; but the more it has been considered the more advocacy it has won. A bill to realize it has been twice before Parliament, failing to be passed, but gaining votes. The main difficulty is to make people see why there should be legislation on the subject; why those who wish to begin the labors of the day an hour earlier in the summer than in the winter may not do so without any meddling of law with the clocks. The reasons why were set forth very clearly in one of the debates of Parliament on the subject. Said one speaker: "The Bill was intended to benefit town dwellers. Two-thirds, if not three-fourths, of the population dwelt in towns, and it was these who suffered from failure to take advantage of the summer daylight. It had been asked why it was necessary, in order to induce town populations to follow the example of agriculturists, to proceed by way of legislation. The answer was simple. There were 140 statutes in which various phases of town life were regulated by the clock, and if they desired those who lived in towns to take advantage of the summer daylight by beginning work earlier in the morning, it was surely easier to accomplish that end by passing a general Act of this kind than by bringing in Bills to amend each of the statutes in which particular hours were specified."

As another (Mr. Winston Churchill) explained: "It was quite impossible for an individual to make alterations in the hours at which he discharged particular duties, while every one else remained unchanged, without subjecting himself to a great deal of inconvenience, and the fact that particular firms had already adopted this early rising system, in spite of the enormous inconvenience which attended all alterations from the regular habits of the community as a whole, was not, as the hon. member for Rye suggested, an argument against the necessity of the Bill. It was, in his judgment, very good evidence of the real, natural pressure that there was behind a measure of this character. If all the world were to change clock time together, no one would be conscious that that change had occurred, except at the moment of change. But where a change of clock time came into contact with unchanged times, as in the case of the American markets or of the Continental mails and trains, there, undoubtedly, they would get friction and discordance. He was, however, not at all sure that that friction and discordance bore any sensible proportion to the interests which might be beneficially affected or that that friction and discordance could not be adjusted without any very serious inconvenience. But whether that was so or not, he was quite clear that any such change as this must be made by legislation, or it could not be made at all."

DEATH DUTIES: Treaty between Great Britain and France, to prevent frauds in connection with Succession or Death Duties. — The following Treaty between the Governments of Great Britain and France was signed November 15, 1907, and ratified December 9

"The Government of His Britannic Majesty and the Government of the French Republic, being desirous of preventing as far as possible frauds in connection with succession duties, have authorized the Undersigned to conclude the following Agreement: —

"ARTICLE 1. The Government of His Britannic Majesty undertake, in the case of the decease of all persons domiciled in France, to furnish an extract from the affidavit, containing the full name, domicile, date and place of death of the deceased; all information relating to his successors, and the details respecting that portion of the estate which is moveable. This extract shall be furnished, however, only in cases where the value of the moveable estate shall amount to a sum of not less than 100*l.*

"ARTICLE 2. The Government of the French Republic undertake, in the case of the decease of all persons domiciled in the United Kingdom of Great Britain and Ireland, to furnish an extract from the *déclaration de mutation* through death, containing the particulars enumerated in Article 1. This extract shall be furnished, however, only in cases where the value of the moveable estate declared shall amount to a sum of not less than 2,520 fr.

"ARTICLE 3. The extracts from affidavits or *déclarations de mutation* shall be certified by the officers intrusted with the duty of receiving or registering these affidavits or declarations.

"In the event, however, of either of the two Governments deeming it necessary, the certifying and authentication of the signatures, as required according to the procedure customary in that country, shall, upon request and without fee, be affixed to these extracts.

"ARTICLE 4. The extracts from affidavits or declarations received or registered during each quarter shall be forwarded directly, within a period of six weeks from the last day of the quarter, by the Board of Inland Revenue to the

Direction Générale de l'Enregistrement, and reciprocally.

"All correspondence respecting the said extracts shall also be conducted directly between those two Central Administrations."

DENMARK: A. D. 1909.—Democracy in Power after a thirty-years' struggle with Landlordism.—Landlordism in Denmark, entrenched in the upper house of the Parliament, was dislodged from the control of Government by the Democratic party, in the elections of April, 1901, after a struggle of thirty years. A Danish correspondent of *The American Review of Reviews* gave a spirited account of the victory to that magazine in the following October, from which the following is taken:

"At the elections of April, 1901, out of 114 members in the lower house only 5 were won by the Conservatives, with small majorities, and even the strong Conservative majority in the upper house was reduced to one vote through the rebellion of the Conservatives. The Danes are now a thoroughly radical and democratic people, with a more perfect system of self-government in politics and business than perhaps any other nation. The population has increased so much that it is now as large as the whole population of the kingdom and duchies before 1864. After England, it is also the richest country in the world per head of the population, and the excellence of its educational system is matter of common knowledge. Denmark, therefore, enters the new century steaming full speed ahead, and with the best hopes for the future.

"The victory of April 3 last was as complete over the Moderates as over the Government. Before the poll the Moderates were twenty-two strong, but Mr. Bojesen, the evil genius of the democracy, withdrew his candidature and retired into private life, while several of his supposed adherents declared during the campaign that, if reelected, they would join the Radicals. Mr. Bojesen's constituency, which he had represented since 1869, was taken by the Radicals, and the Moderates, now reduced to twelve or thirteen—of whom about half will join the Radicals if allowed—have lost all their former importance. The premier and minister of justice is M. Deuntzer, professor of law at the university, an old Radical who in 1885 publicly opposed the government. The minister of agriculture is Mons. Ole Hansen. He is a common farmer from a village in Seeland, owner of a farm of about one hundred acres; M. P. since 1890. . . . The law officer of the crown is Mons. Alberti, who is a leader of many coöperative undertakings of the peasantry; M. P. since 1892.

"Mr. Jens Christian Christensen is the most important member of the new cabinet. He was born in West Jutland, in 1856, the son of a farmer, and earned his living when a boy as a shepherd. He passed the examination for village schoolmaster in Jutland, and taught till recently in the little village of Stadil, in West Jutland. In 1890 he was returned for Parliament, and in 1895 became leader of the opposition. Of late years, the Conservative Government being so utterly weak, he practically ruled the country in his capacity of president of the finance committee of the Folketh . . . A few months ago he resigned his post as schoolmaster, succeeded in being elected a 'revisor of the state,' and is now minister of religion and education. After Mr. Christensen, Mr. Harup is considered the greatest triumph for the Democrats. Born in 1841, the son of a schoolmaster in an Iceland village, he became a law student, taking his degree in 1867 at the university. . . . He is one of the most brilliant and best known of Danish journalists—the most brilliant, according to George Brandes."

A. D. 1902.—Proposed sale of Danish West Indies to the United States.—Negotiations for the sale of the Danish islands in the West Indies to the United States were brought to a point of agreement between the two governments which the Danish Ministry submitted to the two chambers of the Rigsdag. The Folkething—the popular branch of the parliament—assented to the sale, while the other chamber, the Landsthing, rejected the proposed terms. The Rigsdag was then, in May, 1902, prorogued, and assembled again in the following October. Meantime an election of one half of the membership of the Landsthing had taken place, and the Conservatives had lost ground in it; notwithstanding which fact the proposition was defeated in that body again, and the projected sale came to naught.

A. D. 1905-1909.—The Fortification and Naval-Defense Question in Danish Politics.—"That Germany within recent times has paid considerably more than passing attention to the defense plans of Denmark has not escaped the Danes, whose military astuteness is proverbial. At the instigation of the Kaiser himself, Lieu-

DENMARK, 1905–1909

Col. R. von Bieberstein inspect[illegible] the quite openly exposed fortifications of Cop[illegible]gen, and what he has written regarding the [illegible]ability, or otherwise, of the Danish capital has been taken to heart in Denmark's military circles. Beyond a doubt, Denmark to-day is much more favorably situated than when Prussia despoiled the country of Schleswig-Holstein, and while little apprehension exists on the score of Germany again attacking her northern neighbor, should a war break out between England and the German Empire it might prove impossible for either belligerent to keep Danish territory inviolate. Denmark's neutrality would be thrown to the winds where the fate of empires would be at stake. Still, in her defense of such neutrality, Denmark would gain time sufficient to make any trespasser pause before advancing. Meanwhile, the Scandinavian allies of the Danes would be enabled to assert themselves effectively.

"Following the recent Danish cabinet crisis, when the portfolios of war and navy were given into the hands of a civilian, J. C. Christensen, the former minister for instruction of the Deuntzer *Régime*, a special defense commission has had under consideration ways and means best suited for the protection of the country. . . . The Danish Defense Commission is far from being unanimous as to what is the best plan making for a complete protection of the capital. The majority of the members are for the abandoning of the land defenses and the strengthening of Seeland's coast line by adding more forts and introducing a mining system covering all the adjacent waters. The minority of the commission, however, and the leading military experts of the country are for the retention of the present land fortifications, in order that the capital may be securely protected against an enemy invading Seeland from the north or the west. The very circumstance that Seeland's coast line in its entirety does not lend itself to a complete protection through either forts, mines, or torpedo equipment speaks favorably for the claim of the Danish military experts in their assertion that, apart from what is done toward protecting Copenhagen from the sea, the land fortifications must be retained. Nearly one hundred million kroner have been expended on the land defenses, which sum it would be extremely difficult to raise a second time were it a question of abandoning the forts for the present and removing the guns, and in after years restoring them to serviceable condition." — Julius Moritzen, *Denmark, the Buffer State of the North* (*American Review of Reviews*, *Sept.*, 1905).

Since the above was written the question of defense, between land fortification and naval development, has not only been the burning one in Danish politics, but has excited much interest in Europe at large. Politically, the controversy was curiously altered in February, 1909, by a sudden change of front on the part of the Premier, M. Neergaard, of which the Copenhagen correspondent of the London *Times* gave the following account:

"The Premier, who represents the majority in the House, declared that he had changed his opinion and now shared the views of the small group of the Right on a question which is the most urgent of the day — namely, that of national defence, or, to speak precisely, how Denmark can be placed in a position effectively to maintain her neutrality if threatened by any Power. He adopted the opinion that Copenhagen must be fortified on the land side as well as on that of the sea, and that Denmark, in view of her difficult strategical situation, should avoid showing any favour to Russia, Germany, or Great Britain. The surprise which the Premier's speech caused in all political circles was unbounded. M. Neergaard had kept the secret of his scheme so well that only a few persons knew that the Premier might enter into negotiations with the Right, which has its main support in the Upper House. That he would go so far as to adopt the Conservative view was wholly unexpected.

"The Defence Committee, which had been sitting for seven years, issued a report which contained no very clear recommendations. But M. Neergaard, who is, by the way, himself no soldier, working in conjunction with the Danish general staff upon the material which the committee had collected, drew up a scheme of Danish defence, based upon practical views and considerations of international law, but almost the direct contrary of the proposals which his own party, the Left, had adopted only one year ago. And this position was taken up so definitely that at the general election in May the people will have to decide definitely for or against the Premier. It is evident that M. Neergaard himself must be aware that his action will split up his party, the allied Centre groups in the Folkething, that some members will go over to the Right, and that others will approach the Radicals and Socialists. The comments of the Government Press already clearly show this.

"For land and sea fortifications, the construction of 20 torpedo-boats and six submarines, improvements in the system of mines, &c., the sum of 42,200,000 kr. (£2,344,444) is demanded immediately, while an annual increase in the military budgets of about 3,327,000 kr. (£184,833) is also proposed. This is a large amount of money for a small country with but 2,600,000 inhabitants; but, as is well known, the country is in a strong financial position — exceptionally strong, in the opinion of some observers."

In May, as the elections approached, the same correspondent wrote: "All parties unite in the view that Denmark must adhere to a policy of the strictest neutrality. But while the Conservatives urge that this policy must be observed by a system of fortifications, strong enough to show that Denmark is ready to defend her neutrality if she is threatened, the Socialists preach the gospel of disarmament as a step towards eternal peace, and urge furthermore that Denmark is too weak and small to organize any real defence, and must therefore rely upon the generosity of her stronger neighbours.

"In addition to the two main parties there are a number of political groups which are destined to play an important part in the elections and may in fact decide their issue. These groups consist of the Moderate Left, the Reform Left, and the Radical Left. The Moderate Left, the party of the present Premier, Mr. N. Neergaard, has, however, already adopted the policy of the Conservatives and needs little more than mention. The Reform Left, the party of the former Premier, Mr. F. C. Christensen, numbered until a few months ago 56, or nearly one half of the Folkething, which has 114 members. Now it

has been split up on the defence question. Of its members 14 agree with Mr. Neergaard and the Conservatives, and 33 are reorganized under the leadership of Mr. Christensen, who wants Copenhagen fortified, but not on the lines of the Neergaard scheme with its new land fortifications."

The elections were held on the 25th of May and the following was reported next morning to the press: "The election campaign has been heated The returns up to the present show that the ministerials have elected 38 adherents, M. Christensen's party 34, the parties of the Socialists and the Radicals, which opposed fortifications, 39, and that eleven are doubtful. The ministers of finance, justice and commerce have been unseated. Premier Neergaard and the other ministers have been re-elected."

An extraordinary session of the new Parliament was summoned by the King on the 9th of September. Premier Neergaard lacked a majority in the Folkething, and failed to arrange an agreement with ex-Premier Christensen on the defence question. He and his Ministry resigned office, accordingly, in a few weeks, and a new Cabinet was formed under Count Holstein-Ledreborg, in which M. Christensen was included as Minister of Defence. The appointment of the latter was offensive to a large part of the public, which held him responsible for gross frauds in the public service, committed by a former Minister of Justice, M. Alberti. An immense popular demonstration against the obnoxious Minister of Defence was carried out at Copenhagen on August 29th; but he stayed in office some weeks longer, until a scheme of defence had been agreed upon between ex-Premier Neergaard and himself, and carried through Parliament, September 24th. The scheme provides for strong sea fortifications for Copenhagen, while the land defences of the eighties will be maintained and somewhat strengthened by two new forts, which are, however, officially characterized as sea forts.

Three weeks after the passage of the Defence Act M. Christensen resigned, and was followed out of office by the whole Holstein-Ledreborg Ministry before the end of October. For the first time in Denmark a Radical Ministry was then formed, under M. Zahle.

A. D. 1906. — Death of King Christian IX. Succession of Frederick VIII. — Gains by Social Democrats in the elections of the spring. — Visit from the Icelandic Parliament. — On the 29th of January, 1906, King Christian IX. died, at the age of eighty-eight. He was succeeded by his son, Frederick VIII., who is said to have inherited his father's character and ability in a marked degree. He had already reached the age of sixty-three when he came to the throne. When his accession was proclaimed he spoke from the balcony of the palace at Copenhagen to the multitude of people assembled in these words: "Our old King, my dearly beloved father, has closed his eyes. He fell asleep peacefully and calmly, having faithfully discharged his royal duties to the last. In taking over the heavy heritage placed on my shoulders, I cherish the confident hope, and offer a sincere prayer, that the Almighty may grant me strength and happiness to carry on the government in the spirit of my dearly beloved father, and that I may have the good fortune to reach an understanding with the people and their chosen representatives on all that tends to the good of the people and the happiness of our beloved fatherland. Let us join in the cry, 'Long live the fatherland!'"

At a general election for the Folkething, the lower house of the Danish Rigsdag, in May, the Social Democrats made heavy gains, raising their representation in the chamber from sixteen to twenty-four. The Government party, known as the Left Reform party, lost three seats, the Moderate Left lost three, and the Radical Left lost four. The Conservatives gained two seats. Later, when half of the elective part of the upper house was chosen, the Social Democrats made gains there, too, of three seats, and the Government lost five.

In September, on the invitation of King Frederick, the members of the Icelandic Parliament visited Denmark, and their entertainment was an interesting event. See (in this vol.) ICELAND.

EARTHQUAKES.

California: A. D. 1906. — Consequent destructive fire at San Francisco and great distress. See (in this vol.) SAN FRANCISCO: A. D. 1906.

Chile: A. D. 1906. — Destructiveness of life and property at Valparaiso. — One of the most destructive of the many appalling earthquake shocks of the past decade was experienced in Chile on the 16th of August, 1906. It was widely felt, even to the distant Hawaiian Islands; but its most deadly effects were concentrated on the unfortunate city of Valparaiso. The wreck of buildings in the city was followed, as in San Francisco, by fires, which the disabled inhabitants were almost powerless to combat. The total loss of life, there and elsewhere, was estimated finally, when all was known that could be known, at 2000. The homeless for a time were substantially the whole population of the city. Relief was sent to the afflicted city and country from all parts of the world.

The prediction of another earthquake on the Pacific coast of America within some short time had been made by Dr. Becker, of the U. S. Geological Survey, in a letter to the New York *Tribune* written the day after the shock at San Francisco. Such a severe upheaval at one point on the earthquake belt which follows the rim of the Pacific from Singapore, through Japan, the Aleutian Islands, the coast of Alaska, California, and South America to Valparaiso, was sure, he said, to be followed by sympathetic movements at other points on the circuit.

Formosa: A. D. 1906. — Over 6000 persons are reported to have been killed or injured by an earthquake that occurred in the island of Formosa in March, 1906.

France: A. D. 1909 (June). — Serious convulsion along the Mediterranean coast. — A shock which ran through Southern France on the night of June 11 was most severe in the Bouches-du-Rhône, but extended over a very wide area, including the whole Mediterranean coast of France, and was also felt in Spain and Portugal. Official reports stated that 55 lives were known to have been lost. A great amount of damage had been done, especially in the villages; in the towns the buildings for the most part withstood the shock, though it was sufficiently violent to cause panic among the population in Marseilles, Toulon, and other places.

Greece: A. D. 1909 (July). — Destruction in Ellis. — An earthquake which occurred, on the 15th of July, in the province of Ellis, the seat of the most famous of the ancient Olympic games, was reported to have killed or injured over 300 persons. Despatches from Athens to London made the following statements: "At

the village of Havari 400 houses have been completely destroyed. Some 30 persons are known to have perished there, while many others have been injured. The neighbouring villages have also suffered severely. All the houses of Amaliada have been rendered uninhabitable. Volcanic eruptions have occurred in the village of Ponhioti. Shocks of earthquake have also been felt at Patras, Pyrgos, Kalamas, Tripoli, and Missolonghi. People have been killed and injured in about ten villages. Assistance has been sent to the affected districts."

India: A. D. 1905. — In the Punjab and the United Provinces. — One of the most terrific of earthquakes occurred in Northern India on the 4th of April 1905. Its most violent and destructive effects were in the Kangra District of the Punjab, and its neighborhood; but the area of shock extended over several thousand square miles. The finally ascertained and estimated loss of human life was no less in number than 378,000. The villages destroyed numbered 409. As for the destruction of property, including houses, bridges, irrigation works, cattle, and crops, it was beyond computation. In the central region of the earthquake every habitation and human structure of any description went instantly down. The shocks, as described, were first from north to south, then immediately reversed, and followed by a horrible sinking of the earth. *The Empress*, a monthly periodical published at Calcutta, gave the following, among other personal experiences of the disaster. The narrator was a manager of large tea estates near Palampour:

"On the morning of the 4th April, at about 6 A. M., we were disturbed in our sleep by a slight earthquake, quickly followed by a severe one, and lastly by the worst shock of all, which appeared to come from the northeast and having a sudden circular action traveling toward the west. The first one I took no notice of, thinking it was one of the many slight shocks of[ten] felt and on experienced up here. When the second shock came, I sat up in bed and called out to my wife to come to the window. I had hardly done so when I saw the highest wall of our bedroom fall in like a torrent on my poor [sleeping] child; then all became dark with fear[ful] dust from the falling walls. I felt suffocating, and pushed my hand through the panes of glass in the window into which I had crept; had I not done so I should have been killed by the wall that fell in on the head of my bed. I shall never forget those few moments that appeared like years, — the noise of the falling masonry, smashing of beams, planks, and slates. I had fully made up my mind that we should all perish. When the shock was over I opened the window and dropped into the lower veranda, rushed out, and cried out for help. No one could be seen, — all had fled to the villages to help their friends and relations. A fearful sight presented itself to my eyes. All our houses (with the exception of the *mali's* hut) were leveled to the ground, including a magnificent factory built of [cut] stone which my poor old father had lately built. All was still as death save for the wailing of a man who afterward turned out to be my head clerk. After a few minutes had elapsed I succeeded in getting a few of my household servants together and dug with bare fingers among limestone and plaster for my only child. We had to make a coffin out of planks taken from the *débris*, bury her without ceremony in a quiet sequestered spot on the tea estate. To look around the valley, nothing but desolation meets the eye. The once pretty little villages, with their bluish-white walls and slated roofs, mixed here and there with thatched buildings, all leveled to the ground. We have been ruined; lost tens of thousands of rupees. As for our loss in machinery, it is unknown, being all buried beneath the ruins. And this is not all. We are afraid we shall lose thousands yet, owing to our terror-stricken workmen and coolies, who believe that this picturesque valley is to be totally destroyed. They have made little thatch sheds for their families and cattle, and pass the day in sorrow and fear, refusing to return to work or even work at their own fields. A great many families have been wiped out."

The same magazine tells of the destruction of the very ancient temple of Bhowan — one of the oldest in the world — burying 2000 worshippers in its ruins: "On the night of the 3d April, about two thousand pilgrims arrived in the small town of Bhowan, which is about three miles from Kangra town, to worship at the temple. On the morning of the 4th, at 6 o'clock, a rumbling noise was heard, and before the people could realize what it was, they felt the terrible shock, and within four seconds the whole town was destroyed. The shock lasted three minutes, but all the damage was done in the first few seconds. About two thousand people were buried beneath the ruins of the temple, and under the adjacent buildings. The Guru, or High Priest of the Temple, was dug out of the ruins and buried near the site of the Toshakhana, adjoining the temple."

Italy: A. D. 1905. — In Calabria. — A terrible earthquake, accompanied by storms and volcanic disturbances, occurred in Calabria on September 8th. "Hundreds of dead were swallowed up, and ruin was spread far and wide in a country already sorely tried by an unfortunate system of land ownership. The public authorities, the provinces and towns of Italy, strained every nerve to soften the misery of the Calabrian population, and the King eagerly hastened to the scene of the disaster. The public mind, however, was embittered by reports that the rich Calabrian landowners had shown great want of consideration for their unhappy tenants, and that the work of restoration was greatly hindered by absurd disputes between civil and military authorities." — *Annual Register*, 1905, *p.* 278.

A. D. 1908 (Dec.). — In Calabria and Sicily. — Destruction of Messina and Reggio. — The most appalling in history. — Of all catastrophes of earthquake recorded in history, the one which has seemed most appalling to the European and American world was that which destroyed the cities of Messina and Reggio and many smaller towns in northeastern Sicily and southern Italy, on both sides of the Straits of Messina, on the early morning of Monday, December 28, 1908. The time favored an exceptionally great harvest of death. From Christmas until Twelfth Night is a period of feasting among the Southern Italians, when the members of scattered families come together as fully as they are able to do. The doomed cities, accordingly, contained on the

fatal day a large number of guests, and were emptied, at the same time, of large numbers of their residents; but the merry-making of the previous days had induced later slumbers, generally, on that dread Monday morning, and few had risen from their beds when the shock came which buried them in the ruins of their dwellings. It shook Messina at twenty minutes past five o'clock, long before day had begun to dawn. The late F. Marion Crawford, who wrote, three months after the occurrence, for *The Outlook*, a carefully prepared account of it, derived from personal inquiries and investigations on the spot, describes the overwhelming moment thus:

"A southwest wind was blowing and the sky was black when the fatal moment came, but it was not yet raining. Those who were awake and survived remember hearing the horrible subterranean thunder that preceded the shock and might have been a warning to many in waking hours; it seemed to begin far away and to approach very quickly, swelling to a terrific roar just before the crash. Another instant and the solid earth rose and fell in long waves, twice, three times, four times perhaps, and the houses and churches swayed from side to side, in the darkness; for the young moon had set before midnight, and it lacked more than an hour of dawn. The whole city and the towns on the opposite side of the Straits fell at once with a crash that no language can describe; then followed the long-resounding rumble of avalanches of masonry; and when those awful moments were over, nearly two hundred thousand human beings were dead, on both sides of the Straits.

"Almost at the same moment another sound was heard, almost more terrible than the first — the sound of a moving mountain of water; for the sea had risen bodily in a monstrous wave and was sweeping over the harbor, carrying away hundreds of tons of masonry from the outer pier, tearing ships and iron steamers from their moorings like mere skiffs and hurling them against the ruins of the great Palazzata that was built along the semicircular quay, only to sweep them back, keel upwards and full of dead and dying men, as the hill of water sank down and ebbed away. When it had quite subsided, the inner portion of the harbor was half full of sand and mud and stranded wrecks.

"Those who say that they 'saw' these things are either untruthful, or else, in vivid recollection of sensation, but without the true memory of events, they confuse what they heard and felt with what they might have felt and seen; for though some of the gaslights in the streets continued to burn for a few minutes, the darkness was almost total."

The American Vice-consul at Messina, Mr. Stuart K. Lupton, who escaped unhurt from the ruins of the hotel in which he lodged, carrying his clothing in his hands, and hastened in the darkness to give aid, if possible, to his chief, Dr. Cheney, made a report of his experiences to the Department at Washington, from which the following is taken: "I had not proceeded more than fifty yards when I found myself walking in water up to my knees in a place which should have been eight feet above the water level. Next I came to a pile of rubbish some fifteen or twenty feet high over which I clambered on my hands and knees. By this time I began to see that the affair was much more serious than I had at first believed, but I was still in inky darkness, so I could not form any ideas as to the extent of the disaster. After three-quarters of an hour I arrived where I supposed the consulate to be and waited for daylight, which came in a few minutes. I looked for the consulate, but could see nothing that reminded me of it. Half the water front appeared to be down. Here and there the walls were standing, while the interior had collapsed. A few fires were breaking out, but owing to the solid construction of the town they made little progress.

"At the place I supposed the consulate to be there was nothing but a heap of ruins, iron beams, splintered wood, bricks, and stones in hapless confusion. I was not sure of the spot and climbed over the ruins to see if I could find anything familiar. Finally I came across a battered teapot, which I recognized as the property of Mrs. Cheney, and remembering the spot where it had stood, was able to get my bearings. I climbed directly over the spot where their room had been, and called, in the hope that if they were still alive, they would answer. I heard nothing, however, and further search revealed a piano covered to a depth of about ten feet in rubbish. I knew that the Cheneys had no piano, so it must have come down from one of the upper stories. As the shock was so strong that no one could stand, and the consulate went down almost immediately, it was absolutely an impossibility for Dr. Cheney to have opened four doors and gone down a long flight of steps which had three sections. Nothing belonging to the office could be seen except the teapot. . . .

"People were beginning to appear by this time, some half-clothed, others entirely naked. I gave part of my clothes away, but found I could do nothing, there were so many. People were calling from upper windows, asking that some one should aid them, but ladders and ropes were necessary, and they had to be left. Some men were trying to lower an old lady from the fourth floor, but as soon as the weight came upon the cord, it broke, precipitating the poor soul to the pavement below. Another upper window was choked with rubbish, out of which stuck a man's arm. He was unable to call out, but rattled against the railing with a stick, trying to attract attention. Without men and tools it was impossible to do anything, so I kept on, trying to shut my ears.

"Almost all the natives were hysterical, shrieking and moaning. Some were held by their friends, as they seemed to be absolute maniacs. . . . Light shocks were felt every few minutes, adding to the alarm of the people. About eleven o'clock I went on board the steamer Chesapeake, belonging to the Anglo-American Oil Company, and managed to get a cup of tea and a sandwich. Capt. Mort was very kind, and told me to send people in need on board, and he would do anything he could for them. I went again to the shore to see what could be done, and by that night over seventy, principally women and children, were on board. About three o'clock rain began to fall, adding to the misery of the people. Scores and hundreds of them were to be seen sitting in all the squares or wider streets, and looking as if they had abandoned all hope."

From all directions, by all communities and governments, relief to the stricken cities, for

the rescue, feeding and shelter or removal of the survivors, was hastened with the greatest possible speed. War ships from many navies, Italian, French, Russian, British and German, were quickly at the scene, their sailors and marines performing heroic work in discovering and saving many still living people, who had been entombed under mountains of ruin for many days. Even after such burial for thirteen and fourteen days some victims were found alive. The rescuing forces were soon in excess of the need, and a want of systematic organization and direction among them became a subject of complaint. But the outflow of sympathy and eager generosity of helpful desire in all the world was the noblest, without doubt, that has ever been called forth.

By good fortune, when news of the disaster came a supply ship of the United States Navy was being laden at New York with a million and a half of rations, destined for the fleet of American battle-ships then voyaging round the world. The supply-ship was to meet the fleet at Gibraltar; but orders were given immediately for dispatching it to Messina, with an added shipment of tents, clothing, blankets and medical supplies. Furthermore, from the fleet itself, which was about to enter the Suez Canal, a store ship was hastened forward to Messina for such offerings as it could make. The American Congress, reassembled on the 4th of January after the Christmas recess, by action of both Houses that day, appropriated $800,000 for further relief of the Italian need, and a large part of this sum was expended according to the following statement made public by the Secretary of the Navy, January 16: "The Navy Department has arranged for the expenditure of approximately $500,000 in the purchase of building materials, including all articles necessary for the construction of substantial frame houses for the Italian sufferers, and the shipments will begin by the sailing of two steamers probably on Monday. The lumber is being delivered to-day in New York, and the sailing of the vessels will proceed as fast as they can be loaded. Each ship will carry all the materials for the construction of about 500 houses, and it will require no less than six steamers for the entire amount purchased. If possible, the department intends to send with each vessel several civilian house carpenters, with plans, to assist in the erection of these houses."

With this material a suburb of 1500 detached frame houses, of two or four rooms, were built at Messina; 500 were constructed at Reggio, and the remainder at other towns and villages.

The Italian Parliament appropriated 30,000,000 lire ($5,000,000) for immediate relief and for the reconstruction of the ruined cities. The plans formed by the Italian Government included measures to provide for the temporary protection of the orphaned young, the deserted, and the insane; to prosecute the recovery of personal property; to draw up official lists of the dead; to rewrite the civil registers and the records of property transfers; to reestablish, provisionally, administrative and judicial districts within the provinces of Messina and Reggio. New building regulations were to be enacted by a royal commission in conjunction with the Ministry of Public Works. To encourage the reconstruction of the ruined places, all new buildings were exempted from taxation for a period of fifteen years. Loans from state and private financial institutions to be made at a rate of interest not exceeding 4 per cent., to be repaid within thirty years in semi-annual instalments, the Government to contribute half of these periodical payments.

To the effective help and relief rendered by her Mediterranean squadron, Great Britain added large contributions of money, mainly collected as a "Mansion House Fund" by the Lord Mayor of London. There and everywhere, the Red Cross Societies were instant in the field and untiring, receiving and expending immense funds and sending large corps of trained workers to the scene of distress. No summary has yet been made of the whole outpour of gifts and service to the suffering people, and it is impossible even to estimate what a world feeling it expressed; but its like was never known before.

Figures of the total destruction of life by the earthquake are still uncertain. Mr. Clifford, when he wrote, thought it doubtful whether as many as fifteen per cent. of the population of Messina were then alive, scattered groups throughout Italy. That would mean that only about 20,000 out of 150,000 in the one city escaped. Of the loss of life on the other side of the Straits he said: "The proportion of those saved on the Calabrian side is certainly larger—principally, I think, because the houses in Reggio, Villa San Giovanni, Palmi, and the other towns destroyed were much lower than those in the city. Moreover, as will be seen before long, many persons died of hunger and thirst in Messina, where the whole water supply was cut off by the ruin of the first shock, and bread was not obtainable at any price for many days; but on the Calabrian side the survivors camped out in the orange groves, and the fruit, which is almost ripe at Christmas in that latitude, stayed their hunger and assuaged their thirst."

Generally, the total of deaths from the earthquake in Sicily and Calabria, seems now to be estimated at 200,000.

A report from Rome, issued on the 3d of August, 1909, from the Central Relief Committee, of which the Duke of Aosta is president, announced that the receipts of the Committee to that time had been 25,100,000 lire (£1,004,000, or $5,020,000). The fund for the orphans had all been handed over to the Queen Helena Home.

For the building of shelters the sum of 4,000,000 lire had been paid over to the Minister of Public Works for the construction of 3,000 shelters. The number of persons assisted had been 14,000, but it would eventually reach 20,000.

A. D. 1909 (July 1).—A second shock at Messina and Reggio.—During six months following the great catastrophe, Messina had been so far rebuilt and reoccupied as to have acquired a population of somewhat more than 25,000. To them, on the evening of June 30 and the morning of July 1, came once more the dread quaking of their unstable portion of the earth. The shocks as described in despatches to the Press "were similar to the fatal disturbances of December, and were accompanied by the same roaring noises. The people fled with cries of terror. They hurried to the open places of the city and the surrounding country, praying to the saints that their lives be spared. . . . So far as is known, however,

only a few people were hurt, and this undoubtedly is due to the fact that the city was only partially rebuilt. Had the walls of all the houses been standing the loss of life would have been heavy. One woman was killed by a falling wall, and a child was seriously injured." Reggio, as before, shared the experience, but there is said to have been no loss of life.

Late in the year it was reported to a London newspaper that "at Reggio a very fair advance has been made, and the city is already acquiring some air of its former busy prosperity; but in Messina and its neighborhood, little or nothing has been done in the way of permanent work, while the temporary accommodations for the survivors still leave much to be desired."

Jamaica: A. D. 1907. — The destruction of Kingston by earthquake and fire. — "On Monday afternoon, the 14th January, 1907, at about 3.30 P. M., the city of Kingston and its suburbs was almost entirely destroyed by heavy earthquake shocks. There was little or no wind at the time; what little there was was from the east, and the atmospherical conditions were quite normal. The shocks apparently approached from the south at first and then from the west. They are variously estimated to have lasted from ten to thirty seconds, the latter estimate being the general opinion. On the other hand, several Englishmen who were in the open at the time and in no immediate danger from falling houses, &c., consider 20 seconds the outside limit of time taken by the shocks. During this period an enormous amount of damage was done to life and property. Large numbers of buildings at once collapsed. As is, unfortunately, usual in such cases, fires broke out in several places in the commercial portion of the town. . . .

"Unfortunately, the Central Fire Station was destroyed by earthquake, so the fire engine was not available. The means at hand were thus very inadequate for fighting the flames, although they were supplemented greatly by fire-extinguishing appliances from the various ships alongside the wharves, and those belonging to the wharves themselves. The fire, however, spread with terrible rapidity, and all efforts were directed towards isolating the burning area. During this time the light wind blowing was about north-east, but it later in the afternoon went round to the north and north-west, thus lending tremendous assistance to the people in their efforts to extinguish the fire. Many injured persons, buried in the falling *débris*, were burnt to death. Meanwhile, vast numbers of the inhabitants were flying northwards to the racecourse and open spaces outside the town, where they spent the night — small earthquake shocks being felt at frequent intervals during that time. It may be said that the whole of Kingston and its suburbs are either destroyed or in ruins. A few of the substantially built houses are still standing, but so shaken and injured by the shocks that it will be impossible to repair them. . . .

"It is extremely difficult to estimate the total loss of life in the earthquake and fire. The Government have called on the inhabitants to register the names of their killed and missing, but up to this date [January 29] there has been little response. On the 25th January, some eleven days after the catastrophe, the numbers recorded at the Registrar's Office were only 121, although at least four times that number are known to have been buried or cremated. The careful opinion of prominent officials in Kingston is that the loss of life will be about 1000. Of the injured the daily number of in-patients at the hospital is about 300, mostly cases of concussions and legs amputated. . . .

"The large numbers of women, children, and old or disabled men encamped in the Public Gardens and racecourse, &c., were supplied with food rations daily, under the supervision of the Relief Committee. Over 3,000 people daily have been receiving this relief. At no time does there appear to have been a scarcity of food or water. A tremendous strain at once came on the staff of the hospital, the place being besieged with the injured and their relatives. Large numbers of medical men from the out districts at once proceeded to Kingston and assisted in attending to the wounded. With the aid of their ready assistance, and that of many volunteer nurses from the civil population, the hospital staff were enabled to cope with the situation, and at the present time work is proceeding there with great smoothness and regularity. The American ships 'Indiana,' 'Missouri,' and 'Whipple,' also, on arrival, landed their surgeons, who at once established a hospital on shore and rendered great assistance. . . .

"Directly after the earthquake, and while the fire was in progress, the greater portion of the black and coloured population were stupefied with terror and amazement, and lent little or no aid to the white members of the community and the troops and firemen in their rescue work. Vast numbers of them fled from the city. Some became frenzied and ran here and there declaring the end of the world had arrived, impeding the work and terrifying the workers. Others formed groups and commenced praying. At the Penitentiary, the prisoners, who remained seated in their ranks on the parade ground all night, spent the time in singing hymns without ceasing. As soon as the first panic had subsided, the black population became quite apathetic, and it was with great difficulty that the Government were able to get able-bodied men to take part in the work of demolition and clearing the streets. This, in spite of the fact that the wages offered were 25 per cent. more than the usual rate. . . .

"Considering the magnitude and widespread nature of the disaster, the loss of life might easily have been on a much larger scale. The earthquake came at a time of day when the labouring part of the population were at work away from their houses, and the streets in the busy commercial quarter presented the comparatively deserted appearance so usual in the afternoons in tropical places. As the streets in this quarter were very narrow and the buildings on each side of them lofty and of solid construction the loss of life must have been largely increased had the earthquake happened during the busy portion of the day. . . .

"Owing to the dry weather now prevailing here, the homeless population, roughly encamped on the open spaces, are suffering little or no hardship. It is to be hoped they may be permanently sheltered before the wet season commences." — *Report by Major Chown, R. M. L. I., of H. M. S. "Indefatigable"; dated Kingston, January 29, 1907.*

Relief to the stricken island came so swiftly and profusely from all parts of America, Eu-

rope, and almost every part of the world, that Governor Swettenham was able to telegraph on the 23d of January: "Money and provisions more than ample for relief. Except for rebuilding no funds needed." Three ships of the United States Navy, despatched by Admiral Evans from a Cuban port on the instant of receiving news of the disaster, reached Jamaica on the 17th and gave assistance in clearing the ruins, besides rendering hospital service and furnishing food and medical supplies. For the general lifting of the community from its prostration, the British Government, in May, by vote of Parliament, made a free grant to it of £150,000, and a loan to the Colonial Government of £800,000 more. — *Correspondence relating to the Earthquake at Kingston, Jamaica* (*Parliamentary Papers, Cd.* 3560).

Persia: A. D. 1909 (Jan.). — Destructive shock in Luristan. — Seismographs in many parts of the world gave token of a violent earthquake on the 23d of January, 1909; but three weeks passed before the locality of the shock was learned. It proved to have been centered in Western Persia, in the mountainous province of Luristan, and to have been heavily destructive of life. Its greatest severity was reported to have been in a region at two days journey from Burujurd. Many villages were wholly or partly destroyed, several having been completely engulfed, and the loss of life is estimated to have been between 5000 and 6000 people.

Portugal: A. D. 1909 (April). — Lisbon and its neighborhood upheaved. — Lisbon and the country surrounding it were shaken violently on the evening of Friday, April 23d, 1909. There were no fatalities in the city, but the outlying districts suffered severely, especially the towns of Benavente, Samora, and Santo Estevan. Reports three days after the disaster announced 46 killed and 38 injured at Benavente and Samora. Both villages were completely destroyed, and their 6000 inhabitants, starving and homeless, were encamped in the fields

Sumatra: A. D. 1909 (June). — Shocks and sea-wave in Upper Padang district. — News was received at The Hague in June, 1909, of severe shocks of earthquake, on the 3d of that month, at Korinchi, Upper Padang, Sumatra. The shocks were accompanied by an enormous sea-wave. Two hundred and thirty people were killed and many injured. Much damage was done.

ECUADOR: A. D. 1901-1906. — From revolution to revolution. — General Eloy Alfaro, who was made President by the revolution of 1895 (see in Volume VI.), was succeeded peacefully in 1901 by General Leonidas Plaza, and the latter, in turn, by Lugardo Garcia; but in 1906 the revolutionary method was revived in favor of General Alfaro, and he ousted Señor Garcia from the presidential chair.

EDUCATION.

Australia: A. D. 1907. — Latest Statistics of State Schools. — Statistics published in July, 1909, by the Commonwealth Government show that over £2,500,000 was spent on education by the Australian States in 1907 in 7500 State schools. The total daily average attendance at the schools for the year was 444,000. The disbursements of the States on University education amounted to £113,000.

Canada: A. D. 1905. — The question of State Support to Sectarian Schools revived on the creation of two new Provinces. See (in this vol.) CANADA: A. D. 1905.

A. D. 1907. — The founding and endowment of Macdonald College. — On the 16th of October, 1907, there was opened a new college of fine character and great importance, on a noble site, overlooking the Ottawa river, at Sainte de Bellevue, twenty miles west of Montreal. It bears the name of its founder, Sir William Macdonald, from whom it received an endowment of $4,000,000. This Macdonald College is divided into three schools: The School for Teachers, the School of Agriculture, the School of Household Science. Its main purposes are announced to be: (1) "The carrying on of research work and investigation and the dissemination of knowledge, with particular regard to the interests and needs of the population in rural districts"; and (2) the providing of "suitable and effective training for teachers, especially for those whose work will directly affect the education in schools in rural districts." It thus appropriates to itself a field of education for the betterment of farm life and work, the important need of which, looking to everything in national character and prosperity, is only beginning to be understood.

China: A. D. 1887-1907. — Christian Mission Schools. — "In the historical volume presented in 1907 at the Shanghai Conference [see, in this vol., MISSIONS, CHRISTIAN] Dr. Arthur H. Smith makes the following interesting comparison of the statistics presented at the three Protestant Missionary Conferences held in China in 1887, 1890, and 1907:

	1876.	1889.	1907.
Number of societies. . .	29	41	82
Foreign teachers.	473	1,296	3,833
Stations and substations	602		5,734
Pupils in schools.	4,909	16,836	57,683

"The above statistics, although incomplete, do serve as an indication of the vigorous growth of Protestant missionary educational activity in China. In this work the various missionary foundations made their most notable advance in interdenominational coöperation. In many instances several denominations have combined in

union schools or colleges. . . . One of the chief agencies in reaching this unity and effective co operation has been the Educational Association of China, founded as early as 1887. . . .

"No survey of missionary education in China would be complete without mention of the widespread, well-organized Roman Catholic activities. Of the eleven different Catholic orders having representatives in China, the Jesuits are carrying on the largest educational work. In 1907, in their five colleges and seventy-two schools, a total of 25,335 students were enrolled. All the Catholic orders together supervise the instruction of over 75,000 Chinese students; this total, it will be seen, being somewhat higher than that of Protestant missions."—George Marvin, *The American Spirit in Chinese Education* (*The Outlook, Nov.*, 1908).

A. D. 1901-1902.—Edicts of Reform.—Modernizing of Examinations for Literary Degrees and for Military Degrees.—New Universities, Colleges, and Schools.—Students sent abroad.—"An Edict on Reform in Education, published by the Chinese Government on the 29th of August, 1901, commanded the abolition of essays or homilies on the Chinese classics in examinations for literary degrees, and substituted for them essays and articles on modern matters, Western laws, and political economy. The same procedure was also to be observed in the future in the examination of candidates for office. By the same Edict it was ordered that as the methods in use for gaining military degrees—namely, trials of strength with stoneweights, agility with the great sword, and marksmanship with the bow and arrow on foot and on horseback—were not of the slightest value in turning out men for the army, where knowledge of strategy and military science were the *sine qua non* for military officers, these trials of strength, etc., should be thenceforth abolished forever.

"Another Edict for the establishment of new universities, colleges, and schools in China was published on the 12th of September, 1901. It commanded all existing colleges in the empire to be turned into schools and colleges of Western learning. Each provincial capital was to have a University like the Peking University, whilst the colleges in the prefectures and districts of the various provinces were to be schools and colleges of the second and third classes.

"Another Edict, for sending students to be educated abroad, was published on the 17th of September, 1901. It commanded the Viceroys and Governors of other provinces of the Empire to follow the example of the Viceroy Liu Kun-yi of Liangkiang, Chang Chihtung of Hukuang, and Kuei Chun (Manchu) of Szechuen, in sending young men of scholastic promise and ability abroad to study any branch of Western science or art best suited to their abilities and tastes, so that they might in time return to China and place the fruits of their knowledge at the service of the empire.

"Those who are acquainted with China know very well that many of the Edicts of the Government do not amount to much more than waste paper. In this case, however, it has not been so. The Imperial College in Shansi has been opened, with some 300 students, in the hope that it will develop into one of the provincial universities. It is divided into a Chinese and a Foreign Department. . . . The Edicts have not been a dead letter in the other provinces either, though there has been enormous difficulty in getting a sufficient number of professors to teach or of text-books to use. Some Chinamen who under the old system of education would not have got more than £30 per annum now get £240, and there are not enough of them. At the lowest estimate text-books and books of general knowledge of the West to the value of £25,000 must have been sold during this year alone. Books to the value of £6,000 were sold by the Society for the Diffusion of Christian Knowledge.

"I subjoin a list of the new colleges opened in ten different provinces in 1901-2:

Provinces.	Funds provided.
Chekiang	50,000 strings of cash per annum (about Taels 50,000, or over £6,000).
Honan	30,000 Taels per annum.
Kweichow	20,000 Taels per annum.
Fookien	50,000 Mex. Dollars per annum. (about £5,000).
Kiangsi	over 60,000 Mex. Dollars per annum.
Kwangtung	100,000 Taels per annum.
Soochow	several tens of thousands of Taels.
Nanking	
Shantung	50,000 Taels per annum.
Shansi	50,000 Taels per annum.
Chihli	
Prefectural Colleges in Soochow	Taels 10,000.
Prefectural Colleges in Shantung under R. C. Bishop Anzer	Taels 2,000

"This comes to about half a million of Taels annually for the whole Empire for modern education. Such is the new departure, which dates from 1901-2."—Timothy Richard, *The New Education in China* (*Contemporary Review, Jan.*, 1903).

A. D. 1906.—Chinese Students in Japan.—The following is from a communication to the State Department at Washington from the American Legation at Tokyo, under date of January 8, 1906: "During the past year Chinese students have come to this country in continually increasing numbers. Last summer the number was estimated at 5000, of whom 2000 had been sent at the expense of the Chinese Government. In November the number is said to have reached 8000. In addition to the supervision of the Chinese legation the students are looked after by eight superintendents sent to reside here by their Government.

"Until recently the Japanese authorities seem to have done nothing in this matter, but the magnitude of the number of Chinese students finally made a certain degree of supervision on their part seem wise. Accordingly, regulations for controlling schools open to the Chinese were promulgated by the minister for education on November 2, to go into effect from the 1st instant. . . . The publication of these regulations was greeted by a storm of protest. Bodies of Chinese students passed indignant resolutions, saying that their liberty was being assailed and seemed to find in the new rules an indignity to their nationality. The restriction in choosing schools and lodgings and the need of a letter of recommendation annoyed them most. The agitation was so great that over a thousand students returned to China; and no more have been coming since the trouble."

A. D. 1908.— The administration of the Department of Education in the Chinese Government.—Under the date of November 9, 1908, the Peking correspondent of the London *Times* wrote of the administration of the governmental Department of Education as follows: "The Ministry of Education is under the presidency of a learned scholar of the old type, Chang Chih-tung. The old system of examination has entirely been abolished. Education is improving, but there is little attempt at uniformity. There is no lack of desire to learn, but the teaching outside of the mission schools or of colleges under foreign control is quite unsatisfactory. No attempt is made to obtain the services of the best man. Japan engaged the best foreign teachers that money could find, with the result that the standard of education is there very high. But China seems to think any teacher good enough so long as he is a shade better educated than the pupil he has to teach."

On the other hand, Professor Thomas C. Chamberlin, of the University of Chicago, who spent four months of the past year in China, investigating educational conditions, has reported that "the old education has practically passed away, and the government is making strenuous, and on the whole remarkably successful, efforts to build up a system of education modelled on that of Europe and America. In all the larger cities of China buildings have been erected, teachers and pupils gathered, and schools of the modern type organized. In not a few cases, as, for example, at Foochow and in the far west at Chentu, the old examination halls have been torn down to make place for schools modelled on those of the west."

A. D. 1908. — Chinese Students in America. — "The disposition on the part of the Chinese Government to send picked students to America for their education, although interrupted for many years after the first set of twenty came in 1872, has since 1890 shown a comparatively steady growth. During the past year 155 Chinese students were maintained at various educational institutions in this country on foundations provided either by the Imperial or the Provincial Governments. Out of this number seventy-one are under the charge of the Imperial Chinese Legation at Washington; twenty-seven are under the direction of Chang-Chuan, Commissioner of Education for the Viceroyalties of Hupuh and Kiangnan; fifty-seven others have been during the past year under the direction of Dr. Tenny, at present Chinese Secretary of our Legation at Peking. These last, although coming from various parts of the Empire, all received their elementary education at the Peyang College in Tientsin, of which Dr. Tenny was formerly principal. At the request of Yuan-Shih-Kai, then Viceroy of Chihli, of which province Tientsin is the chief city, Dr. Tenny in 1906 assumed charge at Cambridge of the Peiyang candidates sent to America, including those now at Harvard and the various other colleges where, at his suggestion, they were quartered. Since Dr. Tenny's return in July last to Peking, his position has been filled by the appointment of Mr. H. F. Merrill, for many years Commissioner of Customs at Tientsin. . . .

"Quite apart from this official recognition of the advantages of an American education, many Chinese families send their sons at their own expense to schools and colleges in this country. It has been impossible to procure exact statistics of the number of these privately supported students, but, according to the best advices obtainable at the Chinese Legation, there are about two hundred. . . .

"More important than anything that has yet taken place in this movement of Chinese education in America is the recent determination on the part of the Imperial Government to devote a sum equal to that placed at their disposal by the remission of the Boxer indemnity to the founding of an Educational Mission in this country. . . . According to the terms of the agreement contained in the note of Prince Ch'ing to Mr. Rockhill last July, by the end of the fourth year from the inauguration of the scheme four hundred students, sent by the Imperial Government, will be added to the large and growing number of their young fellow-countrymen already coming to America." — George Marvin, *The American Spirit in Chinese Education* (*The Outlook, Nov.*, 1908).

An English correspondent, writing from Peking, Sept. 24, 1909, reported: "This week 47 students selected by examination for proficiency in English and Chinese are leaving Peking for the United States to enter upon studies paid for by funds from the unexpended balance of the Boxer indemnity. They have been selected from nearly 500 candidates who competed for this great reward from many provinces of the Empire. An excellent body of young men, they ought to do credit to their country." See, also (in this vol.) CHINA: A. D. 1901-1908.

A. D. 1909. — Progress in Technical Education. — The following statements were in a Press despatch from Tien-tsin, July, 1909: "Technical education in China shows unmistakable signs of extension. A very few years ago nothing existed which was worthy of the name, while now it is not too much to say that in the course of a few years the engineering schools of China will be second only to the best in Europe and America. Engineering courses are now being given at the following institutions: Imperial Polytechnic Institute, Shanghai; Imperial University of Shansi, Tai-yuan-fu; Tangshan Engineering and Mining College, Tangshan; and Imperial Pei Yang University, Tien-tsin."

A. D. 1909. — Formation in Great Britain and America of the China Emergency Appeal Committee. — "Speaking at the Mansion House meeting [London] of the China Emergency Committee held under the presidency of the Lord Mayor on March 16, 1909, Sir Robert Hart, whose long work as Inspector-General of the Imperial Chinese Customs has given him the profoundest knowledge of China and its people, said: 'We are alarmed lest Western knowledge and Western science may give the Chinese people strength without principle, and may even bring in a crude materialism without that higher teaching and higher guidance which are necessary for the best welfare of any people.'

"It is the realization of that danger, but even more a realization of the needs of China, which have led to the formation of the China Emergency Appeal Committee. . . . It is the object of this Committee to utilize to the full the unexampled present opportunity of establishing in China institutions through which the Chinese people may be trained to educate themselves in the Western knowledge and civilization which they have set themselves to acquire.

EDUCATION

"There is, first, China's crying need of medical education — of schools and hospitals in which Chinese students will be taught and practise medicine and surgery. . . . Not less needed is the establishment of colleges and centres for the training of Chinese teachers for the primary and secondary schools which are being established everywhere throughout this Empire of 400,000,000 inhabitants. The China Emergency Committee appeals for £40,000 to build and equip these training colleges. Thirdly, there is a demand throughout China for translations of European books. The demand far exceeds the supply, though it is only through literature that the Chinese gentleman will acquaint himself with Western thought and learning. The books sell in vast numbers, but the work of translation involves heavy preliminary expenses. . . . These are the three objects for the attainment of which the China Emergency Committee has been established." — *London Times, July* 17, 1909.

On the initiative of the English Committee, of which Sir Robert Hart is chairman, a proposal to move similarly in America came before a recent conference of foreign mission boards of the United States and Canada. A committee, Rev. Dr. Arthur J. Brown, chairman, to whom the proposition was referred, reported favorably. The conference approved the report, and provided that a permanent committee be appointed, to consist of those serving with Dr. Brown, together with twelve laymen, to be chosen by the committee. This new committee is "to promote a larger interest in Christian education in China." It will assist the boards and other Christian agencies and coöperate with the general education committee appointed by the Shanghai conference and with the China Educational Association.

Cuba: A. D. 1899-1907. — Organization of Schools during the American Occupation. — Census-showing of results in 1907. — "During the American occupation of Cuba especial attention was given to the establishment of common schools and other educational institutions. The enrollment of the public schools of Cuba immediately before the last war shows 36,306 scholars, but an examination of the reports containing these figures indicates that probably less than half the names enrolled represented actual attendance. There were practically no separate school buildings, but the scholars were collected in the residences of the teachers. There were few books and practically no maps, blackboards, desks, or other school apparatus.

"The instruction consisted solely in learning by rote, the catechism being the principal text-book, and the girls occupying their time chiefly in embroidery. The teachers were allowed to eke out their unpaid salaries by accepting fees from the pupils. . . . At the end of the first six months of American occupation the public school enrollment of the island numbered 143,120. The schools were subjected to a constant and effective inspection and the attendance was practically identical with the enrollment. . . .

"All over the island the old Spanish barracks and the barracks occupied by the American troops which had been withdrawn were turned into schoolrooms after thorough renovation. The pressure for education was earnest and universal. The appropriations from the insular treasury for that purpose during the first year of American occupation amounted to four and a half millions.

"At the close of American occupation there were 121 boards of education elected by the people (the system was kept out of politics); the work of changing the old barracks throughout the island into schoolhouses had been completed; a thoroughly modern school building costing $50,000 had been erected at Santiago; one school building in Habana had 33 rooms, with a modern kindergarten, manual-training branch, two gymnasiums, and baths; large schools had been established by changes in government buildings at Guineas, Pinar del Rio, Matanzas, Cieguo de Avila, and Colon; over 3600 teachers were subjected to examination, and approximately 6000 persons applied for and received examination as teachers. For six weeks during the summer vacation of 1901, 4000 teachers were collected in teachers' institutes." — *Establishment of Free Government in Cuba* (*58th Congress, 2d Session, Senate Document no.* 312).

"The public-school system organized under the first intervention in Cuba, is producing excellent results. Of the population 10 years of age and over, 56.6 per cent could read, showing a decided gain in that respect since 1899. Of the native whites, 58.6 per cent could read, and of the colored 45 per cent were similarly educated." — *National Geographic Magazine, Feb.*, 1909, *p.* 202.

Egypt: A. D. 1901-1905. — Recent Development of Public Primary Schools. — Schools for Girls. — "Before the English occupation great masses of Egyptians remained ignorant. Over 91 per cent. of the males and almost 99¼ per cent. of the females could neither read nor write. Until within the last five years public primary education for the poorer classes, aside from the mere learning of the Koran, was almost unknown. At the present time public schools are being established everywhere, and grants in aid of these schools are paid in proportion to the attendance and the records made by the pupils. Likewise, certain positions in the civil service can be filled only by those who hold certificates from schools of certain grades. As a consequence there has been a great awakening of interest. Most of the teachers of these public schools are Mohammedan, and the schools are non-Christian in their instruction. The Koran is still used as a text-book for many purposes, but the education is practical in its general nature. The children are taught, besides reading and writing, the elements of the sciences, and they choose either French or English as the foreign language which they will learn, and that in which they will receive instruction in the more advanced studies where Arabic text-books cannot readily be provided. It is a noteworthy fact that while, in the earlier days, French was the language more frequently chosen, nearly all the pupils are now selecting English. There are also provisions for training in law, medicine, agriculture, engineering, etc. The law school is the most popular, while the agricultural college — although the basis of Egyptian wealth and prosperity is and must always be agriculture — suffers from lack of pupils. Female education has not been neglected, and we may expect in the near future that instead of 99¼ per cent. of the women being unable to write, a very large

per cent. of the mothers of the country will be able to give their children the rudiments of education at home." — Prof. J. W. Jenks, *The Egypt of To-day* (*International Quarterly Rev., Oct.*, 1902).

"A revolution is a growth, not a cataclysm: the seeds of the Egyptian Revolution were sown in the autumn of 1901 when Miss Amina Hafiz Maghrabi was admitted to the Stockwell Road Training College for Teachers. Miss Amina is the daughter of one of the Officials in the Ministry of Public Instruction at Cairo, and after passing a preliminary examination was sent to England to be educated at the expense of the Egyptian Government. . . . Miss Amina spent nearly three years at Stockwell; then she returned to her own people: now she is a teacher at the Abbas Public Girls' School at Cairo, and the right hand of Miss Spears, the Principal; this seed is bearing fruit. No Revolution can be a success unless the women take it up, and it is the women who are going to turn Egypt upside down; it is the Mussulman women who have already begun to do so. . . .

"The really astonishing work that has been going on for nearly two years is the education for the teaching profession of girls of the better class aged from about fourteen to twenty. There are two or three schools where these girls are received as boarders, and carefully tended by European mistresses; the amazing thing is that they throw aside their veils and consent to be taught by men. . . . In all the State schools of Egypt the Koran is taught. In one corner of the garden is a small room built to serve as a mosque; attendance is voluntary, but three times a day each girl retires there for private prayer.

"These schools have been recently founded to provide female teachers; they have not been in existence long enough for any girls to have completed the two-years' course; it may be they will fail in their primary object; it is possible that the girls who have been educated will none of them persevere in the teaching profession; nevertheless, as Egyptian wives and mothers, they must become the leaders of the revolution." — Edmund Verney, *A Revolution in Egypt* (*Contemporary Review, July*, 1905).

A. D. 1908. — Gordon Memorial College at Khartoum. — From the eighth annual report of the Director of Education in the Sudan it appears that the Gordon Memorial College, founded at Khartoum in 1899 (see, in Vol. VI. of this work, Egypt: A. D. 1898–1899), is now composed of the following educational units: "The primary school, which has been attended by 190 pupils, the training college — vernacular and English — by 178, of which 150 belong to the vernacular side, and the upper school for the training of engineers and surveyors by 28 students. One hundred and seventy-two are on the roll of the instructional workshops. There is, he remarks, no doubt whatever about the popularity of the military school among the inhabitants of the country, both Arab and Sudanese. Some 20 young men have now received commission in the famous black battalions, or in the new Arab levies now being raised. They have almost all been well reported on. He understood that the responsible Army authorities propose to increase this school substantially, and to render it capable of holding twice the present number of cadets." The College is reported to have "felt the strain of existing financial difficulties very keenly, and the rate of progress has hardly been maintained this year." — 1908.

England: A. D. 1902. — The Education Act, in the interest of the Voluntary or Church Schools. — Text of its provisions most obnoxious to the Nonconformists. — "Passive resistance" among them to the law. — Under the Education Act of 1870, which created in England for the first time a system of officially regulated and publicly supported elementary schools (see, in Volume I. of this work, Education: Modern: England: A. D. 1699–1870), those schools divided the work of elementary education with schools of another, older system, founded, maintained, and managed by the churches of the country, — mainly by the predominant Established Church of England. The public elementary schools, supported out of local rates and governed by locally-elected school boards were called Board Schools; the others were called Voluntary Schools. The latter received some public money from an annual Parliamentary grant, but nothing from the local taxation which supported the former. In the Voluntary Schools under church control religious teaching was prescribed and given systematically; in the Board Schools it was not. Those who held religious teaching, of their own denominational orthodoxy, to be a vital part of education, were ardent partisans of the Voluntary Schools. Those who approved the exclusion of theological differences from the teaching of the Board Schools were equally ardent champions of those. As a rule, the adherents of the Established Church and of the Roman Catholic Church were opponents of the public system, while the Dissenters or Nonconformists of all sects gave it strenuous support. Thus the two systems were mischievously antagonized, and almost from the beginning of the operation of the Act of 1870 it had been manifest that one or the other must ultimately give way to its rival.

In 1902 the Conservative party, in which the Established Church of England is most largely represented, found itself strong enough in Parliament to undertake the nationalizing of the Voluntary Schools in England and Wales, incorporating them with their rivals in one reconstructed national system, but securing their domination in it, along with equal sharing from the public purse. A Bill for the purpose was proposed to the House of Commons on the 24th of March by Mr. Balfour, then the Administration leader in the House. In his speech on a motion for leave to bring it in he spoke of the need of a single authority for education, primary, secondary, and technical; of the disadvantages of the two organizations of elementary schools, and of the absurdity of supposing that the great number of Voluntary Schools and Endowed Schools could be swept away and replaced at enormous public cost. The proposed Bill, based on these views, would extinguish the local School Boards and make the County Council in counties and the Borough Council in county boroughs the one local education authority. As introduced subsequently and enacted, after heated and long debate, the Bill accomplished its leading objects, so far as concerned elementary education, by provisions of which the following is the text:

"PART III. ELEMENTARY EDUCATION. 5. The local education authority shall throughout their area have the powers and duties of a school board and school attendance committee under the Elementary Education Acts, 1870 to 1900, and any other Acts, including local Acts, and shall also be responsible for and have the control of all secular instruction in public elementary schools not provided by them, and school boards and school attendance committees shall be abolished.

"6. — (1) All public elementary schools provided by the local education authority shall, where the local education authority are the council of a county, have a body of managers consisting of a number of managers not exceeding four appointed by that council, together with a number not exceeding two appointed by the minor local authority. Where the local education authority are the council of a borough or urban district they may, if they think fit, appoint for any school provided by them a body of managers consisting of such number of managers as they may determine.

"(2) All public elementary schools not provided by the local education authority shall, in place of the existing managers, have a body of managers consisting of a number of foundation managers not exceeding four appointed as provided by this Act, together with a number of managers not exceeding two appointed — (*a*) where the local education authority are the council of a county, one by that council and one by the minor local authority; and (*b*) where the local education authority are the council of a borough or urban district, both by that authority.

"(3) Notwithstanding anything in this section — (*a*) Schools may be grouped under one body of managers in manner provided by this Act; and (*b*) Where the local education authority consider that the circumstances of any school require a larger body of managers than that provided under this section, that authority may increase the total number of managers, so, however, that the number of each class of managers is proportionately increased.

"7. — (1) The local education authority shall maintain and keep efficient all public elementary schools within their area which are necessary, and have the control of all expenditure required for that purpose, other than expenditure for which, under this Act, provision is to be made by the managers; but, in the case of a school not provided by them, only so long as the following conditions and provisions are complied with: —

"(*a*) The managers of the school shall carry out any directions of the local education authority as to the secular instruction to be given in the school, including any directions with respect to the number and educational qualifications of the teachers to be employed for such instruction, and for the dismissal of any teacher on educational grounds, and if the managers fail to carry out any such direction the local education authority shall, in addition to their other powers, have the power themselves to carry out the direction in question as if they were the managers; but no direction given under this provision shall be such as to interfere with reasonable facilities for religious instruction during school hours;

"(*b*) The local education authority shall have power to inspect the school;

"(*c*) The consent of the local education authority shall be required to the appointment of teachers, but that consent shall not be withheld except on educational grounds; and the consent of the authority shall also be required to the dismissal of a teacher unless the dismissal be on grounds connected with the giving of religious instruction in the school. . . . [Here follow provisions relative to schoolhouses and teachers' dwellings.]

"(3) If any question arises under this section between the local education authority and the managers of a school not provided by the authority, that question shall be determined by the Board of Education.

"(4) One of the conditions required to be fulfilled by an elementary school in order to obtain a parliamentary grant shall be that it is maintained under and complies with the provisions of this section.

"(5) In public elementary schools maintained but not provided by the local educational authority, assistant teachers and pupil teachers may be appointed, if it is thought fit, without reference to religious creed and denomination, and, in any case in which there are more candidates for the post of pupil teacher than there are places to be filled, the appointment shall be made by the local education authority, and they shall determine the respective qualifications of the candidates by examination or otherwise.

"(6) Religious instruction given in a public elementary school not provided by the local education authority shall, as regards its character, be in accordance with the provisions (if any) of the trust deed relating thereto, and shall be under the control of the managers: Provided that nothing in this subjection shall affect any provision in a trust deed for reference to the bishop or superior ecclesiastical or other denominational authority so far as such provision gives to the bishop or authority the power of deciding whether the character of the religious instruction is or is not in accordance with the provisions of the trust deed.

"(7) The managers of a school maintained but not provided by the local education authority shall have all powers of management required for the purpose of carrying out this Act, and shall (subject to the powers of the local education authority under this section) have the exclusive power of appointing and dismissing teachers.

"8. — (1) Where the local education authority or any other persons propose to provide a new public elementary school, they shall give public notice of their intention to do so, and the managers of any existing school, or the local education authority (where they are not themselves the persons proposing to provide the school), or any ten rate payers in the area for which it is proposed to provide the school, may, within three months after the notice is given, appeal to the Board of Education on the ground that the proposed school is not required, or that a school provided by the local education authority, or not so provided, as the case may be, is better suited to meet the wants of the district than the school proposed to be provided, and any school built in contravention of the decision of the Board of Education on such appeal shall be treated as unnecessary.

"(2) If, in the opinion of the Board of Education, any enlargement of a public elementary school is such as to amount to the provision of a

new school, that enlargement shall be so treated for the purposes of this section.

"(3) Any transfer of a public elementary school to or from a local education authority shall for the purposes of this section be treated as the provision of a new school.

"9. The Board of Education shall, without unnecessary delay, determine, in case of dispute, whether a school is necessary or not, and, in so determining, and also in deciding on any appeal as to the provision of a new school, shall have regard to the interest of secular instruction, to the wishes of parents as to the education of their children, and to the economy of the rates; but a school for the time being recognized as a public elementary school shall not be considered unnecessary in which the number of scholars in average attendance, as computed by the Board of Education, is not less than thirty."

The main contentions were raised by these sections of the Bill, and as soon as their bearing and effect were discerned the Nonconformist opposition was rallied in strong force. "The main ground of objection taken," says the *Annual Register*, "was that, while throwing the whole charge of the maintenance of denominational schools (apart from that of the fabrics) on public funds, it failed to secure to the local public any real control over the management of the schools so maintained, and amounted in effect to a new endowment of the Church of England; also that it perpetuated and enhanced the injustice of the pressure of the system of religious tests in the profession of elementary teaching, which would now, it was said, if the Bill should pass, be the permanent monopoly of Anglicans in the schools educating more than half of the children of the working classes. Denunciatory resolutions based generally on grounds of this character, were passed by the National Free Church Council, the London Congregational Union (April 8), the General Committee of the Protestant Dissenting Deputies, and other bodies; and at an early date a disposition, to which both encouragement and expression were vigorously administered by the *British Weekly*, was somewhat extensively shown to urge that it would be the duty of Nonconformists to refuse to pay the education rate if the Bill should become law. Dr. Parker, of the City Temple, in a letter to the *Times* (April 5), avowed himself earnestly in favour of this policy, which was also defended by the Rev. H. Price Hughs. It was opposed by the Rev. John Watson, of Liverpool (known in the literary world as 'Ian Maclaren'), but the voices of restraint among the Nonconformist opposition were less audible than those of indignant reproach and menace."—*Annual Register*, 1902, p. 107.

The following from an article by Rev. J. Guinness Rogers shows the attitude and feeling of the Nonconformist opposition:

"Hitherto a certain proportion of the cost of these schools has been borne by Churchmen themselves, and Nonconformists have been content to regard that as fairly providing for the sectarian teaching that was given. They did not regard the arrangement as wise or salutary. But they acquiesced considering that they had no responsibility whatever for the denominational teaching that was given. The new Act alters all the conditions. The State now assumes all the responsibility for the support of these schools. The last vestige of voluntary support is swept away, and they become in every sense part of the National School system. The burden of their support is thrown upon the public funds. Only in the matter of control and of their religious teaching do they retain anything of their private character. . . . They are to be supported out of the public funds. But they constitute a privileged class of schools under private managers, and their chief teachers have to belong to a particular Church and to give instruction in its principles and doctrines. It is this which has stirred the indignation of Nonconformists. They conscientiously object to pay for the support of schools staffed by Anglican teachers and employed in the dissemination of Anglican doctrines. . . .

"For thirty years the Free Churches of England have quietly submitted to an arrangement which practically left thousands of the schools under the absolute sway of the clergy. There were thus vast districts of the country, and those the districts least open to the free play of public opinion, in which Nonconformist children were forced into the ranks of the pupils, while Nonconformist teachers were just as resolutely kept out of these favoured preserves of sectarianism. But even this did not satisfy the clergy and their friends. During almost the whole of the period in question there have been continual attempts to secure better terms for those already so highly privileged. At length came the period for decided action. . . . The whole character of our educational apparatus has been changed, and changed in a manner as unfavourable to constitutional liberty as to religious equality. School boards were institutions in which Nonconformists had taken a deep interest and in which in many of the large towns they had achieved conspicuous success. They have been ruthlessly swept away, and henceforth the work of education in our large towns and cities is entrusted to committees chosen by County Councils: Mr. Balfour showing here the same dislike of popular control as characterises his administration in the House of Commons. Can it be thought wonderful that Nonconformists have been goaded into resistance by a policy so high-handed and so determined? We have heard enough of the intolerable strain put upon the supporters of the voluntary schools. The strain of clerical intolerance and Tory partiality has become still more intolerable."—J. Guinness Rogers, *The Nonconformist Uprising* (*Nineteenth Century, Oct.*, 1903).

A weightier and more statesman-like objection to the Act was set forth by the Rt. Hon. James Bryce in the following:

"Of all the causes which have kept education in England, secondary as well as elementary, below the level it has reached in such countries as Switzerland and Scotland and New England, the most deep seated is the want of popular interest and popular sympathy. The people have not felt the schools to be their own, have not been associated with the management, have not realised how largely the welfare and prosperity of the nation depend on the instruction which each generation receives. Since 1870 something has been done to stimulate popular interest by the creation of School Boards (whose admirable work in the large towns is admitted even by the Ministry which proposes to destroy them), by the introduction of a large representative ele-

EDUCATION

ment upon the governing bodies of endowed secondary schools, and by entrusting County and Borough Councils with power to spend money upon technical instruction. What can be plainer than that a wise statesmanship ought to follow in the same path endeavouring to create everywhere local educational authorities chosen by the people and responsible to the people, keeping these local authorities up to the mark by making a share in the imperial grant conditional upon full efficiency, but teaching them to look upon the schools as their own, and to feel that it is their own interest as parents and citizens to make their schools worthy of an advancing nation? No such idea has been present to those who framed this Bill. It reduces, instead of increasing, the element of popular interest and popular control.

"School Boards are to be swept away, and with them those elected women members who have been so valuable and influential an element. The substituted County and Borough Councils are, no doubt, elective bodies. But they have so many functions already besides those educational functions which are now to be thrown on them that the latter will play a small part, and their discharge of those functions cannot be effectively reviewed by the people at an election. Moreover, every Council is directed to act through an Education Committee largely, or possibly entirely, consisting of persons outside their own bodies. It is certainly desirable to secure an element of special knowledge. But the policy of these committees — and policy (except as regards finance) is to rest with them — will never be subject to any review by the electors, to whom the committees are nowise responsible. The fault is still worse when we come to the local managers. Where there exist only denominational schools, there will be no popular control at all, for the permissive appointment by the Education Committee of not more than one-third of the local managers is a merely nominal concession, quite illusory for the purpose of securing any local power, any local interest, any local sympathy. In most cases this permissive right of appointment will probably be used to add to the denominational managers some person or persons recommended by them, or one of them, to the Education Committee, which sits in the distant county town and may know nothing about the locality.

"It is not from any superstitious faith in popular election or in what are called 'democratic principles' that I deplore these provisions of the Bill. It is because they tend to withdraw from education one of its most valuable propulsive forces. Let us hear the Schools Inquiry Commissioners of 1868, among whom were the present Archbishop of Canterbury, the late Bishop of Winchester, and another eminent ecclesiastic.

"'No skill in organisation, no careful adaptation of the means in hand to the best ends, can do as much for education as the earnest co-operation of the people. The American schools appear to have no great excellence of method. But the schools are in the hands of the people, and from this fact they derive a force which seems to make up for all their deficiencies. . . . In Zurich the schools are absolutely in the hands of the people, and the complete success of the system must be largely ascribed to this cause. . . . It is impossible to doubt that in England also inferior management, if it were backed up by very hearty sympathy from the mass of the people, would often succeed better than much greater skill without such support.'

"These words were spoken of secondary education. They apply with even greater force to elementary. The experience of thirty-four years confirms them. But there is nothing in this Bill to give effect to their principle." — James Bryce, *A Few Words on the New Education Bill* (*Nineteenth Century*, May, 1902).

The Education Bill passed its third reading in the House of Commons on the 3d of December, by a vote of 246 against 123, being a majority of exactly two-thirds. In the House of Lords it received brief discussion and a few amendments, which the Commons accepted, and it was sent quickly to the King, receiving the royal assent December 18. And now there came into action the stubborn revolt which took the name of "passive resistance," — the refusal, that is, of a considerable body of people to pay the rates levied for school purposes under a law which they held to be unjust. Their attitude, and the consequences they suffered, in imprisonment and the seizure and sale of their property, are described in the following passages from an article by one of the leaders of the movement:

"It is difficult to believe that, at the beginning of the twentieth century, Englishmen of high character and indisputable loyalty are being sent to prison for exactly the same reasons as those which were urged for committing John Bunyan to Bedford Gaol; for exposing Richard Baxter to the browbeating of Judge Jeffreys and a sentence of eighteen months incarceration; and for sending George Fox to the noisome dungeons of Carlisle and Derby, Lancaster and London. Americans cannot credit it. The colonists of Canada and Australia say, 'Can these things be?'; and even Englishmen would never accept the humiliating conclusion, if they were not confronted by the undeniable fact. The fact is that nearly one hundred freemen of England, respectable and God-fearing citizens, have been sentenced to different periods of imprisonment since November, 1903. . . .

"Imprisonment is only one phase of this advancing cause; another is that of the public sale of the furniture, pictures and books of those who refuse to submit. The first sale was at Wirksworth, in Derbyshire, on June 26th, 1903; and it has been followed by about 1,600 more in different towns and villages, all over England. . . . In one extremely flagrant instance, one hundred pounds' worth of goods were taken for the sum of fifteen shillings, and in many cases fidelity to conscience has meant loss of trade and of position. . . . No less than 40,000 summonses have been sent forth by the overseers to compel recalcitrant rate-payers to appear before the magistrates and 'show cause' why they will not pay. . . .

"Now, it is for that process we cannot and will not pay any rate whatever. We object to many of the provisions of the Education Acts. They are anti-democratic, unfair, unjust; they are destructive of educational efficiency and social peace; but the one thing that has created the Passive Resistance movement is not the destruction of the School Board, not the loss of popular control, but this intrusion into the realm of conscience by the State. That is the prime

factor in this situation. To that 'we will not submit,' declared Dr. Fairbairn to Mr. Balfour when the Bill was before the House. In short, we say with Bunyan to our persecutors, 'Where I cannot obey actively, there I am willing to lie down, and to suffer what they shall do unto me.'" — John Clifford, *Passive Resistance in England and Wales* (*North American Review*, *March*, 1905).

In Wales, where the Nonconformists are very strong, the resistance became more than passive. The County Councils refused generally to put the Act into operation, and Parliament, in August, 1904, passed what was described as the "Welsh Coercion Act," to compel their obedience to it. This Act authorized the central Board of Education, in the case of a county proclaimed in default to provide for Church schools and to deduct such appropriation from the Government grant for educational uses to the county. As the deficit thus caused in the sum available for the National schools would have to be made up by the county, the recalcitrant county would thus indirectly be saddled with the maintenance of the Church schools. But Welsh resistance was not so easily overcome; for a new plan was devised, according to which every proceeding under the Coercion Act would be met by the resignation of county education committees and managers of the National schools. This would paralyze the central Board, which has no power to fill the places thus vacated.

A. D. 1904. — Church Attendance in School Hours. — A circular issued by the Board of Education, in July, relative to the taking of children from Church schools, during school hours, to attend Church services on Saints' days, caused great dissatisfaction and complaint in Church circles. The practice had been permitted hitherto; but the Board ruled that school time-tables making provision for this must have the sanction of the local school authorities, which in many cases were opposed to the practice. A "Church Schools Emergency League" was now organized to contest the action of the Board.

A. D. 1905. — Underfed School Children. — An order issued by the Local Government Board, in April, directed that, in the case of school children under sixteen, found to be underfed, who were not blind, deaf or dumb, and who were living with a father not in receipt of relief, there must be application for relief made to the guardians of the poor by a teacher empowered by the managers, or by an officer authorized by the education authorities. The guardians must then investigate the case and decide whether relief should be given as a loan or in the ordinary mode, and notify the father accordingly; thus giving the parent the opportunity to make the needed provision himself. If he did not do so, the guardians were empowered to recover from him the cost of the necessary relief by county court process.

The report of the Board of Education for the year 1907–1908, published in March, 1909, states with reference to the feeding of necessitous school children that: "From December 21, 1906, when the Education (Provision of Meals) Act, 1906, came into operation, to July 31, 1908, 51 local education authorities have been authorized to spend money from the rates in providing food for school children. Of the 20 authorities referred to in last year's report as having taken power to spend money for this purpose 14 have obtained sanction to spend money in a second year."

A. D. 1906.— Education Bill passed by the House of Commons and killed by amendments in the House of Lords. — The defeat of the Conservatives and Unionists in the Parliamentary elections of January, 1906, was ascribed very largely to popular dissatisfaction with the Education Act of 1902. Hence, on the resignation of the Balfour Ministry and the call of the Liberals, under Sir Henry Campbell-Bannerman, to the administration of the Government, the new masters of legislative authority were held to have received a mandate from the people to amend the objectionable law. On the 9th of April a Bill to that end was brought forward by Augustine Birrell, President of the Board of Education and again the old disputes over denominational religious teaching in schools supported by the public at large were re-enlivened and re-heated, in Parliament and out. In December it passed the House of Commons by a majority of 192, and went to the Lords. A succinct and clear statement of the intent of the Bill, as framed by the Government, was given in an article contributed to *The Outlook* of August 4, 1906, by Dr. Clifford Webster Barnes Special Commissioner of the Religious Education Association to investigate moral and religious instruction in European schools. In the framing of the Bill it had been assumed that the overwhelming majority which swept the new Government into power had determined that the following principles should be enacted into law: 1. Unification of the public school system. 2. Complete local control where public funds are received. 3. Abolition of religious tests for teachers.

"The new bill by its first clause," wrote Dr. Barnes, "has virtually met these three requirements. It makes it impossible for the State, hereafter, to recognize or provide for any school unless it comes under the absolute control of the local authority; and as church boards are thus supplanted, religious tests for teachers need no longer be feared. In later clauses, also, special safeguards are arranged to protect the teachers from this sort of test. If the bill, after providing the necessary machinery with which to carry out its first clause, went no further, the extreme Nonconformist would undoubtedly have given it most hearty support, and the wrath of the Church party might possibly have been no greater. But love for fair play has prevailed in the Cabinet, and the Liberal Government has proved its right to the title by introducing, in clauses 2, 3, and 4, special provisions for leasing the denominational schools and for permitting their owners to give the religious instruction distinctive of the church to which they belong. . . .

"The bill, therefore, makes the following concessions:

"1. For the purpose of continuing any existing voluntary school it permits the local authority, on some arrangement being made with the owners, to take over such school, provided it is structurally fit. The State will then pay the entire cost of maintenance, keep the property in good repair, and use it only between the hours of 9 A. M. and 4 P. M., from Monday to Friday inclusive. At all other times the owners are privileged to do with it as they see fit. On two mornings of the week, between 9 and 9.45, the

religious teaching peculiar to the denomination owning the property may be given, but children whose parents do not wish such teaching are to be excused during that time.

"3. In urban areas where there is a population of five thousand or over, a Church school may remain as denominational as at present, the distinctive dogmas of the Church being taught as much as may be desired, provided the parents of four-fifths of the children vote in favor of this arrangement, and provided, also, that there are accommodations in some neighboring school for those whose parents prefer undenominational instruction. In every case that portion of the religious teaching which is distinctively denominational must be paid for by the church giving it. Statistics show that by this concession one hundred per cent. of the Jewish schools will be able to preserve their denominational character, seventy-five per cent. of the Catholic schools, fifty per cent. of the Wesleyan, and twenty-five per cent. of the Church of England. By the previous concession, of course, all the remaining schools of the various denominations will be able to give their distinctive theological teaching on two mornings of each week.

"But this denominational instruction is not the only religious education which the schools will provide. By the bill of 1870 local authorities were permitted to introduce a kind of simple Bible teaching which has been nicknamed, from the author of the act, 'Cowper-Templeism.' It consists of Bible lessons covering the Old and New Testaments arranged according to some well-planned syllabus, the majority of these being modeled after that of the London County Council. The exercise opens with prayer and a hymn, after which the children tell the Bible story of the day and are assisted by the teacher to draw from it some suitable moral lesson, but no creed or religious formulary distinctive of any denomination can be used. This teaching must be given in the first hour of the morning, between 9 and 9.45, and any child may be excused from attendance upon the request of its parent. It is a significant fact that the Nonconformists of 1870 were unanimously opposed to the Cowper-Temple clause, and that it was put through only by the strong and united effort of the bishops. Now it is the Nonconformists who, to a man, favor this kind of instruction, while some at least of the bishops, in their eagerness to preserve denominationalism, go so far as to say 'this teaching undermines the foundations of Christianity.'"

In the House of Lords the Bill came under the Church influences which had dictated the Act of 1902, and it was slashed with amendments which would totally reverse its operation on all the controverted points. That procedure killed the measure, of course; and so the burning school question remains unsettled, while England gives much thought to another question, — What to do with the House of Lords? — See ENGLAND: A. D. 1906 (APRIL–DEC.).

A. D. 1907 (Nov.). — Failure to compromise the Religious Sectarian Differences concerning Public Education. — Attempts to negotiate a compromise with the religious bodies whose antagonism wrecked the Education Bill of 1906 went so far as to induce the Government, in November, 1907, to introduce a Bill embodying the points on which agreement had been reached. The outcome was stated in the report of the Board of Education for 1907–8, as follows: "It became apparent after some progress had been made in Committee that denominational assent could only be obtained by still further concessions, including a substantial increase in the grant to contracting-out schools. Your Majesty's Government have always maintained that the number of schools availing themselves of the privilege of contracting out must be strictly limited, that the grant provided by the Bill was sufficient to afford a limited number of schools a reasonable chance of existence, and that to increase the grant beyond this sum would enable the great majority of schools to take advantage of the privilege, and would involve the establishment of a system of contracting-out as the rule instead of the exception. In view of the impossibility of obtaining agreement without such amendments as were, in the opinion of your Majesty's Government, inadmissible, it was found necessary to withdraw the Bill."

A. D. 1908. — Provisions of the Children Act relating to Industrial and Reformatory Schools. See (in this vol.) CHILDREN, UNDER THE LAW.

A. D. 1908-1909. — Oxford Teaching for Working People. — In 1908 the Convocation of the University of Oxford passed a statute which gave the University Extension Delegacy power to form a committee consisting of working-class representatives in equal numbers with members of the Delegacy, with the object of enabling Oxford to take its proper share in the work of providing higher education for the manual working classes. In January, 1909, the committee organized eight tutorial classes, at Chesterfield, Glossop, Littleborough, Longton, Oldham, Rochdale, Swindon and Wrexham. At the end of the first twelve weeks of the work results were reported, as follows: "The number of students enrolled was about 284, among whom were 20 women; and all of these pledged themselves to study continuously under the supervision of the tutors provided by Oxford for a period of three years. The subjects studied were industrial history and economics. . . . The members with few exceptions are men and women engaged in manual labour during the day. Out of 169 students 48 were engineers, 35 were engaged in the textile industries, 17 belonged to the building trades, 12 were labourers, ten were potters, seven were in the clothing trades, five were miners, and four were printers. Sixty per cent. of the 234 students were under the age of 34. Many of them were members of working-class organizations. . . . Few students abandoned the classes after beginning to attend them, except for reasons such as illness, overtime or unemployment. The average attendances are about 90 per cent. of the *maximum* possible. The paper work in some cases would probably compare with the work done by first-class students in the final honours schools at Oxford. . . . The committee consider that any movement to shorten the hours of labour would enormously increase the opportunities for higher education among work people."

A. D. 1909. — Official Reports and Statements of the extent and operation of the English agencies of Public Education. — On the 2d of March, the President of the Board

EDUCATION

of Education, Mr. Runciman, received a deputation of the Parliamentary Committee of the Trade Union Congress, who presented a resolution passed at the Congress stating that no solution of the educational problem would be satisfactory that did not give free education from the elementary school to the University, and demanding the immediate abolition of fees in secondary schools and technical colleges. One of the speakers of the deputation complained that secondary school fees were mounting so high that working people could not afford to pay them, and that in some cases the rule as to the reservation of 25 per cent. of free places in secondary schools had not been observed. Mr Runciman, in reply, said that the difficulties which had been raised centered around local finance. The Board of Education had not been idle during the last three years in assisting local authorities, especially for secondary education. In the year 1906–7 the grant for this purpose amounted to £480,000; £691,000 was granted in 1907–8; and in the estimate for 1908–9 £902,000 was put aside for secondary education; and as far as he could see at present the amount to be granted for secondary education purposes next year would be even larger. . . . Of the total number of secondary schools which were now required to comply with the free places regulation, 368, or more than half, provided in 1907–8 more than the stipulated 25 per cent., and the great majority of the whole of them provided the 25 per cent. There were, it was true, a number of cases where a smaller number of free places had been granted, but that fact was due purely to local considerations. . . . He should do all he could to prevent secondary schools from becoming class schools, but it was not every child who was suitable to enter a secondary school, and they must have a fairly good standard examination for the children who wished to enter. He would very much deplore indeed if the cost of secondary education were to make it prohibitive, or so to restrict as to allow it to be open only to the children of well-to-do parents. He hoped, before the new regulations were published to clear away some of the obstacles in the direction of throwing open a larger number of free places to scholars and towards making the secondary schools as much schools for the clever poor children as for the clever rich children.

A few days later in March the report of the general Board of Education for the school year 1907–8 was issued, bringing statistical information of the English schools down to the 31st of July in the latter year. During the year then ended, the number of new public elementary schools sanctioned under the Education Act, 1902, was, in England, 215, giving accommodation for 80,351 children, and in Wales 64, accommodating 13,942 students. Enlargements, numbering 94 and 21 respectively, provided accommodation for 17,697 children in England and 3,407 in Wales. During the year ending July 31, 1907, the number of ordinary public elementary schools in England and Wales increased by 44, the council schools increasing by 223, while the number of voluntary schools decreased by 179. One hundred voluntary schools were transferred to local education authorities. During the next 12 months the number of schools grew by 47, the number of council schools having increased by 205, and the number of voluntary schools having decreased by 158.

As regards higher elementary schools, 35 schools of the new type existed on August 1, 1907, by which date there were left 26 such schools of the old type. The changes during the succeeding year brought the total number of higher elementary schools of the new type to 88, and the number of such schools of the old type to 21 by August 1, 1908. The number of scholars on the registers of elementary schools decreased during 1906–7 by 22,584, due mainly to a continued diminution in the number of scholars under five years of age. During 1907–8 the number of scholars on the registers increased by 12,166, a further decrease in the number of scholars under five being more than balanced by a large increase in the number of scholars between the ages of five and twelve.

The report records a growth of secondary schools receiving grants from the Board, both in the numbers of such schools and of the pupils attending them, and also in their effectiveness. The Board adds: "There are still areas where the amount of public secondary school provision is wholly inadequate, or where its quality falls much short of any standard that can be regarded as even provisionally satisfactory. But there is no area in which the Board have to note actual retrogression."

As regards evening schools, the report says: "The total number of students enrolled in these schools during 1906–7 diminished from 749,491 to 736,512; but there was a considerable increase in the number of efficient students."

Statistics of the elementary schools of London for the year 1907–8, published in March, 1909, in the annual report of the education officer of the London County Council, showed that the average number of children on the rolls of schools maintained by the Council during the year was 731,706. Of this number, 566,086 were on the rolls of London County Council schools and 165,620 on the rolls of non-provided schools. The average number of children in attendance during the year was 650,861, of whom 505,698 were at London County Council schools and 145,163 at non-provided schools. The total number of teachers engaged on March 31, 1908, was 17,562, of whom 13,030 were in London County Council schools and 4,532 in non-provided schools. The salaries of these teachers amounted to £1,820,816 and £443,468 respectively. On March 31, 1908, the average salaries of head teachers and certificated assistants (excluding teachers "on supply") were — for masters in London County Council schools, £174 13s. 4d., and for mistresses, £125 11s.; for masters in non-provided schools, £144 1s. 7d., and for mistresses, £104 6s. 3d.

With reference to the size of classes the report states that the number of pupils per class teacher was, in the case of London County Council schools, 44.8, and in the case of non-provided schools 37.5. Ten years ago the number was 55.2.

The gross expenditure on elementary schools was, approximately, £4,000,000. The cost of London County Council schools was about £3,400,000, and of non-provided schools £600,000. About £1,257,000 of Government grant was earned and of this £971,000 was in respect of London County Council schools and £286,000 in respect of non-provided schools.

Under the Education (Administrative Provisions) Act, 1907, the London County Council is empowered to provide vacation schools or classes during the holidays, or assist voluntary agencies formed for this purpose. Hitherto the council has given assistance to voluntary agencies, but in 1909 it was proposed by the Children's Care (Central) Sub-Committee of the Education Committee of the council that the council should itself organize vacation schools.

Debate in the House of Commons on the Education Estimates was opened by the President of the Board of Education, Mr. Runciman, on the 14th of July. In the course of his speech he made the following statements:

"The Board of Education is now one of the greatest of the spending departments, and a rough estimate of the amount of public money spent on public education in this country shows that we have cognizance of an expenditure of something like £28,000,000 on elementary, secondary, and higher education, and over and above that of a sum of probably £8,000,000 to £10,000,000 spent by other authorities and other persons. These estimates affect no fewer than 8,000,000 parents and about 6,000,000 children. The improvement which has been made in the elementary education system during the last five years has been mainly machinery improvement rather than improvement in the curriculum.

"The secondary and technical branches of the work which were formerly under the control of South Kensington are now treated as two different departments. In the old days technical education was too technicalized and too little in touch with the practical affairs, necessities, and actual circumstances of life. It has been the object of the Board of Education therefore to generalize secondary education, and so far as it comes under the control of the Board to make technical education more practical with a closer bearing on the duties likely to be required from the young men and women who pass through these classes. The improvement has been led, as might have been expected, in the North of England, where classes have been definitely graded. . . .

"The secondary schools of England and Wales have shown a most marked improvement, both in numbers and character, during the last few years. Progress has been noted in several directions. First of all, the number of schools aided by grants and the number of pupils attending those schools have gone up year by year since 1902. The 272 secondary schools of that year have increased to 800, and even since 1905–06 the increase has been at the same rate. I think in 1905–06 there were only about 600 secondary schools in this country; now there are over 800. About 60 new secondary schools are being added every school year, and the number of pupils is increasing to an even greater extent. The increase during the years 1902–05 was about 6,000 per annum, and the increase now has risen to over 10,000 per annum, so that the total number of pupils in secondary schools is now 134,000, or very nearly 135,000. The grants which have been made to secondary schools have, of course, increased very considerably. It is impossible to expect local authorities to spend much of their money on the expenses of secondary schools unless they receive a large measure of State aid. The grants have gone up during the seven years from 1902 to the present time from £129,000 per annum to over half a million; and this great increase in pupils, in the amount of money spent on the schools, and in the number of schools in the country, has been marked at the same time by a raising of the standard of the teachers employed in those schools, by an increase in the length of the school life of the pupils who attend those schools, and by an incalculable improvement in the curriculum and the efficiency of those schools. I think we may look back with satisfaction on the increase of the secondary schools over which we have control."

At the annual conference of the National Union of Teachers, held at Morecambe, in April, 1909, with about 2000 in attendance, the address of the incoming President contained some interesting statements relative to the national teaching staff. "The character of the teaching staff in the elementary schools of England and Wales," he remarked, "as shown by the latest available return of the Board of Education, was: Of certificated teachers, 89,078, or 49 per cent.; of uncertificated teachers, 40,569, or 22 per cent.; of supplementary teachers, 21,984, or 12 per cent.; and of pupil teachers, 27,237, or 15 per cent. The 22,000 so-called supplementary teachers, possessing scarcely any educational equipment, were utterly unfitted in most cases for the important duties they were called upon to perform. Their sole passports to the teaching profession were that they must be at least one year over 17 and had been successfully vaccinated; yet they were answerable for the education of nearly 600,000 children. The Board of Education proposed that in future each member of the class of teacher should count on the staff for 2[illegible] instead of 3[illegible] children, while other regulations provided for the limitation of the numbers to be employed in the schools, and for the withdrawal by the board of the recognition of a supplementary teacher at any time if not efficient. This was indeed a step in the right direction, and showed that Mr. Runciman was really solicitous that there should be an improvement in the quality of the teachers at work in the schools. There were also many young persons termed student teachers whose academic training was unexceptionable. They were really apprentices, but the Board of Education had regarded each of these young people, who might never have been in an elementary school before, or done a day's teaching anywhere, and who were away one day out of every five, as an efficient teacher equal to educating 45 children on every occasion on which the school was opened. . . . There were some 500 well-equipped college-trained certificated teachers waiting to fill the gap which would be caused by the new regulations of the Board of Education, and an additional 4,000 would be seeking employment in August."

A. D. 1909 (May). — Revival of Passive Resistance to the Act of 1902. — The defeat of the Education Bill of 1906 wakened the spirit of "passive resistance" afresh; but it was not until May, 1909, that a reorganization of the movement was undertaken. As the result of a conference then held in London, under the presidency of Dr. Clifford, resolutions were adopted for the "organizing of the whole passive resistance forces of the country into a new league," to act on the following lines: "(1) Suffering imprisonment where the resister has no distrain-

able goods; (2) suffering the distraint of goods without repurchase; (3) suffering distraint of goods and afterwards buying them back; (4) protesting before the magistrates and then paying, on order, the rate." It was also resolved to urge upon the Government "the absolute necessity of encouraging from national funds the building at the earliest practicable moment of council schools in those areas in which there are no undenominational schools, and also the provision of unsectarian colleges in all parts of the country where these are needed."

To a delegation from the League which waited, subsequently, on the Head of the Board of Education, Mr. Runciman, the latter said, with reference to the Act of 1902, that it "could not be got rid of by administration. It would be a mischievous precedent for any Minister to attempt to undo what Parliament had done. He was, however, prepared to administer the Act fairly and justly, and he was not going to show any favour to any particular class of school. Dealing with the question of the improvements in the conditions governing the existence of training colleges, he said that during the past 12 months the accommodation in training colleges for Nonconformist teachers, or those who were not prepared to be bound by any denominational creed, had greatly increased. Since 1905 there had been a gradual increase, until there now existed 3,800 more places for that class of teacher than existed when the Government came into power."

A. D. 1909.—Educational demands of the Trade Unions.—The British Trade Union Congress, at Ipswich, in September, 1909, adopted a resolution urging workers to continue their efforts to secure Parliamentary and municipal recognition of the trade union education policy, which demanded:—"(1) The State maintenance of school children; (2) scientific physical education, with individual medical inspection and records of the physical development of all children attending State schools, and skilled medical attendance and treatment for any requiring it; and in order to secure this:—(*a*) the development of the Medical Department at the Board of Education, the head of which should be directly responsible to the Board of Education, to whom he shall report annually; (*b*) the payment of an adequate grant from the Imperial Exchequer for purposes of medical inspection and for the establishment under every education authority of properly equipped centres for medical treatment; (*c*) the establishment under every education authority of scientifically organized open air recovery schools, the cost to be borne by the community as a whole and not in any part by charitable contributions; (3) the complete dissociation of these reforms from Poor Law administration; (4) that secondary and technical education be an integral part of every child's education and be secured by such a reform and extension of the scholarship system as would place a maintenance scholarship within the reach of every child, and thus make it possible for all children to be full time day pupils up to the age of 16; (5) that the best intellectual and technical training be provided for the teachers of the children, that each educational district be required to train the number of pupil teachers demanded by local needs and to establish training colleges, preferably in connexion with Universities or University colleges; (6) that the provision of educational buildings and facilities be obligatory upon the local authority who should always maintain administrative control of the buildings and the facilities so provided; (7) that the cost of education be met by grants from the Imperial Exchequer and by the restoration of misappropriated educational endowments; and further, having regard to the increasing cost of popular education, and also to the increasing value and notoriously undemocratic administration of the University and public school endowments, the Congress called upon the Parliamentary Committee to press the Government to appoint a Royal Commission to inquire into and report upon the educational endowments of the country."

A. D. 1909.—A late awakening to the need of better technical and industrial training.—France has been slow in understanding the modern necessity of systematic industrial training and technical education, in order to keep her workmen abreast of the more alert and enterprising peoples in efficiency and skill. She has trusted too long, it seems, to the old customs of apprenticeship, and apprenticeship has decayed in her workshop practice, as it has decayed everywhere else. The situation, as brought recently to notice, was described as follows in a Paris letter to the London *Times*, in May, 1909:

"Legislative enactments of recent date, limiting the hours of labour for young people and placing under strict regulations those workshops where children and adults are employed together, have led to so much discontent among employers who take apprentices that the majority of the masters, especially those who obtain no immediate profit from the work of the apprentices, have abandoned the practice of endeavouring to train young people likely to be of use to them in the future. The consequences are that the level of professional skill and competence is becoming lowered among the rising generation of workmen, and all are now agreed that the discovery of some remedy is a matter of extreme urgency. It seems to be admitted that in a very few years this evil may become one of fatal importance in the case more especially of the art industries and of those involving mechanical skill.

"The report of the Parliamentary Commission appointed to make inquiry into this question has just been published, together with the draft of the proposed legislation on this subject, while the resolutions adopted at a Congress of Commerce and National Industries, which has just taken place at Paris, are entirely in accord with the views and suggestions of the above Commission.

"The remedies unanimously demanded are as follows:—1. That it be made compulsory for all young persons of both sexes, under 18 years of age, who may be employed either in commerce or industry, to attend courses of technical instruction (*cours de perfectionnement*). 2. These courses are to take place in the daytime, upon

days and at hours determined for each locality by committees composed of representatives of the municipal authorities, the associations of manufacturers, and of the workpeople. The selection of the dates and hours in question is to be made in such a way as to accord best with the respective interests of the manufacturers and the educational requirements. Employers will be bound to enable their workpeople to set apart sufficient time to attend the classes. 8. The course of instruction is to be adapted in each district to the requirements of the local trades."

A. D. 1909. — Clerical attack on the Secular or Neutral Schools. — Antagonism between the Roman Catholic Church and the Government was newly accentuated in October, 1909, by a clerical attack on the so-called "neutral" schools, — that is, the secular or lay schools, publicly maintained and administered. This was opened by a pastoral letter, signed by French cardinals, archbishops, and bishops, in which those faithful to the Church were warned against sending their children to these schools, whose religious neutrality was said to be in reality a bitter opposition to religion and church. The Catholic schools, it was urged, must be kept up if the Church is to be kept up. "In proportion as the schools from which religious instruction is banished keep on filling up, our churches will grow empty." The pastoral letter put the ban on more than a dozen text-books on French history and civics whose views it found pernicious. "If, therefore," the letter concluded, "parents perceive that the souls of their children are imperilled in the so-called neutral schools, they must not hesitate, under pain of forfeiting the sacraments of the church."

This roused anti-clerical extremists to demand the establishing of a State monopoly of education, making the lay school compulsory and suppressing all private schools in which religion is taught. But the sounder republicans, in public life and in journalism, gave no countenance to this. The *Petite République* reminded its advocates that there are at present 1,122,375 children who attend private schools, and that to establish Government schools for them would cost some $75,000,000; or, if secondary schools be included, $88,000,000. In addition an annual expenditure of $15,000,000 would be necessitated for upkeep and salaries. The *Temps*, taking higher grounds of principle, condemned the scheme as one that would essentially parallel the Revocation of the Edict of Nantes. France, it declared, is a free country; every creed has the perfect right to provide for its adherents the kind of religious education which it thinks proper. At the same time the *Temps* pointed out that the opponents of the lay schools are not merely attacking abuses that may have crept into them, but mean to strike at the principle of religious neutrality. It admitted the existence of wrongs that need righting, saying it cannot be denied that some of the school books are disfigured by partiality on various points affecting history, patriotism, and religion, and that this is contrary both to the letter and to the spirit of the law. This evil must, the *Temps* urges, be eradicated. But the *école laique*, says the *Temps*, cannot be destroyed without destroying the Republic.

This, too, was the fundamental proposition of Premier Briand, in a speech of admirable tone which he made, October 30th, at a great banquet in Paris which inaugurated the new buildings of *La Ligue de l'Enseignement*. The neutral school, he declared, was the corner stone of the Republic. As reported in *The Times* of London, he went on to say: "It was natural that the adversaries of the Republic should attack the school — the mould in which the Republican spirit and the character of Frenchmen and Frenchwomen was formed. Certain people were pleading the dictates of conscience as the explanation of the campaign which they had just started. Why had they not attacked the school before? He would remind them that the *école laïque* existed before the recent separation of Church and State; it had existed under the Concordat. Why did not the conscience of its opponents seek any expression till now? . . . The Government was determined to give the country the means of defending the 'neutral' school, and measures to that end had been prepared by the Ministry. But the most effective defence was that which would be conducted by private initiative like that of the Ligue de l'Enseignement and by the male and female teachers themselves. The teaching in the schools, M. Briand continued, 'ought not to be directed against any one; in order to secure the confidence of the parents it ought not to be of a polemical character; in order to be effective it must not let the passions of the street invade the schoolroom.' Let them leave violent language to their opponents and not play the game of their opponents by indulging in violent methods."

This seems to have been the spirit in which the matter was brought officially before the Chamber of Deputies, by M. Steeg, the reporter on the Budget of Public Instruction. The following is from a summary of his remarks on this subject: "He says that it would be difficult to come to terms with the Bishops of the disestablished Roman Catholic Church, who will never, he thinks, agree to recognize with good will the neutral school. He remarks, however, that no pretext must be furnished to the Bishops for their attacks upon the school, and that they must not be enabled to appeal against the Republican Government to the idea of 'neutrality' itself. As to the associations of parents, which are now being formed in accordance with the Episcopal views, M. Steeg recognizes that they are quite lawful. He only fears that they may sometimes transgress by reason of excessive zeal; but he declares that the best way of avoiding their interference is to make the management of the schools irreproachable. The objections raised against some of the school-books are, he thinks, obviously exaggerated. But he considers that scrupulous care ought to be exercised in resisting all temptation to borrow for the purposes of the neutral school the weapons of sectarian propagandism. . . . He continues: 'We should not desire that the book placed in the hands of a school child should in any sense whatever contain a single proposition that is perilous or open to suspicion. Let there be no veiled proselytism supported by ingenious distortions of fact or interpretations with an object.'"

The *Temps* remarks: "M. Steeg's language does him credit, and it is a pleasure to see a politician of the Extreme Left recognizing, with

a strong sense of philosophic truth, that respect for the past is perfectly compatible with justice to the present and preparation for the future."

A. D. 1909. — Appointment of the Abbé Loisy, Professor of Religions in the College de France. See (in this vol.) FRANCE: A. D. 1909 (MARCH).

Germany: Technical Education. — Causes of its great development and wonderful industrial results. — Its influence on International Trade. — "How much Germany owes to her system it would be almost impossible to estimate. Certainly no other country has turned the education of children and young people to such enormous advantage. A good and efficient education has been made not only accessible but also compulsory in every corner of the country, and one of the most priceless features of this education has been and is the inculcation of real, personal interest in the national welfare. Further, the fullest possible use has been made of scientific investigations, and all sciences have been drawn into the service of the nation. The result of this has been truly amazing; in fact, wholly undreamt of. There can no longer be any doubt that Germany's industrial advance is mainly due to the extent and thoroughness with which technical education is being conducted. Briefly stated, the secret of the pronounced success of the technical colleges in the Fatherland lies in the fact that they have kept pace with the ever-increasing scope of all branches of science in general, and, to the same extent, with the ever-increasing demands of the present day industrial enterprises upon scientific investigation and research." — Louis Elkind, *Germany's Commercial Relations* (*Fortnightly Review, July*, 1906).

What seems to be the most satisfying explanation that has been given of causes or reasons lying behind the extraordinary development of scientific training on practical lines in Germany, resulting in so wonderful a speed of industrial progress within the passing generation, was cited from a German scientist by President Pritchett, of the Massachusetts Institute of Technology, in an article contributed to the *Review of Reviews*, February, 1906. "About a year ago," said President Pritchett, "I heard a famous chemist in Germany explain the present industrial supremacy of his country in words something like these: 'Forty years ago,' said he, 'the scientific men of the various German states devoted their study almost wholly to theoretical subjects. They were humorously described as given up to investigations of the dative case and similar impractical problems. In a measure this was true. The investigators of that day had a wholesome contempt for anything which promised direct utilitarian results. But the development of the spirit of research throughout the German universities trained a great army of men to be expert investigators, and when a united Germany arose to crown the labors of William I. and of Bismarck, with it came a great national spirit in which the men of science shared. They realized that to them were committed the great industrial problems which must be solved in order to make the nation strong, and scientific research, which up till then had been mainly theoretical was turned to the immediate solution of the industrial problems of the nation. No longer the dative case alone, but the development of the chemical, electrical, and mineral resources of the country formed the avenues of scientific activity, and scientific research, which had till then been looked upon as theoretical accomplishment, became the greatest financial asset of the Fatherland.'

"There is truth in this statement. The research habit, long cultivated in German universities, had nourished a body of men trained to research, men who had acquired the research habit and the spirit of investigation. When, therefore, the problems of industrial development began to appeal strongly to the national spirit, the country had a trained body of men to call upon who threw themselves heartily and enthusiastically into these practical industrial problems."

A correspondent of the London *Times*, writing in May, 1909, draws attention to an influence on international trade exerted by the German technical schools which is generally overlooked: "In the German technical high schools," he writes, "an appreciable proportion of the students are foreigners from various countries in Europe. Among these foreign students the Russians and Poles hold the first place in Germany as regards numbers, there being about 2,000. There are also an appreciable number of Scandinavians and Dutchmen, with a few Belgians, Spaniards, Italians, South Americans, and Slavs from Austria and the Balkan States. There are very few Englishmen, Frenchmen, or Americans. . . . At present quite a large proportion of the engineers and manufacturers in the neutral countries on the Continent have been educated in Germany or Switzerland, and as a result there is a great bias in favour of German machinery and productions. . . . As the outcome of this feeling it is a difficult matter for British manufacturers of machinery to obtain a hearing when tenders are being considered on the Continent, as the prejudice in favour of German or Swiss machinery is strong."

A. D. 1898-1904. — Rise of Commercial Universities. — A report on Commercial Instruction in Germany by Dr. Frederic Rose, British Consul at Stuttgart, presented to Parliament in September, 1904 (Cd. 2237), gives the following account of the rise of the Commercial Universities which have been developed in Germany since 1898, carrying the process of training young men for business life to a higher point than had been aimed at in the older commercial schools:

"The commercial universities for higher commercial instruction (Handelshochschulen) have been founded within the last six years [1898–1904] and mark a further step in the development of commercial instruction in Germany. Their aim is to afford persons engaged in business and industry on a large scale (Grosskaufleute and Grossindustrielle), masters at commercial schools, administration officials, bank officials, Consular officials, secretaries to Chambers of Commerce, and so forth, a deeper and broader measure of instruction in commercial and national economical matters than that provided by the various commercial schools. The special province of the commercial universities lies less in the mere acquisition of commercial-technical knowledge and attainments for immediate practical detailed application, than in the attempt to provide a general mental schooling

for the higher branches of the commercial profession. They are intended to awaken and develop the mental faculties of a merchant, to enable him to grasp the inner working and meaning of national and international economy, and to understand and judge its causes and results, its temporary and permanent phenomena; as far as commercial officials are concerned they are intended to impart general knowledge and understanding of the economic conditions of commerce and industry with their manifold aims and requirements.

"This measure of university education (Akademische Bildung) is also intended to raise the social position of the mercantile profession, and to increase its political importance and influence in public life. Generally speaking the instruction is arranged to include the following subjects:—Political economy, commercial history and geography, commercial law in all its aspects, the organisation and management of commercial undertakings and their technical details, industrial law, financial science, bank, exchange, monetary, and credit operations, State and administrative law, and so forth."

At the writing of Dr. Rose's report there were four of these commercial universities. The oldest, at Leipsic and Aix, were founded in 1898, the former in connection with the Leipsic University, the latter connected with the Aix Technical University. The other two, at Frankfort-on-the-Main and at Cologne, were opened in 1901. The Frankfort University, which bears also the name of "Academy of Social and Commercial Science," and the Cologne University, are both independently organized. "The initiative for the foundation of the commercial universities," says Dr. Rose, "has been taken by Chambers of Commerce and municipalities, and not by the governments of the German States. The latter, however, are now becoming aware of the importance of the movement. For the present their action is limited to the supervision exercised by the Ministers of Education and Industry and Commerce. . . .

"The foundation of the commercial universities has brought forward many opponents, who not only deny their utility but consider them actually harmful, because the persons they instruct become too old before they engage in practical business work. . . . The extreme opponents go further and deny that a commercial university is able to train practical business men, and assert that this can only be done by close and continual contact with actual business life, and that the acquisition of too much theoretical knowledge injures the practical faculties. . . .

"The whole opposition to the commercial universities seems to be based upon a narrow-minded and vague idea of the part they are destined to play in the future. . . . Unless industrial and commercial life in the future is to degenerate wholly into one fierce and relentless struggle for one-sided aggrandisement, to the detriment of other members of the social body, ample opportunities for the thorough comprehension of the social and economic conditions of the present day must be provided."

India: A recent report of its schools and colleges. See (in this vol.) INDIA: A. D. 1907–1909.

A. D. 1908.—American Mission Schools.—"Increasing interest is now being concentrated on Burma and India, where an illiterate population seems to need far more education than has yet been provided by Great Britain. In Burma the Baptists play the leading rôle, educating no less than twenty-four thousand pupils. In India, however, the Methodists lead, with a record of over thirty-seven thousand pupils. They have two colleges at Lucknow. The Baptists have a college at Ongole, and have about fifteen thousand pupils in their schools. The Congregationalists have a college at Madura, and have also about fifteen thousand pupils in India, added to their total of ten thousand in Ceylon. The Presbyterians have a college at Lahore and one at Allahabad, and are educating about ten thousand pupils in the Empire."—*American Schools Abroad* (*The Outlook*, *May* 2, 1908).

International Interchanges: Of Professors.—Of Students.—Of Teachers' visits.—A fund provided by Mr. James Hazen Hyde, of New York, enabled Harvard University, in 1904, to accept an invitation from the Sorbonne, at Paris, to send one of its professors to give a course of lectures at that ancient institution of learning, on subjects relating to the United States. Professor Barrett Wendell was chosen for the pleasant mission, and has been followed by others in succeeding years, who have given courses in various French universities, while the compliment has been returned, in lecturing visits from a number of the most distinguished men of letters and learning in France.

This opened what seems to have become an established and widening system of lecturing interchanges between American and European Universities, tending greatly to promote better acquaintance between nations and better understanding of each other. At about the time, or soon after, the mission of Professor Wendell to Paris, arrangements were made for a similar interchange between Harvard and the University of Berlin. In a communication to *The Outlook* of February 18, 1905, Professor Kuno Francke, Curator of the Germanic Museum at Harvard University, gave an account of the circumstances which led to this latter. In March, 1901, as he relates, there were conferences in Berlin with Dr. Althoff, Commissioner-General of the Prussian Universities, and with other Prussian officials of eminence, having for their object the promotion of the Germanic Museum. "The upshot of these conferences," said the Professor, "was the draft of a provisional agreement between the Prussian Government and Harvard University, according to which for a period of five successive years an exchange of professors between Harvard and Berlin University was to be instituted, in such a manner that every year one member of each of the two institutions would enter for at least three months the regular teaching staff of the other institution, it being understood that in each case the visiting member represent subjects or methods distinctly peculiar to his country. This scheme, which met with the hearty support of President Eliot, was discussed and approved a year later by the Harvard Faculty, and reached its consummation a few

months ago, [1904] when, through the intercession of Professor Harnack, an official proposition embodying it was made by the Prussian Government to the Harvard Corporation, and adopted by the same. It is most fortunate that the German Emperor, with his quick grasp of international relations and his deep sympathy for the American people, has now given to this whole subject a much wider scope by proposing to extend the exchange of professors to other universities in America and Germany; for it seems as though such a measure could not fail to open the way toward a veritable fraternization of the moral, intellectual, and industrial leaders of both nations."

In the latter part of 1905, a Theodore Roosevelt Professorship of American History and Institutions, in the University of Berlin, was endowed with the sum of $50,000 by Mr. James Speyer, of New York, the endowment being placed in the hands of the trustees of Columbia University. The plan of this professorship had been arranged with the German Emperor by President Butler, of Columbia, at an interview in the previous summer. Nominations to it would be made by the trustees of Columbia University, subject to confirmation by the Prussian Ministry of Education and to the Emperor's sanction; each incumbent to hold the office for one year, and the incumbents to be so chosen that in successive years the field of American history, constitutional and administrative law, economic and sociological problems and movements, education, contributions to science, technology, the arts and literature, be presented with some fullness; the professorship to be filled by members of any American institution of learning, or by scholars not connected with academic institutions. The scheme involved also the establishment at Columbia University of a similar professorship of German history and institutions, the lectures in New York to be delivered in English. The first incumbent of the new professorship in Berlin was Dr. Burgess, Professor of Political Science in Columbia University, who began his work in Berlin in the winter of 1906–7, and took as his subject American constitutional history.

A movement looking to the establishment of similar interchanges between American and Scandinavian Universities was inaugurated in 1908 by the "Scandinavian American Solidarity," a society organized in the United States that year, with Dr. Nicholas Murray Butler, of Columbia University, for its President, and Professor Carl Lorentzen, of New York University, for its Secretary. The Danes resident in New York City and Chicago arranged that President Butler of Columbia and President MacCracken of New York University should each give lectures at the University of Copenhagen that year, and raised the necessary funds. The lectures were given at Christiania, as well as at Copenhagen, and appear to have aroused a widespread interest. Norwegian and Swedish Universities and the University of Helsingfors, in Finland, have signified a wish to participate in the interchange, and it is more than likely to become permanently arranged.

An educational interchange of a different character, but equally important, was instituted in 1906 by Mr. Alfred Mosely, an English gentleman of great wealth, who invited five hundred English, Scotch, and Irish teachers to visit and inspect American schools at his expense. Between November, 1906 and March, 1907, they came in parties of twenty-five, some remaining one month in the country, some two, and some even more, visiting many parts of it and all descriptions of its schools. They were selected by an advisory committee in London, which aimed to have them fully representative of the men and women who are engaged in the work of the British and Irish schools.

A return visit of some hundreds of American teachers to Great Britain and Ireland, in similar parties, under the auspices of the National Civic Federation, was made in the fall of 1908. The schools of both countries gained, beyond question, from what each had to offer of suggestion to the other.

The organization of a "new educational movement to provide for the interchange of University students among the English-speaking peoples" was announced in England in June, 1909. "The object," it was stated, "is to provide opportunities for as many as possible of the educated youth of the United Kingdom, Canada, and the United States (who, it is reasonable to suppose, will become leaders in thought, action, civic and national government in the future), to obtain some real insight into the life, customs, and progress of other nations at a time when their own opinions are forming, with a *minimum* of inconvenience to their academic work and the least possible expense."

A great number of the most distinguished men of the time in British public and professional life were listed among the officers and committee-members of the organization, with Lord Strathcona as President for the United Kingdom. As set forth in the prospectus of the society, "the additional objects of the movement are to increase the value and efficiency of, as well as to extend, present University training by the provision of certain Travelling Scholarships for practical observation in other countries under suitable guidance. These scholarships will enable those students to benefit who might otherwise be unable to do so through financial restrictions. It also enables the administration to exercise greater power of direction in the form the travel is to take. In addition to academic qualifications, the selected candidate should be what is popularly known as an 'all round' man; the selection to be along the lines of the Rhodes Scholarships. . . .

"To afford technical and industrial students facilities to examine into questions of particular interest to them in manufactures, &c., by observation in other countries and by providing them with introductions to leaders in industrial activity.

"To promote interest in travel as an educational factor among the authorities of Universities, with a view to the possibility of some kind of such training being included in the regular curricula.

"To promote interest in other Universities, their aims and student life, the compulsory physical training, and methods of working their ways through college, for example, being valuable points for investigation.

"To promote international interchange for academic work among English-speaking Universities. . . .

"It is proposed to establish two students' travelling bureaux, one in New York and one in London; an American secretary (resident in New

York) and a British secretary (resident in London), both of whom shall be college men appointed to afford every facility to any graduate or undergraduate of any University who wishes to visit the United States, Canada, or the United Kingdom for the purpose of obtaining an insight into the student, national, and industrial life of those countries."

Further announcements of the plans of the organization were made in November, including the following:

"It should be pointed out that, although the scholarships proper will be reserved for undergraduates of the Universities who are already midway through their course, the provision of scholarships by no means defines the scope of the movement. The bureau will afford facilities to all *bona fide* students — whether dons, scholars, or commoners — who wish to gain a practical insight into the work and life of other portions of the world.

"The travelling students will have the advantage of reduced rates of travel; of the special information which the bureau will be able to afford; and of the privilege of being brought as far as possible into contact with the actualities of those countries to which they go, whether persons, places, or institutions. . . .

"The method of election to the scholarships, which it is purposed shall number not less than 28 for each year of the experimental triennium — 14 in the United Kingdom, ten in the United States, and four in Canada — will be along the lines of the Rhodes scholarships. The candidate, it is stated, shall, as far as possible, be what is popularly known as an all-round man, who plays a part in his college life and whose character makes him popular."

Ireland: A. D. 1909. — Organization of the two new Irish Universities. — On the 1st day of October, 1909, the two Universities created by the Irish Universities Act of 1908 came into existence. "That day also was fixed for the dissolution of the Royal University of Ireland, the duties of which are now to be distributed between the new National University in Dublin and Queen's University, Belfast. Circumstances, however, have given the Royal University a short reprieve. It cannot be dissolved until the autumn degrees of the present year have been conferred. These degrees will be given as the result of examinations which are now in progress, and it is probable that the Univerity's last public function will be a conferring of degrees on the last Friday in October. It will cease to exist in the first or second week of November. . . .

"The National University itself consists of a Senate and officers with large powers but with no local habitation. The University has its concrete embodiment in the new University Colleges, formerly Queen's Colleges, at Cork and Galway. University College, Dublin, is so far only concrete in the sense that its governing body has been called into existence. At the present time it has no teaching and no college buildings. The former of these wants will be supplied almost immediately. The University Commissioners will meet early next month to appoint a teaching staff, and the college will be available for students at the beginning of November. As regards staffs, the Dublin College is differently situated from those at Cork and Galway. For the latter colleges teaching staffs exist ready made in the staffs of the old Queen's Colleges, which are to be taken over in accordance with the provisions of the Act. . . .

"Nothing has yet been done in connexion with the buildings of the new college in Dublin, though various sites have been suggested, including that of the Royal Hospital at Kilmainham. . . . The cases of Queen's University, Belfast, and of the University Colleges at Cork and Galway present no difficulties. These institutions will have teaching staffs within a couple of weeks, and all their buildings and classrooms are in going order.

"The agitation of the Gaelic League in favour of the compulsory teaching of Irish in the National University is vigorously maintained. It is most improbable that the Senate will yield to this agitation; and the result of their firmness will be, if the league fulfils its threats, a rather serious boycott of the University." — *Dublin Cor. London Times, Sept.* 30, 1909.

An Associated Press despatch from Dublin, Oct. 24, announced that "among the appointments to the new National University of Ireland are Dr. Douglas Hyde, president of the Gaelic League, as professor of modern Gaelic. Dr. Henebry, formerly of Washington, D. C., has been appointed to the professorship of the Irish language in the University College, Cork."

Korea: American Mission Schools. — "In Korea the Presbyterians have the strongest representation of any religious denomination, with over three hundred schools and, what is still more striking, practically every one of these schools is self-supporting. The Methodists follow with over a hundred schools and over forty-two hundred pupils." — *The Outlook, May* 2, 1908.

Netherlands: A. D. 1905. — New Education Law, an issue in the elections. See (in this vol.) NETHERLANDS: A. D. 1905–1909.

Porto Rico: A. D. 1906. — Schools as seen by President Roosevelt. See (in this vol.) PORTO RICO: A. D. 1906.

Prussia: A. D. 1904. — Denominational Education restored. — A resolution adopted by the Prussian Chamber of Deputies, in May, 1904, restored the denominational school system which the "May Laws" of the *Kulturkampf* in 1873 and after (see GERMANY: A. D. 1873–87, in Volume II. of this work) had abolished. Under those laws the schools were common to children of all religious beliefs; under the new system they became either Protestant or Roman Catholic according to the faith of the majority of their pupils.

Rhodes Scholarships: The Will of Cecil John Rhodes, providing Scholarships at Oxford for students from the British Colonies and the United States. — The late Cecil John Rhodes, who played an eminent part in the development of South Africa and in the extension of the British dominion in that portion of the world (see, in this volume, SOUTH AFRICA: A. D. 1902–1904), died on the 26th of March, 1902, leaving a will which contained the following directions for the use to be made of one large part of the great fortune he had acquired.

"Whereas I consider that the education of young colonists at one of the universities in the United Kingdom is of great advantage to them for giving breadth to their views, for their instruction in life and manners, and for instilling

into their minds the advantage to the colonies as well as to the United Kingdom of the retention of the unity of the Empire; and

"Whereas in the case of young colonists studying at a university in the United Kingdom I attach very great importance to the university having a residential system, such as is in force at the universities of Oxford and Cambridge; for without it those students are at the most critical period of their lives left without any supervision; and

"Whereas there are at the present time fifty or more students from South Africa studying at the University of Edinburgh, many of whom are attracted there by its excellent medical school, and I should like to establish some of the scholarships hereinafter mentioned in that university but owing to its not having such a residential system as aforesaid I feel obliged to refrain from doing so; and

"Whereas my own university, the University of Oxford, has such a system, and I suggest that it should try and extend its scope so as if possible to make its medical school at least as good as that at the University of Edinburgh; and

"Whereas I also desire to encourage and foster an appreciation of the advantages which I implicitly believe will result from the union of the English-speaking people throughout the world and to encourage in the students from the United States of North America who will benefit from the American scholarships to be established for the reason above given at the University of Oxford under this my will an attachment to the country from which they have sprung, but without, I hope, withdrawing them or their sympathies from the land of their adoption or birth.

"Now, therefore, I direct my trustees as soon as may be after my death and either simultaneously or gradually as they shall find convenient, and if gradually, then in such order as they shall think fit, to establish for male students the scholarships hereinafter directed to be established, each of which shall be of the yearly value of £300 and be tenable at any college in the University of Oxford for three consecutive academical years.

"I direct my trustees to establish certain scholarships and these scholarships I sometimes hereinafter refer to as 'the colonial scholarships.'

"The appropriation of the colonial scholarships and the numbers to be annually filled up shall be in accordance with the following table:

Total number appropriated.	To be tenable by students of or from—	Number of scholarships to be filled up in each year.
9	Rhodesia	3 and no more.
3	The South African College School in the colony of the Cape of Good Hope	1 and no more.
3	The Stellenbosch College School, in the same colony	Do.
3	The Diocesan College School of Rondebosch, in the same colony	Do.
3	St. Andrews College School, Grahamstown	Do.
3	The colony of Natal, in the same colony	Do.
3	The colony of New South Wales	Do.
3	The colony of Victoria	Do.
3	The colony of South Australia	Do.
3	The colony of Queensland	Do.
3	The colony of Western Australia	Do.
3	The colony of Tasmania	Do.
3	The colony of New Zealand	Do.
3	The Province of Ontario, in the Dominion of Canada	Do.
3	The Province of Quebec, in the Dominion of Canada	Do.
3	The colony or island of Newfoundland and its dependencies	Do.
3	The colony or islands of the Bermudas	Do.
3	The colony or island of Jamaica	Do.

"I further direct my trustees to establish additional scholarships sufficient in number for the appropriation in the next following clause hereof directed, and those scholarships I sometimes hereinafter refer to as 'the American scholarships.'

"I appropriate two of the Ameri scholarships to each of the present States itories of the United States of North Au vided that if any of the said Territori n my lifetime be admitted as a State the arships appropriated to such Territory shall be appropriated to such State, and that my trustees may in their uncontrolled discretion withhold for such time as they shall think fit the appropriation of scholarships to any Territory.

"I direct that of the two scholarships appropriated to a State or Territory not more than one shall be filled up in any year, so that at no time shall more than two scholarships be held for the same State or Territory.

"The scholarships shall be paid only out of income, and in event at any time of income being insufficient for payment in full of all the scholarships for the time being payable I direct that (without prejudice to the vested interests of holders for the time being of scholarships) the following order of priority shall regulate the payment of the scholarships:

"(I) First, the scholarships of students of or from Rhodesia shall be paid;

"(II) Secondly, the scholarships of students from the said South African Stellenbosch Rondebosch and St. Andrews schools shall be paid;

"(III) Thirdly, the remainder of the colonial scholarships shall be paid, and if there shall not be sufficient income for the purpose such scholarships shall abate proportionately; and

"(IV) Fourthly, the American scholarships shall be paid, and if there shall not be sufficient income for the purpose such scholarships shall abate proportionately.

"My desire being that the students who shall be elected to the scholarships shall not be merely bookworms, I direct that in the election of a student to a scholarship regard shall be had to (I) his literary and scholastic attainments, (II) his fondness of and success in manly outdoor

sports, such as cricket, football, and the like; (III) his qualities of manhood, truth, courage, devotion to duty, sympathy for the protection of the weak, kindliness, unselfishness, and fellowship, and (IV) his exhibition during school days of moral force of character and of instincts to lead and to take an interest in his schoolmates, for those latter attributes will be likely in after life to guide him to esteem the performance of public duties as his highest aim. As mere suggestions for the guidance of those who will have the choice of students for the scholarships, I record that (I) my ideal qualified student would combine these four qualifications in the proportions of three-tenths for the first, two-tenths for the second, three-tenths for the third, and two-tenths for the fourth qualification, so that according to my ideas if the maximum number of marks for any scholarship were 200 they would be apportioned as follows: Sixty to each of the first and third qualifications, and 40 to each of the second and fourth qualifications. (II) The marks for the several qualifications would be awarded independently, as follows (that is to say): The marks for the first qualification by examination, for the second and third qualifications, respectively, by ballot by the fellow-students of the candidates, and for the fourth qualification by the head master of the candidate's school, and (III) the results of the awards (that is to say the marks obtained by each candidate for each qualification) would be sent as soon as possible for consideration to the trustees or to some person or persons appointed to receive the same, and the person or persons so appointed would ascertain by averaging the marks in blocks of 20 marks each of all candidates the best ideal qualified students.

"No student shall be qualified or disqualified for election to a scholarship on account of his race or religious opinions.

"Except in the cases of the four schools hereinbefore mentioned, the election to scholarships shall be by the trustees after such (if any) consultation as they shall think fit with the minister having the control of education in such colony, province, State, or Territory.

"A qualified student who has been elected as aforesaid shall within six calendar months after his election, or as soon thereafter as he can be admitted into residence or within such extended time as my trustees shall allow, commence residence as an undergraduate at some college in the University of Oxford.

"The scholarships shall be payable to him from the time when he shall commence such residence.

"28. I desire that the scholars holding the scholarships shall be distributed among the colleges of the University of Oxford and not resort in undue numbers to one or more colleges only.

"29. Notwithstanding anything hereinbefore contained, my trustees may in their uncontrolled discretion suspend for such time as they shall think fit or remove any scholar from his scholarship.

"30. My trustees may from time to time make, vary, and repeal regulations either general or affecting specified scholarship only with regard to all or any of the following matters, that is to say:

"(I) The election, whether after examination or otherwise, of qualified students to the scholarships, or any of them, and the method, whether by examination or otherwise, in which their qualifications are to be ascertained;

"(II) The tenure of the scholarships by scholars;

"(III) The suspension and removal of scholars from their scholarships;

"(IV) The method and times of payment of the scholarships;

"(V) The method of giving effect to my wish expressed in clause 28 hereof; and

"(VI) Any and every other matter with regard to the scholarships, or any of them, with regard to which they shall consider regulations necessary or desirable.

"31. My trustees may from time to time authorize regulations with regard to the election, whether after examination or otherwise, of qualified students for scholarships and to the method, whether by examination or otherwise, in which their qualifications are to be ascertained to be made:

"(I) By a school in respect of the scholarships tenable by its students; and

"(II) By the minister aforesaid of a colony, province, State, or Territory in respect of the scholarships tenable by students from such colony, province, State or Territory.

"32. Regulations made under the last preceding clause hereof, if and when approved of, and not before, by my trustees, shall be equivalent in all respects to regulations made by my trustees.

"No regulations made under clause 30 or made and approved of under clauses 31 and 32 hereof shall be inconsistent with any of the provisions herein contained.

"In order that the scholars past and present may have opportunities of meeting and discussing their experiences and prospects, I desire that my trustees shall annually give a dinner to the past and present scholars able and willing to attend, at which I hope my trustees, or some of them, will be able to be present, and to which they will, I hope, from time to time invite as guests persons who have shown sympathy with the views expressed by me in this, my will."

The trustees are the Earl of Rosebery, Earl Grey, Lord Milner, Mr. Alfred Beit, Dr. Leander Starr Jameson, Mr. Lewis Loyd Mitchell, and Mr. Bourchier Francis Hawksley.

Russia; A. D. 1909. — Great Educational Projects before the Duma. — Primary schoolhouses by the hundred thousand, and Compulsory Education. — Increased opening to Jews. — A telegram from St. Petersburg, February 16, 1909, announced that the Ministry of Education had introduced that day a bill before the Duma providing for a building fund for the erection of 148,179 new primary schools throughout the empire within ten years. These schools are to be built and maintained by the provincial authorities on government subsidy. The same despatch reported that a statute providing for general compulsory education would soon be discussed in the Duma.

On the 5th of October it was announced that the Tsar had sanctioned a resolution of the Council of Ministers permitting the admission of an increased percentage of Jews into the secondary schools of the Crown. In the capitals 5 per cent. of the total number of scholars may be Jews, in

other parts of the Empire 10 per cent., and in the special Jewish settlements 15 per cent.

Scotland: A. D. 1901. — Mr. Carnegie's great gift to the Universities and their students. — The first of Mr. Andrew Carnegie's great gifts to other institutions of education than the public libraries, which he has assisted in such numbers, was conferred on the universities of Scotland, his native country, in 1901. It was a gift of $10,000,000 (£2,000,000), placed in the hands of trustees for two purposes, namely, to improve and expand the teaching power of the universities, on one hand, and to put their teaching, on the other hand, more within the reach of all the young in Scotland who craved it. It was said to have been the original wish of Mr. Carnegie to make the tuition of the universities free; but he found that it would be wiser to strengthen them for their work, leave it subject to proper fees, and provide for an allowance of pecuniary assistance to students, in the discretion of the trustees. The application of the gift was so arranged, one-half of the net annual income from the great fund being appropriated to buildings, equipments, endowments of professorships and lectureships, and the like uses for the betterment of the university work.

There were fears at first that the effect of so much easing of the attainment of a university education might be injurious to the spirit and character of the students who accepted the helping hand; but seven years of experience, under the working of the gift, do not seem to have justified the fear. In those seven years over 8000 of the Scottish young people had the benefit of Mr. Carnegie's help to a college training, and the trustees of the Fund, in their annual report of 1909, pronounced the result good. "In the opinion of such men as Lord Rosebery, Lord Elgin, Lord Balfour of Burleigh, Mr. Balfour, and Mr. Haldane, who are all helping to administer Mr. Carnegie's charity," says a London correspondent of the New York *Evening Post*, "Scotland has much to thank him for."

Turkey and the Near East: American Mission Schools. — "At present [1909] there are about twenty-five thousand native students in American schools in this country. America can boast to-day that she has, in Turkey, nine colleges, five theological seminaries, fifty-seven boarding and high schools, and 348 public schools. And, if we accumulate the work of seventy-five years, it is a simple matter to understand how many thousands have been educated in American ways and with the American spirit.

"Missionaries came to this country to spread Protestant Christianity among the Moslems. They failed in that. The Mohammedan government was against them. They tried to make Christian Greeks, Christian Armenians, Protestants. This did not result in a marked success, but their schools, which they opened as a medium of spreading religion, were eagerly sought by young men and young girls of every race. Armenians form the majority in this country of those who have received an American education. Bulgarians and Greeks come next.

"Many I have met who have been thoroughly educated in missionary institutions. Generally they are not Protestants, neither much religiously inclined. But they are moral, independent, and broad-minded.

"The Turkish mission, as it is written about in America, is not, in fact, a real Turkish mission; not a Moslem has been Christianized; not a single Turk is a member of mission communities; yet native Christians have been widely helped by the opportunity offered for education and the growth of a spirit of civilization and humanity.

"Year after year young men graduated from American institutions in Turkey to go forward among their compatriots as teachers, journalists, and public officers. The building up of brave little Bulgaria is the work of graduates of Robert College of Constantinople. Stambouloff, who made Bulgaria what it is to-day, was an alumnus of the same institution. Among the Armenian revolutionary leaders, who worked hand-in-hand with the Young Turks to bring about a political change in Turkey, boys of Robert College and young men educated in American universities are prominent. I know young girls, graduates of the American College at Scutari, who took active part in revolutionary work during the despotic days of the old régime; and even joined in the conspiracy which led to the throwing of a bomb at the Sultan during the Selamlik ceremony a few years ago. . . . There are a number of Turkish girls to-day at the college in Scutari, and it is a pleasure to any one to see Turkish women discussing in fluent English politics, economics, and history." — *Special Correspondence of the N. Y. Eve. Post, Constantinople, March* 20, 1909.

At Beirut is the Syrian Protestant College, under Presbyterian control, one of the most enlightened institutions abroad. Euphrates College at Harput in Asia Minor, with a thousand students, is a Congregational institution. At Tarsus, the Apostle Paul's home, is, appropriately enough, St. Paul's Institute. Throughout Turkey the Congregationalists have over four hundred schools, with over twenty-one thousand pupils. In Syria the Presbyterians maintain about a hundred schools. The Presbyterians (North) have no work in Egypt, but the United Presbyterians are educating there no less than fifteen thousand pupils, a total the more surprising when we recall that the Government schools in Egypt have only eighteen thousand pupils. More than four thousand have received instruction at Assiut College, the center of the United Presbyterian work. . . . As in Persia, the Presbyterians are the strongest denominational force. Besides Urumia College, they have about a hundred and twenty-five schools throughout the country." — *American Schools Abroad* (*The Outlook, May* 2, 1908).

The Influence of Robert College. — "Two years ago one of the subjects given out for a thesis in the Russian Theological Seminary at Kiev was, 'The Influence of Robert College in the Development of Bulgaria.' Russia has found the influence of that College there a factor which she has had to take into serious account; indeed, it has been said by Russian as well as by high Turkish officials that Robert College really created Bulgaria. Its influence has also been abundantly recognized throughout Europe and America. In Bulgaria itself the first National Assembly, which met to adopt a constitution and to choose a Prince, passed a resolution expressing the gratitude of the new-born nation to the College. Prince Alexander conferred a high decoration on the President of the College to express his personal appreciation, and last summer

Prince Ferdinand did the same. Robert College has not only been the backbone of Bulgaria; it has been the greatest civilizing power in the Turkish Empire. Sir William White, who knew that Empire better than has any recent British ambassador, once remarked that the College had accomplished more for the good of the Turks than had all the representatives of the British Government; and Professor Ramsey, of St. Andrews, who has spent many years in exploring Asia Minor, says:

"'I have come in contact with men educated in Robert College in widely separate parts of the country, men of diverse nationalities and different forms of religion — Greek, Armenian, and Protestant — and have everywhere been struck with the marvelous way in which a certain uniform type, direct, simple, honest, and lofty in tone, has been impressed upon them. Some had more of it, some less. But all had it to a certain degree, and it is diametrically opposite to the type produced by growth under the ordinary conditions of Turkish life.'

"The College is not organized for the purpose of missionary propaganda. It is not denominational. It is Christian in the broad sense in which Princeton, Yale and Harvard are Christian Colleges. In its faculty it has a Mohammedan Professor of Turkish language and literature, and an orthodox Greek Professor of Greek language and literature. . . . It draws students not only from Turkey, but also from Greece, Bulgaria, Rumania and Russia, and has already educated nearly twenty-six hundred. If the demands upon the College continue to increase in the future as in the past, its endowment will have to be doubled. Occupying one of the most beautiful sites on the Bosphorus, the College has at present five buildings, besides six houses for professors, a teaching staff of twelve professors and twenty-five other instructors." — *The Outlook, January* 21, 1905.

Robert College was founded at Constantinople in 1863 by James H. and William B. Dwight, sons of an American missionary to Turkey, the Rev. Harrison G. O. Dwight. It was named after Christopher R. Robert, of New York, its main supporter, whose gifts to it first and last amounted to $450,000. Its first President was the Rev. Dr. Cyrus Hamlin, who presided over it until 1877, when he resigned, and was succeeded by the Rev. Dr. George Washburn.

In November, 1909, it received a bequest of $1,500,000, from the late John Stewart Kennedy, of New York, and its work will be greatly expanded.

Turkey: A. D. 1909. — Constitutional Amendment. See (in this vol.) TURKEY: A. D. 1909 (MAY-DEC.).

A. D. 1898-1909. — The Annual Conferences for Education in the South. — Since 1898 a series of annual Conferences for Education in the South, inspired, organized, and sustained especially by the joint efforts of J. L. M. Curry and Robert C. Ogden, have been held in various Southern cities, with notable effect. At the twelfth of these conferences, in April, 1909, at Atlanta, Mr. Ogden, presiding, said in his address: "This conference holds its place as a part of an educational renaissance. Its work can perhaps be definitely defined only at a single point. It exists primarily to impress upon the mind of the citizen, the people, the responsibility of the individual for educational conditions, to support the claim that every child in America, native or foreign born, is entitled to a good English education, that it is the duty of the State as representing the people to provide such education, that in the words of the man that recruited me and pledged my service, such as it is, to this work, J. L. M. Curry, president of this conference in its second year, 'Ignorance Cures Nothing.' . . .

"Aside from the first mentioned special influence this conference makes no direct claim save that it has by various agencies assisted in the promotion and development of many progressive educational ideas, and through the Southern Educational Board, to which it is both mother and child, has supplied methods and incidental support that have caused many latent forces to germinate, flourish, and bring forth abundant fruit that otherwise never could have existed. We simply have planted seed that eventually produced large harvests.

"I am told, and I think the statement is accurate, that during the last seven years the public appropriations for education in the States under the influence of the Southern Education Board have increased $16,000,000 per annum. These figures are difficult of verification, but probably are greater than I have stated. We have had something to do with this result, how much may not be a subject for definite calculation. . . .

"The twelve years that measure the life of the conference for education in the South have been years of great originality in the development of American education."

A. D. 1901. — The Washington Memorial Institution. — "In almost every Government department and bureau at Washington, prolonged scientific investigations are continually carried on, in order that governmental action itself may be more intelligent and more efficient, and the general welfare of the people promoted. . . . While the Congress carries on this work for governmental purposes only, it indicated as long ago as 1892, in a joint resolution approved April 12 of that year, that the Government's large collections illustrative of the various arts and sciences, and its facilities for scientific and literary research, were to be held accessible to the investigators and students of any institution of higher education then existing or thereafter established in the District of Columbia. By an almost unnoticed but most important provision incorporated in the general deficiency bill passed at the second session of the Fifty-sixth Congress, and approved March 3, 1901, the privileges given by the joint resolution of April 12, 1892, to investigators and students of institutions in the District of Columbia were extended to 'scientific investigators and to duly qualified individuals, students, and graduates of institutions of learning in the several States and Territories, as well as in the District of Columbia, under such rules and restrictions as the heads of the departments and bureaus mentioned may prescribe. . . . The new opportunities created a new need, and that need is to be met by the Washington Memorial Institution, incorporated on May 17, 1901, and formally organized on June 3.

"The Washington Memorial Institution is the direct outcome of the activities of the Washington Academy of Sciences and of the George Washington Memorial Association, the latter body being an organization of women 'to aid in securing in the city of Washington, D. C., the increase of opportunities for higher education, as recommended by George Washington, the first President of the United States, in his various messages to Congress.' . . . The plan has been worked out in consultation with representatives of the universities and other scientific bodies, and with their hearty cooperation and approval. It has the merits of simplicity and of not duplicating any existing form of educational effort." The Institution "will ascertain, year by year, just what the opportunities for students are at Washington, and will publish them to the world; it will receive and enroll students who offer themselves, and direct them to the places which await them; it will record their work and its results, and, when requested, will certify these to any institution of learning. It will keep in touch with the universities, scientific schools, and colleges on the one hand, and with the departments and bureaus of the Government on the other. In this way it will, it may be hoped, promote the interests and the ideals of both."—Nicholas Murray Butler, *The Washington Memorial Institution* (*American Review of Reviews*, *July*, 1901).

A. D. 1901-1909.—Changes at the Universities.—In October, 1901, on accepting a nomination to the mayoralty of New York City, President Seth Low, of Columbia University, resigned from that post, and Professor Nicholas Murray Butler became acting President until the following January, when he was elected to the Presidency by the unanimous vote of the trustees.

For the first time in its history, the University of Virginia—Jefferson's creation—received a President in April, 1905, when Dr. Edwin Anderson Alderman was inducted in office as its administrative head. The significance of the occurrence was expressed at the time by Professor William P. Trent, when he said: "The University of Virginia, so long, under its chairmen of the faculty, faithful to its founder's prejudices against the concentration of executive power in the hands of an individual, has been forced by pressure from within and from without to align itself with its sister universities in this essential feature of educational government, and in this fact many will see another step in the slow but certain nationalizing of the South, as well as an indication that in the future the University of Virginia will be widely known as a national institution of high standing."

In the summer of 1902, President Francis L. Patton, who had been the successor of President McCosh at Princeton University, retired and was succeeded by Professor Woodrow Wilson, previously occupant of the chair of Jurisprudence and Politics since 1890.

The President who had organized the University of Chicago at its foundation, in 1891, and directed its successful development through fifteen years of a remarkable success, William Rainey Harper, died on the 10th of January, 1906, and was succeeded by Professor Harry Pratt Judson, previously at the head of the department of Political Science and Dean of the faculties of Arts, Literature, and Science.

President Henry Hopkins of Williams College retired in 1907 and was succeeded by Harry A. Garfield, eldest son of the former President of the United States, and lately Professor of Politics at Princeton University.

In October, 1908, President Charles W. Eliot of Harvard University made known his wish to retire in the following May from the office which he had filled with so much distinction for forty years. His resignation was accepted with profound regret, and he vacated the Presidency of the great University on the 19th of May, 1909. His successor, Professor Abbott Lawrence Lowell, taken from the chair of the Science of Government, in the Harvard faculty, had been elected in the preceding January. President Lowell was inaugurated with much ceremony on the 6th of October.

Dr. Richard C. Maclaurin was called from the department of physics in Columbia University, New York, to the presidency of the Massachusetts Institute of Technology, in November, 1908.

President Cyrus Northrup, of the University of Minnesota, announced in 1908 his resignation to take effect the following year.

A change in the Presidency of Dartmouth College took place in June, 1909, Dr. W. J. Tucker resigning because of ill health, and Professor Ernest Fox Nichols, formerly head of the department of physics at Dartmouth, and latterly occupying a chair at Columbia University, being elected to his place.

Having passed his eightieth year of life and the thirty-eighth of his administration of the University of Michigan, President James Burrill Angell was reluctantly permitted to retire from active service to the University at the close of the academic year in 1909. The acceptance of his resignation by the Regents of the University was accompanied, however, by the tender to him of the office of Chancellor, the duties to be such as "he may be willing and able to perform; the salary for such office to be $4000 per year, with house rent, light and fuel, so long as he sees fit to occupy his present residence." Dean H. B. Hutchins, of the law department was made acting President.

A. D. 1902.—Founding of the Carnegie Institution of Washington, for Original Research. See (in this vol.) SCIENCE AND INVENTION: CARNEGIE INSTITUTION.

A. D. 1902-1909.—The General Education Board.—Its stupendous endowment by Mr. Rockefeller.—Its plans and operations.—The General Education Board, destined to become so great an educational power in the United States, had its birth on the 27th of February, 1902, at a meeting in New York to which Mr. John D. Rockefeller had invited the following named gentlemen: William H. Baldwin, Jr., Wallace Buttrick, Hon. J. L. M. Curry, Frederick T. Gates, Daniel C. Gilman, Morris K. Jessup, Robert C. Ogden, Walter H. Page, George Foster Peabody, John D. Rockefeller, Jr., and Albert Shaw; with Edward M. Shepard as counsel. A conception of the general plan and purpose of the Board had been, it is said, in Mr. Rockefeller's thought for some time past, and his guests gave hearty approval to the project in which he asked them to join him. Then and there they became organized temporarily under the name still borne, Mr. Rockefeller pledging $1,000,000 to the support of their work, which

should specially be directed at the outset to the study and improvement of educational conditions in the Southern States. Offices of the Board were opened in New York April 1, 1902. It was incorporated by Act of Congress on the 12th of January, 1903, at which time a considerable number of new members were added to the Board, chosen from the heads of important universities and colleges, North and South. The Board was now in active coöperation with the United States Department of Agriculture, whose work of scientific and systematic instruction in agriculture, by demonstration farms and otherwise, it found to be dealing with the most pressing of Southern needs. It found another field of useful coöperation, with Southern universities and colleges, in promotion of the founding and maintaining of high schools. Its main operations were on these lines until the summer of 1905, when, on the 30th of June, Mr. Rockefeller expanded its forces immensely by adding $10,000,000 to his original gift of $1,000,000.

In *The Independent* of August 6, 1908, Mr. Wallace Buttrick, secretary of the Board, described the enlargement of undertakings which followed this increase of endowment, saying: "The income of this large foundation for higher education enabled the board to extend its work throughout the whole country, as contemplated in its charter. Studies had already been made of the colleges in the Southern States, and such studies were at once made of the colleges in other parts of the United States. After such comprehensive study and the careful consideration of how best to aid in the development of an adequate system of colleges in all of the States of the Union, the board adopted the following principles as defining its general policy: To co-operate sympathetically and helpfully with the religious denominations; to choose the centers of wealth and population as the permanent pivots of an educational system; to mass its funds on endowments, securing in this work the largest possible local co-operation."

Less than two years later, on the 7th of February, 1907, Mr. Rockefeller nearly trebled his previous endowment by an enormous addition to the fund in the possession of the Board, announced in the following letter from his son, Mr. John D. Rockefeller, Jr.: "My father authorizes me to say that on or before April 1st, 1907, he will give to the General Education Board income-bearing securities the present market value of which is about thirty-two million dollars ($32,000,000), one-third to be added to the permanent endowment of the board; two-thirds to be applied to such specific objects within the corporate purposes of the board as either he or I may from time to time direct, any remainder not so designated at the death of the survivor to be added also to the permanent endowment of the board."

Of what was being done by the Board with this stupendous fund Mr. Buttrick gave details in *The Independent* as follows: "Conditional appropriations have been made to forty colleges, in the States of Maine, Massachusetts, Connecticut, New York, New Jersey, Pennsylvania, Virginia, North Carolina, South Carolina, Georgia, Alabama, Mississippi, Louisiana, Tennessee, Kentucky, Ohio, Indiana, Michigan, Illinois, Wisconsin, Minnesota, Iowa, Missouri, Kansas and Colorado.

"Twenty-five of these colleges have secured subscriptions for the supplemental sums required and but one has failed. The remaining fifteen colleges report satisfactory progress. The total amount thus appropriated by the board is $3,427,500; the supplemental sums, when completed, will aggregate $10,397,000.

"From the original $1,000,000 gift to the board by Mr. Rockefeller appropriations have been made to schools in the South amounting to about $700,000, one-half of which has gone to schools for the colored people. The high school propaganda and the agricultural demonstration work have also been supported from this fund.

"From the foregoing it will be seen that, in the Northern States, the board devotes itself exclusively to the promotion of higher education, having always in view the desirability of aiding such institutions as, taken together, will constitute an adequate system of higher education for each of the several States, thus seeking to correct and prevent duplication and waste and securing the highest efficiency.

"In the Southern States its work for colleges is similar to that done in the North, and, in addition, it seeks to promote public high schools through the State universities and the State Department of Education, to promote elementary education (or common schools) by increasing the productive efficiency of rural life, and to aid in developing schools for the training of leaders among the colored people."

But Mr. Rockefeller was not yet at the end of his gifts to this great Foundation. On the 9th of July, 1909, the following announcement was published: "John D. Rockefeller has raised the total of his contributions to the Rockefeller foundation of the general education board to $53,000,000 by a gift of $10,000,000 which will be passed to the credit of the board between now and Aug. 1. He has gone farther than that and has intrusted to the membership of the board — as it may be constituted at some future day — the responsibility of distributing the principal of the fund among the educational institutions of the land if it shall be deemed advisable.

"Under the regulations at present obtaining, this power of final disposition would extend only to $33,000,000, inasmuch as the board holds the other $20,000,000 in trust with the power to dispose of the income, while Mr. Rockefeller and his son, John D. Rockefeller, Jr., retain the right to dispose of the principal during their lives. It was said to-day that it always has been Mr. Rockefeller's intention to make such a provision for the final disposition.

"In making the announcement to-day, Chairman Gates said that this large addition to the permanent funds of the board was contributed because the income of the present funds immediately available for appropriation had been exhausted and it was found necessary to have an additional income in order to meet the needs of 'present great importance.'

"He said the board made it a rule never to exceed the immediately available income — which might amount to $80,000 or $90,000 a month — in its awards to the colleges and universities that something like 300 applications had been received by the board beyond the number which it already had acted upon, which was large.

"Mr. Gates said that at the same meeting last Wednesday another communication had been

received from Mr. Rockefeller, authorizing and empowering the board and its successors 'whenever, in their discretion, it should seem wise to distribute the principal of funds contributed by him to the board upon the affirmative vote of two-thirds of all those who shall at the time be members of the board.'"

A. D. 1905-1908.—The Carnegie Foundation for the Advancement of Teaching.—After the founding of the Carnegie Institution, of Washington, Mr. Carnegie's next great gift to Education, made in 1905, was in the sum of $10,000,000, placed in the hands of trustees as a fund the income of which may be applied "to provide retiring pensions, without respect to race, sex, creed, or color, for the teachers of universities, colleges, and technical schools in the United States, the Dominion of Canada, and Newfoundland," and "to provide for the care and maintenance of the widows and families of the said teachers." The board of trustees chosen by Mr. Carnegie for the administration of the fund is made up of eminent educators from different parts of America, with Dr. Henry S. Pritchett called from the Presidency of the Massachusetts Institute of Technology to become its executive head. The board was organized in November, 1905, and in the following April it adopted a plan of administration which had been formulated meantime by a committee from its membership. It had then, by an Act of Congress, approved by the President, March 10, 1906, been incorporated under the title of "The Carnegie Foundaton for the Advancement of Teaching." Besides using the words quoted above, in description of the authorized purpose of the Foundation, the Act of Incorporation adds furthermore that it is "in general, to do and perform all things necessary to encourage, uphold, and dignify the profession of the teacher and the cause of higher education." It is a further provision of the Act that "retiring pensions shall be paid to such teachers only as are or have been connected with institutions not under control of a sect, or which do not require their trustees, their officers, faculties, or students (or a majority thereof), to belong to any specified sect, and which do not impose any theological test as a condition of entrance therein or of connection therewith."

As explained by President Pritchett in an article published soon after the organization of their board, the Trustees had three fundamental questions to determine: "First, What is a college? second, What constitutes denominational control? and, third, Should a private agency step in between the State and one of its institutions and establish a system of retiring allowances for university professors who are officers of the State?" "The term college is used to designate, in the United States, Canada, and Newfoundland, institutions varying so widely in entrance requirements, standards of instruction, and facilities for work that the term is no description of the character of the institution. Of the seven hundred and more institutions calling themselves colleges or universities, many are such in name only." To rule their present action the Trustees adopted the definition that is "now in use under the revised ordinances of the State of New York, and which reads as follows: 'An institution to be ranked as a college must have at least six professors giving their entire time to college and university work, a course of four full years in liberal arts and sciences, and should require for admission not less than the usual four years of academic or high school preparation, or its equivalent, in addition to the preacademic or grammar school studies.' The trustees will also require that an institution, to be ranked as a college and to be dealt with as a college officially, must have a productive endowment of not less than $200,000."

As for the institutions to be excluded from the benefits of the retiring pension fund because of a sectarian connection the Trustees were confronted with a still more difficult question, since "a large majority of all the colleges of the country have a connection more or less strong with denominations." In the circumstances, no hard and fast rule of exclusion could be formulated; but, said President Pritchett, "it is evident that in many cases colleges must choose between the advantages of this gift and the benefits of a denominational connection."

So far as concerned State institutions, it was the original conclusion of the Board that "the States may fairly be expected to provide a retiring pension system for their own professors, and it is certainly questionable whether such wholesale action on the part of a private agency in the endowment of State institutions might not do them an injury rather than a kindness." Trustees and officers of the State Universities appealed from this view, and submitted to the Trustees cogent reasons why these institutions should participate in the distribution of the Fund. The Trustees replied that the Fund was not large enough for such an extension of its use. That objection, however, was soon removed by Mr. Carnegie, who made it known, in April, 1908, that he would have pleasure in adding $5,000,000 to his original gift in order to furnish retiring allowances for all State Universities that may apply for them. The Carnegie Foundation is now being administered accordingly.

Retiring allowances are determined by the following rules of the Board:—"I. In reckoning the amount of the retiring allowance, the average salary for the last five years of active service shall be considered the active pay.

"II. Any person sixty-five years of age, and who has had not less than fifteen years of service as a professor, and who is at the same time a professor in an accepted institution, shall be entitled to an annual retiring allowance computed as follows: (*a*) For an active pay of sixteen hundred dollars or less, an allowance of one thousand dollars, provided no retiring allowance shall exceed ninety per cent. of the active pay. (*b*) For an active pay greater than sixteen hundred dollars the retiring allowance shall equal one thousand dollars, increased by fifty dollars for each one hundred dollars of active pay in excess of sixteen hundred dollars. (*c*) No retiring allowance shall exceed three thousand dollars.

"III. Any person who has had a service of twenty-five years as a professor, and who is at the time a professor in an accepted institution, shall be entitled to a retiring allowance, computed as follows: (*a*) For an active pay of sixteen hundred dollars or less, a retiring allowance of eight hundred dollars, provided that no retiring allowance shall exceed eighty per cent.

of the active pay. (b) For an active pay greater than sixteen hundred dollars the retiring allowance shall equal eight hundred dollars, increased by forty dollars for each one hundred dollars of active pay in excess of sixteen hundred dollars. (c) For each additional year of service above twenty-five, the retiring allowance shall be increased by one per cent. of the active pay. (d) No retiring allowance shall exceed three thousand dollars.

"IV. Any person who has been for ten years the wife of a professor in actual service may receive during her widowhood one-half of the allowance to which her husband would have been entitled."

A. D. 1906. — Change in the Headship of the Bureau of Education. — Dr. William Torrey Harris, after seventeen years of distinguished service as United States Commissioner of Education, accepted the first designation of a retirement pension that was made by the trustees of the Carnegie Foundation. Professor Elmer Ellsworth Brown, professor of the Theory and Practice of Teaching in the University of California, was appointed by the President to succeed him.

A. D. 1906. — Celebration of the twenty-fifth anniversary of the founding of Tuskegee Institute. — The twenty-fifth anniversary of the founding of Tuskegee Normal and Industrial Institute, at Tuskegee, Alabama, by Booker T. Washington, was celebrated in April, 1906, and made the occasion of a notable gathering at Tuskegee of strong friends of the institution and its founder from all parts of the country. In *The North American Review* of that month Mr. Washington gave an interesting account of the rise of the Institute from insignificant beginnings, of the aims pursued in it and of the extent of their realization. It had sought to promote among the negroes of the South an education which, as he expressed it, "not only did not educate them out of sympathy with the masses of their people, but made them actively and practically interested in constructive methods and work among their people." Its students "are expected to be able to show the farmers how to buy land, to assist them by advice in getting out of debt, and to encourage them to cease mortgaging their crops and to take active interest in the economic development of their community."

This wise leader and true statesman of his race has devoted his life to the solving of the race-problem in the South on the principle stated by him in these words: "There is nothing for the negro to do but to remain where he is and struggle on and up. The whole philosophy of the negro question can be written in three words, — patience, persistence, virtue. The really helpful thing about the situation is that on the whole the negro has done, under the circumstances, the best he could."

Of the planting and growth of Tuskegee Institute he wrote: "Starting in a shanty and a hen-house, with almost no property beyond a hoe and a blind mule, the school has grown up gradually, much as a town grows. We needed food for our tables; farming, therefore, was our first industry, started to meet this need. With the need for shelter for our students, courses in house-building and carpentry were added. Out of these, brick-making and brick masonry naturally grew. The increasing demand for buildings made further specialization in the industries necessary. Soon we found ourselves teaching tinsmithing, plastering, and painting. Classes in cooking were added, because we needed competent persons to prepare the food. Courses in laundering, sewing, dining-room work, and nurse-training have been added to meet the actual needs of the school community. This process of specialization has continued as the school increased in numbers, and as the more varied wants of a larger community created a demand, and instruction is now given in thirty-seven industries."

At the end of its first twenty-five years of existence, the Institute has 1600 students; 156 officers, teachers, and employees; 86 buildings; and various ramifications for extensive work.

A. D. 1906. — Segregation of Oriental children in the San Francisco schools. See (in this vol.) RACE PROBLEMS: UNITED STATES: A. D. 1904–1909.

A. D. 1907. — Large gift for Rudimentary Schools for Southern Negroes. — A fund of $1,000,000 was created in the spring of 1907, by gift from Miss Anna T. Jeanes, to be devoted to rudimentary schools for Southern negroes. The fund is to be administered by Principals Frissell, of Hampton, and Booker T. Washington, of Tuskegee.

A. D. 1907. — Re-dedication of the enlarged Carnegie Institute, at Pittsburg. — An account of the founding of the richly housed and equipped Carnegie Library at Pittsburg, opened in 1895 is given in Volume VI. of this work (see LIBRARIES). To that fundamental institution Mr. Carnegie began soon to add auxiliaries, in technical schools, lecture hall, music hall, art galleries, and museum of science, until a great Institute, on which no less than $18,000,000 had been expended and bestowed by the founder was complete. A rededication of this splendid Carnegie Institute, in 1907, was made an impressive event by the presence of a remarkable number of distinguished guests, invited from Great Britain, Germany, France, Holland, Belgium, and the United States. The interesting exercises of the occasion were opened on the 10th of April and continued through three days.

A. D. 1909. — Wanted, in Massachusetts: The right leader for an Educational Revolution. — The State Board of Education in Massachusetts is said to have arrived, as a body, at the conviction, which has been taking possession of many minds in late years, that in the whole educational work of the present day, from primary school to university, "there is much time wasted in learning things of little help in after life, and failure to get the essential character-building"; that conditions are changed so greatly from what they were when the last great educational revolution was led in Massachusetts by Horace Mann, and others, that a new revolution is the imperative need of the day. Hence the State Board of Education is reported to be searching anxiously for a man to fill the lately created office of State Commissioner of Education, who is equal to a revolutionary undertaking. "He must be," says a recent Boston letter, "a broad man, of the right sort to realize the unusual opportunity open to-day." "There is no limit to the salary which the board may offer." "There has been no politics in the board, and there shall be none. All that the Commissioner wants in

the way of coöperation to carry out his views he will have." "The board feels that this is a crisis. If the right man can be found, the State's system will take a step forward toward a better practice, which shall remove the present dissatisfaction and the feeling that the public schools are not fitting children to be good producers or citizens." This opening seems a great one for the right man, if he can be found.

A. D. 1909. — Election of a woman to the Superintendency of the Chicago schools. — Mrs. Ella Flagg Young, elected Superintendent of the public schools of Chicago by the City's Board of Education, in July, 1909, is the first of her sex to occupy so important an administrative position. Her election is said to have been due entirely to her manifest superiority in qualification over other suggested candidates. The school system she will administer is second only in magnitude to that of the City of New York.

A. D. 1910. — Gift to Yale University by Mrs. Sage. — The following is announced from New Haven on the 10th of January, 1910: — "The recent gift of $650,000 by Mrs Russell Sage of New York city for the purchase of the Hillhouse property and its transfer free of encumbrance to Yale University releases a corresponding amount without restriction for the use of the university corporation. Important meetings will be held this week, one by the board of Sheffield Scientific School trustees and the other a special meeting of the Yale Corporation to act upon the disposition of the funds released by the Sage gift. It is generally understood that the plan proposed is the erection upon the Hillhouse property of a large biological laboratory, and perhaps the appointment in connection with it of a university professor in biology upon a new foundation."

A. D. 1902 (Dec.). — Completion of the Assuan Dam. — The great Assuan Dam, to control the waters of the Nile, was opened with formal ceremony on the 10th of December, 1902, in the presence of the Duke and Duchess of Connaught, the Khedive, Lord and Lady Cromer, and other distinguished personages. Earlier in the year the value of this important work of engineering had been enhanced by a treaty with the Emperor of Abyssinia or Ethiopia, which forbids constructions on the upper waters of the Nile, within the Abyssinian territory, which would arrest the flow of their waters. See (in this vol.) ABYSSINIA: A. D. 1902.

A. D. 1905-1906. — Pan-Islamic preaching. — Pro-Turkish movement. — Turkish encroachments on the Sinai frontier. — The Tabah incident. — British fleet at Phalerum. — British garrisons reinforced. — "Whether ordered by the Sultan or the result of an instinctive religious wave, a new and definite crusade began to affect Egypt in the summer of 1905. Preachers appeared mysteriously in Cairo and spread rapidly through the country, giving a new and stricter interpretation to texts from the Koran, and preaching in strong terms the wickedness of obeying the infidel. These preachers mixed with the people in their houses and cafés, and . . . the infinite leisure of a prosperous Oriental country doubtless found no lack of occasion for instilling their new doctrines. Then the Arabic native Press began to preach the same lesson, applying it specially to the Macedonian crisis and the piteous plight of the harassed Sultan. A new spirit came suddenly into political controversy. Any native defender of British rule was marked as a 'bad Moslem,' or 'a traitor to Egypt.' Argument was impossible; for any doubt of the Sultan was simply impiety. So the work went on bravely through the summer and autumn of 1905, while the British authorities looked on in surprise and perplexity. Lonely residents up country began to notice a change in the tone of the people. They felt the under-swell of a new and mysterious movement of religious feeling. Europeans who understood Arabic heard insolent remarks in the cafés as they passed by, and doctors in charge of invalids in lonely hotels noticed with alarm the sullen looks of their Arab servants, and their keen excitement over the Sultan's struggle. A spirit of nervous apprehension began to spread abroad among Europeans.

"Then in January, 1906, the Sultan suddenly showed his hand; and the smouldering fire burst out into the flame of the famous Tabah incident. The events that followed became conspicuous to the whole world — the seizure by Turkish troops of villages on the Egyptian side of the Sinai frontier, the threat to fire on an Egyptian cruiser, the defiant resistance to the English successor, the peremptory order to Egypt to evacuate Faroun Island, and, finally, the claim of Mouktar Pasha to a frontier-line west of Suez. The behaviour of Turkey seemed to bear out Rudyard Kipling's description of the ethical atmosphere that lies east of that port. Even where 'there ain't no ten commandments,' indeed, the little villages that sparkle like a grain of salt in the empty desert of the wanderings of Israel might be thought tempting to no man. But the line of the frontier had been drawn east of Tabah by the treaty which established Mehemet Ali in the Khedivate in 1840 [see in Vol. I. of this work, EGYPT: A. D. 1840–1869], and the claim to this limit had been prudently re-asserted by Lord Cromer in 1892, when . . present Khedive ascended the throne. Any tampering with these written arrangements, even to the extent of a single village, would have been the end of our authority in Egypt. There was, therefore, no room for compromise. If Sir Edward Grey had hesitated to force a surrender from Turkey in May by the only possible method of moving the fleet to Phalerum [and demanding

EGYPT

the immediate evacuation of Tabah], we might just as well have left the Nile.

"For the real significance of these events lay in what was going on in the mosques and newspapers of Egypt itself. As the crisis grew, these voices grew more and more daring. The preachers were as tempestuous as those who fulminated at St. Paul's Cross in our own Reformation times. Every move of the Sultan in those tortuous negotiations was accompanied by an obligato of sympathy from the Pan-Islamic Press. The native journals in Egypt are small sheets, cheaply produced. During the last eighteen months they multiplied exceedingly, fed by mysterious channels. The new journals preached the new doctrine — the doctrine of Pan-Islamism. . . .

"A Turkish raid on the Suez Canal or Nekl might have caused an outburst of fanaticism in Egypt and seriously divided and embarrassed the Army of Occupation. It was impossible to be sure that the Egyptian army of 16,000 men, though officered by Englishmen, could be trusted to fight against the Turks. Hence the reinforcement of the British garrison, reduced to some 2000 men, by an addition of some 3000. These began to arrive in May, and the agitation calmed quickly after their arrival. They are now to stay on at the expense of Egypt. Thus the first effect of the Sultan's interference has been a deplorable setback from Lord Cromer's ideal of governing Egypt by means of British-officered native policemen." — Harold Spender, *England, Egypt and Turkey* (*Contemporary Review, Oct.*, 1906).

A. D. 1907 (Jan.). — State of the country. — General satisfaction of the people. — The disaffected a minority. — Transformation effected by English rule. — Testimony of a French writer. — Those who know the real situation in Egypt can easily understand how almost the whole population, with the exception of an insignificant minority, are satisfied and desire no change. It is enough to compare the present state of the country — even rapidly and superficially — with that existing in 1882, to perceive the perfect satisfaction of all classes and the greatness of the work achieved by England; and the more profoundly this question is studied, the greater the admiration that must be accorded to Lord Cromer and to all those who during the past twenty-five years have worked under his orders at the regeneration of Egypt. The situation of that country in 1882 may be briefly summed up in the following manner:

"The Government was then in the hands of a band of rebels at the head of whom was the cowardly and worthless colonel, Arabi. The exchequer was empty; Egypt owed (almost entirely to Europe) nearly five millions sterling. The revenue was insufficient to pay the interest on her debts, or even to meet the expenses of government. The public works were all in such a state of neglect and disuse as to be no longer of any service. Commerce was paralysed and industry at the last gasp. The fellaheen, to whose labour Egypt owes her agricultural wealth, had stopped working, for, left at the mercy of the Pashas, who extorted from them everything possible down to the last farthing, they died of hunger, whether they worked or not. If we add that their leaders told the unfortunate people that their suffering all these privations was solely the fault of the Christian devils who were exacting mountains of gold from Egypt, it is easy to see that fanaticism and poverty combined were helping to make the situation a critical one for Europeans. It was into this fiery furnace that England entered and France refused to follow her. . . .

"This is now a tale of the past, and on the curtain being raised we behold a transformation so marvellous, so grand, that it is almost incredible. We find Egypt rich and prosperous; a great portion of her debt paid, an admirably adjusted budget; her revenues increasing enormously, regularly every year — and that in the face of large and important public works, works which daily augment the wealth of the country. Agriculture is advancing by leaps and bounds, while commerce and industry develop and increase with a rapidity unparalleled in the history of the world. A well-organised network of railroads, steam navigation, telegraphs, telephones, and excellently maintained canals, spreads over the country. Schools of every kind have been opened — primary, secondary, and higher schools, technical, commercial, and medical schools. The fellah works quietly and happily on his land, and the townsman is growing rich, while business prospers increasingly from one end of the country to the other. From the mouths of the Nile, from Alexandria to the great lakes of Central Africa, all across Egypt, Nubia, and the Soudan, peace and quiet reign everywhere. And — strange as it may seem — all these results have been obtained, not by increasing the taxes, but, on the contrary, by reducing and even in some cases abolishing them altogether.

"In less than twenty-five years England has accomplished all this and much more still. She has effected the marvellous achievement of remaining in Egypt with the unanimous consent of the Powers of Europe, to the great satisfaction of the Egyptians themselves and the foreigners dwelling in Egypt, and finally of living there as a friend, almost as an ally of France! . . .

"The honesty of the Government in all its branches, the impartiality with which all abuses have been punished, and finally the honourable example which during five-and-twenty years the English have set before the Egyptians, have certainly borne good fruit. To be 'honest' is no longer an empty expression on the banks of the Nile, and the entire population understands to-day what that word signifies. I think of how absolutely unknown it was in 1882! To sum up, Egypt and the Egyptians have now become *clean*, both physically and morally. We may say that England has cleansed and disinfected them, externally and internally." — A. B. de Guerville, *The Situation in Egypt* (*Fortnightly Review, Feb.*, 1907).

In his work on "Modern Egypt," published since his retirement from the British administration in Egypt, Lord Cromer speaks as follows of the change which has come over Egypt since the British occupation took place. Though an interested witness, Lord Cromer is one well trusted by the general opinion of the world: "A new spirit," he wrote, "has been instilled into the population of Egypt. Even the peasant has learnt to scan his rights. Even the Pasha has learnt that others besides himself have rights which must be respected. The courbash may hang on the walls of the Moudirieh, but the

Moudir no longer dares to employ it on the backs of the fellaheen. For all practical purposes, it may be said that the hateful corvee system has disappeared. Slavery has virtually ceased to exist. The halcyon days of the adventurer and the usurer are past. Fla. burthens have been greatly relieved. Everywhere law reigns supreme. Justice is no longer bought and sold. Nature, instead of being spurned and neglected, has been wooed to bestow her gifts on mankind. She has responded to the appeal. The waters of the Nile are now utilized in an intelligent manner. Means of locomotion have been improved and extended. The soldier has acquired some pride in the uniform which he wears. He has fought as he never fought before. The sick man can be nursed in a well-managed hospital. The lunatic is no longer treated like a wild beast. The punishment awarded to the worst criminal is no longer barbarous. Lastly, the schoolmaster is abroad, with results which are as yet uncertain, but which cannot fail to be important."

A. D. 1909. — Completion of the Esneh Barrage. See (in this vol.) CONSERVATION OF NATURAL RESOURCES: EGYPT.

A. D. 1909 (May). — The Nationalist agitation, excited by the Turkish Revolution. — A correspondent of the New York *Evening Post*, writing from London of the agitation for national independence in Egypt, under date of May 8, 1909, remarks that it has been affected in two ways by the recent revolutionary movements in the East. They have "weakened as well as strengthened the cause. For a number of half-educated native thinkers to see Turkey with a Parliament is to make them feel they should have one, too. The British agent points out that the youth of Egypt, upon whom must rest all hopes of eventual autonomy, are becoming demoralized by such propaganda. They have been clamoring on every occasion for a Constitution." They have been incited by a virulent press. "When, a few months ago, Mr. Haldane announced that the British army of occupation was to be increased to the same strength as the force in South Africa, disgusting diatribes were indulged in against the British army. Officers were described as monsters of low breeding, ill manners, cowardice, and multifarious vice. As a result of this kind of thing, and also through the pressure of the moderate native press, the old Press law of 1881 was revived — a law providing that after three warnings a paper may be suspended by the Council of Ministers by an administrative order, and not through the courts of law.

"Since then the Nationalists have arranged frequent demonstrations, some of them resulting in encounters with the police, which have been magnified by part of the English press into serious riots. Serious riots are not got up by schoolboys, who, according to the best information, seem to have been entirely responsible for the physical part of these demonstrations in Cairo and elsewhere. They have now been strictly forbidden to take part in any public political discussion."

A. D. 1909 (Sept.). — Young Egypt Congress. — The party of Young Egyptians, so called, held a Congress at Geneva in September — the second of such assemblies — which was attended by several sympathetic members of the British Parliament, Mr. Keir Hardie and others, representing the Labor and Irish parties. A telegram was sent from the Congress to the House of Commons in England, stating that the representatives of the intellectual elements of organized Egyptian political parties gathered in congress at Geneva on the occasion of the anniversary of the entry of the English troops into Cairo saluted very respectfully the representatives of Great Britain, recalled the reiterated promise of the British Government to evacuate Egyptian territory, and inasmuch as the reasons given by Mr. Gladstone for the occupation no longer existed, asked the House for the honour of the English nation to secure the withdrawal of the troops from Egyptian territory. A similar telegram was despatched to the Grand Vizier, Hilmi Pasha, asking him to use his influence with England to secure the withdrawal of the troops.

This was sent on the 14th of September, the 27th anniversary of the British occupation of Egypt, and on the same day the Prime Minister of Great Britain, Mr. Asquith, received the following telegram from Cairo:

"A meeting of 6,000 Egyptians assembled here to-day desires to convey to your high personage the unanimous and energetic protest of the Egyptian people against the occupation, and from to-day demands the evacuation, relying upon the engagements and solemn oaths of the Queen's Governments. Moreover, to gain our friendship is more preferable for English honour than to lose our hearts and support."

The protest was also sent to the Grand Vizier in Constantinople and to the Young Egypt Congress in Geneva.

Germany: A. D. 1906. — Extensions of popular rights in some parts of the Empire. — A comedy of election reform in Prussia. — "The agitation for the extension of popular rights is vigorous in many parts of the Empire. The Kingdom of Würtemberg has just reformed its antique constitution by eliminating from the Lower House the privileged members, 'knights' and clergymen, and substituting members elected by popular vote. Baden has introduced universal suffrage, and Bavaria has changed from indirect to direct voting. In the Kingdom of Saxony, which a decade ago remodeled its election law in a plutocratic direction, the government is now trying to retrace its steps. The Oldenburg government has committed itself to universal suffrage, and in Saxe-Weimar the Liberal parties and the Socialists have formed a compact to establish it. In the midst of this democratic movement Prussia has just carried through a slight revision of its election laws. . . .

"The government [Prussian] came forward last spring with a scheme of election reform which is nothing short of comical in its bureaucratic narrowness. Several huge city districts were divided, and ten new seats in the Chamber created, — not, however as a recognition of the rights of the urban population, but in order to facilitate the mere formalities of balloting. The number of electors in such districts had outgrown the capacity of any hall to hold them." — W. C. Dreher, *The Year in Germany* (*Atlantic Monthly, Nov.*, 1906).

Proportional Representation: England: The subject under discussion. — The practicability and desirability of proportional representation has been under investigation in the United Kingdom, during 1909, by a Royal Commission, which has had frequent sessions for hearings at Whitehall. At a hearing in October Lord Hugh Cecil, who represents Oxford in the House of Commons, argued with great force in favor of proportional representation, as a means of moderating the constraint exercised over independent opinion by party ties. He said that the present system was not satisfactory. It greatly hindered free discussion in the House of Commons, and tended to exaggerate there the intensity of feeling and the rigidity of the party system. Majorities were generally large, and often it was merely a trial of endurance. The empty condition of the House on many occasions proved that discussion never influenced divisions, and there was an elimination of independent opinion. Decisions were on party issues, except when new subjects such as the fiscal question, were brought forward. With smaller majorities independent opinion — specific rather than general — would have more opportunity, and that would be a gain. There was a growing tendency to lift foreign politics and, to a lesser degree, Colonial politics beyond party, and to a large extent the Government could count on the support of moderate opponents when foreign and Colonial matters were considered. He did not think the effect of proportional representation would be to form any more groups than they had at present, but his desire was that there should be members who were not absolute party men, and independent members would have more chance of getting returned. He considered that desirable, and did not apprehend the return of faddists. Even now faddists were easily elected to Parliament, where for the most part they were disregarded. He did not agree that practically all sections of the community were represented under the existing system. A very large and important section between the two parties was never represented, having always to choose between one or the other extreme.

South Africa: The Principle in Practice. — The principle of proportional representation was brought into practice in the municipal elections of the Transvaal in October, 1909. The Constitution of the South Africa Union, which goes into effect in the spring of 1910, applies it, also, to the election of senators in the Union Parliament. "The proportional method chosen is, in each case, that of the single transferable vote, and the Johannesburg elections will furnish an example of the use of this system on a larger scale than any hitherto attempted, whilst the senatorial elections will furnish examples of its application to very small electorates. The duty of the voter, both in the senatorial and in the municipal elections, will be the same. He must place the figure 1 against the candidate for whom he desires to vote, and, in addition, he may and should place the figures 2, 3, 4, 5, 6, 7, and so on against the names of the other candidates in the order of his preference. The numbering of additional preferences, if not so vital as that of marking the first choice, is of extreme importance, and the elector should continue to indicate preferences until he has exhausted his powers of choice. The object, in marking preferences, is to prevent the waste of voting power. For, if the elector's first choice has obtained more votes than are necessary to secure his election, or if his first choice has obtained so few votes as to be hopelessly out of the running, the returning officer will carry forward these votes in accordance with the wishes expressed by the electors, as indicated by the preferences marked . . . The vote is always credited to the first choice and is not transferred save in the contingencies named. If, however, no effective use can be made of the vote in the return of the elector's first choice the returning officer, in the absence of any instructions from the voter, will be unable to carry the vote forward, and the vote will therefore have no influence in determining the result of the election. Electors should therefore exercise to the full their privilege of marking preferences." — *The State* (*South African National Magazine*), *Oct.*, 1909.

Prussia: A. D. 1909. — Rejection of proposed Reforms. — The result of new proposals for reforming the intolerable class-system of voting in Prussia (see CONSTITUTION OF PRUSSIA in Volume VI. of this work), proposals of more

sincerity than those of 1906, described above,—was thus reported in a Press despatch from Berlin, January 26, 1909: "The debate upon the motions regarding reform of the Prussian franchise was concluded in the Lower House of the Diet to-day. After two more speeches had been delivered the Conservatives moved and carried the closure, and the various reform proposals were put to the vote. All the motions were rejected. Against most of the proposals so large a hostile majority was shown when the Deputies were invited to rise from their seats that no counting of votes was necessary. A motion in favour of the substitution of direct for indirect election was rejected, upon a division, by 168 votes against 165—a majority of three. Upon this question, and also upon the main question—the introduction of a universal and equal franchise with secrecy of the ballot—most of the Centre Party Deputies voted with the Left, and the majority consisted almost entirely of Conservatives and Free Conservatives, who under the existing system, possess an absolute majority in the Diet."

A. D. 1910.—A bill brought forward by the Government in February, 1910, professing to reform the elective franchise, gave less than no satisfaction to the mass of the people, who resented it as an insult to their rights. The measure was reported to make no change in the three-class system of voting, which ensures to wealth its political domination, and it refused the secret ballot. It conceded nothing of reform except a direct instead of an indirect election of representatives, and provoked formidable demonstrations of popular indignation in Berlin and other cities.

United States: Direct primary nomination of candidates.—After a long and unsatisfactory experience in the United States of the nomination of candidates for public office by conventions of delegates, the people have been rapidly discarding that system within the last few years, replacing it by the institution of primary elections, at which candidates for the subsequent *election* are *selected* by direct vote. The old delegate system tended irresistibly to give the picking of candidates (between whom the people had finally a narrow choice) to little handfuls of men who make manipulative party management their main business in life, with objects of self profit, either in money or political power. Effective revolt against this evil-working system began in the Western States and is now strong in the East. The following summary statement of what it had accomplished, up to the spring of 1909, is from a pamphlet then published by the Citizens Union of New York City, in support of a "Direct Primary Bill" which was pending at the time in the Legislature of the State of New York:

"The direct primary is now the most usual system of making nominations in the United States, and in no case has a state, a county, or a town turned back from direct nominations to the convention system. It is no longer an experiment, having been tried out under varying conditions in so many states that it is possible to be guided by experience in avoiding the dangers of an imperfect direct primary law.

"Fourteen states [Illinois, Iowa, Kansas, Louisiana, Mississippi, Missouri, Nebraska, North Dakota, Oklahoma, Oregon, South Dakota, Texas, Washington, and Wisconsin], with a total population of 25,328,089, have *mandatory* laws *requiring* the use of this plan in selecting candidates of the principal parties for practically all offices. Three other states [Minnesota, Ohio, Pennsylvania] have *mandatory* laws covering practically all except the state offices. Five other states [Indiana, Massachusetts, Michigan, New Jersey, Tennessee] have *mandatory* laws covering certain localities or offices. Five states [Alabama, Florida, Kentucky, Michigan, Tennessee], including two of the above, have optional laws covering practically all officers, the provisions of which laws have been largely taken advantage of. There are direct nominations laws of a weaker sort, some of them of little or no value, in many other states. Party rules have established direct nominations for at least the majority party in nearly all of the Southern states not mentioned above.

"About one-half of the states, including those in which the system has been established by party rules, use direct nominations for practically all elective offices. The states in which the system is established by mandatory law for practically all elective offices have about thirty per cent. of the population of the United States.

"Of the thirty-one United States senators elected last fall, seventeen were nominated by direct primaries. Fifteen out of thirty-two governors of states were so nominated. There is a strong movement for direct primaries in states which do not at present use this system to any considerable extent, namely: Vermont, Connecticut, New Hampshire, New York, California, Colorado, Idaho and Utah. In New Hampshire, both Republican and Democratic parties declared for it in their party platforms last fall, and the Republican Governor has recommended it to the Republican Legislature. In California, two direct nominations laws have been passed, but declared unconstitutional. Last fall, an amendment to the constitution of that state permitting the legislature to enact a direct nominations law was passed by a vote of the people.

"A brief outline of how direct nominations originated and how the system has been extended until it has been substituted for the convention system by a majority of the American people furnishes a strong argument in its favor. It is an American system, and a product of the struggle of the American people for the control of their government.

"Direct primaries originated in Crawford County, Pennsylvania, where the so-called Crawford County System was established by action of a Republican County Committee in 1860 and has been in force ever since. On two occasions, the question of whether it should be retained was put before the Republican voters and overwhelmingly decided in the affirmative, the last of these votes being taken after the system had been in force for nineteen years. Its

ELECTIVE FRANCHISE

popularity led to its adoption throughout the entire Congressional district for all nominations.

"The Minnesota direct primary law for the city of Minneapolis, Hennepin County, was enacted in 1899. After it had been tried in the city for two years, public sentiment, because of the excellent results achieved under the new law in Minneapolis, insisted upon its being extended, and other localities were brought within its provisions. Minnesota at present has a mandatory state-wide law applying to practically all except state offices. The newspapers of Minneapolis all declared for it, and no man of prominence in the state took a stand against it after it had been tried in the city.

"Michigan adopted direct primaries in 1908 for use in Grand Rapids, Kent County. The result was the defeat for re-nomination of the Mayor under whose administration the so-called water scandal had developed. Two years later, candidates in Kent County were requested to go on record as to whether they favored a general direct primary law for the state. All who recorded their positions declared for such a law, and it was commonly reported in the newspapers that opposition to direct primaries would mean defeat for any candidate who took so unpopular a stand.

"Thereafter direct nominations spread rapidly through the middle western states. Mandatory laws were substituted for optional laws, and state-wide laws for laws applying to certain localities or offices."

The movement for direct primary voting, to supersede delegated conventions in the nomination of candidates for office, was inspired and invigorated powerfully in New York by Governor Hughes (see, in this vol., NEW YORK STATE: A. D. 1906–1910), soon after his second term in the executive administration began. He saw that nothing else could emancipate the political parties of the State from their "boss"-ridden servitude, and make them real organs of expression for the mind and will of the people. The whole force of his great influence then went to the help of the advocates of this reform, and it produced a public wakening on the subject which years of ordinary agitation might have failed to bring about. He brought, moreover, to the movement an inborn statesmanship of judgment and an intellectual training which gave it the wisest direction it had yet received. The Bill which he assisted to frame, embodying his official recommendations, was designed more carefully than the legislation in other States had been, not only to avoid any weakening of the organization of political parties, but to give them the strength of a leadership conferred truly and freely by its followers. The measure was opposed desperately by the existing "organization" of the party in power, and that combination was represented in the Legislature so much more effectively than the people were that it compassed the defeat of the Bill, in the session of 1909

Four times the people of Illinois have extorted acts from their Legislature providing for direct nominations, and thrice the enactments, badly framed, have been pronounced unconstitutional by the Supreme Court of the State. The fourth of these pieces of legislation, produced in February, 1910, is not yet tested.

Disfranchising Amendment to the Maryland Constitution defeated. — A disfranchising amendment to the Constitution of Maryland, designed not only to exclude many colored people from the suffrage, but to give the now dominant political party a complete mastery of the ballot box, was rejected by the people when submitted to them at the election of November, 1909.

Short Ballot Reform. — A movement that will gain force if the grave reasons for it can be duly impressed on the popular mind has been assuming organized form of late. The prime mover in it is Mr. Richard S. Childs, of New York, who began missionary work for it in a convincing magazine article on "The Doctrine of the Short Ballot," published in 1908. Printed afterwards in a small pamphlet, this impressive argument has had wide circulation and has drawn many men of influence into league with the author for urging the subject on public attention. The aim is to reduce elective offices in State, county and town to such a limited number that the average voter can acquaint himself with the comparative merits of candidates and make a fairly intelligent choice, which he cannot do when the number is large. "We must shorten the ballot," wrote Mr. Childs, "to a point where the average man will vote intelligently without giving to politics more attention than he does at present." "Voting a straight ticket is not a matter of party loyalty so much as of not knowing what else to do, and split tickets will become common as soon as the list is reduced to a point where each candidate becomes in the mind of the voter a definite personality instead of a mere name on a long list. To make public office conspicuous can only be accomplished by making it stand out in solitude before the gaze of the voter. Let all the encumbrances in the shape of minor offices disappear from the ballot and be made appointive. Or at the very least prevent the few offices from overshadowing the many. Make all the candidates conspicuous by letting no one be more conspicuous than another."

A digest of the "short ballot" doctrine is offered in the following propositions:

"To the average American voter most of the long ballot is a mere list of names. He registers a genuine personal opinion only on certain conspicuous offices — the rest he necessarily delegates by default to organizations of 'political specialists.'

"These political organizations, if victorious, sink into the control of their worst members, since these members having most to gain and being least scrupulous can generally win within the organization. Then these men run public administrations as badly as they dare.

"But we get good men for any conspicuous office where there is adequate public scrutiny of the candidate, and even Tammany offers us satisfactory public servants in such places.

"*Therefore*, if we make most offices appointive so as to *shorten the ballot*, till the voter can master his whole task, and every elected officer becomes conspicuous before his constituents, political machines will become impotent and merit will become the most important asset for a candidate.

"The result will be uniform clean government as in England, Canada, etc., where they have 'The Short Ballot' already."

Suffrage Amendment to the Georgia Constitution adopted by popular vote. — A suffrage

amendment to the Constitution of the State of Georgia, adopted by an overwhelming popular vote in October, 1908, provides that, in order to register and vote according to the provisions of this amendment, a man must, besides meeting certain requirements as to residence and the payment of his taxes, have one of the following qualifications: Either (1) he must have served in the land or naval forces of the United States or the Confederate States or the State of Georgia in time of war, or be lawfully descended from one who has done so; *or* (2) he must be a person of good character, satisfying the registrars of election that he understands the duties and obligations of citizenship; *or* (3) he must correctly read in the English language any paragraph of the United States Constitution or the State Constitution, and, unless physically incapacitated from doing so, correctly write the same when read to him; *or* (4) he must be the owner of at least forty acres of land in the State in which he resides, or the owner of five hundred dollars' worth of property in the State assessed for taxation.

Woman Suffrage: At Large: Present extent of the movement. — "We rejoice in the immense progress made by women in the last 60 years. In 1848 women had votes nowhere in the world except the school vote in Kentucky by widows with children of school age, and a very limited franchise in some parts of Europe. Today women vote for all elected officers in Finland, Norway, Federated Australia, New Zealand, Wyoming, Colorado, Utah and Idaho; they have municipal suffrage in England, Scotland, Ireland and Wales, in Canada, Kansas, Sweden, Denmark and Iceland; tax suffrage in Louisiana, Montana, Iowa and New York, and school suffrage in one-half the States of the Union. When that first convention met, only one College in the United States admitted women; now hundreds of colleges do so. Then there was not a single woman physician, or ordained minister, or lawyer; now there are 7000 women physicians and surgeons, 3000 ordained ministers, and one thousand lawyers. Then only a few poorly paid employments were open to women; now women are in more than 300 occupations, and comprise 80 per cent. of our teachers. Then there were scarcely any organizations of women; now such organizations are numbered by thousands. Then the few women who dared to speak in public, even on philanthropic questions, were overwhelmingly condemned by public opinion; now the women most opposed to equal suffrage travel about the country making public speeches to prove that a woman's only place is at home. Then a married woman in most of our States could not control her own person, property or earnings; now in most of the States these laws have been largely amended, and it is only in regard to the ballot that the fiction of women's perpetual minority is still kept up. Most of the demands made by the convention of 1848, which then seemed so revolutionary, have been already granted, and are now looked upon as matters of course. . . . We rejoice in the increasingly rapid progress of the woman suffrage cause. Every year shows some gain. Since our last annual meeting Parliamentary suffrage has been extended to the women of Norway; municipal suffrage to the women of Denmark; Sweden has made women eligible to municipal office; Russia has given women of property a proxy vote for members of the Douma; and Great Britain, with only 15 dissenting votes, has made women eligible as Mayors, Aldermen and County and Town Councillors. We congratulate the women of Great Britain upon their gallant fight for the franchise." — *Resolutions of the 40th Annual Convention of the National American Woman Suffrage Association, at Buffalo, N. Y., October*, 1908.

In Europe "there is the curious anomaly that in its two so-called republics the cause of woman suffrage is more backward than in almost any of the other countries. In Switzerland every man over twenty may vote. A National Woman Suffrage Association has lately been organized which is supported by many public men. . . .

"In France, all men twenty-one years old have the franchise. The National Council of Women, composed of 55 associations with about 70,000 members, has recently joined forces with the National Suffrage Union, thus assuring strong and systematic effort for the enfranchisement of women. In 1906, a Committee for the Defence of the Rights of Women was formed in the Chamber of Deputies, to secure the social, civil and political rights of women." — Ida H. Harper (*North Am. Review, Sept.*, 1907).

Australia. — The Constitution of the Commonwealth of Australia, in its 41st clause (see CONSTITUTION OF AUSTRALIA, in Vol. VI. of this work) provides as follows:

"No adult person who has or acquires the right to vote at elections for the more numerous House of the Parliament of a State, shall, while the right continues, be prevented by any law of the Commonwealth from voting at elections for either House of the Commonwealth."

Inasmuch as two of the Australian States, South Australia and Western Australia, had already extended the suffrage to women when this federal constitution was adopted, they gained at once, by its terms, the right of voting at federal elections in those States. An account of their first appearance in Australian Federal politics was given subsequently by one of the women who participated, — in part as follows:

"The political incentive is now the possession of the women of Australia, and its influence was a potent factor in the recent Federal elections. The women of South Australia and West Australia have had the suffrage for some years, so that they are accustomed to voting, but to the women of the other States the whole business was new; nevertheless, they voted in as large numbers proportionally as the men in a majority of the constituencies, while in some they cast a heavier vote than the men. The total vote was only 52 per cent. of the voting strength, the low percentage being due to the fact that the people as a body have not yet grasped the Federal idea. Federation has not completely scotched provincialism in politics, though it is fast doing so, if for no other reason than the enormous cost of government in this country. The people are beginning to realize that we are paying the political piper heavily — fourteen Houses of Parliament and seven viceroyalties for four millions of people! It is too big an order, and common sense, as well as the state of our finances, demands that we should simplify our legislative machinery. It is right here, as the Americans say, that the women's influence will tell. Dur-

ELECTIVE FRANCHISE

ing the election campaign, it was most evident that a very large section of the women favoured those candidates who urged economy in public expenditure. Individual women, with no idea of the value of money, may be extravagant, but most women are compelled by circumstances to be economical, and have a horror of wasteful expenditure. Therefore the growing demand for less expensive legislative machinery will find devoted adherents amongst the women voters. . . .

"The elections had an added interest in the appearance of four women candidates in the field — Mrs. Martell, Mrs. Moore (New South Wales), myself (Victoria), standing for the Senate; and Miss Selina Anderson (New South Wales) for the House of Representatives. All were defeated, but the defeat was not unexpected, as we were well aware that it would be altogether phenomenal if women were to succeed in their first attempt to enter a National Parliament. . . .

"There were eighteen candidates in the field, and, while unsuccessful, my record of 51,497 votes, when 85,387 were sufficient to secure election, is most gratifying. I polled more heavily than one candidate who has been Premier of Victoria, and than another who had been for twenty-six years a member of the State legislature, defeating the one by 24,827, the other by 32,436 votes — 51,000 odd votes, in spite of the opposition of the powerful daily papers, and the prejudice that a pioneer always has to encounter, is nothing less than a triumph for the cause that I represent, the cause of women and children." — Vida Goldstein, *The Political Woman in Australia* (*Nineteenth Century, July*, 1904).

"The argument that women will not vote is completely disproved by Australian experience. They not only vote, but they vote in continually increasing numbers as time goes on, and they become educated up to a sense of their political responsibilities and all that these imply. Not all the states discriminate in their returns between men and women voters, but those that do show something like the following: In South Australia, at the last general election, 59 per cent. of the men on the rolls voted, and 42 per cent. of the women; in Western Australia, 49 per cent. of the men and 47 per cent. of the women voted; at the last Federal election, 56 per cent. of the men voted, and 40 per cent. of the women. None of the Australian states has yet reached the extraordinary record of New Zealand, where, in 1902, nearly 75 per cent. of the women electors recorded their votes, as against 76 per cent. of their brothers.

"It is unnecessary to add that the conservative woman votes. Her husband or father and their newspaper take good care that the duty of doing so is well impressed upon her, even though abstractly they may all three disapprove of woman in politics, and have striven to avert her appearing in that arena as long as they possibly could . . .

"Among the measures that can be traced to woman suffrage within the last ten years are prematernity acts, acts raising the age of consent, family maintenance acts, and many acts improving children's conditions by extending juvenile courts, limiting hours of work, providing better inspection, forbidding sale to children of drink, drugs and doubtful literature." — Alice Henry, *The Australian Woman and the Ballot* (*North American Review, Dec.* 21, 1906).

Writing in the New York *Evening Post* of February 10, 1909, Mrs. Ida Husted Harper makes the following statements: "The recent announcement that the upper house of Parliament in Victoria, Australia, had passed a woman suffrage bill by a vote of 23 to 5, marked the gaining of complete suffrage for women in all of Australasia. Since 1902 women have had a vote in Australia for members of the national Parliament, and for a number of years the vote for State officials in all the States except Victoria. There the lower house, or Assembly, has fifteen times passed a bill giving this vote to women only to have it rejected by the upper house, or Council. The Assembly is elected by popular vote; the Council is not. . . . With their municipal and national franchise the women were able to make things decidedly uncomfortable for the opponents, in which they were encouraged and aided by the labor unions. At last the council surrendered unconditionally, and the vote of twenty-three to five showed that most of them tried to get into the ban' wagon. The five who voted 'no' were probably 'in for life,' and not afraid of the consequences. . . . Australia has thoroughly tested woman suffrage, first in municipal affairs, and then in those of State and nation. There is not one objection made against it which is not refuted by the actual experience of that country. All the talk about who will take care of the baby and what will become of the home, its men would brush aside as so much chaff."

Denmark: Its first exercise in Municipal Elections. — Danish municipal elections in March, 1909, were conducted under a new law which gives every woman who either pays direct taxes or whose husband does so the right to vote. The law also provides for a system of proportional representation. "There was naturally much discussion beforehand," wrote a newspaper correspondent from Copenhagen, "as to what would be the result of this first experiment in woman suffrage in Denmark. The Conservatives, indeed, protested for a long time before they yielded to its claims. As far as can now be ascertained the relative strength of the parties in the councils will be practically unchanged, that is to say, the Conservatives will still have a slight majority. This is at all events the case in and around Copenhagen, where the women took a very active part in the voting, nearly 75 per cent. of those who were entitled to vote having done so."

England: Qualification for County and Borough Councils. — The following are the provisions of an Act of Parliament approved in August, 1907:

"A woman shall not be disqualified by sex or marriage for being elected or being a councillor or alderman of the council of any county or borough (including a metropolitan borough): Provided that a woman if elected as chairman of a county council or mayor of a borough shall not by virtue of holding or having held that office be a justice of the peace."

The Campaign of the Militant Suffragists or "Suffragettes." — The cause of the women who desire and demand equal political rights with men seemed to be advancing fast toward complete victory in Great Britain,

ELECTIVE FRANCHISE

in 1906–07, when the impatient among them began resorting to militant methods of agitation. It is probably safe to say that no other movement by any part of any people in any country, for obtaining an extension of political rights, had ever been carried by rational discussion and appeal to a point of more encouragement than the woman suffrage movement in the United Kingdom had then attained. For everything elective in local government the vote had been won for women, and the opening of county and borough offices to them was on the eve of being written into law. Representation in Parliament, only, had not been secured, but the disposition to concede it was growing from day to day. It was at this stage of promising progress in the movement that an impatient section of its promoters became persuaded that some disturbance of the public peace and some troubling of the Government would hasten the final triumph of their cause. Why they were led to that conclusion was explained to an American audience in New York by their leader, Mrs. Pankhurst, in October, 1909, as follows:

"The Liberals failed to put woman suffrage in their Newcastle programme. We waited on Sir Henry Campbell-Bannerman, leader of that party, and who would be prime minister, but he said he was too busy seeing voters to attend to women. The other parties acted in the same way, so we were forced to other action. A. J. Balfour, the Tory leader, upon whom we called, declared that he was in favor of equal suffrage, but was honest enough to add that no statesman would propose a bill to give it unless it were made a practical question of politics.

"You have heard much of our methods. You have condemned them, but whether they were right or wrong, objectionable or not, they have certainly accomplished our object of bringing the question before the British public as a practical political question. . . . My grandmother was a Chartist, and so I determined to follow in her footsteps.

"It was at Manchester, almost on the site of the Peterloo franchise riots, when the yeomen, with their bayonets, cut down the men seeking votes, that our agitation began. Sir Edward Grey was closing the great Liberal revival in Lancashire by a great meeting. Women were admitted to meetings in England in those days; it is not so now. We decided to be there with a banner on which we would inscribe the motto 'Will the Liberal government give working women the vote?' Annie Kenny, an officer of the Cotton Workers' Trade Union, was chosen to put the question to Sir Edward Grey. She accepted on condition that my daughter, Christobel Pankhurst, would accompany her and hold her hand. We tried to get them seats in the front of the balcony, where they could unfurl the banner. We failed in this, so we got seats in the area, and had to change the banner. The new one was made on my dining-room table with a piece of calico and some black paint and contained the now world-wide motto: 'Votes for Women.'

"Sir Edward Grey delivered a great speech, but there was nothing in it about giving women votes. Several questions were put to him, and he answered as all public speakers should, and as they always do in England. When he was done, more questions were in order. Annie Kenny rose and unfurled her banner, holding it up in a hand from which she had lost a finger while at work in the mills at an age when girls should not be allowed to work — especially when they are intended for motherhood. Holding her companion's hand, she put her question: 'Will the Liberal government give working women votes?' Instantly the stewards pounced upon her; hands were pressed over her mouth, and she was forced to sit down. She was told to write her question, and it would be answered. A vote of thanks was proposed, and Sir Edward Grey answered.

"When he failed to answer her question, Annie Kenny rose and insisted on an answer. She was pounced upon; six men dragged her hat off and pulled her to the door, but her last words as she was thrown out were: 'Sir Edward Grey, answer my question.' My daughter took up the task, and repeated the question. She, too, was set upon and dragged past the stage, upon which sat men who had known her from childhood, who had voted for her father; but so strong is party spirit that they allowed her to be thrown out without protest.

"They held a meeting outside and were arrested for obstructing the police. They were fined, and went to jail. But we had gained what we wanted. The press, which had ignored us, heralded our cause. We were giving them good copy."

In the early period of the campaign of public disturbance which the militant suffragists had thus planned, their operations were directed mainly to the interruption of speakers at political meetings, not only by questions, but by bell-ringing and the like, provoking forcible ejection, arrest and fine, or commitment to jail. Presently some resorted to the device of chaining themselves to seats, prolonging the disturbance and heightening its sensational character. The crowning sensation of this description was achieved on the 8th of November, 1908, when two daring suffragettes who had gained admission to the women's gallery in the House of Commons chained themselves to the metal lattice work in front of it and opened a fire of questions and demands on the dismayed law-makers below. In the previous month the House had been besieged by a great mob of women who attempted to force their way into its well-guarded chambers, under Mrs. Pankhurst's lead. She and others of the leaders, arrested on this occasion, refused to give bonds to keep the peace, and were sentenced to imprisonment for three months.

From this time on, the devices of public disturbance and of annoyance to Parliament and Ministers became more and more ingeniously sensational. One performance, on the 27th of April, 1909, was thus described by a London newspaper of the morning after: "St. Stephen's Hall is built upon the site of the old Parliament, its dimensions in length and width are the same, its memories embalm the great Parliamentary tradition, it is the place where the liberties of the people have been won. This is the place which was chosen yesterday by woman suffragists for a degrading exhibition of disorder. On either side of the hall are two rows of wonderful statues, like white ghosts of the old Parliament. To the legs of four of these statues as many women yesterday afternoon fastened themselves after their practice, with chains, and remained there, a centre of disturbance, until an end was put to their mimic slavery by the police. The statues

were those of Selden, Walpole, Somers, and Falkland; and it is matter for great regret that Falkland's statue, in its pathetic grace the most charming of them all, has been wantonly injured by this rough usage."

On the 24th of June the lobby of the House of Commons became the scene of another performance in the same spirit by a single dauntless actor, — thus related: "Miss Wallace Dunlop, who was interrepted the other day in an attempt to deface with indelible ink the walls of the lobby of the House of Commons with an appeal on behalf of 'Votes for Women,' succeeded yesterday in accomplishing her object. Disguised as an elderly lady and carrying a brown handbag, she eluded the vigilance of the police till well within the lobby of the House. Drawing from her handbag a small wooden stencil, or board, with felt attached and saturated with indelible purple ink, she succeeded in placing it against the wall of the lobby at a conspicuous spot. The ink was at once absorbed into the surface of the wall. The words written were: — 'Women's Deputation, June 29th. Bill of Rights. It is the right of the subjects to petition the King, and all commitments and prosecutions for such petitioning are illegal.' Miss Wallace Dunlop was taken to Cannon-row Police-station, and after being detained two hours was charged with doing wilful damage. She will be brought before the magistrates at Bow Street this morning."

Miss Dunlop received a sentence of imprisonment, and inaugurated in prison a more heroic protest against and defiance of the tyranny of which she believed herself to be a victim. It is described in the following manifesto, published by the National Women's Social and Political Union (the principal organization of the militant suffragists) on the 14th of July:

"The women who have been sent to prison in connexion with woman suffrage disturbances have, from the beginning, demanded treatment as political prisoners, and have appealed to the Home Secretary to accord them the rights and privileges to which political prisoners are entitled in every part of the world. As this appeal has been disregarded, women have now decided to take the law into their own hands, and, by carrying on a revolt in prison, to force the hands of the authorities to concede them what they have refused to give as a matter of justice.

"The first action taken in the matter was that of Miss Wallace Dunlop, sent to prison on Friday, July 2, for imprinting an extract from the Bill of Rights upon one of the walls in the House of Commons. Political treatment being refused to her, and being ordered to wear prison clothes and eat prison food, Miss Wallace Dunlop determined to strike a blow for her rights by refusing absolutely to eat the food offered to her. After 91 hours of starvation — during which time communications were constantly passing between the Governor of the prison and the Home Office — the authorities decided to give in, and Miss Wallace Dunlop was released.

"The 14 members of the Women's Social and Political Union who were sent to prison on Monday, July 12, in connexion with the stone throwing at the Government buildings on June 29, have determined to carry out a further revolt. Before leaving for prison they informed the officers of the union that it was their intention, if denied the rights of political prisoners, to carry out an effective protest in prison. When ordered to take off their own clothes and to put on prison clothes they intended to refuse to do so, and standing all together they would refuse to be put into cells of the second division. If put into their cells by force and undressed, they would refuse in the morning to get up and dress excepting into their own clothes. They also informed members of the union that they would refuse to obey the rule of silence, but would talk to one another whenever they liked and would sing aloud during retention.

"In making this protest the women claim that they are fighting for the preservation of the rights of political prisoners, which were not denied even in the Bastille."

Miss Dunlop's heroic protest by refusing prison food, was taken up at once and repeated by numbers of her imprisoned sisters; until the prison authorities met it by forcibly administering food, in the manner of treatment applied sometimes to desperate convicts or to the insane; and this, of course, is more than repugnant and distressing to the feeling of everybody. The whole unexampled situation is repugnant and distressing, however it may be viewed. The cause involved is so pitifully stripped of its dignity, simply for the reason that the sex whose cause it is has nothing in body or mind to qualify it for effectual rioting. A mob of men can invest its mischievous doings with the impressiveness of terror, which crushes laughter and contempt. A mob of such women as the champion suffragists are cannot do so, and the riot they attempt is but a travesty, which challenges jeers, and sadly smirches the after heroism of the self starved rioters in their prison cells. The difference between a political insurrection of men and the insurgency of Mrs. Pankhurst and her followers is the difference between a menace that alarms and a nuisance that annoys and provokes. With what effect the cause of woman suffrage has been made a public nuisance in England remains to be seen. The advantage to it is dubious, to say the least. On this point Mr. Winston Churchill, President of the Board of Trade, spoke his mind plainly to a deputation of suffragettes who called on him at Dundee on the 18th of last October. He said: "I saw the beginning of what you call the militant tactics. They broke out in my late constituency, North-West Manchester, and during the four years that have passed I have fought three by-elections, and have made a great many speeches about the country. So, I suppose, I have come very nearly as much in contact with them as any other Cabinet Minister. . . . You have come to me in a deputation, and I am bound to give you my candid and truthful opinion that your cause is in a worse position now than it was four years ago. I do not mean by that that anything has been done which will prevent the ultimate success of the movement. I do not think that is so, but I am quite sure that, while these tactics of silly disorder and petty violence continue, there is not the slightest chance of any Government that will be called into power, or of any House of Commons which is likely to be elected, giving you the reform which you seek. That is my honest, unprejudiced view."

The National Union of Women Suffrage Societies, of which Mrs. Henry Fawcett is President, represents a large body of women claimants of

the suffrage who distinctly disapprove of and disclaim responsibility for the proceedings of their militant allies. In a statement which this National Union communicated to the Prime Minister on the 2d of October, 1909, they set forth the following facts in evidence of the strength of the popular support given to their claims: Since the beginning of 1908 the National Union had taken part in 31 by-elections in Great Britain. "These have been contested by 69 candidates, of whom 26 were Liberals, 32 Unionists, and 11 Labour, Socialist, or Independent. Of these 69 candidates, only nine declared themselves opponents of woman suffrage. The rest in varying degrees accepted the principle of the enfranchisement of women. A few merely stated that they were not hostile, but the overwhelming majority frankly accepted it, some even pledging themselves to oppose any further extension of the franchise to men so long as it was withheld from women."

Finland: The great victory of 1906.—"The great victory for woman suffrage in 1906 was won in Finland, where women were enfranchised on exactly the same terms as men, and made eligible to all offices, including seats in Parliament. This gives the vote at once to about 800,000 women. Preceding and during the revolution, in the attempt to throw off the Russian yoke, the women shared with the men the work, the hardships and the dangers; and, when the triumph came, there was not a thought on the part of men of excluding women from any portion of the rewards, the most important of which was the suffrage. But they themselves had long been preparing the ground. The Finnish Women's Association to work for equal rights was founded in 1884 by Baroness Alexandra Gripenberg and never ceased its efforts. In 1892 the Woman's Alliance Union was organized, more democratic and aggressive in its character. . . . After the vast national strike in the autumn of 1905, while a body of leading men were drawing up a Declaration of Rights to be presented to the Tsar, Dr. (Miss) Tekla Hulsin, a member of the National Bureau of Statistics, made an eloquent plea in behalf of the women, and they were included in its demand for universal suffrage. . . . The Tsar signed it in November, giving his consent to the proposed reforms. Immediately the women set to work, lecturing, organizing, getting up petitions, and finally held another huge mass-meeting in Helsingfors, demanding that the Diet carry out this measure. All of the political parties put it in their platforms. On May 28th, 1906, the Diet with only one dissenting vote passed the bill giving the suffrage to all men and women twenty-four years old. This was signed by the Tsar on July 20th."—Ida H. Harper, *Woman Suffrage throughout the World* (*North American Review, Sept.*, 1907).

Dr. Tekla Hulsin, referred to above, now a woman member of the Finnish Diet, speaking at a suffragist meeting in London, in September, 1909, gave the following account of the action of the women members of that body: "The granting of woman suffrage had caused no change in the strength of the respective political parties. Every citizen in Finland who was entitled to vote was also eligible for membership of the Diet. There had been no rivalry between the men and women candidates; they recognized that they were there for common ends. The women members of the Diet had followed their parties on party questions, but had joined on women's questions for humanitarian ends. They had presented petitions for the raising of the marriageable age from 15 to 17, the exemption of women from their husband's guardianship, the reception of Government employment on the same grounds as men, and on the subject of the prevention of cruelty to children and animals. These had all been accepted by the Diet."

International Council of Women. See (in this vol.) WOMEN, INTERNATIONAL COUNCIL.

International Woman Suffrage Alliance.—"Since the Conference held at Copenhagen in August of 1906, which closed with thirteen countries in membership, the Alliance has been growing till its influence is felt as far as South Africa. On the first day of the Conference, held in Amsterdam June 15, 1907, there was presented an application from the Woman Suffrage Associations of Natal and Cape Colony for auxiliaryship in the Alliance. . . . The second request for auxiliaryship was presented by Switzerland, which had formed a National committee of seven Cantonal Associations. . . . The third new member, and the last one to enter the Alliance, was the National Bulgarian Alliance for Women's Rights. This body is composed of thirty local societies working in different lines, and is somewhat like our Federation of Women's Clubs here, or a National Council of Women. . . . The full membership roll of the Alliance now includes Australia, Bulgaria, Canada, Denmark, Finland, Germany, Great Britain, Hungary, Italy, the Netherlands, Norway, Russia, Sweden, United States, South Africa and Switzerland. Perhaps the most important new departure at Amsterdam was the fact that official representatives were sent to that meeting by the Australian Federation, Norway and the State of Utah. Those coming from Australia and Norway were not only delegated by the Government but their expenses were borne by the National Treasury, and they were sent as students of the whole question as represented internationally by the Alliance, and expected to report upon it to their respective governments. . . . Fraternal delegates came to the Alliance from the International Council of Women, and from the National Councils of Belgium, Denmark, France, Germany, Great Britain, the Netherlands, New Zealand, Norway and Sweden; and in addition to these fraternal delegates were sent by seventeen associations from the countries already mentioned and Scotland in addition; making in all twenty-one countries represented either by regular delegates or by fraternal delegates at the Amsterdam conference."—*Proceedings of the 40th Annual Convention of the National American Woman Suffrage Association, at Buffalo, N. Y., October*, 1908.

New Zealand: Its working in that country.—Sir Joseph George Ward, Prime Minister of New Zealand, returning home from England in August, 1908, passed through the United States, and was questioned in New York about the working of woman suffrage in his country, where women have been voters for the last sixteen years. He declared his conviction that New Zealand had found it to be one of the most far-sighted policies ever put into effect, for the ballot in the

hands of women had exercised a great influence for the general good. "A stranger coming to New Zealand," he said, "would not recognize any difference between our institutions and those here, so far as the right of women to vote is concerned. He would see no women politicians, no campaign orators of the other sex, no disturbances such as are so often pictured as one of the attendant ills of woman's suffrage.

"Under our laws women cannot stand for Parliament, nor hold any other office. They do not mix it up in a campaign. You never hear of them in this way during an election. They attend public meetings, they are present at all of the public ceremonies, and are unusually well-informed upon all public questions. When they vote they vote intelligently, and any woman over twenty-one years of age and a citizen of the country can vote. Her right to vote does not, as many imagine, cause family dissensions, nor family wrangles such as cartoonists picture. There are no more differences over politics in New Zealand families than there are over domestic problems in the United States. The ballot in the hands of the women, so far as I have observed, means only the healthy influence of the home injected into politics. Our law prohibits the solicitation of votes on election day; the placarding of streets and houses, the use of vehicles to carry voters, the exerting of any influence to obtain a vote. A wife may accompany her husband to the polls, to the door of the booth, but no further. The laws absolutely protect the privacy of the ballot.

"In New Zealand the granting of the privilege of voting to women did not result in the levelling of the wage scale, or the competition between men and women in labor. In comparison with other countries the proportion of wage-earning women in New Zealand is small. She has her place to fill in the home, and there are no truer and more devoted mothers of families in the world. I believe that her influence upon man is all the greater and better by reason of her suffrage. She recognizes the position of man as the head of the household, and he is, generally speaking, always the wage-earner, and I firmly believe that if women could under our laws be elected to office and have a part in the making of laws, they would not seek legislation that would tend to further advance themselves and limit the activity of the men.

"Women's suffrage has surely resulted in the raising of the standard of education in our country. The class of ignorant people is very small, and growing smaller and smaller with each succeeding generation. . . . The country has not been without its political and labor demagogues, but the conservative judgment of the voters has always prevailed in the end. Graft is something unknown in New Zealand."

A. D. 1901.—Census of England and Wales, and of the United Kingdom.—Population.—Relative numbers of males and females.—Agricultural industry.—Extent of various uses of the soil.—The different kinds of areas.—The eleventh Census of the population of England and Wales was taken April 1st, 1901, "ascertaining the required information relating to the persons returned as living at midnight on Sunday, March 31st." The number enumerated in England and Wales, as finally revised at the Census Office, was 35,527,843; showing an increase of 3,525,318, or a de-

* For convenience of use in the many references to this heading throughout the volume, the name of England is made to stand for The United Kingdom of Great Britain and Ireland,—a stretch of meaning which seems often permissible.

cennial rate of increase of 12.17 per cent. upon the number returned at the preceding enumeration in April, 1891. Of the persons enumerated in England and Wales in 1901, 15,738,618 were males and 16,799,280 were females, the latter exceeding the former by 1,070,617. This, however, does not represent the relative numbers of the two sexes that *belong* to the population of the country; "for there are always men temporarily absent abroad as soldiers or seamen or for business purposes"; while, on the other hand, "the enumerated population temporarily includes some soldiers and sailors who were born in Scotland and Ireland, as well as foreign sailors and business representatives." Making reckonings for these, "the population *belonging to* England and Wales at the date of the Census may be estimated at 32,805,040 persons, of whom 16,005,810 were males, and 16,799,230 were females." During the ten years prior to 1901 the recorded male births in England exceeded the female births by 160,987, while the recorded deaths of males exceeded the deaths of females by 155,363. This would have about evened their numbers in the population of 1901; hence the existing excess of females is due, in the main, to the more extensive emigration or temporary absence of males.

Of the population of England and Wales less than 4 per cent. was born outside of those two divisions of the United Kingdom; not quite 1 per cent. was born in Scotland; a little more than 1.3 per cent. was born in Ireland; a trifle more than 1 per cent. in foreign countries, and an insignificant fraction in British colonies and dependencies. England, it will be seen, is troubled very slightly with problems arising from a mixed population.

The Census of Scotland and Ireland, taken simultaneously with that of England and Wales, gave the former a population of 4,472,103, and the latter 4,458,775. Scotland had gained 46,456 since 1891; Ireland had lost in the same period 245,975. In the sixty years since 1841 Ireland had lost more than 3,700,000. The total of population in the United Kingdom, at midnight, March 31, 1901, was found to be 41,458,721; and the females exceeded the males in number by 1,253,905. The excess was least in Ireland.

Judged by the numbers engaged therein, the Agricultural Industry is still the most important in the United Kingdom; but, since 1881, it had been reduced from 2,362,331 males to 2,109,812 in 1901. The decline was far less in Ireland than in England, Scotland, or Wales. In England and Wales, the whole area of land, amounting to 37,129,162 acres, or 58,014 square miles, is divided by the census report into areas as follows:

	Acres.
Corn Crops	5,886,052
Green Crops	2,511,744
Clover and grasses under rotation	3,262,926
Flax, Hops, Small Fruit	120,083
Bare Fallow	336,884
Permanent Pasture or Grass	15,399,025
Mountain and Heath Land used for Grazing	3,556,636
Woods, Plantations, Nursery Grounds, Houses, Streets, Roads, Railways, Waste Grounds, &c.	6,055,212
Total Land Area of England and Wales	37,129,162

The enumeration of "different kinds of areas," in England and Wales, as set forth in the Census report, is interesting in some particulars — such as these: 74 Ancient Counties; 62 Administrative Counties; 468 Parliamentary Areas; 3 Ecclesiastical Provinces; 35 Ecclesiastical Dioceses; 14,080 Ecclesiastical Parishes; 14,900 Civil Parishes; 67 County Boroughs; 26 Metropolitan Boroughs with their Wards; 54 County Court Circuits; 500 County Court Districts; 1122 Urban Districts (including 316 County or Municipal Boroughs, with the Wards of those which are so subdivided; 664 Rural Districts. — *Census of England and Wales*, 1901. *General Report*. (*Parliamentary Papers*, 1904, *Cd.* 2174.)

A. D. 1901 (Nov.). — An addition to the Titles of the King. — The following is part of the proclamation of an addition to the titles of the King which was made on the 4th of November, 1901: "Whereas an act was passed in the last session of Parliament, entitled 'An act to enable His Most Gracious Majesty to make an addition to the royal style and titles in recognition of His Majesty's dominions beyond the seas,' which act enacts that it shall be lawful for us, with a view to such recognition as aforesaid of our dominions beyond the seas, by our royal proclamation under the great seal of the United Kingdom issued within six months after the passing of the said act, to make such addition to the style and titles at present appertaining to the Imperial Crown of the United Kingdom and its dependencies as to us may seem fit: and

"Whereas our present style and titles are, in the Latin tongue, 'Edwardus VII Dei Gratiâ Britanniarum Rex, Fidei Defensor, Indiæ Imperator,' and in the English tongue, 'Edward VII, by the Grace of God of the United Kingdom of Great Britain and Ireland King, Defender of the Faith, Emperor of India,' we have thought fit, by and with the advice of our privy council, to appoint and declare, and we do hereby, by and with the said advice, appoint and declare that henceforth, so far as conveniently may be, on all occasions and in all instruments wherein our style and titles are used, the following addition shall be made to the style and titles at present appertaining to the Imperial Crown of the United Kingdom and its dependencies — that is to say, in the Latin tongue, after the word 'Britanniarum,' these words, 'et terrarum transmarinarum quæ inditione sunt Britannicâ'; and in the English tongue, after the words 'of the United Kingdom of Great Britain and Ireland,' these words, 'and of the British Dominions beyond the Seas.'"

A. D. 1902 (Feb.). — Wei-hai-wei found valueless. — Fortification abandoned. — The British public was unpleasantly surprised on the 11th of February, 1902, by an official announcement in Parliament that the fortifying of the port of Wei-hai-wei, on the Chinese coast (extorted from China in 1898 as an offset to the

cession of Port Arthur to Russia, — see, in Volume VI. of this work, CHINA: A. D. 1898. MARCH-JULY), — had been abandoned, for the reason that military and naval opinion agreed in concluding that the place had no strategic value. It would not be returned to China, however, having usefulness for experiments in naval gunnery, and as a sanitarium. The announcement drew much sarcasm on the Government.

A. D. 1902 (June-Aug.). — Illness and deferred Coronation of King Edward VII. — While England was preparing, in the last half of June, 1902, for the great ceremony of the Coronation of King Edward VII., appointed to take place on the 26th, disquieting accounts of his Majesty's health began to appear. Some exposure at Aldershot, during military reviews, had brought on a chill, it was said; and though it was made light of in the reports, there was anxiety abroad. The King and Queen came to London from Windsor on the 23d, and all seemed to promise well. That evening he attended a State banquet; but a little before noon the next morning the nation received a dreadful shock from the announcement: "The King is suffering from perityphlitis [more familiarly known as appendicitis]. The condition on Saturday was so satisfactory that it was hoped that, with care, his Majesty would be able to go through the Coronation ceremonies. On Monday evening a recrudescence became manifest, rendering a surgical operation necessary to day." A serious disappointment as well as a grave anxiety was produced. Preparations for the pageant and the solemnities of the Coronation had been made on a splendid scale. London was crowded with visitors from all parts of the world, and specially decorated as never before. The sudden descent of grief and fear and gloom on the gayeties of the scene was a transformation which London and England can never forget.

Within three hours from the first startling report the success of the operation was made known. The King had borne it well and was in a satisfactory state. From that time on there were none but good reports. On the 5th of July he was declared to be out of danger. On the 15th he was removed to the royal yacht *Victoria and Albert* and taken to Cowes. At the end of seven weeks he had recovered so fully as to be able to bear the fatigues and the strain of a trying ceremony, and the King and Queen were crowned in Westminster Abbey on the 9th of August, with somewhat less of magnificent public show than had been prepared for the 26th of June, but nevertheless with regal pomp.

A. D. 1903 (June). The Celebration of Empire Day. — A Canadian custom of celebrating Queen Victoria's birthday, June 24, as Empire Day, was taken up in Great Britain in 1903, and "the movement," says the London *Times*, "has spread with striking rapidity." The day is made especially interesting in the schools, where the morning of the day is given to addresses on citizenship and the Empire and to the singing of patriotic songs, while the afternoon is a half-holiday.

A. D. 1903 (May-Sept.). — Mr. Chamberlain's declaration for Preferential Trade with the British Colonies. — The political commotion excited. — Mr. Balfour's puzzling attitude on the questions raised. — It is made clear by the correspondence when Mr. Chamberlain resigns. — The latter's propagandism. — In June, 1902, when, as Secretary of State for the Colonies, Mr Joseph Chamberlain addressed the Conference of Prime Ministers from the self-governing British Colonies (see, in this vol., BRITISH EMPIRE: A. D. 1902), his mind was manifestly not prepared to accept as a practicable proposition their request that the United Kingdom would grant "preferential treatment to the products and manufactures of the Colonies." "Preferential treatment" meant

ENGLAND, 1903

as Imperial protective-tariff policy, with discrimination of duties in favor of imports from British colonies. As the products of the colonies were mostly food stuffs and raw materials for manufacture, it meant a taxing of the supplies of these to British tables and British industries from every source outside the colonies. It meant an artificial higher pricing in the market of the British Isles for everything in which cost bears hardest on the livelihood and the living of their people. Mr. Chamberlain, in 1902, was waxing ardent in the high mission he had undertaken, of unifying and consolidating the great British Empire, strengthening the ties of family between Mother England and her scattered brood; but he had not yet been persuaded that the mother could afford to expend quite so much as this of her own well-being on premiums for the allegiance of her offspring.

In the course of the next year, however, the Colonial Secretary spent some weeks in South Africa, and seems to have been remarkably intensified in his imperializing aims by what he saw and learned. He came home filled with the conviction that England must, for the sake of a really unified and incorporated Empire, abandon the free opening of her markets, which gave her people the cheapest food and the cheapest mate[illegible]' for labor that the world at large could fur[illegible]h, and must wall them and gate them, with [illegible]'ering keys to the locks, so that her own co[illegible]ists might be given the "preferential" admission they claim. If he had arrived at that conviction before going to South Africa he had made no sign of it; but it was proclaimed soon after his return in a speech to his constituents at Birmingham, on the 15th of May, which shook England as no sudden development in politics had done for many years. The time had come, he declared, when the country must decide for or against a deliberate policy of Imperial unification, which required it to reciprocate the preferential tariffs which the colonies had adopted or were offering to adopt. Canada had given Great Britain a preference in her tariff, first of 25 per cent., afterwards increased to 33⅓ per cent., and was ready to go farther if the British Government would reciprocate, in allowing a drawback on the shilling corn duty (a duty which had been levied for a year past, and was about to be removed). At the Colonial Conference of the previous year the representatives of Australia and New Zealand had expressed readiness to act on the same line. A recent conference of the British colonies in South Africa had recommended the Legislatures of those colonies to give the Mother Country a similar preference on all dutiable goods of 25 per cent. Whether this policy of the colonies should be developed in the future or withdrawn depended now on the treatment given to it by the people of Great Britain.

"The people of the Empire," continued Mr. Chamberlain, "have two alternatives before them. They may maintain if they like in all its severity the interpretation — in my mind an entirely artificial and wrong interpretation — which has been placed on the doctrines of Free Trade by a small remnant of the Little Englanders, of the Manchester school, who now profess to be the sole repositories of the doctrines of Mr. Cobden and Mr. Bright. They may maintain that policy in all its severity, though it is repudiated by every other nation and by all your own Colonies. In that case they will be absolutely precluded either from giving any kind of preference or favour to any of their Colonies abroad, or even protecting their Colonies abroad when they offer to favour us. That is the first alternative. The second alternative is that we should insist that we will not be bound by any purely technical definition of Free Trade, that, while we seek as one chief object free interchange of trade and commerce between ourselves and all the nations of the world, we will, nevertheless, recover our freedom, resume that power of negotiation and, if necessary, retaliation whenever our own interests or our relation between our Colonies and ourselves are threatened by other people

"I leave the matter," said Mr. Chamberlain, "in your hands. I desire that a discussion on this subject should be opened. The time has not yet come to settle it, but it seems to me that for good or for evil this is an issue much greater in its consequences than any of our local disputes. Make a mistake in legislation. Yet it can be corrected. Make a mistake in your Imperial policy. It is irretrievable. You have an opportunity; you will never have it again."

Naturally this speech, from a Minister of the Crown, as important and influential in the Government and in his party as Mr. Chamberlain, caused an immense political commotion. It had suddenly injected a new issue into the politics of the United Kingdom, involving some reconstruction of the party in possession of power, and a fundamental readjustment of principles in some part of it, more or less, according to the following that Mr. Chamberlain secured. Would he leave the Ministry or the Ministry leave him? — was the question of the hour. It remained unanswered for three months or more, while controversy over the propositions of Mr. Chamberlain raged and the situation became more puzzling every day. Meantime the head of the Government, Mr. Balfour, was acting like a faithful adherent to the English principle of freedom in trade, by advocating a repeal of the incongruous corn duty levied the year before, but speaking, at the same time, like a man of open mind on the question of preferential trade, treating it as one that demanded careful thought. "If foreign countries," he said, "should take the view that our self-governing colonies could be treated as separate nations we must resist their policy by fiscal retaliation. There must be a weapon to our hands with which to meet those who might attempt to disintegrate the Empire by fiscal means. The question whether we should be justified in raising revenue with the object of drawing the different portions of the Empire more closely together was certainly well worth consideration."

All that he said in these months conveyed the impression that he was in an undetermined, waiting state of mind on the question raised by Mr. Chamberlain, not yet convinced that his colleague should be supported in the new policy proposed, but quite likely to be. That, however, was not the attitude in which he could hold the two coalesced parties, Conservative and Liberal Union, that were behind him in the Government. The issue had instant activity there, dividing both. The Premier could suppress debate on it in Parliament, as he did, but everywhere else in the kingdom the rage of controversy gathered heat, and party lines on the

side of the Government were rapidly confused. Two members of the Cabinet resigned, while Mr. Chamberlain kept his place in it until the 9th of September, when he addressed to Mr. Balfour a letter which offered his resignation, for reasons stated as follows:

"Owing to admitted differences of opinion in the Unionist party the political organisations of the party were paralysed and our opponents have had full possession of the field. . . . I recognise that serious prejudice has been created, and that, while the people generally are alive to the danger of unrestricted competition on the part of those foreign countries that close their markets to us while finding in our market an outlet for their surplus production, they have not yet appreciated the importance to our trade of Colonial markets, nor the danger of losing them if we do not meet in some way their natural and patriotic desire for preferential trade.

"The result is that, for the present at any rate, a preferential agreement with our Colonies involving any new duty, however small, on articles of food hitherto untaxed is, even if accompanied by a reduction of taxation on other articles of food of equally universal consumption, unacceptable to the majority in the constituencies. . . .

"I suggest that you should limit the present policy of the Government to the assertion of our freedom in the case of all commercial relations with foreign countries, and that you should agree to my tendering my resignation of my present office to his Majesty and devoting myself to the work of explaining and popularising those principles of Imperial union which my experience has convinced me are essential to our future welfare and prosperity."

Mr. Balfour's reply to this, when published, disclosed the fact that he was wholly in agreement with Mr. Chamberlain, and that they were now parting company in order to pursue a common purpose more effectually on different lines. Both saw that England was not to be drawn easily away from its fundamental belief in freedom of trade; that what they had undertaken would require much persuasive labor and considerable time, if accomplished at all; wherefore Mr. Chamberlain accepted an assignment to the missionary field of the imperialist cause, while Mr. Balfour would continue his endeavor to hold a party in waiting for the fruits of the mission, and in possession of the government as long as circumstances might permit. The programme was disclosed frankly in the two letters. In that of Mr. Balfour he said:

"Agreeing as I do with you that the time has come when a change should be made in the fiscal canons by which we have bound ourselves in our commercial dealings with other Governments, it seems paradoxical, indeed, that you should leave the Cabinet at the time that others of my colleagues are leaving it who disagree on that very point with us both. Yet I can not but admit, however reluctantly, that there is some force in the arguments with which you support that course, based as they are upon your special and personal relation to that portion of the controversy which deals with Colonial preference. You have done more than any man, living or dead, to bring home to the citizens of the Empire the consciousness of Imperial obligation, and the interdependence between the various fragments into which the Empire is geographically divided. I believe you to be right in holding that this interdependence should find expression in our commercial relations as well as in our political and military relations. I believe with you that closer fiscal union between the Mother Country and her Colonies would be good for the trade of both, and that, if much closer union could be established on fitting terms, its advantage to both parties would increase as the years went on and as the Colonies grew in wealth and population.

"If there ever has been any difference between us in connection with this matter it has only been with regard to the practicability of a proposal which would seem to require, on the part of the Colonies, a limitation in the all-round development of a protective policy, and on the part of this country the establishment of a preference in favour of important Colonial products. On the first of these requirements I say nothing, but if the second involves, as it almost certainly does, taxation, however light, upon food stuffs, I am convinced with you that public opinion is not yet ripe for such an arrangement. . . .

"I feel, however, deeply concerned that you should regard this conclusion, however well founded, as one which makes it difficult for you, in your very special circumstances, to remain a member of the Government. Yet I do not venture, in a matter so strictly personal, to raise any objection.

"If you think you can best serve the interests of Imperial unity, for which you have done so much, by pressing your views on Colonial preference with the freedom which is possible in an independent position, but is hardly compatible with office, how can I criticise your determination? The loss to the Government is great, but the gain to the cause you have at heart may be greater still. If so, what can I do but acquiesce?"

So Mr. Chamberlain left the Cabinet, with Mr. Balfour's blessing and God-speed, and went out to preach the gospel of commercial imperialism, under the more carefully chosen name of "fiscal reform." His co-laborer, who stayed at the helm of State, was so favored by circumstances as to hold it for somewhat more than another year. But the propagandism made no satisfying progress in that year; it seems doubtful, indeed, if Mr. Chamberlain won as many disciples as he lost from his first following.

A. D. 1905-1906. — Resignation of the Balfour Ministry. — The Liberal Party in power. — Sir Henry Campbell-Bannerman Prime Minister. — His Cabinet. — His attitude toward Ireland. — Strength of the Labor Party in Parliament. — Its representative in the Cabinet. — The Education Act of 1902, the apostasy of Mr. Chamberlain and his Conservative Unionist followers from British Free Trade principles, proclaimed in 1903, and the Licensing Act of 1904, had each, in turn, been productive of bitter disagreements and ruptures which rapidly lowered the strength of the party in power. It had been in control of the Government since 1895, when its opposition to Irish Home Rule was endorsed by a large majority. The next election, in 1900, during the war in South Africa, reinforced its Parliamentary support, and it could count, during the two years following, on more than 400 votes in the House of Commons, against about 268. After that period its Parliamentary majority in the popular chamber ran down, until, in the later months of 1905, it was no more than 75 or 76. This would have been an ample majority if it had represented an equivalent preponderance of public support, which, manifestly, it did not. For three years the "by-elections," — that is, the special elections ordered for filling vacancies in the House as they occurred, — had been going steadily against the Government, and nobody doubted that a general election would throw it out. It was challenged again and again to give the country an opportunity to express its feeling in the matter, by a dissolution of Parliament, without waiting for any nearer approach to the end of the term. This it would not do; but, on the 4th of December, 1905, the Premier, Mr. Balfour, surprised the country, and likewise his own Cabinet, it was said, by placing his resignation in the hands of the King.

This proceeding was regarded as an artful manœuvre in politics, for the embarassment of the opposition. As explained at the time by a journalist who wrote of it on the side of the latter, — "The Liberals naturally desired that the country should have an opportunity of going to the polls on the clear issue raised by the record of ten years of Tory administration. They regarded Mr. Balfour and his party as being in the dock, and before they took office they wished to have the verdict of the country returned by the votes of the electors. But this, for equally obvious reasons, Mr. Balfour wished to avoid. By resigning now, he compelled his opponents to undertake the task, first of forming a new administration, with all the risks which it involves of personal slight and sectional differences, and, secondly, of facing the risk of any untoward incident arising in the next few weeks which might be used against the new-born government. It also would enable them to obscure to a certain extent the real issue before the country. Instead of simply voting for or against Mr. Balfour and his administration, they would be asked to express their opinion upon a new ministry, which had not had any opportunity of giving the country a taste of its quality. But as Mr. Balfour could not be compelled to stay in when he had made up his mind to go out, and as it was such a relief to get rid of him on any terms, the Liberals consented to face the disadvantages of taking office before the dissolution."

Sir Henry Campbell-Bannerman was invited by the King to form a Ministry, and accepted the Commission. The organization of his Cabinet was completed within the week following Mr. Balfour's resignation, and it took office at once. Parliament was dissolved on the 8th of January, 1906, and a new Parliament was summoned to meet on February 13th. Elections began on the

12th of January and were finished for the most part by the 19th. In their total result, they returned 375 Liberals to the House of Commons, 55 Labor representatives, who would act on most questions with the Liberals, and 83 Irish Nationalists, whose attitude towards the new Ministry would depend upon its attitude on Irish questions, and seemed more likely to be friendly than otherwise. Against this array on the side of Sir Henry and his colleagues, of pledged partisans and conditional allies, the Conservative Unionists had secured an Opposition in the House that numbered only 157. The political overturn was one of the most remarkable that the United Kingdom has ever known.

The Cabinet as formed when Sir Henry Campbell-Bannerman took office was made up as follows:

Prime Minister and First Lord of the Treasury, Sir Henry Campbell-Bannerman.
Lord Chancellor, Sir Robert T. Reid.
Chancellor of the Exchequer, Herbert H. Asquith.
Secretary of State for Foreign Affairs, Sir Edward Grey.
Secretary of State for the Colonies, the Earl of Elgin.
Secretary of State for War, Richard B. Haldane.
Secretary of State for Home Affairs, Herbert J. Gladstone.
Secretary of State for India, John Morley.
First Lord of the Admiralty, Lord Tweedmouth.
President of the Board of Trade, David Lloyd-George.
President of the Local Government Board, John Burns.
Chief Secretary for Scotland, John Sinclair.
President of the Board of Agriculture, Earl Carrington.
Postmaster General, Sydney C. Buxton.
Chief Secretary for Ireland, James Bryce.
Lord President of the Council, the Earl of Crewe.
Lord of the Privy Seal, the Marquis of Ripon.
President of the Board of Education, Augustine Birrell.
Chancellor of the Duchy of Lancaster, Sir Henry H. Fowler.

The following were not members of the cabinet, but formed part of the administration:

Lord Lieutenant of Ireland, the Earl of Aberdeen.
Under Secretary for the Colonies, Winston L. Churchill.
First Commissioner of Works, Louis Vernon-Harcourt.
Attorney-General, John Lawson Walton.
Solicitor-General, William S. Robson.

That Lord Rosebery had no place in the new Liberal administration was due to his wide disagreement with most of the leaders of his party on the question of Home Rule for Ireland. When he succeeded Mr. Gladstone as Prime Minister, in 1894, he quite distinctly discarded that line of Irish policy (see, in Volume VI. of this work, ENGLAND: A. D. 1894–1895), and his antagonism to it had undergone no change. On the other hand, Sir Henry Campbell-Bannerman had remained faithfully sympathetic with Mr. Gladstone's idea of Ireland's due from England, and had reannounced his standing on it in a recent speech. "My opinion," he said, "has long been known to you. It is that the only way of healing the evils of Ireland, — difficulties of her administration, of giving contentment and prosperity to her people, and of making her a strength instead of a weakness to the empire, — is that the Irish people should have the management of their own domestic affairs; and so far from this opinion fading and dwindling as the years pass, it is becoming stronger, and, what is more, I have more confidence in its realization. . . . If I were asked for advice by an ardent Nationalist, I would say my desire is to see the effective management of Irish affairs in the hands of a representative Irish party. . . . I trust that the opportunity of making a great advance on this question of Irish government will not long be delayed, and when that opportunity comes my firm belief is that a greater measure of agreement than hitherto as to the utimate solution will be found possible, and that a keener appreciation will be felt of the benefits that will flow to the Irish communities and British people throughout the world, and that Ireland, from being disaffected, impoverished, and discouraged, will take its place as a strong, harmonious, and contented portion of the empire."

That Sir Henry, maintaining this posture on the Irish question of questions, could be the accepted leader of the Liberal party and the Premier of Government, afforded clear evidence that the party, and the country which confided power to that party, were at least more nearly prepared to make the great concession to Ireland than they were to refuse it; but the question entered slightly into the parliamentary canvass, though the Conservative-Unionists strove hard to make it the dominant issue. The public mind was occupied so fully with the fiscal and educational controversies of the last three years that the motives in its voting came mostly from them. The mandates of the vote were understood to be especially for the amending of recent legislation on those subjects and on the terms of the licensing of the liquor trade. It was equally understood that Irish measures in the Gladstone spirit should be looked for, not hastily undertaken, but in due time.

The fact of most impressive significance in the result of the parliamentary elections was the sudden weight that had been given in the House of Commons to the representation of Labor by laboring men. Since 1903 (see, in this vol., LABOR ORGANIZATION: ENGLAND: A. D. 1900–1906; 1903; and SOCIALISM: ENGLAND) the Labor Party had emerged in British politics as a force to be taken into serious account. Of its 55 members in the new Parliament a considerable number had been elected by a combination of Liberal and Labor votes; but the same combination went as often to the increase of the Liberal representation. One large section of the Labor voters, organized under the name of the Independent Labor Party, stood aloof from such alliances entirely. It had been formed some years before, under the lead of Mr. Keir Hardie, a Scottish miner, with Socialistic beliefs, but opposed to the aims of the Marxian Socialists, and expecting nothing substantially beneficial to the working class from any political party. His mission was to create a Labor Party that would fight its own battles on its own ground. He made no great headway until the Taff Vale decision of 1902 roused the British Trade Unions to fight for their lives. That brought them into the ranks of the Independent Labor Party, and

prepared it for the powerful showing it made in the elections of January, 1906, when it polled 303,000 votes, and elected 30 members who are free lances in the House. The remaining 25 Labor Members act with these on labor questions, but otherwise are to be reckoned as allies of the Liberal Party.

Foremost among these latter is Mr. John Burns, who represents the Labor Party not only in Parliament but in the Ministry of Government, being the first of his class to be called to a Cabinet seat. A London editor who wrote of him when he took that seat said: "He has been a working engineer, a strike leader, labor agitator, a London County Councilor for eighteen years, and member of Parliament for fourteen. He is a great leader who never had a party, but whose influence has been felt in every labor movement in England for the last twenty years. The labor and social policy of the London County Council has been largely inspired and directed by him. He has also molded labor legislation in Parliament. Mr. Burns has 'scorned delights and lived laborious days' for the sake of the workers. He is an avowed Socialist. He has never changed his principles, only modified his methods. He is a real Fabian, a skillful opportunist, a tireless worker, and a first-rate organizer. Since he became a Socialist who does things, he has been ostracized by the Socialists who only agitate. Mr. Burns is exercising great influence within the Cabinet, and is one of the men in the confidence and in the secrets of the Prime Minister, who seeks his advice in many matters outside Mr. Burns's department."

The same writer gave the following account of the many important duties and great responsibilities of the office filled by Mr. Burns, as the President of the Local Government Board, which supervises the administration of local government in all England and Wales: "As President of the Local Government Board, Mr. Burns has multifarious duties committed to his charge. He has to sanction local loans, supervise the finances of local authorities, hold inquiries into proposed new undertakings, exercise the (almost) legislative powers which Parliament has delegated to him by way of provisional orders, and is armed with large powers of initiative, inspection, revision, and veto, so that in some respects he can revolutionize the whole system of local administration. In the domain of Poor Law his authority is paramount. He revises, for example, the rules and regulations which guide the system of relief and the administration of the Poor Law, passes plans for new workhouses, settles the wages of the nurses and porters, and fixes the amount of snuff (if any) which a pauper may receive. Sanitary legislation is also under his supervision, as he acts as Minister of Public Health, and beyond the more strictly local governmental functions belonging to his department there is the social side of his work, such as the administration of the Allotments Acts, the Unemployed Act, inquiring into housing conditions, etc"

A. D. 1906 (April-Dec.). — Fate of the Liberal Education Bill, passed by the Commons and killed by Amendments in the House of Lords. — Resolution of the Commons, contemplating a change of Constitutional Law respecting the Legislative Powers of the House of Lords. — When the Education Bill brought forward by the Government in April and passed by the Commons in December (see, in this vol., EDUCATION: ENGLAND: A. D. 1906) had been killed by destructive amendments in the House of Lords, the Prime Minister, Sir Henry Campbell-Bannerman, proposed to the House of Commons a resolution, which was adopted, declaring that "the power of the other house to alter or reject bills passed by this house should be so restricted by law as to secure that within the limits of a single Parliament the final decision of the House of Commons shall prevail." In plainer words, this proposed an amendment of what has been, since 1832, an unwritten but understood rule of the British Constitution, namely, that the House of Lords cannot defeat a measure which has been passed by the Commons in successive parliaments, and thus certified, by an intervening election, as being the embodiment of a popular demand. The proposed amendment is to give the force of law to a repeated enactment of the House of Commons, even "within the limits of a single Parliament," and without the intervention of an election.

The Premier has explained that this resolution is adopted only to foreshadow action which the Government intends to take at some convenient future time So far as indicated by the Premier's resolution, he and his colleagues, if they do anything affecting the peers in Parliament, will not touch the existing composition of the aristocratic house, but will only shorten the suspense in which it may hold legislation that is persisted in by the popular house. As now exercised, the practical effect of the suspensive veto of the Lords, if not submitted to by the government, is to bring about what is actually a referendum of the question at issue to the people. The proposed constitutional amendment would eliminate the referendum and empower the Commons to override the opposition of the Lords

The legislative function of the House of Lords would not differ substantially then from that performed by the President of the United States. Acts of Congress require the approval of the President to make them law. His disapproval sends

them back to Congress for reënactment, if two-thirds of both houses persist in them; annulling them if they do not. The function is simply a critical one, and involves no exercise of legislative powers, if the language of our Constitution is correct; for that instrument, in the first section of its first article, says: "all legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and a House of Representatives." Thus the reference of legislation to the President for his approval or disapproval is not recognized as a grant to him of participation in the exercise of legislative powers."

In this view the British House of Lords, when its part in legislation is reduced, like that of the American President, to mere criticism, expressed in approval or a suspensive veto, cannot rightly be regarded as a legislative body, and Parliament can hardly be counted among the bicameral legislatures, as we have counted it hitherto. The House of Commons will hold all the powers of legislation; the House of Lords will be its official critic, commissioned only to make it think twice in the enactment of some of its laws.

The King has no voice now in the making of British laws, although, when his prerogatives are described, it is still said that "he may refuse the royal assent to any bills." Two hundred years ago it ceased to be prudent for royalty to exercise that prerogative, and Queen Anne, in 1707, asserted it in practice for the last time. The sovereigns of the reigning House of Hanover have never enjoyed the satisfaction of refusing assent to an act of Parliament. Even George III. did not venture it, though he stoutly asserted his right.

A. D. 1907 (Aug.). — Act legalizing Marriage with a Deceased Wife's Sister. — The following are the main provisions of the Act to legalize marriage with a deceased wife's sister which, after many years of agitation by its advocates and many defeats in Parliament, was passed finally in 1907:

"1. No marriage heretofore or hereafter contracted between a man and his deceased wife's sister, within the realm or without, shall be deemed to have been or shall be void or voidable, as a civil contract, by reason only of such affinity: Provided always that no clergyman in holy orders of the Church of England shall be liable to any suit, penalty, or censure, whether civil or ecclesiastical, for anything done or omitted to be done by him in the performance of the duties of his office to which suit, penalty, or censure he would not have been liable if this Act had not been passed:

"Provided also that when any minister of any church or chapel of the Church of England shall refuse to perform such marriage service between any persons who, but for such refusal, would be entitled to have the same service performed in such church or chapel, such minister may permit any other clergyman in holy orders in the Church of England, entitled to officiate within the diocese in which such church or chapel is situate, to perform such marriage service in such church or chapel.

"Provided also that in case, before the passing of this Act, any such marriage shall have been annulled, or either party thereto (after the marriage and during the life of the other) shall have lawfully married another, it shall be deemed to have become and to be void upon and after the day upon which it was so anulled, or upon which either party thereto lawfully married another as aforesaid.

"2. No right, title, estate or interest, whether in possession or expectancy, and whether vested or contingent at the time of the passing of this Act, existing in, to, or in respect of, any dignity, title of honour, or property, and no act or thing lawfully done or omitted before the passing of this Act shall be prejudicially affected nor shall any will be deemed to have been revoked by reason of any marriage heretofore contracted as aforesaid being made valid by this Act.

"3. — (1) Nothing in this Act shall remove wives from the class of persons adultery with whom constitutes a right, on the part of wives, to sue for divorce under the Matrimonial Causes Act, 1857.

"(2) Notwithstanding anything contained in this Act or the Matrimonial Causes Act, 1857, it shall not be lawful for a man to marry the sister of his divorced wife, or of his wife by whom he has been divorced, during the lifetime of such wife.

"4. Nothing in this Act shall relieve a clergyman in holy orders of the Church of England from any ecclesiastical censure to which he would have been liable if this Act had not been passed by reason of his having contracted or hereafter contracting a marriage with his deceased wife's sister.

"5. In this Act the word 'sister' shall include a sister of the half-blood."

A. D. 1907-1908.— Proposals in the House of Lords of Reform in its Constitution. — Consequent, no doubt, on the increase of popular hostility to the House of Lords which it had provoked by its dealing with the Education Bill of 1906, and the serious threatenings of an undertaking in the House of Commons to "end or mend" it as a branch of Parliament, the Lords, in 1907, gave thought among themselves to the expediency of a constitutional reformation of their House. In February, a bill was proposed to them by Lord Newton which provided in its first two articles as follows:

"1.— (1) After the termination of the present session of Parliament a writ of summons to attend and to sit and vote in the House of Lords shall not be issued to any temporal peer of the peerage of England entitled by descent to an hereditary seat in the House of Lords (in this Act referred to as an hereditary peer), unless he is a representative or a qualified hereditary peer within the meaning of this Act, nor to any lord spiritual, unless he is a representative lord spiritual within the meaning of this Act."

"2. For the purposes of this Act the expression 'qualified hereditary peer' means an hereditary peer who possesses any of the qualifications specified in the First Schedule to this Act."

The schedule referred to was as follows: "QUALIFICATIONS ENTITLING AN HEREDITARY PEER TO A WRIT OF SUMMONS: I. The holding at any time of any of the following Offices:— 1. High judicial office, within the meaning of the Appellate Jurisdiction Acts, 1876 and 1887. 2. The office of First Lord of the Treasury, Secretary of State, Chancellor of the Exchequer, President of the Council, or Head (not being a permanent Civil Servant) of any other Government Department. 3. The office of Lord Lieutenant of Ireland, and Secretary to the Lord Lieutenant. 4. Office of Viceroy of India, or a Governor of the Presidency of Madras or Bombay, or of Lieutenant-Governor of any Province of India. 5. Office of Governor-General of the Dominion of Canada or of the Commonwealth of Australia, or of High Commissioner of South Africa, or of Governor of any Colony. 6. The Office of Parliamentary Under Secretary, Parliamentary Secretary, or permanent Under Secretary, in any Government Department. 7. Office of Lord of the Admiralty or member of the Army Council. 8. Office of Minister plenipotentiary, or any higher office, in His Majesty's Diplomatic Service. 9. Office of Vice-Admiral, or any higher office, in His Majesty's Naval Forces, or of Lieutenant-General, or any higher office, in His Majesty's Land Forces.

"II. Election to serve in the House of Commons on not less than two occasions before succeeding to the peerage."

In addition to the hereditary peers thus qualified to sit in the House of Lords as proposed to be reformed, the Bill provided for the election by the peers, from their own number, of representatives, to the extent of one-fourth of their whole number; and likewise for the election by the lords spiritual, from their ranks, of representatives in the same proportion of number; such representatives to form part of the House of Lords in Parliament. It authorized, further, the appointment by the King of peers for life, to be "peers of Parliament," these never to exceed one hundred in number.

Debate on the Bill in May resulted in the substitution for it of a resolution, that "a Select Committee be appointed to consider the suggestions which have from time to time been made for increasing the efficiency of the House of Lords in matters affecting legislation, and to report as to the desirability of adopting them, either in their original or in some modified form." The report of the Committee (twenty-five in number, having Lord Rosebery for its elected chairman) was not brought in until near the close of the following year. Its recommendations were considerably on the lines of the Bill described above. It suggested that the reformed House of Lords should be made up of three classes of members, namely, hereditary peers who had held certain high public offices — much the same as those scheduled in Lord Newton's Bill; two hundred representative "Peers of Parliament," elected from the whole body of the peerage, not for life, but for a single Parliament, and ten lords spiritual, to include the two archbishops and eight bishops to be elected. The self-governing colonies, in the judgment of the Committee, should be represented in the House of Lords, and twenty years of service in the House of Commons should entitle an Irish peer to a seat in it.

The plan submitted by the Committee would reduce the House from 617 members to about 350. No action has been taken on the report.

A. D. 1907-1908. — The Small Holdings Act. — The first year of its operation. — In 1907 an Act passed Parliament which provided for the acquisition by local authorities of land to be divided into small holdings for sale or lease to buyers or tenants who could not otherwise be placed on it for self-support. The results from the first year's operation of the Act was reported in September, 1909, by the Board of Agriculture and Fisheries, which administers the law. The following are statements from the report of the Board: "Stated shortly, the result, so far as small holdings are concerned, of the first year's work since the Small Holdings and Allotments Act, 1907, came into operation has been that 23,285 applications have been received by county councils for 373,601 acres, that 13,202 applicants have been approved provisionally as suitable, that the estimated quantity of land required for the suitable applicants is 185,098 acres, that 21,417 acres have been acquired by county councils, of which 11,346 acres have been purchased for £3,0,965, and 10,071 acres leased for total rents amounting to £11,209, that the land acquired

will provide for about 1,500 of the applicants, and that 504 of them were in actual possession of their holdings on December 31, 1908.

"It may seem at first sight that the progress that has been made in satisfying the keen demand for small holdings which the Act has disclosed has been small, but the figures do not give at all an adequate idea of the amount of work that has been actually done. It must be remembered that practically the whole of the first six months of the year were occupied in the preliminary work of constituting committees, issuing forms, receiving and tabulating applications and holding local inquiries, and that until this work was completed little progress could be made in the acquisition of land. . . . The rate at which land is being acquired is now increasing rapidly, and we have little doubt that by Michaelmas, 1909, not less than 50,000 acres will have been obtained. In addition to the holdings which have been provided by county councils, the returns we have obtained show that over 700 applicants have been supplied with holdings by landowners direct, mainly through the intervention of the councils.

"In considering the results already accomplished it must also be borne in mind that the problem is to fit particular men to particular land, and not merely to acquire whatever land may be in the market and to offer it in small holdings. The great majority of the applicants desire land in close proximity to their homes, and it is obviously more difficult to acquire a large number of detached plots than to take a whole farm or estate and divide it into a number of small holdings. . . .

"A striking feature of the applications made under the Act has been the small extent to which the applicants desire to purchase their holdings. Out of the 23,295 applications received during the year, only 629, or 2.7 per cent., expressed a desire to purchase. . . . The Act imposes no direct obligation on councils to provide houses, but we are of opinion that where an applicant desires a holding to which he will devote his whole time and from which he will get his whole living councils should be prepared to erect a house and the necessary buildings."

A. D. 1908. — Estimate of King Edward VII. as a Diplomatist. — Mr. Isaac N. Ford, the American newspaper correspondent in London, has much well-informed opinion in Europe and America to support him in the following estimate of the diplomatic influence exerted by King Edward, which he expressed in January, 1908: "At the opening of King Edward's reign Berlin was the center of European diplomacy, as Paris had been when Bismarck entered upon his series of machinations and triumphs. The personal ascendency of the German Emperor was unchallenged in Europe. . . . In the course of seven years conditions have been transformed. London is now the diplomatic capital of Europe. Resentful enemies like France have been reconciled; friendships with America, Austria-Hungary, Italy, and Spain have been strengthened; strained relations with Russia and Germany have been eased; and by the alliance with Japan forces have been readjusted for the maintenance of existing order in the Pacific. A new balance of power has been established in Europe, and the diplomatic resources of the British Empire have been reinvigorated and enlarged. While there have been eminent statesmen in the British Foreign Office — Lord Lansdowne and Sir Edward Grey — these transformations have been mainly King Edward's work. Fifty years hence there may be a true sense of proportion, so that his services as an empire-builder and a peacemaker can be judged aright."

A. D. 1909 (Feb.). — The Opening of Parliament. — The session of Parliament was opened by the King with due form and ceremony on February 16. "The Royal procession from Buckingham Palace to Westminster," says a report of the occasion, "took place in the dim grey light of a typical February afternoon, and the pageant lost much of its beauty in consequence. In spite of the cold wind and the absence of the genial sunshine which is such a valuable asset on occasions of spectacular display, there appeared to be as many people as ever along the route of the procession. These formal openings of Parliament, which have become customary since the beginning of the present reign, are clearly popular with those of the King's subjects who know nothing, except by hearsay, of the impressive scenes which are to be witnessed in the House of Lords. The immense crowds who assembled to watch the King and Queen pass yesterday, waiting patiently for hours in order to enjoy a few minutes' ecstatic sight-seeing, welcomed their Majesties with a cordiality of the meaning of which there could be no doubt. The King and Queen, in their wonderful gold coach, with its sides of glass, must have been gratified with the respect and affection which were manifested from all quarters."

A. D. 1909 (Feb.). — Represented in International Opium Commission at Shanghai. See OPIUM PROBLEM.

A. D. 1909 (March). — Representation of the People Bill. — Proposed Universal Suffrage, including women. — Its second reading. — On the 20th of March, 1909, the second reading of a bill described as "the Representation of the People Bill" was moved and seconded in the House of Commons. Its provisions were substantially for universal suffrage, including women. In explaining the measure, the member who moved the second reading — a representative of the Labor party, Mr. Howard — said: "It was difficult, if not almost impossible, to deal with a reform of the franchise without at the same time dealing with woman suffrage, and it was difficult to deal with woman enfranchisement without at the same time making some alteration in the existing franchise law which should meet the condition of the new elements proposed to be placed on the register. The House must face the situation as a whole and handle the two reforms in one scheme, because by a coördinated Bill there would be a better chance of getting nearer a settlement. In the Bill that he submitted to the House there was no abolition of any old franchise. It proposed to create a residential franchise in order to do away with the hardships which any one with a knowledge of registration knew to exist in connexion with the occupation vote of men. The second clause provided for a restriction of plural voting, and the third clause related to the removal of the sex disqualification."

Before debate began another member presented a monster petition against the political enfranchisement of women, said to contain 243,000 signatures.

The atittude of the Government toward the bill was explained by Mr. Asquith, the Premier. It was well known, he said, that on the issue whether women should be granted the suffrage Ministers were not of one mind. But they were strongly in favour of a wide reform of the existing suffrage. They desired the abolition of plural voting, the disappearance of the artificial distinctions between occupiers and lodgers, the material shortening of the period of qualification, and an effective simplification of the machinery of registration. But any measure to bring about these reforms ought, in his opinion, if it was to take its place on the Statute-book, to proceed from the responsible Government of the day, and to be carefully remoulded in the light of prolonged Parliamentary discussion. For these reasons he thought it was not necessary that the members of the Government should vote for the second reading of the Bill under consideration.

After some hours of debate the closure was

moved and the second reading of the bill was carried by 157 votes against 122.

A. D. 1909 (April). — The National Debt of the United Kingdom. — The following official statement of the national debt of the United Kingdom was published in April, 1909: "On the 1st April, 1908, the aggregate gross liabilities of the State amounted to £762,326,051. On the 1st April, 1909, the corresponding figure was £754,121,309, showing a reduction of £8,204,742.

A. D. 1909 (April). — Announced Governmental projects of Afforestation, and other measures for Development of Natural Resources. See (in this vol.) CONSERVATION OF NATURAL RESOURCES: GREAT BRITAIN.

A. D. 1909 (April-Dec.). — Mr. Lloyd-George's Budget. — Its features of taxation, denounced as Socialistic. — Seven months of vehement debate. — Adopted by the Commons and rejected by the Lords. — Warnings to the Lords against their action. — Preparation for appeal to the people. — The 29th of April, 1909, when the financial proposals of the Government for meeting the needs of the coming year, called "the Budget," were brought before Parliament, and the 30th of the following November, when, after seven months of arduous and angry debate, and after their adoption by a great majority of the Commons, the Bill embodying them was overwhelmingly rejected by the Lords, will be memorable dates in English history if the consequences of the action of the Peers are what, at this writing, they seem likely to be. Even failing such consequences, the production of the Budget will be in itself an event of no small moment, from what it signifies of the development of democracy in Great Britain.

As a formulated "Finance Bill," the Budget was not submitted to the House of Commons and to the public in print until the 28th of May. It was then entitled "A Bill to grant certain Duties of Customs and Inland Revenue (including Excise), to alter other Duties, and to amend the Law relating to Customs and Inland Revenue (including Excise), and the National Debt, and to make other provisions for the Financial Arrangements of the Year." Until then its provisions were known only from the statement of them made four weeks before by the Chancellor of the Exchequer, Mr. David Lloyd-George, in a speech extended through several hours, which even his opponents were forced to characterize as "a wonderful effort."

The Chancellor's explanation of the Budget rested primarily on the fact that an anticipated deficit of £15,762,000 required to be filled from new sources of revenue. Of the main causes of the deficit he said: "Were I dealing with a shortage due only to a temporary cause like forestalments, I might have resorted to some temporary shift which would have carried me over until next year when the revenue would resume its normal course. But unfortunately I have to reckon no' merely with an enormous increase in expendi: .e this year, but an inevitable expansion of some of the heaviest items in the course of the coming years. What is the increase of expenditure due to? It is very well known that it must be placed to the credit of two items, and practically two items alone. One is the Navy, and the other is old-age pensions. Now I have one observation which I think I am entitled to make about both. . . . The increased expenditure under both these heads was substantially incurred with the unanimous assent of all political parties in this House. There was, it is true, a protest entered on behalf of hon. members below the gangway against increased expenditure in the Navy, but as far as the overwhelming majority of members in this House are concerned the increase has received their sanction and approval. I am entitled to say more. The attitude of the Government towards these two branches of increased expenditure has not been one of rushing a reluctant House of Commons into expense which it disliked, but rather of resisting appeals coming from all quarters of the House for still further increases under both heads. . . .

"We are told that we ought not to have touched old-age pensions, at least not at the present moment, when heavy liabilities were in sight in connexion with the defence of the country. I may point out that when we introduced our Old-Age Pensions Bill that emergency had not arisen. But, apart altogether from that, we had no honourable alternative left. We simply honoured a cheque drawn years ago in favour of the aged poor, which bore at its foot the signatures of all the leaders of political parties in this country. They had all promised pensions at election after election, and great political parties have no right to make promises to poor people in return for political support, valuable to them, and all these people had to give, and then time after time return the bill with 'No assets' written across it."

Proceeding next to survey the "inevitable expansion" of future expenditure to which he had referred at the outset, and which could be foreseen in connection with the navy and with social reform, the Chancellor dealt at length on the demands that were pressing from the latter side and would not be postponed. "What the Government have to ask themselves," he said, "is this: Can the whole subject of further social reform be postponed until the increasing demands made upon the National Exchequer by the growth of armaments has ceased? Not merely can it be postponed, but ought it to be postponed? Is there the slightest hope that if we deferred consideration of the matter we are likely within a generation to find any more favourable moment for attending to it? I confess that, as to that, I am rather pessimistic. And we have to ask ourselves this further question — If we put off dealing with these social sores are the evils which arise from them not likely to grow and to fester until finally the loss which the country sustains will be infinitely greater than anything it would have to bear in paying the cost of an immediate remedy? There are hundreds of thousands of men, women, and children

ENGLAND, 1909

in this country now enduring hardships for which the sternest judge would not hold them responsible; hardships entirely due to circumstances over which they have not the slightest command—the fluctuations and changes of trade, or even of fashions, ill-health, and the premature breakdown or death of the bread-winner. . . . Last year, while we were discussing the Old-Age Pensions Bill, all parties in this House recognized fully and freely that once we had started on these lines the case for extension was irresistible. The leader of the Opposition, in what I venture to regard as the most notable speeches he has probably delivered during this Parliament, recognized quite boldly that, whichever party was in power, provision would have to be made in some shape or other for those who are out of work through no fault of their own, and those who are incapacitated for work owing to physical causes for which they are not responsible."

The speaker then developed at length the intentions of the Government on these lines of social reform, which will have to include undertakings of some system like the German, of compulsory insurance against sickness, accident and unemployment, and which will have to look to the organization of labor exchanges and to the opening of wider fields for employment, by development of neglected resources of the country, through afforestation, through promotion of agriculture, and the extension and improvement of roads.

And now, at last, he began to unfold his plans for raising the means with which to deal with all these augmented demands on the Government, and started them with a schedule of increased taxes on automobiles. Further details of his scheme are summarized in the following, from *The Times* "Review of Parliament," next morning:

"The right hon. gentleman was listened to with intense attention when he proceeded to announce an increase of the income-tax and of the estate duty. He proposed that for earned incomes under £2,000 the tax should remain at 9d. but that between £2,000 and £3,000 it should be 1s., and that all other incomes now liable to the shilling tax should pay 1s. 2d. Holding that the family man was entitled to more relief than the bachelor, he proposed that on all incomes under £500, in addition to existing abatements, a special abatement should be allowed of £10 for every child under 16 years of age. He hoped to get £160,000 by the partial restoration of the shilling duty and £3,000,000 from the additional 2d. on the higher incomes. There was also to be a super-tax on incomes exceeding £5,000, to be levied on the amount by which such incomes exceeded £3,000. The tax would be at the rate of 6d. in the pound. Exclamations denoting great disapproval arose from the Unionist benches when this was announced. The yield from this super-tax, Mr. Lloyd-George explained, would be in a full year £2,300,000; but this year not more than £500,000. He next came to the Death duties. There would be no change in the case of estates up to £5,000, but between this limit and the limit of two millions graduation would be steepened. The duty on estates between £5,000 and £10,000 would be 4 per cent.; between £10,000 and £20,000, 5 per cent.; £20,000 to £40,000, 6 per cent.; £40,000 to £70,000, 7 per cent.; £70,000 to £100,000, 8 per cent.; £100,000 to £150,000, 9 per cent.; £150,000 to £200,000, 10 per cent.; £200,000 to £400,000, 11 per cent.; £400,000 to £600,000, 12 per cent.; £600,000 to £800,000, 13 per cent.; £800,000 to £1,000,000, 14 per cent., and above £1,000,000, 15 per cent. This new scale was estimated to yield £2,550,000 this year, £4,200,000 next year, and afterwards £4,400,000. The settled Estate duty he raised from 1 per cent. to 2 per cent. From this source he hoped to get £50,000 this year and £375,000 in 1910–1911. The Legacy and Succession duty was to be raised in some cases from 3 per cent. to 5 per cent., and in all others to 10 per cent. The yield from this next year would be £1,300,000, and would increase in the course of time to £2,150,000. Property alienated *inter vivos* within five years from death was to be liable to duty. Objects of national and scientific interest would only be chargeable for duty when they were actually sold. There were to be increased duties in bonds to bearer and in stock and share transfers. The estimated yield from the increased Stamp Duties would be this year £650,000.

"It was at this point in his speech that the Chancellor of the Exchequer required rest and that the sitting was suspended. When in half-an-hour's time it was resumed, the right hon. gentleman continued his speech with renewed vigour. He dealt at considerable length with the subject of licenses, dwelling on the value of the monopoly granted to the liquor trade and arguing that the toll exacted by the public was ludicrously inadequate. He explained in detail a number of changes which he proposed to effect, the chief being a uniform charge of 50 per cent., subject to a *minimum* rate in urban areas according to population. For clubs there would be a poundage rate of 3d. on the amount taken for the sale of liquor. The yield from his revision of the liquor licensing law would be £2,600,000.

"Then he turned to land, drawing a marked distinction between the agricultural landowner and the urban landowner, of whom he spoke with some scorn. He proposed to levy a tax on the value accruing to land in the future through the enterprise of the community, taking the land apart from buildings and other improvements. This duty of 20 per cent. on unearned increment would be payable on two occasions—when land was sold and when land passed at death. A preliminary valuation of the land at the price which it might be expected to fetch at the present time would be necessary; and as the tax was to be imposed only on the unearned increment subsequently accruing on that valuation, the yield would probably be only £50,000 in 1909, but in future years it should prove a fruitful source of revenue. It was further proposed to levy an annual duty of one halfpenny in the pound on the capital value of undeveloped land and undeveloped minerals. Until the proposed valuation of the land of the United Kingdom on a capital basis was completed, it would be impossible to estimate the yield of this duty, but till then the duty would be calculated on the declarations of the owners, and in the current year he expected it to bring in £350,000. A 10 per cent. reversion duty was to be imposed on any benefit accruing to a lessor on the termination of a lease, and from this source a yield of £100,000 was anticipated. The three land

taxes were, accordingly, calculated to produce £500,000 in the current year.

"He next dealt with indirect taxation. He proposed to raise the present duty on spirits by 3s. 9d. per gallon. This would justify an increase in the retail price of whisky of one half-penny per glass, which would recoup the publican for the additional duty and leave him something more to mitigate the pressure of the new duties on licenses. The yield, during the current year, he estimated at £1,600,000. He also proposed to increase the duty on unmanufactured tobacco from 3s. to 3s. 9d. per lb., with equivalent additions to the rates for cigars, cigarettes, and manufactured tobacco, the return from which he estimated at £1,900,000 during the current year and £2,250,000 for a full year.

"The total estimated revenue was £162,300,000 and the total estimated expenditure £162,103,000, leaving a margin of £488,000 for contingencies. In conclusion, the right hon. gentleman — anticipating the charge that he was imposing very heavy taxation for a time of peace — declared it was a war Budget. The Government had declared implacable war against poverty. It was 8 o'clock when the right hon. gentleman finished, amid the cheers of his supporters."

That Mr. Lloyd-George's Budget was a gage of battle and that the fight over it was fierce is known to everybody, for the din of the conflict penetrated to every corner of every land. The key-note of the outcry against it was sounded in *The Times* of next morning, which opened its editorial comment with these words: "One general impression will be very widely made by the complicated and portentous Budget which Mr. Lloyd-George expounded at enormous length yesterday. That is that the huge deficit of nearly sixteen millions is to be raised almost exclusively at the cost of the wealthy and the fairly well-to-do. They are struck at in all sorts of ways, through the income-tax, the legacy duties, the estate duties, the stamps upon their investments, their land, their royalties, their brewery dividends, and their motor-cars. So when Mr. Lloyd-George exclaims rather theatrically — 'Mr. Emmott, this is a war Budget,' his words carry a meaning which he did not intend. He talks of waging war against poverty, but that is never really waged by unjust exactions from those whose custom prevents a worse poverty than any we know; and whose brains and capital count for at least as much as thews and sinews. Unless men exempt from income-tax either smoke or drink, they do not pay a single penny towards making up a deficit mainly due to a pension scheme of which they reap the whole benefit. The doctrine of social ransom has never been carried quite so far."

So it was branded by its opponents as a "Socialist Budget" and its authors as allies of Socialism, throughout the campaign. This denunciation was applied especially to the tax on unearned increments of value in land, as such increments should occur hereafter. On that point of opposition to the Budget Mr. Asquith, the Prime Minister of the Government, speaking at a public meeting in London, had this to say: "The increment duty is a tax of 20 per cent. on the increase in the capital value of certain kinds of land which is shown on the occasion of its transfer or devolution, and which is not attributable to the efforts or to the expenditure either of

the owner or the occupier. That is what the increment duty is. Now what is it not? I spoke a few moments ago of certain classes of land. Let me ask you to observe, first, what are the kinds of landed property which are altogether exempted from the scope of this taxation. In the first place, all agricultural land which has no building value above its agricultural value; next, small properties occupied by their owners; thirdly, property belonging to local authorities; again, property held for public or charitable purposes; and, finally, property belonging to statutory companies, such as railways, which cannot be used for other than statutory purposes. . . .

"Now, suppose the case of land which does not fall within any of those exempted categories, how is the duty charged? Here, again, there is a great deal of misapprehension about it, so it is better to state the case as clearly as one can. You start with the site value of the land at the present moment, and by site value — I am not going into technicalities — we mean, roughly speaking, the value of the land divested of the buildings. You do not go back into the past, you take things as they are; you do not rip up the previous history; you do not interfere with existing or past contracts. You give to every man, however he has acquired it, the full and undisturbed enjoyment of the rights, privileges, and property which he at present possesses. Starting with that *datum* line, you will see that in years to come, when that piece of land is transferred by sale — it may be by lease — or devolves upon death, the site value (you are comparing like with like, mind you) at that date — that is to say, the value after giving the owner and every one who has been interested in the land credit for all expenditure they have made in the way of improvement and development in the interval — comparing site with site, if you find an increment in value there, you say that it is an increment due to the community, to social causes, to causes over which the owner was no more responsible than you or I, and that it is not unfair in point of justice, and that it is in the highest degree expedient in point of policy that the State should be entitled to claim for itself in relief of the necessities of the same community some part — not any exaggerate[illegible] exorbitant part — but some part, of the increment which has so accrued. I may point out that there is no duty chargeable at all. So tender has my friend Mr. Lloyd-George (laughter and cheers) been to the interests concerned — he is a man of a most sympathetic nature — sometimes I am disposed to think he is of almost too impressionable a nature when appeals of this kind are addressed to him — so tender has he been of all these interests that he has agreed that no duty should be chargeable unless the increment value amounts to at least 10 per cent., and where it is over, the first 10 per cent. should escape free. That is the increment duty which Lord Rothschild tells you — I think I am not misquoting him — is rank and undiluted Socialism, and which Lord Lansdowne says is going to shake the very foundations of civilized society. . . .

"The propriety and justice of taxing this kind of increment, in the case of these classes of land, rests upon the most solid ground both of authority and experience. It has been advocated for generations by the most eminent economists. It has been recommended in one shape or another

ENGLAND, 1909

by more than one Royal Commission. It was approved in principle more than once even by the late non-progressive House of Commons. It has been put in practice in various forms for local purposes in not a few Continental municipalities and in many of our own Colonies, and, I believe, always with successful results. And let me add, by way of climax to that catena of authority, that it is at this moment, or at any rate was a few weeks ago, the alternative proposal put forward by the Conservative party in the Reichstag in Germany — an increment duty, not for local but for Imperial purposes, was the alternative proposal to the Budget of Prince Bülow put forward by the Conservative party in the Reichstag in Germany, and this is rank Socialism!"

Next to the proposed land taxes, the most bitterly opposed feature of the Budget was the increased revenue to be exacted from the licensed monopolists of the liquor trade. Everything, however, in its new taxation was denounced by the Conservatives, who set against it their own project of obtaining increased revenues by returning to the protective tariff which England had abandoned three-quarters of a century ago. The cry for what they preferred to call "tariff reform" had been silenced since the election of 1906, when the electors of the Kingdom rejected Mr. Chamberlain's revived protectionism by an overwhelming vote. Now it was raised again, and fully made the prime article in the Conservative creed, as it had not been before.

It was not until the 4th of November that the Finance Bill was brought to its third reading in the House of Commons, and was passed, by the heavy majority of 379 to 149. From the beginning it was known, of course, that the measure had few friends in the House of Lords, and would go down in defeat there if the Peers ventured to assume the right to negative a money Bill. For many generations they had not disputed the claim of the Commons to exclusive control of revenue legislation; but a theory had now been mooted, that Mr. Lloyd-George's Budget Bill differed from a mere money Bill by carrying Socialistic implications tacked on to it, which the House of Lords was under no obligation to accept. Whether the Lords would or would not be bold enough to act on this theory and throw down the Bill, as they had thrown down so much of the non-financial legislation of the Liberal Government, had been a serious question throughout the debates. Sir Edward Grey said of it, in a speech at Leeds, in August:

"As to the fate of the Budget — Is it going to be destroyed by the House of Lords or is it not? The leaders of the Tory party — with whom the decision rests — are very cautious in expressing their opinions. Some of the rank and file have said the House of Lords is going to destroy the Budget, or have spoken as if it were so. But the leaders — Mr. Balfour, Lord Lansdowne, and so forth — have been very cautious. They are great partisans in this matter of the open door, or, perhaps I should say, of two open doors. They have studiously kept two doors open, and as far as Lord Lansdowne's utterances go, he has kept the door open for passing the Budget in the House of Lords or rejecting it. He says the House of Lords is bound to decide so that the people should be properly consulted, and that that is the function of the House of Lords, to protect the right of the people to have their say on the subject. A very nice function if only it was performed impartially; but when it is a function which has been in abeyance for the greater part of the last 20 years, and is only to be erected into operation when a Liberal Government comes into office, it is not a function for which we can have much respect. But, nevertheless, it is so in our Constitution at present that the House of Lords is a weapon — a great gun, if you like to call it so — which can be pointed only against Liberal measures — not against Conservative measures — and which is in the hands of the Conservative party. Now there is the Budget going presently to the House of Lords; there is the gun pointing when it arrives there; there is the Conservative finger on the trigger. Are they going to fire the gun or not? They do not know themselves yet. They are debating in their own minds what will happen if they fire the gun. Will they destroy the Budget, or will the recoil be more injurious to themselves? Or, perhaps, will the gun burst altogether if they let it off? We know what their wishes and inclinations are; what we do not know at the present time is how much nerve they have got. But of this I am convinced — whatever the House of Lords may do, when the time comes for an appeal to the country, it will be an appeal on this Budget as a Free Trade Budget, and against the alternative of tariff reform.

Others among the prominent Liberals spoke with more temper of the threatened action of the Lords. Mr. Winston Churchill, for example, at Leicester, in September, said: "The rejection of the Budget by the House of Lords . . . would be a violent rupture of constitutional custom and usage extending over 300 years and recognized during all that time by the leaders of every party in the State. It would involve a sharp and sensational breach with the traditions of the past; and what does the House of Lords depend upon if not upon the traditions of the past? It would amount to an attempt at revolution not by the poor, but by the rich; not by the masses, but by the privileged few; not in the name of progress, but in that of reaction; not for the purpose of broadening the framework of the State, but greatly narrowing it. Such an attempt, gentlemen whatever you may think of it, such an attempt would be historic in its character, and the result of the battle fought upon it, whoever wins, must inevitably be not of an annual, but of a permanent and final character. The result of such an election must mean an alteration of the veto of the House of Lords; if they win they will have asserted their right, not merely to reject legislation of the House of Commons, but to control the finances of the country, and if they lose we will smash to pieces their veto. I say to you that we do not seek the struggle, we have our work to do; but if it is to come, it could never come better than now."

Very soon after the Bill had been passed over to the House of Lords it was known that the Conservative leaders had consented to its death in that body. What may be called the death sentence was pronounced on the 22d of November, when Lord Lansdowne moved the following amendment to a motion for the second reading of the Bill: "That this House is not justified in giving its consent to this Bill until it has been submitted to the judgment of the country."

ENGLAND, 1909

speaking to the motion with great seriousness he said: "I have been in this House more than 40 years, I owe everything to its indulgence, and I say from the depth of my heart that it is my desire to do nothing unworthy of your high reputation or your great place in the Constitution of this country. But I believe that the worst and most damaging thing that you could do would be that you should fail those who look to you as the guardians of their greatest constitutional right — the right to be consulted when fundamental political changes are demanded by the Government of the day; and, my lords, depend upon it that in rejecting this Bill you will, on the contrary, assert that that right shall be respected; you will not usurp the function of granting aid and supplies to the Crown; you will not pronounce any final verdict upon this Bill, bad though many of us think it to be; but you will say that [illegible] which you have no right to give your hereditary consent until you are assured [illegible] that they desire it [illegible]."

In the weeks of debate which followed many examples of oratorical force and impressiveness were made on both sides, but, unquestionably, the weightiest in reasoning and feeling, were those which came from opponents of the Budget who would not join their associates in the step proposed but warned them of dangers involved, to the existence of their House and to the future of parliamentary government, from constitutional changes which no man could forecalculate. On the latter point, Lord Rosebery begged his fellows of the peerage to "remember this. The menaces which were addressed to this House in old days were addressed by statesmen of a different school and under a different balance of constitutional forces in this country. The menaces addressed to you now come from a wholly different school of opinion, who wish for a single Chamber and who set no value on the controlling and revising forces of a second Chamber — a school of opinion which, if you like it and do not dread the word, is eminently revolutionary in essence, if not in fact. I ask you to bear in mind that fact when you weigh the consequences of the vote which you are to give to-morrow night. 'Hang the consequences,' said my noble friend Lord Camperdown last night. That is a noble sentiment and a noble utterance. It is a kind of Balaklava charge and nothing more intrepid could be said by any of us if we had not to weigh the consequences, not to the individual, but to the State; and you should think once, you should think twice, and thrice, before you give a vote which may involve such enormous constitutional consequences."

Lord Balfour, while condemning the Bill, condemned still more the proposition that the House of Lords would do its duty in compelling a referendum to the people on the measure. A question in finance, he said, differs from all others in its unfitness for this treatment in Great Britain. "If you are to establish a system whereby this House or any other authority had the right of establishing a referendum as it is called — a reference to the people [illegible] matters of finance — you would spoil and destroy the control of the other House of Parliament over the Government, and you would make, I venture to say, perhaps the most momentous change in the Constitution, as it has grown up, which has been made in the whole history of that Constitution. Take it how you like, if you pass this resolution, if you make it a precedent — I care not with what safeguards you accompany it, whether you say it is only to be done on extreme occasions or by any other safeguard — you have made a change in the practice and in the Constitution which will prevent things going on as they have gone on up to the present time. My lords, if you win, the victory can at most be a temporary one. If you lose you have altered and prejudiced the position, the power, the prestige, the usefulness of this House, which I believe every one of you honours and desires to serve as heartily and as thoroughly as I do myself. If you win you are but beginning a conflict."

Lord James, one of the ablest of the Law Lords, and Lord Cromer, were other opponents of the Budget who earnestly counselled the Upper House not to interfere with the action of the Commons on this measure of finance. From the side of the few Liberals among the peers came other weighty words of admonition, spoken especially by the calm and thoughtful Lord Morley and by the Lord Chancellor, the presiding officer of their House. "No one," said the latter, "will be so simple as to believe that the only question which the country will consider will be the question whether this Bill ought to pass into law. Other and graver questions will be raised. We have been in office for four years. In 1906 our whole time in the House of Commons was taken up by passing an Education Bill. It came to this House. It was wrecked, and the whole labour of that Session was thrown away. The following year, 1907, was not a year of very great enterprise of a legislative character. In 1908 the whole time of the House of Commons was spent in passing the Licensing Bill, a measure the loss of which I regret more than I regret the loss of any other. It came up to this House. It was not alive when it came here. It had perished by the stiletto in Berkeley-square before it ever saw this House. Now, again in 1909, after a Session of unexampled labour, the House of Commons has presented to your lordships the proof of many, many months of arduous work in a domain entirely their own; and this House is going to destroy the Finance Bill of 1909 and to refuse supplies. It is, in my opinion, impossible that any Liberal Government should ever again bear the heavy burden of office unless it is secured against a repetition of treatment such as our measures have had to undergo for the last four years. If we fail in the coming general election, assuming that his Majesty is pleased to dissolve Parliament, it will only be the beginning of a conflict which can end only in one way. If we succeed I hope we shall not flinch from that which will have to follow."

The Archbishop of Canterbury and the Spiritual Lords generally refrained from taking sides on what they regarded as a political question; but the Archbishop of York construed his duty differently, and added his voice to the remonstrance against Lord Landsdowne's motion. Close upon midnight, November 30, the House divided on that motion and it was carried, rejecting the Finance Bill, by a vote of 350 to 75. So big a vote — such a swarming of titled legislators to record it — had not been known within the memory of living men.

Three days later, on the 3d of December, the Premier, Mr. Asquith, rose in the House of Commons and moved the adoption of the following declaration: "That the action of the House of Lords in refusing to pass into law the financial provision made by this House for the service of the year is a breach of the Constitution and a usurpation of the rights of the Commons."

Speaking to this motion, he said, in part: "When, a short time ago, the Finance Bill received its third reading, as it left this House it represented, I believe, in a greater degree than can be said of any measure of our time, the mature, the well-sifted, the deliberate work of an overwhelming majority of the representatives of the people upon a matter which, by the custom of generations and by the course of a practically unbroken authority, is the province of this House, and of this House alone. In the course of a week, or a little more than a week, the whole of this fabric has been thrown to the ground. For the first time in English history the grant of the whole of the Ways and Means for the Supply and the Services of the year, the grant made at the request of the Crown to the Crown by the Commons, has been intercepted and nullified by a body which admittedly has not the power to increase or to diminish one single tax or to propose any substitute or alternative for any one of the taxes. The House of Commons would, in the judgment of his Majesty's Government, be unworthy of its past and of the traditions of which it is the custodian and the trustee if it allowed another day to pass without making it clear that it does not mean to brook the greatest indignity, and, I will add, the most arrogant usurpation (loud cheers), to which for more than two centuries it has been asked to submit."

After a short debate, the House divided on the motion, and it was adopted by 349 against 134.

On the afternoon of the same day the King prorogued Parliament to the 15th of January, 1910, this being preparatory to the dissolution and appeal to the people which the action of the Lords had made necessary. See below, A. D. 1910 (JAN.–MARCH).

A. D. 1909 (May).—A Majority Vote in the Commons for removing Disabilities from Roman Catholics.—A bill for the removal of remaining disabilities from Roman Catholics passed its second reading in the House of Commons on the 14th of May, by a vote of 133 to 12[illegible]. Not being a Government measure, the crowded programme of business for the session gave little hope that it could be carried into law; but the vote was an encouragement.

A. D. 1909 (May).—Resolution in the House of Commons in favor of the Payment of Members and the public payment of election expenses.—The following resolution was introduced in the House of Commons on the 12th of May, 1909, by Mr. Higham, of York: —"That in the opinion of this House the non-payment of members and the inability of candidates for the returning officer's expenses render it impossible for many constituencies to exercise a free choice in their selection of candidates, and elections of members of Parliament; and this House is of opinion that any measure of general electoral reform passed before the dissolution of this Parliament, and coming into force [illegible] after the dissolution, should be accompanied by arrangements for the payment of members elected to serve in Parliament and for the transfer to the Imperial Exchequer of the financial responsibility for the returning officers' expenses incurred in the conduct of such elections."

Mr. Harcourt, for the Government, accepted the motion at once. He pointed out that the expenditure entailed, if members were paid £300 a year, would be £300,000 annually; but this was not a valid argument against the change. For his part, he could not see why politics should be the only profession "run by amateurs." He was, therefore, not frightened by the prospect of an Assembly of professional politicians. The time had gone by when the country could select its legislators solely from the leisured class; public servants deserved to be paid.

Most of the speakers in a debate of three hours favored the resolution, and it was then adopted, by 243 votes against 93. No legislation in accordance with it has yet been undertaken.

A. D. 1909 (July-Dec.).—Decision against the right of Trade Unions to pay Salaries to Members of Parliament.—On the 23d of July, 1909, an appeal from an order of the Court of Appeal was argued before five legal members of the House of Lords, on the question whether the payment of members of Parliament chosen to represent the interests of a trade union was a lawful application of the funds of such union. The complainant in the case had sued the Amalgamated Society of Railway Servants, of which he had been a member since 1892, to have it declared that one of the rules of the society, amongst other things, for Parliamentary representation and the enforced levy of contributions from the plaintiff and other members of the society, towards the payment of salaries, or maintenance allowance, to members of Parliament pledged to observe and fulfil the conditions imposed by the constitution of the Labour Party therein referred to, is *ultra vires* and void, and that the society may be restrained from enforcing it. And in the alternative that it may be declared that a certain amendment or addition made to the rules in 1906 be declared to be illegal and void. The added rule, thus complained of, was as follows: "All candidates shall sign and accept the conditions of the Labour Party and be subject to their Whip."

The judgment of the Lords, rendered on the 21st of December, sustained the order from the court below, dismissing the appeal. Their decision rested mainly on considerations relating to the rule quoted above, and stated briefly by

one of their bench, Lord James, as follows: "The effect of this rule and others that exist is that a member of the trade union is compelled to contribute to the support of a member of Parliament, who is compelled 'to answer the Whip of the Labour Party.' I construe this condition as meaning that the member undertakes to forego his own judgment, and to vote in Parliament in accordance with the opinions of some person or persons acting on behalf of the Labour Party. And such vote would have to be given in respect of all matters, including those of a most general character — such as confidence in a Ministry or the policy of a Budget — matters unconnected directly at least with the interests of labour. Therefore I am of opinion that the application of money to the maintenance of a member whose action is so regulated is not within the powers of a trade union. If your Lordships decide on this branch of the case that the respondent is entitled to judgment, it is unnecessary that any opinion should be expressed upon the very broad constitutional question raised for the first time in the Court of Appeal affecting the general support of members."

A. D. 1910 (Jan.-March). — Dissolution of Parliament. — An indecisive Election. — No majority in the House of Commons for any single party. — Precarious support for the Liberal Ministry. — Uncertainties of the Situation. — As expected, Parliament was dissolved by royal proclamation early in January, and new elections commanded, the first of which took place on the 15th of that month and the last on the 14th of February. The result was generally disappointing, because wholly indecisive. The new House of Commons was found to be made up of 275 Liberals, 273 Unionists, 71 Nationalists (Irish), 11 Independent Nationalists, and 40 Labor members. Neither of the political parties arrayed on the main issues involved had won a majority. The people had rendered no recognizable verdict on the Budget, or on the tariff question, or on the abolition of the veto power claimed by the House of Lords.

Even with the support of the Labor members the Asquith Ministry was in a minority. The balance was held by the Irish members, and it was only by compromise with them that either Liberals or Unionists could do anything. Had the Ministry been able to choose its own course it might have preferred, perhaps, to push the Budget question to a settlement before attempting to determine the future of the House of Lords; but the leader of the Nationalists, Mr. Redmond, gave prompt notice that they would allow no such second-rating of the Lords' veto question to go into the programme of legislation. Probably, therefore, there were negotiations between Liberals and Nationalists before Mr. Asquith announced the intentions of the Government, which he did on the 28th of February, — Parliament having been formally opened on the 15th. Up to the 24th of March, he claimed all the time of the House of Commons for immediate measures which must be adopted before the close of the financial year, to provide immediately necessary means for maintaining the national credit. Then, "when the House reassembled after Easter, on March 29, the Government would present their proposals on the relations between the two Houses. They would be presented, in the first instance, in the form of resolutions affirming the necessity for excluding the House of Lords altogether from the domain of finance, and inviting the House to declare that, in the sphere of legislation, the power of the veto now possessed by the Lords should be so limited as to secure the predominance of the deliberate and considered will of the Commons within the lifetime of a single Parliament. Further, it would be made plain that these constitutional changes were without prejudice to and contemplated in a subsequent year the substitution in our Second Chamber of a democratic for an hereditary basis. When these resolutions had been agreed to, they would be submitted to the House of Lords, so as to bring the main issue to a trial at the earliest possible moment."

This programme of procedure appears to have been hastened slightly; for despatches from London on the 21st of March announced that Mr. Asquith had brought forward his resolutions, and that their purport was as follows: "The first resolution provides for complete control of money bills by the House of Commons, thus unmistakably disposing of the question that was precipitated by the Lords' rejection of the budget; the second precludes the Lords from rejecting any bill that has been passed by the Commons at three successive sessions, provided the entire time the bill has been before the House is not less than two years; and in the same case the bill becomes a law without the royal assent."

A. D. 1910 (May). — Death of King Edward VII. — Accession of King George V. — The political situation in England, which had become problematical, was probably changed with suddenness, on the night of May 6, by the death of King Edward, after a brief illness, consequent on chronic bronchial disorders. His son was proclaimed as King George V. Settlement of the pending political questions seems likely to be postponed for some time.

EUROPE.

A. D. 1850-1907. — Growth and changes in population. — The shifting of numerical weight among nations and peoples. — Some statistical statements of surprising interest were set forth in an article published by Professor Sombart, of Berlin, in 1907. German statisticians have a reputation for accuracy, and we have no ground for questioning the figures submitted by this professor, which show that, notwithstanding the great flow of emigration from Europe within the last 60 years, its population has increased from about 250,000,000 to 400,000,000 since the middle of the nineteenth century. The main growth, however, has been in Russia, from which the emigration has been slight.

The exhibit of relative increase in the several countries and among the several races of Europe is more interesting and more important than the total growth. This comparison gives a heavy gain of weight to Russia since 1850, a considerable gain to Germany, slight gains to Austria-Hungary, Great Britain and Ireland (wholly on the British side of the United Kingdom), Belgium, and the Netherlands, with comparative losses in all the rest. The drop made by France in the scale of population is distressingly great. Out of every 1,000 inhabitants of Europe in 1850, 137 were in France; but out of the same number of Europeans in 1905 she counted but 94. Russia, in the same period, raised her share of the population of Europe from 215 per 1,000 to 285; Germany from 188 to 145; Austria-Hungary from 114 to 117; Great Britain and Ireland from 104 to 105; Belgium from sixteen to seventeen; the Netherlands from twelve to thirteen. On the other hand, Italy dropped from 95 to 80; Spain and Portugal from 71 to 58; Sweden, Norway, and Denmark from 29 to 25; the Balkan States from 60 to 53; Switzerland from nine to eight.

Carrying the comparisons of relative population back to the beginning of the last century, Professor Sombart finds that Germany, which gained ground in the last half of the period, had lost more in the first half than that gain made good. In 1801 the Germans furnished 160 to each 1,000 of the population of Europe, against their present count of 145. But [illegible] Britain and Ireland gave but 93 to that 1,000 in 1801 against the 105 of the present time. The gains of Russia and the losses of France, Italy, and Spain were alike continuous from the first to the latest date.

As the result of these differences of advance in population, the Slavic peoples have been raised from the lowest to the highest weight in numbers; the Germanic have dropped just enough in the scale to take second place; while the Latinized folk of Southwestern Europe, or Latins as we call them, have fallen far from the share they had in the peopling of the continent 100 years ago. Of each 1,000 Europeans in 1801 the Slavs numbered 268, the Latins 355, the Germanics 375. In 1850 the count was 310 for the Slav, 321 for the Latin, 369 for the Germanic. The next 55 years brought the Slav to the front, with a great bound, and the figures in the column for 1905 are 375 Slav, 373 Germanic, 251 Latin.

These statistics hold a number of deep meanings; but they are especially eloquent in their showing of the deadly effects of the Napoleonic wars. For France there has been no recovery since those horrible years when the Corsican vampire sucked at her veins; and Spain and Italy are still sicklied from the same cause. But Germany's languishing ended when the long peace of the last 36 years began. Her vitality had never been spent, even in the Thirty Years' War and by the belligerency of Frederick, "called the Great," before Napoleon came to trample upon her, as that of France had been exhausted by her Bourbon and Corsican masters.

A. D. 1870-1905. — Rate of Increase of Population in other countries compared with Germany. — "During the last few decades, the population of Germany has been increasing with marvellous and unprecedented rapidity. From 1870 to the present time it has grown from 40,818,000 people to more than 60,000,000 people, and has therefore increased by 50 per cent. During the same period, our own [British] popu-

lation has increased from 31,817,000 people to 43,000,000 people, or by but 33 per cent. No nation in the world excepting those oversea which yearly receive a huge number of immigrants from abroad multiplies more rapidly than does the German nation, as may be seen from the following figures:

"Average Yearly Increase of Population between the Last and the Previous Census.

Germany, 15,000 people per million of inhabitants.
Russia, 13,600 people per million of inhabitants.
Holland, 12,300 people per million of inhabitants.
Switzerland, 10,400 people per million of inhabitants.
Belgium, 10,100 people per million of inhabitants.
Great Britain, 9,400 people per million of inhabitants.
Austria-Hungary, 9,300 people per million of inhabitants.
Spain, 8,800 people per million of inhabitants.
Italy, 6,900 people per million of inhabitants.
France, 1,700 people per million of inhabitants.

"From the foregoing table it appears that not only the population of Germany, but that of all the chiefly Germanic nations, increases very much faster than that of all other nations, Russia excepted. However, Russia cannot fairly be compared with Germany, partly because her population statistics are not reliable, partly because the growth of her population is to some extent due to conquest. . . .

"The proud boast of the Pan-Germans that it is the destiny of the German race to rule the world would appear to be correct, were it not for a singular phenomenon which, so far, has remained almost unobserved. Whilst the 60,000,000 Germans in Germany are increasing with astonishing celerity, the 30,000,000 Germans who live in Austria-Hungary and in other countries are so rapidly losing all German characteristics and even the German language, that it seems possible that, forty or fifty years hence, the number of Germans outside Germany proper will be almost nil. . . .

"The 90,000,000 Germans who live in Germany and in Greater Germany are distributed over the globe as follows:

Germany	60,000,000
Austria-Hungary	11,550,000
Switzerland	2,320,000
Russia	2,000,000
Various European countries	1,130,000
Total in Europe	77,000,000
United States and Canada	11,500 000
Central and South America	600,000
Asia, Africa, Australia	400,000
Grand total	89,500,000"

—O. Eltzbacher, *Germany and Greater Germany* (*Contemporary Review, Aug.*, 1905).

Later figures, relative to France, on this subject, were given by the Paris correspondent of the New York *Evening Post*, writing June 12th, 1909, when he said: "From 1901 to 1905 the birth rate was high enough to increase the population of France 18 for every 10,000 yearly. During the same period the relative increase per 10,000 was 106 in Italy, 113 in Austria, 121 in England, 149 in Germany, and 155 in Holland. . . . Coming back to single years, the birth rate of 1906 only

increased the French population 7 per 10,000; that is, among every 10,000 inhabitants there were as many births of living children as there were deaths taken altogether, plus seven births more. In 1907 there were five fewer births than deaths per 10,000 inhabitants. And now here comes 1908 jumping back to an excess of twelve births over deaths per 10,000. Such sudden fluctuations can be seized on by no theory; 1907 had its deficit because it had 19,892 more deaths than the average; 1908 recovers lost ground because it had 48,266 fewer deaths than 1907, or 28,374 fewer than the average of the preceding period of five years. Along with this slow but sure decrease in the absolute birth rate of France goes the happier decrease of deaths, owing to greater well-being in general and better popular hygiene in particular.

"Statistics have something better than this to show. The steady increase in marriages, which I noted last year, has gone on. For 1908 it is the heaviest since 1873; the total number was 315,928—which is 1,172 more than in 1907 and 9441 more than in 1906. Divorces, for all France, were 10,578 in 1906 and 11,515 in 1908.

"Why do Frenchmen have few children? Because they deliberately will not to have them. That is the answer which every intelligent observer who passes his life among Frenchmen—as one of themselves, not as an outsider—will give spontaneously; and it is the answer to which all statistics and all verified social facts lead up."

A. D. 1878-1909.—Thirty-one Years of Peace, broken only by Thirty-one Days of War.—In the spring of 1897 there were thirty-one days of war between Turkey and Greece. With that exception there have been no hostilities on the European continent since Russia fought the Turks in 1877–78, a period of thirty-one years. In the preceding thirty years there had been nearly a score of serious insurrections and wars: the widespread revolutionary conflicts of 1848–49, in France, Italy, Austria, Hungary, Germany, and Denmark; the coup d'état of 1851 in France; the Crimean War of 1854–56; the war of France and Sardinia with Austria in 1859; Garibaldi's liberation of Sicily and Naples in 1861, and his attempt on Rome the next year; the Greek revolution of 1862; Polish revolts of 1861 and 1863; the Schleswig-Holstein war of 1864; the Austro-Prussian "Seven Weeks War" and the Austro-Italian war, in 1866; Garibaldi's renewed attack on the Papal government at Rome in 1867; revolution in Spain in 1868; the Franco-German War and the insurrection of the Communists at Paris in 1870–71; the revolts of Bosnia and Herzegovina in 1875 and of Bulgaria in 1876.

There is no mistaking the hopeful significance of so striking a contrast as this; and if we look back through two more similar periods, each of which represents the average term reckoned for a generation, we find the key to a better understanding of its hopefulness. Behind the turbulent thirty years from '47 to '77 are thirty years during most of which Europe lay bleeding, panting, exhausted by thirty other years of the French Revolution and the Napoleonic wars; exhausted physically but stirred deeply in brain and heart, and gathering strength for the efforts toward freer and better institutions of government and more homogeneous organizations of

nationality which most of the conflicts between 1847 and 1877 represent.

It is because those conflicts resulted in far better political conditions, and in much of satisfaction to racial affinities and national aspirations long resisted, that the people of Europe, in these last thirty years, have enjoyed the longest exemption from war on their own soil that their history records.

A. D. 1902-1907. — Renewal and maintenance of the Triple Alliance. — Its value to Italy. — The Triple Alliance or Dreibund of Germany, Austria-Hungary and Italy, formed in 1882 and renewed in 1887 and 1891, was renewed for the third time in 1902, a year before the end of its term, by the Zanardelli Government. "The term of this renewal was for six or 12 years; that is to say, if the treaty were not denounced in 1907, five years after its actual renewal, it should be considered as holding good for the full term of 12 years. The treaty was not denounced by the Giolitti Ministry, with Signor Tittoni Minister of Foreign Affairs, and therefore is in force until 1914, 12 years after its third renewal by Prinetti. Except in the case of a very marked alteration in the friendly relations between the three contracting Powers there can be no question of its renewal or non-renewal at this date. That case has not arrived; the cordial relations between Italy and her allies, in spite of conjectured though unacknowledged differences of opinion, remain ostensibly unaltered, and may still be considered as correctly described in the words used in their speeches in Vienna by the Emperor of Austria and the German Emperor, and in the telegrams which they afterwards exchanged with the King of Italy.

"Some Italian politicians, however, seem disposed to question the utility of an alliance which does not relieve Italy from the necessity of spending more money on her national defence. What, they ask, is the use of the alliance if we have to make these heavy sacrifices in order to increase our army and navy and put our frontier fortifications in order? The answer is more simple than agreeable. It is precisely the existence of the Triple Alliance that has permitted Italy to leave her Austrian frontier absolutely open to invasion, and to allow both her army and navy to fall below the standard which she had proposed to keep up. The alliance has secured her immunity for her neglect. But she has naturally paid for that combined neglect and immunity by accepting a subordinate rôle by the side of her allies." — *Rome Correspondence, London Times, May* 15, 1909.

A. D. 1904 (April). — The Entente Cordiale of England and France. — In his interesting work on "France and the Alliances," founded on a course of lectures delivered at Harvard University in 1908, M. André Tardieu reviews the long antagonism between England and France, which ran through their history, from early in the Fourteenth Century to the last year but one of the Nineteenth, when, in March, 1899, France, by treaty with the British Government, gave up her strong desire to extend her North African dominion eastward to the Nile. Then he asks: "How came it that within five years a sincere understanding was established between the two hereditary enemies?" He answers the question by saying: "Neither in England nor in France is the principle of the understanding to be sought. Rather was it the fear of Germany which determined England — not only her King and Government, but the whole of her people — to draw near to France." This, without doubt, is substantially the true explanation of the friendly agreements, forming what is known as the *Entente Cordiale* between England and France, which were signed on the 8th of April, 1904. They involved nothing in the nature of a defensive alliance against Germany, and they had been prepared for by a rapid growth of natural and real good feeling between English and French folk; but it is certain that they received their immediate prompting from the common recognition, in England and France, that Germany had become a rival in political and economic ambitions to both of them, more formidable than either could be to the other. This gave them a common reason for obliterating all their old differences and causes of difference, and exhibiting themselves to the world as friends.

M. Tardieu credits the English King with the initiation of this most important *rapprochement*. "He it was," says the French writer, "who both conceived and facilitated it, while still many believed that the moment was premature. Edward VII. has been both praised and attacked without stint. Perhaps he deserves neither the 'excess of honor nor yet the excess of abuse.' Among present sovereigns, he has one superiority, that of having gained experience in life before reigning. . . . He is not afraid of taking the initiative; and so far his initiative has been a success. The boldest example of it was his visit to Paris in 1903. Putting aside all objections, and being convinced of his success, he arrived in France amidst an atmosphere of uncertainty. When the first platoons of cuirassiers rode down the Champs Élysées, embarrassment and anxiety weighed on the public. The Nationalists had declared their intention of hissing. What would be the result of a hostile manifestation? The King, as far as he was concerned, did not believe in the danger, and he was right. The Parisians accorded him, not an enthusiastic, but, from the first, a respectful, and soon a genial, reception. The road was clear. Two months later, Mr. Loubet paid King Edward a return visit. And, on welcoming his colleague, Mr. Delcassé, to London, Lord Lansdowne said to him: 'Now we are going to have some conversation.' As a matter of fact, there was conversation both in Paris and in London. . . . On the 8th of April, 1904, the agreement was signed, and its immediate publication produced a deep impression in Europe."

Strictly speaking, there were three Agreements, or two Declarations and one formal Convention, signed on the 8th of April, 1904, constituting, together, the Anglo-French *Entente*. The first, a "Declaration respecting Egypt and Morocco," ran as follows:

"ARTICLE I. His Britannic Majesty's Government declare that they have no intention of altering the political status of Egypt. The Government of the French Republic, for their part, declare that they will not obstruct the action of Great Britain in that country by asking that a limit of time be fixed for the British occupation or in any other manner, and that they give their assent to the draft Khedivial Decree annexed to the present Arrangement, containing the guarantees considered necessary for

EUROPE, 1904

the protection of the interests of the Egyptian bondholders, on the condition that, after its promulgation, it cannot be modified in any way without the consent of the Powers Signatory of the Convention of London of 1885. It is agreed that the post of Director-General of Antiquities in Egypt shall continue, as in the past, to be entrusted to a French *savant*. The French schools in Egypt shall continue to enjoy the same liberty as in the past.

"ARTICLE II The Government of the French Republic declare that they have no intention of altering the political status of Morocco. His Britannic Majesty's Government, for their part, recognize that it appertains to France, more particularly as a Power whose dominions are conterminous for a great distance with those of Morocco, to preserve order in that country, and to provide assistance for the purpose of all administrative, economic, financial, and military reforms which it may require. They declare that they will not obstruct the action taken by France for this purpose, provided that such action shall leave intact the rights which Great Britain, in virtue of Treaties, Conventions, and usage, enjoys in Morocco, including the right of coasting trade between the ports of Morocco, enjoyed by British vessels since 1901.

"ARTICLE III. His Britannic Majesty's Government, for their part, will respect the rights which France, in virtue of Treaties, Conventions, and usage, enjoys in Egypt, including the right of coasting trade between Egyptian ports accorued to French vessels.

"ARTICLE IV. The two Governments, being equally attached to the principle of commercial liberty both in Egypt and Morocco, declare that they will not, in those countries, countenance any inequality either in the imposition of customs duties or other taxes, or of railway transport charges. The trade of both nations with Morocco and with Egypt shall enjoy the same treatment in transit through the French and British possessions in Africa. An Agreement between the two Governments shall settle the conditions of such transit and shall determine the points of entry. This mutual engagement shall be binding for a period of thirty years. Unless this stipulation is expressly denounced at least one year in advance, the period shall be extended for five years at a time. Nevertheless, the Government of the French Republic reserve to themselves in Morocco, and His Britannic Majesty's Government reserve to themselves in Egypt, the right to see that the concessions for roads, railways, ports, &c., are only granted on such conditions as will maintain intact the authority of the State over these great undertakings of public interest.

"ARTICLE V. His Britannic Majesty's Government declare that they will use their influence in order that the French officials now in the Egyptian service may not be placed under conditions less advantageous than those applying to the British officials in the same service. The Government of the French Republic, for their part, would make no objection to the application of analogous conditions to British officials now in the Moorish service.

"ARTICLE VI. In order to insure the free passage of the Suez Canal, His Britannic Majesty's Government declare that they adhere to the stipulations of the Treaty of the 29th October, 1888, and that they agree to their being put in force. The free passage of the Canal being thus guaranteed, the execution of the last sentence of paragraph 1 as well as of paragraph 2 of Article VIII of that Treaty will remain in abeyance.

"ARTICLE VII. In order to secure the free passage of the Straits of Gibraltar, the two Governments agree not to permit the erection of any fortifications or strategic works on that portion of the coast of Morocco comprised between, but not including, Melilla and the heights which command the right bank of the River Sebou. This condition does not, however, apply to the places at present in the occupation of Spain on the Moorish coast of the Mediterranean.

"ARTICLE VIII. The two Governments, inspired by their feeling of sincere friendship for Spain, take into special consideration the interests which that country derives from her geographical position and from her territorial possessions on the Moorish coast of the Mediterranean. In regard to these interests the French Government will come to an understanding with the Spanish Government. The agreement which may be come to on the subject between France and Spain shall be communicated to His Britannic Majesty's Government.

"ARTICLE IX. The two Governments agree to afford to one another their diplomatic support, in order to obtain the execution of the clauses of the present Declaration regarding Egypt and Morocco."

The more formally designated Convention relates to questions concerning the Newfoundland fisheries and certain boundaries between French and English possessions in Africa. The articles respecting Newfoundland and the fisheries are as follows:

"ARTICLE I. France renounces the privileges established to her advantage by Article XIII of the Treaty of Utrecht, and confirmed or modified by subsequent provisions.

"ARTICLE II. France retains for her citizens, on a footing of equality with British subjects, the right of fishing in the territorial waters on that portion of the coast of Newfoundland comprised between Cape St. John and Cape Ray, passing by the north; this right shall be exercised during the usual fishing season closing for all persons on the 20th October of each year. The French may therefore fish there for every kind of fish, including bait and also shell fish. They may enter any port or harbour on the said coast and may there obtain supplies or bait and shelter on the same conditions as the inhabitants of Newfoundland, but they will remain subject to the local Regulations in force; they may also fish at the mouths of the rivers, but without going beyond a straight line drawn between the two extremities of the banks, where the river enters the sea. They shall not make use of stake-nets or fixed engines without permission of the local authorities. On the above-mentioned portion of the coast, British subjects and French citizens shall be subject alike to the laws and Regulations now in force, or which may hereafter be passed for the establishment of a close time in regard to any particular kind of fish, or for the improvement of the fisheries. Notice of any fresh laws or Regulations shall be given to the Government of the French Republic three

EUROPE, 1904

months before they come into operation. The policing of the fishing on the above-mentioned portion of the coast, and for prevention of illicit liquor traffic and smuggling of spirits, shall form the subject of Regulations drawn up in agreement by the two Governments.

"ARTICLE III. A pecuniary indemnity shall be awarded by His Britannic Majesty's Government to the French citizens engaged in fishing or the preparation of fish on the 'Treaty Shore,' who are obliged, either to abandon the establishments they possess there, or to give up their occupation, in consequence of the modification introduced by the present Convention into the existing state of affairs. This indemnity cannot be claimed by the parties interested unless they have been engaged in their business prior to the closing of the fishing season of 1903. Claims for indemnity shall be submitted to an Arbitral Tribunal, composed of an officer of each nation, and, in the event of disagreement, of an Umpire appointed in accordance with the procedure laid down by Article XXXII of The Hague Convention. The details regulating the constitution of the Tribunal, and the conditions of the inquiries to be instituted for the purpose of substantiating the claims, shall form the subject of a special Agreement between the two Governments.

"ARTICLE IV. His Britannic Majesty's Government, recognizing that, in addition to the indemnity referred to in the preceding Article, some territorial compensation is due to France in return for the surrender of her privilege in that part of the Island of Newfoundland referred to in Article II, agree with the Government of the French Republic to the provisions embodied in the following Articles:"

The provisions here referred to, contained in the subsequent articles, modify the former frontier between Senegambia and the English colony of the Gambia, "so as to give to France Yarbutenda and the lands and landing places belonging to that locality"; cede to France "the group known as the Isles de Los, and situated opposite Konakry"; and substitute a new boundary, to the east of the Niger, for that which was fixed between the French and British possessions by the Convention of 1898.

The Declaration which concludes the series of Agreements has to do with matters in Siam, Madagascar, and New Hebrides. As to Siam, the two Governments "declare by mutual agreement that the influence of Great Britain shall be recognized by France in the territories situated to the west of the basin of the River Menam, and that the influence of France shall be recognized by Great Britain in the territories situated to the east of the same region, all the Siamese possessions on the east and southeast of the zone above described and the adjacent islands coming thus henceforth under French influence, and, on the other hand, all Siamese possessions on the west of this zone and of the Gulf of Siam, including the Malay Peninsula and the adjacent islands, coming under English influence. The two Contracting Parties, disclaiming all idea of annexing any Siamese territory, and determined to abstain from any act which might contravene the provisions of existing Treaties, agree that, with this reservation, and so far as either of them is concerned, the two Governments shall each have respectively liberty of action in their spheres of influence as above defined."

The further agreements were, on the part of the British Government, to withdraw a protest it had raised against the customs tariff established in Madagascar, and, on the part of the two Governments, "to draw up in concert an arrangement which, without involving any modification of the political *status quo*, shall put an end to the difficulties arising from the absence of jurisdiction over the natives of the New Hebrides."

In the British Parliamentary Paper (Cd. 1952, April, 1904) which gave official publication to these Agreements, they are accompanied by an explanatory despatch from the Marquess of Lansdowne, British Foreign Secretary, to Sir E. Monson, Ambassador at Paris, which affirms distinctly that "if any European Power is to have a predominant influence in Morocco, that Power is France." The language of the despatch on this subject is as follows:

"The condition of that country [Morocco] has for a long time been unsatisfactory and fraught with danger. The authority of the Sultan over a large portion of his dominions is that of a titular Chief rather than of a Ruler. Life and property are unsafe, the natural resources of the country are undeveloped, and trade, though increasing, is hampered by the political situation. In these respects the contrast between Morocco and Egypt is marked. In spite of well-meant efforts to assist the Sultan, but little progress has been effected, and at this moment the prospect is probably as little hopeful as it ever has been. Without the intervention of a strong and civilized Power there appears to be no probability of a real improvement in the condition of the country.

"It seems not unnatural that, in these circumstances, France should regard it as falling to her lot to assume the task of attempting the regeneration of the country. Her Algerian possessions adjoin those of the Sultan throughout the length of a frontier of several hundred miles. She has been compelled from time to time to undertake military operations of considerable difficulty, and at much cost, in order to put an end to the disturbances which continually arise amongst tribes adjoining the Algerian frontier —tribes which, although nominally the subjects of the Sultan, are, in fact, almost entirely beyond his control. The trade of France with Morocco is again—if that across the Algerian frontier be included—of considerable importance, and compares not unfavourably with our own. In these circumstances, France, although in no wise desiring to annex the Sultan's dominions or to subvert his authority, seeks to extend her influence in Morocco, and is ready to submit to sacrifices and to incur responsibilities with the object of putting an end to the condition of anarchy which prevails upon the borders of Algeria. His Majesty's Government are not prepared to assume such responsibilities, or to make such sacrifices, and they have therefore readily admitted that if any European Power is to have a predominant influence in Morocco, that Power is France."

Of the reciprocal and equally important recognition by France of the paramount influence of Great Britain in Egypt, Lord Lansdowne wrote: "From the point of view of Great Britain the

most important part of the Agreement which has been concluded in respect of Egypt is the recognition by the French Government of the predominant position of Great Britain in that country. They fully admit that the fulfilment of the task upon which we entered in 1883 must not be impeded by any suggestion on their part that our interest in Egypt is of a temporary character, and they undertake that, so far as they are concerned, we shall not be impeded in the performance of that task. This undertaking will enable us to pursue our work in Egypt without, so far as France is concerned, arousing international susceptibilities. It is true that the other Great Powers of Europe also enjoy, in virtue of existing arrangements, a privileged position in Egypt; but the interests of France — historical, political, and financial — so far outweigh those of the other Powers, with the exception of Great Britain, that so long as we work in harmony with France, there seems no reason to anticipate difficulty at the hands of the other powers."

A. D. 1904-1909. — General Consequences in Europe of the Russo-Japanese War and the Weakening of Russia in Prestige and Actual Power. — "Europe is apparently on the eve of such a new combination of the Great Powers as was caused by the Franco-German War of 1870, and just as after that fateful event Berlin became the centre of the continental political system, so Paris bids fair to play this part in the near future. For France has never been so powerful a factor in politics since the fall of the Empire as to-day. Everyone recognises that her alliance with Russia was the first step from the isolation which followed her military reverses towards her reinstatement in the political hierarchy, and some of the most popular and statesmanlike politicians of the Republic hold that the dissolution of that partnership will be the second. For the good which it achieved, they allege, was largely accidental, while the cost it entailed was proportionately great. . . .

"The chief aim of the French statesman who struck up an alliance with the Government of Alexander III. was to neutralise Teutonic aggressiveness, and if possible to recover the lost provinces as well. The latter part of this programme has turned out to be a will-o'-the-wisp, while the first item can now be realised independently of the Russian alliance. Moreover, France, far from being isolated to-day, counts among her friends and natural allies not only the Latin peoples but the smaller States of the Continent, to say nothing of Great Britain. . . .

"The motives which induced Germany, Austria-Hungary and Italy to enter into partnership have lost their force; the Triple Alliance has ceased to exist in aught but the name. Italy was the first of the three States to break away. And her adherence to the league was so obviously opposed to the sentiments of her people and the real interests of the nation, that only the strongest conceivable motive could keep her in the uncongenial society of her former oppressor. That motive had been supplied by Bismarck, who persuaded Crispi that clerical France was at the beck and call of the Vatican, and only awaited a prosperous moment to disunite Italy and restore Rome to the Pope. But to-day Germany herself has become the most trusty and perhaps the most helpful friend of the Holy See, while France has struck a vigorous blow on the line of cleavage between the political and ecclesiastical institutions which constitute the Catholic Church. The ruling body in Parliamentary Germany is the Ultramontane centre, and if any State in Europe could be conceived to be capable of breaking a lance for the temporal power of his Holiness, it would certainly be one of the two Teutonic Empires of Central Europe." — E. J. Dillon, *Foreign Affairs* (*Contemporary Review, Aug.*, 1904).

The following is from a special correspondent of the New York *Evening Post*, who wrote from St. Petersburg on the 5th of March, 1909: "The international position of Russia has weakened greatly during the last five years. Before the Japanese war and the revolution her strength was enormous, and a Japanese officer who visited St. Petersburg in 1903 wrote in a Japanese paper that, judging by the attention which was paid to the Czar by every court in Europe and by the respect, almost awe even, with which he was regarded, that monarch might almost be styled the king of kings. The war and the revolution made short work, however, of this respect and awe. The Emperor William first took advantage of Russia's weakness by springing the Morocco surprise on Europe; then Baron von Aerenthal annexed Bosnia and Herzegovina, which he would never, of course, have dared to do six years ago; while recently in the Duma Mr. Iswolsky frankly confessed that Russia can do absolutely nothing; that the war and the revolution have bled her white, and that no assistance or hope of assistance can be given to the Serbs and the Montenegrins."

A. D. 1905. — Joint action of Powers in forcing Financial Reforms in Macedonia on Turkey. See (in this vol.) TURKEY: A. D. 1905–1908.

A. D. 1905-1906. — Sudden hostility of Germany to the Anglo-French Agreement concerning Morocco. — The Kaiser's speech at Tangier. — Threatening pressure on France. — Demand for International Conference. — Results at Algeciras. — What use the French Government wished to make of the free exercise of influence in Morocco which Great Britain consented to, in the agreements of April 8, 1904, is stated by M. Tardieu in his "France and the Alliances," with more than probable truth, as follows: "There was no design of conquest, or of protectorate, or of monopoly. Conquest would have cost too dear. A protectorate would have served no purpose in face of the exclusiveness of the tribes. Monopolization would have been contrary to international treaties. To create police forces with Moroccan natives and Algerian instructors in all the principal towns; to restore finances by means of a more honest collection of taxes, a genuine checking of expenses, and the repression of smuggling; to increase the carrying trade by public works wisely planned and the construction of ports, bridges and roads — all this by contract law; to multiply hospitals, schools, educational and charitable institutions, — such was the tenor of the programme. . . . As Mr. Delcassé wrote: 'Far from diminishing the Sultan's authority, we were peculiarly anxious to enhance his prestige.'"

For almost a year after the signing of the Anglo-French agreements of April, 1904, no objection was raised in Europe to the undertaking by France of such regenerative work in Morocco

EUROPE, 1905–1906

as they contemplated. Italy had assented to it before England did. Spain did the same a few months later. These were the Powers most concerned. The German Ambassador to France had been informed of the tenor of the agreement with England a fortnight before it was signed, and no criticism came from his Government. After the text of it had been published, Chancellor von Bülow said in the Reichstag: "We know of nothing that should lead us to think that this agreement is directed against any Power whatsoever. . . . From the point of view of German interests, we have no objection to make against it." During the eleven months that followed this utterance nothing appears to have been done by France in Morocco that changed the situation; but something changed the official attitude of Germany towards what it had found acceptable before, and changed it very suddenly. On the 31st of March, 1905, the German Emperor, on a yachting cruise to the Mediterranean, disembarked at Tangier, and found occasion to address these remarks to a representative of the Sultan:

"To day, I pay my visit to the Sultan in his character of independent sovereign. I hope that, under the Sultan's sovereignty, a free Morocco will remain open to the pacific competition of all nations without monopoly and without annexation, on a footing of absolute equality. My visit to Tangier is intended to make known the fact that I am resolved to do all that is in my power properly to safeguard the interests of Germany, since I consider the Sultan as being an absolutely free sovereign. It is with him that I mean to come to an understanding respecting the best way of safeguarding such interests. As regards the reforms which the Sultan is intending to make, it seems to me that any action in this direction should be taken with great precaution, respect being had for the religious sentiments of the population in order that there may be no disturbance of public tranquillity."

All Europe read an emphasized threat in these words, and felt instantly that they meant hostile intentions towards France. That they came so quickly after the crushing defeat of Russia at Mukden; that Russia, ally of France in European politics, would need no longer to be counted, for some indefinite future time, as a military Power; that the Dual Alliance, which had been the prop of France in the recovery of her standing among the Powers, was thus suddenly a broken reed, and that circumstances were propitious, therefore, for humiliating her again, — here were facts for a bit of reasoning which suggested itself quickly to a multitude of minds.

Twelve days after the speech of William II. at Tangier Chancellor Bülow addressed a circular to the Ambassadors of Germany at various capitals, directing them to demand an International Conference for the settlement of matters concerning Morocco. A little later the Moorish Sultan, Abd el Aziz, endorsed the demand, in the following missive, addressed to the several legations of foreign governments at Tangier:

"We have been ordered by our master the Sultan (God strengthen him) to request all the great powers to hold a conference at Tangier, composed by its honorable representatives and those appointed by the Maghzen [the royal council or Cabinet] to discuss the manner for suitable reforms which His Shereefian Majesty has determined to introduce into his Empire, and the expenses to carry out the same. We therefore beg to inform your excellency of this, so that you may notify your government and request them to permit your excellency to attend said conference for the above-mentioned purpose and let us know of its answer, and remain in peace and with joy. Written at the Holy Court at Fez on the 25th day of Rabe 1st, 1905; corresponding to May 29, 1905. MOHAMMED BEN ARBY TORRES."

Meantime, Germany was bringing pressure at Paris to force the resignation or removal of M. Delcassé, the Foreign Minister, whose policy was now said to be "A threat to Germany," and the French Government, unprepared for war, submitted to concessions which involved that result. It entered on preliminary *pourparlers* concerning the demand for an international conference, and allowed Minister Delcassé to resign.

A fair-minded German's view of the proceedings of the German Government in this matter was expressed by Mr. W. C. Dreher in his next annual review of "The Year in Germany" for *The Atlantic Monthly*. Frankly acknowledging that the Morocco controversy had "left with most other nations a distinctly disagreeable impression of the disturbing tendencies of German policy," and that the Kaiser's famous speech at Tangier had "astonished the German people not less than other nations," he remarks: "For the Germans had learned to acquiesce in the Anglo-French settlement, under which France was to have a free hand for its scheme of *pénétration pacifique* in Morocco. The utterances of the Imperial Chancellor in the Reichstag clearly indicated that the Government accepted with good grace the general terms of that settlement. The people, too, had been schooled by the inspired press in the theory that Germany's commercial interests in Morocco were so insignificant as not to warrant the inauguration of a large and energetic action to assert them; and this view had been generally accepted by them, barring the noisy little faction of Pan Germans.

"The chief fault of Germany's Morocco policy was, accordingly, that it was sprung upon the German people themselves without warning, without any preparation of their minds for it; hence they imperfectly comprehended it and never had any great interest in it. They did not feel that it was a matter intimately affecting the nation's interests; and while the German Ambassador at Paris was asserting Germany's solidarity with Morocco, the press at home was diligently occupied in convincing the outside world that Germany would never go to war on account of that remote and insignificant state.

"Despite the abruptness and lack of skill in launching its new policy, however, the government's position was logical and, within certain limits, reasonable. France and England had assumed to decide the fate of Morocco between themselves, whereas the Madrid Treaty of 1880, to which Germany was signatory, had explicitly given an international character to the Moroccan question. This was clearly an affront to Germany's dignity and an attempt to isolate her, which ought to have been objected to at once." — W. C. Dreher, *The Year in Germany* (*Atlantic Monthly, Nov.*, 1906).

On the 28th of September M. Rouvier, the

EUROPE, 1905–1906

French Premier, and Prince de Radolin, the German Ambassador at Paris, arrived at an agreement concerning the matters to be settled at the demanded Conference, and it was announced to other governments in the following Memorandum:

The two Governments have agreed to submit to the Sultan the draft of the following programme elaborated in conformity to principles adopted by exchange of notes on July 8:

"*First.* — 1. Organization, by way of international agreement, of the police outside the border region.

"2. Regulations organizing the surveillance and suppression of the smuggling of arms. In the border region the enforcement of these regulations will exclusively concern France and Morocco.

"*Second.* — Financial reform.

"Financial support given to the Maghzen through the establishment of a state bank with the privilege of issue, taking charge of treasury operations and acting as a medium for the coinage of money, the profits of which would belong to the Maghzen.

"The said state bank would undertake to bring about a sounder monetary condition.

"The credits opened to the Maghzen would be applied to the equipment and salaries of the public forces and to urgent public works, especially the improvement of the harbors and their facilities.

"*Third.* — Study of better proceeds from imposts and of new sources of revenue.

"*Fourth.* — Undertaking on the part of the Maghzen that no public service will be disposed of for the benefit of private interests.

"Principle of letting contracts for public works to the lowest bidder, without preference for any nationality."

In due time the further details were arranged, and representatives of thirteen governments, namely, of Austria-Hungary, Belgium, France, Germany, Great Britain, Italy, Morocco, the Netherlands, Portugal, Spain, Russia, Sweden, and the United States, were assembled in Conference on the 15th of January, 1906, not at Tangier, but at the Spanish city of Algeciras, on the coast of the Straits of Gibraltar. The United States were represented by the American Ambassador to the French Republic, Henry White, and by the American Minister to Morocco, S. R. Gummeré. The instructions addressed to them from Washington by the Secretary of State, Mr. Root, were partly in these words:

"The United States is a participant in the discussions of the conference solely by reason of being a treaty power, having conventional engagements with Morocco dating back to 1836, by which this country not only enjoys special privileges, but is entitled to the most-favored-nation treatment for the time being. This government also shares in the right of protection of certain native Moors as defined in the multipartite convention of July 3, 1880. Our interest and right comprise and are limited to an equal share in whatever privileges of residence, trade, and protection are enjoyed by, or may be hereafter conceded by, the Shereefian Government to aliens and their local agencies, and it follows that we have a like concern in the enlargement of those privileges in all appropriate ways. With the special political problems of influence and association affecting the relations of the Moroccan Empire, as a Mediterranean state, to the powers having interests in that great sea and whose concern lies naturally in the conservation and extension of its commerce for the common benefit of all, the United States have little to do beyond expression of its [their?] wish that equality and stability be secured. . . .

"It is expected that your attitude in the proceedings of the conference will display the impartial benevolence which the United States feels toward Morocco and the cordial and unbiased friendship we have for all the treaty powers. Fair play is what the United States asks — for Morocco and for all the interested nations — and it confidently expects that outcome. The complete dissociation of the United States from all motives or influences which might tend to thwart a perfect agreement of the powers should, in case of need, lend weight to your impartial counsels in endeavoring to compose any dissidence of aims which may possibly develop in the course of the conference."

Algeciras, the chosen seat of the Conference, had been three times a landing place of the Moors in their invasions of Spain. "The modern town," says one who wrote an account of the Conference, "dating only from 1760, has but one attraction, a magnificent English hotel, built by the owners of the picturesque railway which connects it with the rest of Europe, and of the corresponding steamer service across the bay to Gibraltar, placing it in touch with all the world. But this attraction sufficed, and the Reina Cristina Hotel was engaged for the delegates, while the town-hall was cleared and refitted for their deliberations. . . .

"The meetings were held at irregular intervals, about three times a week, being summoned whenever the President was advised that sufficient instructions had been received, or that the drafting committee had some document to present for consideration. Formal sessions were held from ten to twelve in the morning, the Conference meeting in committee from three to five in the afternoon, the drafting and translating committees assembling when and where convenient to their members." — Budgett Meakin, *The Algeciras Conference* (*Fortnightly Review, May,* 1906).

The General Act of the Conference, finished and signed on the 7th of April, 1906, is in 123 Articles, divided into 6 Chapters, as follows: I. A Declaration relative to the Organization of the Police; II. Regulations concerning the detection and suppression of the Illicit Trade in Arms; III. An Act of Concession for a Moorish State Bank; IV. A Declaration concerning an Improved Yield of the Taxes, and the creation of New Sources of Revenue; V. Regulations respecting the Customs of the Empire and the suppression of Fraud and Smuggling; VI. A Declaration relative to the Public Services and Public Works. The first chapter provides for the organization of a police force, not less than 2000 nor more than 2500 in number, recruited from among Moorish Mussulmans and commanded by Kaids, but having Spanish and French officers and non-commissioned officers for instructors, nominated to the Sultan by their respective Governments, and their services given for five years. This police force, moreover, is subject to general inspection

EUROPE, 1907

by a superior officer of the Swiss army. The regulations of the second chapter are minute and precise for their stated purpose. The Morocco State Bank, provided for in the third, is made subject to the law of France, and is to "discharge the duties of disbursing Treasurer of the Empire" and "financial agent of the Government." The Directors of the Bank are chosen, of course, by the shareholders; but one article stipulates that "the Shereefian Government shall exercise its high control over the Bank through a Moorish High Commissioner, whom it shall appoint after previous agreement with the board of directors," while another requires that "each of the following institutions, viz., the German Imperial Bank, the Bank of England, the Bank of Spain and the Bank of France, shall, with the approval of its Government, appoint a Censor to the State Bank of Morocco." The prescriptions in the fourth and fifth chapters of the act are not of general significance or interest. In the sixth, relating to "public services and public works," it is set forth that, "should the Shereefian Government consider it necessary to have recourse to foreign capital or to foreign industries for the working of public services or for the execution of public works, roads, railways, ports, telegraphs, or other, the Signatory Powers reserve to themselves the right to see that the control of the State over such large undertakings of public interest remain intact."

On the signing of the Act Mr. Henry White, the chief delegate from the United States to the Conference, made the following Declaration on behalf of his Government:

"The Government of the United States of America, having no political interests in Morocco, and having taken part in the present Conference with no other desires or intentions than to assist in assuring to all the nations in Morocco the most complete equality in matters of commerce, treatment, and privileges, and in facilitating the introduction into that Empire of reforms which should bring about a general state of well-being founded on the perfect cordiality of her foreign relations, and on a stable internal administration, declares: that in subscribing to the Regulations and Declarations of the Conference by the act of signing the General Act, subject to ratification according to constitutional procedure, and the Additional Protocol, and in consenting to their application to American citizens and interests in Morocco, it assumes no obligation or responsibility as to the measures which may be necessary for the enforcement of the said Regulations and Declarations."

A. D. 1907 (Aug.). — Convention between Great Britain and Russia, containing arrangements on the subject of Persia, Afghanistan, and Tibet. — Parallel with the Agreements — the "*Entente Cordiale*" — of 1904 between England and France, in its purpose and in its importance to Europe, was the Convention between England and Russia in 1907, which harmonized the interests and the policy of the two nations in matters relating to Persia, Afghanistan, and Tibet. In each case the dictating motive looked not so much to a settlement of the particular questions involved, as to a general extinguishment of possible causes of contention which might at some time disturb the peaceful or friendly relations of the peoples concerned. Taken together, the two formally expressed understandings, Anglo-French and Anglo-Russian, added to the Franco-Russian Alliance of 1895 (see, in Volume VI. of this work, FRANCE: A. D. 1895) constituted, not a new Triple Alliance, set over against that of Germany, Austria-Hungary, and Italy, but an amicable conjunction which bore suggestions of alliance, and which introduced a counterweight in European politics that makes undoubtedly for peace.

The Anglo-Russian Convention, signed August 31, 1907, contained three distinct "Arrangements," under a common preamble, as follows:

"His Majesty the King of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, Emperor of India, and His Majesty the Emperor of All the Russias, animated by the sincere desire to settle by mutual agreement different questions concerning the interests of their States on the Continent of Asia, have determined to conclude Agreements destined to prevent all cause of misunderstanding between Great Britain and Russia in regard to the questions referred to, and have nominated for this purpose their respective Plenipotentiaries. . . . Who, having communicated to each other their full powers, found in good and due form, have agreed on the following:

Arrangement concerning Persia.

"The Governments of Great Britain and Russia having mutually engaged to respect the integrity and independence of Persia, and sincerely desiring the preservation of order throughout that country and its peaceful development, as well as the permanent establishment of equal advantages for the trade and industry of all other nations;

"Considering that each of them has, for geographical and economic reasons, a special interest in the maintenance of peace and order in certain provinces of Persia adjoining, or in the neighbourhood of, the Russian frontier on the one hand, and the frontiers of Afghanistan and Baluchistan on the other hand; and being desirous of avoiding all cause of conflict between their respective interests in the above-mentioned Provinces of Persia;

"Have agreed on the following terms:

"I. Great Britain engages not to seek for herself, and not to support in favour of British subjects, or in favour of the subjects of third Powers, any Concessions of a political or commercial nature — such as Concessions for railways, banks, telegraphs, roads, transport, insurance, &c. — beyond a line starting from Kasr-i-Shirin, passing through Isfahan, Yezd, Kakhk and ending at a point on the Persian frontier at the intersection of the Russian and Afghan frontiers, and not to oppose, directly or indirectly, demands for similar Concessions in this region which are supported by the Russian Government. It is understood that the above-mentioned places are included in the region in which Great Britain engages not to seek the Concessions referred to.

"II. Russia, on her part, engages not to seek for herself, and not to support in favour of Russian subjects, or in favour of the subjects of third Powers, any Concessions of a political or commercial nature — such as Concessions for railways, banks, telegraphs, roads, transport, insurance, &c. — beyond a line going from the Afghan frontier by way of Gazik, Birjand, Kerman, and ending at Bunder Abbas, and

EUROPE, 1907

not to oppose, directly or indirectly, demands for similar Concessions in this region which are supported by the British Government. It is understood that the above-mentioned places are included in the region in which Russia engages not to seek the Concessions referred to.

"III. Russia, on her part, engages not to oppose, without previous arrangement with Great Britain, the grant of any Concessions whatever to British subjects in the regions of Persia situated between the lines mentioned in Articles I and II. Great Britain undertakes a similar engagement as regards the grant of Concessions to Russian subjects in the same regions of Persia. All Concessions existing at present in the regions indicated in Articles I and II are maintained.

"IV. It is understood that the revenues of all the Persian customs, with the exception of those of Farsistan and of the Persian Gulf, revenues guaranteeing the amortization and the interest of the loans concluded by the Government of the Shah with the 'Banque d'Escompte et des Prêts de Perse' up to the date of the signature of the present Arrangement, shall be devoted to the same purpose as in the past. It is equally understood that the revenues of the Persian customs of Farsistan and of the Persian Gulf, as well as those of the fisheries on the Persian shore of the Caspian Sea and those of the Posts and Telegraphs, shall be devoted, as in the past, to the service of the loans concluded by the Government of the Shah with the Imperial Bank of Persia up to the date of the signature of the present Arrangement.

"V. In the event of irregularities occurring in the amortization or the payment of the interest of the Persian loans concluded with the 'Banque d'Escompte et des Prêts de Perse' and with the Imperial Bank of Persia up to the date of the signature of the present Arrangement, and in the event of the necessity arising for Russia to establish control over the sources of revenue guaranteeing the regular service of the loans concluded with the first-named bank, and situated in the region mentioned in Article II of the present Arrangement, or for Great Britain to establish control over the sources of revenue guaranteeing the regular service of the loans concluded with the second-named bank, and situated in the region mentioned in Article I of the present Arrangement, the British and Russian Governments undertake to enter beforehand into a friendly exchange of ideas with a view to determine, in agreement with each other, the measures of control in question and to avoid all interference which would not be in conformity with the principles governing the present Arrangement.

Convention concerning Afghanistan.

"The High Contracting Parties, in order to ensure perfect security on their respective frontiers in Central Asia and to maintain in these regions a solid and lasting peace, have concluded the following Convention:

"ARTICLE I. His Britannic Majesty's Government declare that they have no intention of changing the political status of Afghanistan. His Britannic Majesty's Government further engage to exercise their influence in Afghanistan only in a pacific sense, and they will not themselves take, nor encourage Afghanistan to take, any measures threatening Russia. The Russian Government, on their part, declare that they recognize Afghanistan as outside the sphere of Russian influence, and they engage that all their political relations with Afghanistan shall be conducted through the intermediary of His Britannic Majesty's Government; they further engage not to send any Agents into Afghanistan.

"ARTICLE II. The Government of His Britannic Majesty having declared in the Treaty signed at Kabul on the 21st March, 1905, that they recognize the Agreement and the engagements concluded with the late Ameer Abdur Rahman, and that they have no intention of interfering in the internal government of Afghan territory, Great Britain engages neither to annex nor to occupy in contravention of that Treaty any portion of Afghanistan or to interfere in the internal administration of the country, provided that the Ameer fulfils the engagements already contracted by him towards His Britannic Majesty's Government under the above-mentioned Treaty.

"ARTICLE III. The Russian and Afghan authorities, specially designated for the purpose on the frontier or in the frontier provinces, may establish direct relations with each other for the settlement of local questions of a non-political character.

"ARTICLE IV. His Britannic Majesty's Government and the Russian Government affirm their adherence to the principle of equality of commercial opportunity in Afghanistan, and they agree that any facilities which may have been, or shall be hereafter obtained for British and British-Indian trade and traders, shall be equally enjoyed by Russian trade and traders. Should the progress of trade establish the necessity for Commercial Agents, the two Governments will agree as to what measures shall be taken, due regard, of course, being had to the Ameer's sovereign rights.

"ARTICLE V. The present Arrangements will only come into force when His Britannic Majesty's Government shall have notified to the Russian Government the consent of the Ameer to the terms stipulated above.

Arrangement concerning Thibet.

"The Governments of Great Britain and Russia recognizing the suzerain rights of China in Thibet, and considering the fact that Great Britain, by reason of her geographical position, has a special interest in the maintenance of the *status quo* in the external relations of Thibet, have made the following Arrangement:—

"ARTICLE I. The two High Contracting Parties engage to respect the territorial integrity of Thibet and to abstain from all interference in its internal administration.

"ARTICLE II. In conformity with the admitted principle of the suzerainty of China over Thibet, Great Britain and Russia engage not to enter into negotiations with Thibet except through the intermediary of the Chinese Government. This engagement does not exclude the direct relations between British Commercial Agents and the Thibetan authorities provided for in Article V of the Convention between Great Britain and Thibet of the 7th September, 1904, and confirmed by the Convention between Great Britain and China of the 27th April, 1906; nor does it modify the engagements entered into by Great Britain and China in Article I of the said Convention of 1906.

"It is clearly understood that Buddhists,

subjects of Great Britain or of Russia, may enter into direct relations on strictly religious matters with the Dalai Lama and the other representatives of Buddhism in Thibet; the Governments of Great Britain and Russia engage, as far as they are concerned, not to allow those relations to infringe the stipulations of the present Arrangement.

"ARTICLE III. The British and Russian Governments respectively engage not to send Representatives to Lhassa.

"ARTICLE IV. The two High Contracting Parties engage neither to seek nor to obtain, whether for themselves or their subjects, any Concessions for railways, roads, telegraphs, and mines, or other rights in Thibet.

"ARTICLE V. The two Governments agree that no part of the revenues of Thibet, whether in kind or in cash, shall be pledged or assigned to Great Britain or Russia or to any of their subjects.

Annex to the Arrangement between Great Britain and Russia concerning Thibet.

"Great Britain reaffirms the Declaration, signed by his Excellency the Viceroy and Governor-General of India and appended to the ratification of the Convention of the 7th September, 1904, to the effect that the occupation of the Chumbi Valley by British forces shall cease after the payment of three annual instalments of the indemnity of 25,000,000 rupees, provided that the trade marts mentioned in Article II of that Convention have been effectively opened for three years, and that in the meantime the Thibetan authorities have faithfully complied in all respects with the terms of the said Convention of 1904. It is clearly understood that if the occupation of the Chumbi Valley by the British forces has, for any reason, not been terminated at the time anticipated in the above Declaration, the British and Russian Governments will enter upon a friendly exchange of views on this subject."

As an Inclosure with the Convention, Notes were exchanged by the Plenipotentiaries, of which that from Mr. Nicolson was in the following words, M. Iswolsky replying to the same effect.

"ST. PETERSBURG, August 18 (31), 1907.

"M. LE MINISTRE,

"With reference to the Arrangement regarding Thibet, signed to-day, I have the honour to make the following Declaration to your Excellency: —

"'His Britannic Majesty's Government think it desirable, so far as they are concerned, not to allow, unless by a previous agreement with the Russian Government, for a period of three years from the date of the present communication, the entry into Thibet of any scientific mission whatever, on condition that a like assurance is given on the part of the Imperial Russian Government.

"'His Britannic Majesty's Government propose, moreover, to approach the Chinese Government with a view to induce them to accept a similar obligation for a corresponding period; the Russian Government will as a matter of course take similar action.

"'At the expiration of the term of three years above mentioned His Britannic Majesty's Government will, if necessary, consult with the Russian government as to the desirability of any ulterior measures with regard to scientific expeditions to Thibet.'

I avail, &c.

(Signed) A. NICOLSON."

In authorizing Sir A. Nicolson to sign the preceding Convention, Sir Edward Grey, the British Secretary for Foreign Affairs, wrote, on the 29th of August, as follows:

"I have to-day authorized your Excellency by telegraph to sign a Convention with the Russian Government containing Arrangements on the subject of Persia, Afghanistan, and Thibet.

"The Arrangement respecting Persia is limited to the regions of that country touching the respective frontiers of Great Britain and Russia in Asia, and the Persian Gulf is not part of those regions, and is only partly in Persian territory. It has not therefore been considered appropriate to introduce into the Convention a positive declaration respecting special interests possessed by Great Britain in the Gulf, the result of British action in those waters for more than a hundred years.

"His Majesty's Government have reason to believe that this question will not give rise to difficulties between the two Governments, should developments arise which make further discussion affecting British interests in the Gulf necessary. For the Russian Government have in the course of the negotiations leading up to the conclusion of this Arrangement explicitly stated that they do not deny the special interests of Great Britain in the Persian Gulf — a statement of which His Majesty's Government have formally taken note.

"In order to make it quite clear that the present Arrangement is not intended to affect the position in the Gulf, and does not imply any change of policy respecting it on the part of Great Britain, His Majesty's Government think it desirable to draw attention to previous declarations of British policy, and to reaffirm generally previous statements as to British interests in the Persian Gulf and the importance of maintaining them.

"His Majesty's Government will continue to direct all their efforts to the preservation of the *status quo* in the Gulf and the maintenance of British trade; in doing so, they have no desire to exclude the legitimate trade of any other Power." — *Parliamentary Papers by Command.* Russia. No. 1. 1907 (Cd. 3750).

A. D. 1907-1908. — Treaties respecting the Independence and Territorial Integrity of Norway, and concerning the Maintenance of the Status Quo in the territories bordering upon the North Sea. — Two Treaties of great importance to the security of peace in Europe, having for object a joint protection by several Powers of existing conditions on the North Sea and the Baltic exit to it, were concluded and signed on the 2d of November, 1907, and the 23d of April, 1908, respectively. The parties to the first of these Treaties were Great Britain, France, Germany, Norway, and Russia, and its purpose was "to secure to Norway, within her present frontiers and with her neutral zone, her independence and territorial integrity, as also the benefits of peace." It was signed at Christiania, where ratifications were deposited on the 6th of February following: The following is the text of the Treaty:

"ARTICLE I. The Norwegian Government undertake not to cede any portion of the territory of Norway to any Power to hold on a title founded either on occupation, or on any other ground whatsoever.

"ARTICLE II. The German, French, British, and Russian Governments recognize and undertake to respect the integrity of Norway. If the integrity of Norway is threatened or impaired by any Power whatsoever, the German, French, British, and Russian Governments undertake, on the receipt of a previous communication to this effect from the Norwegian Government, to afford to that Government their support, by such means as may be deemed the most appropriate, with a view to safeguarding the integrity of Norway.

"ARTICLE III. The present Treaty is concluded for a period of ten years from the day of the exchange of ratifications. If the Treaty is not denounced by any of the parties at least two years before the expiration of the said period, it will remain in force, in the same manner as before, for a further period of ten years and so on accordingly.

"In the event of the Treaty being denounced by one of the Powers who have participated with Norway in the conclusion of the present Treaty, such denunciation shall have effect only as far as that Power is concerned.

"ARTICLE IV. The present Treaty shall be ratified and the ratifications shall be exchanged at Christiania as soon as possible."

The second of the two Treaties was in two documents, styled "Declaration and Memorandum between the United Kingdom, Denmark, France, Germany, the Netherlands, and Sweden, concerning the maintenance of the *Status Quo* in the territories bordering upon the North Sea." They were signed at Berlin, where ratifications were deposited on the 2d of July, 1908, and were in the following terms:

"**Declaration.** — The British, Danish, French, German Netherland, and Swedish Governments,

"Animated by the desire to strengthen the ties of neighbourly friendship existing between their respective countries, and to contribute thereby to the preservation of universal peace, and recognizing that their policy with respect to the regions bordering on the North Sea is directed to the maintenance of the existing territorial *status quo*,

"Declare that they are firmly resolved to preserve intact, and mutually to respect, the sovereign rights which their countries at present enjoy over their respective territories in those regions.

"Should any events occur which, in the opinion of any of the above-mentioned Governments, threaten the existing territorial *status quo* in the regions bordering upon the North Sea, the Powers Signatory of the present Declaration will communicate with each other in order to concert, by an agreement to be arrived at between them, such measures as they may consider it useful to take in the interest of the maintenance of the *status quo* as regards their possessions.

"The present Declaration shall be ratified with the least possible delay. The ratifications shall be deposited at Berlin as soon as may be, and, at the latest, on the 31st December, 1908. The deposit of each ratification shall be recorded in a Protocol, of which a certified copy shall be forwarded through the diplomatic channel to the Signatory Powers.

"**Memorandum.** — At the moment of signing the Declaration of this day's date, the Undersigned, by order of their respective Governments, consider it necessary to state —

"1. That the principle of the maintenance of the *status quo*, as laid down by the said Declaration, applies solely to the territorial integrity of all the existing possessions of the High Contracting Parties in the regions bordering upon the North Sea, and that consequently the Declaration can in no case be invoked where the free exercise of the sovereign rights of the High Contracting Parties over their above mentioned respective possessions is in question;

"2. That, for the purposes of the said Declaration, the North Sea shall be considered to extend eastwards as far as its junction with the waters of the Baltic." — *British Parliamentary Papers, Command, Treaty Series No.* 35, 1907, and 23, 1908 (*Cd.* 3754 *and* 4248).

D. 1907-1909. — The Situation in Crete as controlled by the Four Protecting Powers. — (In this vol.) CRETE: A. D. 1907–1909.

D. 1908-1909 (Oct.-March). — Declaration of Bulgarian Independence. — Austrian annexation of Bosnia and Herzegovina. — Excitement of Servia. — The menace to European peace. — The question of a Conference. — Attitude of Germany. — Was Russia coerced to assent? — Violation of the Public Law of Europe. — On the 5th of October, 1908, the independence of Bulgaria as a Kingdom was formally proclaimed, the suzerainty of the Sultan of Turkey renounced, and Prince Ferdinand invested with the title of Tsar or King. This proceeding was consequent on the revolution in Turkey (see TURKEY: A. D. 1908, JULY–DEC.), which had resurrected the suspended Constitution of 1876, broken the despotism of the Sultanate and subjected it to a Parliamentary system of government. Never having accepted the arrangements of 1878, made by the Congress of Berlin, which gave them self government but kept them tributary and nominally subject to the overlordship of the Sultan (see, in Volume V. of this work, TURKS: A. D. 1878; and in Volume I., BALKAN AND DANUBIAN STATES: A. D. 1878, and 1878–1886), the Bulgarians had but waited for the opportunity which now seemed to invite this act. An immediate provocation to their declaration of independence was supplied by a thoughtless offence to them given by the new Ministry at Constantinople. To celebrate the triumph of the revolution a state dinner was given, the Sultan presiding, and all the diplomats at the Turkish capital were invited to it excepting the representative of Bulgaria. When he asked for an explanation of this exception he was told that he could not be recognized as an ambassador or envoy, but only as the agent of a subject province. This was enough to set Bulgaria aflame. Her affronted Minister at Constantinople was withdrawn and diplomatic intercourse with the Turkish Government dropped. The breach was accentuated further by the recent occurrence of a strike on the railway, owned by the Turkish Government, which traverses both Turkish and Bulgarian territory. The Bulgarians had taken possession of and were operating the section within their own domain, and when the strike

was called off the Government announced its intention to retain that portion of the line, with due compensation to the company which leased it. This proceeding intensified and doubled the ferments produced by the proclamation of independence. Statesmen were disturbed by the violation of the Treaty of Berlin and capitalists by the danger which menaced their Turkish railway securities.

But this tells of only half the threatening incidents of the time. Simultaneously with the Bulgarian defiance of the Treaty of Berlin and its signatory sponsors, the Government of Austria-Hungary broke away from its obligations, by a formal announcement that the simple occupation and administration of Bosnia and Herzegovina, which that treaty had permitted the Dual Empire to undertake, was now to be complete annexation, by no other authority than the imperial will to have it so.

Many interests and ambitions, many jealousies and distrusts among the Powers, were disturbed and excited by this sudden disorderings of the political geography of Southeastern Europe. Pan-Slavic feelings and hopes were profoundly antagonistic to the Austrian absorption of more Slavic populations and lands. Servia was alarmed to desperation by the aggrandizement of her dangerous great neighbor, and Russia was more than sympathetic with her alarm. What Turkey could or would do in vindication of her treaty rights over Bulgaria, Bosnia, and Herzegovina, was a question of little gravity compared with that which asked what Servia might attempt in resistance to [illegible] claims, and what Russia would [illegible] Austro-Servian war should break out. The [illegible] very soon became one in which [illegible] tality on any side could hardly fail to precipitate a great tempest of war; and thus the peace of Europe was held in a trembling balance for months. The state of affairs was described clearly and with ample knowledge at the time by Mr. Archibald R. Colquhoun, in a paper which he read in London, at a meeting of the Royal Society of Arts. "The more hot-headed Servians," he said, "undoubtedly felt that their whole future was imperilled, and that they might as well risk all on a desperate hazard, in the belief that intervention would come to their assistance should their independence be threatened. The close racial ties between the Bosnians, Servians, and Montenegrins made it impossible to say how far an armed movement might spread if it once broke out. While Turkey and Bulgaria might come to terms, and while Austria might effect an amicable arrangement with Turkey, it was difficult to see how the question of the Southern Slavs was to be finally adjusted unless Austria could placate them in sections, and so perhaps divide them. Concessions of a comparatively unimportant nature might induce Montenegro to keep quiet, and a liberal policy, with a promise of autonomy in the near future, would discount a good deal of the agitation in Bosnia and Herzegovina. The more far-sighted Bosnians appreciated the fact that their shortest cut to comparative freedom lay through that local autonomy which they could legitimately demand from Austria. . . .

"The spectacle of these Southern Slave countries, whose peoples exhibited so many splendid qualities, but yet did not have that instinct for

government which characterized some far less gifted races, was rather a melancholy one. In the tangle of mountains, races, and religions which made up the Balkans the people needed peace above every other thing — a breathing space in which to develop themselves and their resources, and to get a truer perspective on their position in Europe. To the Great Powers who controlled the destinies of these small ones peace was no less essential, but it was not quite clear that Austria-Hungary, with the great military power of Germany behind her, realized this or was prepared to 'seek peace and ensue it.' It was this uncertainty which made many await with anxiety the melting of the Balkan snows, which put an end to enforced inactivity in those regions."

Great Britain, France, Russia, and Italy were agreed in desiring a Conference of the Powers which had been parties to the Berlin Treaty of thirty years before, to adjudicate all the questions raised by the acts of Austria and Bulgaria, in contravention of that treaty. Austria was supported by Germany in holding back from such a conference, and nothing definite in that direction was done. Meantime Turkey was brought to negotiations with both of the trespassers on her ancient sovereignty, and within a few months she came to terms with both. The arrangement with Austria, determining an indemnity to be paid for the surrender of Turkish claims to Bosnia and Herzegovina, was quickened by a boycott of Austrian merchandise in Turkey, so extensive as to be felt very seriously in Austrian and Hungarian trade. By the terms of a protocol, which was signed on the 26th of February, 1909, Austria-Hungary paid £T2,500,000 ($10,800,000) of indemnity to the Ottoman Government; assured religious freedom and political equality to Mussulman Bosniaks who should choose to remain in the province, with liberty of emigration during three years to all who might choose to depart, and promised a commercial treaty on lines which the Turks desired. This cleared the situation as between Austria and Turkey, but intensified the Servian and Montenegrin bitterness of anger and dread, which menaced the peace of the continent for another month.

Meantime the terms of [illegible] settlement with Bulgaria had been [illegible] fully [illegible]ed, on the basis of a helpful [illegible] from St. Petersburg. Bulgaria offered $16,400,000 of indemnity; Turkey claimed $24,000,000. The bargaining was at a standstill until Russia offered to remit a yearly war indemnity of $1,600,000 which Russia owed her under the Berlin Treaty, until the Turkish claim on Bulgaria should be satisfied, while she would collect from Bulgaria in similar instalments until the offer of the latter had been made good. Inasmuch as the Turkish debt to Russia bore no interest, while Bulgaria would pay interest on the deferred payments to Russia, the Muscovite treasury would suffer no loss. The matter was so arranged, and the interests of peace were served by a most ingenious and happy device.

But peace was made more than insecure for some weeks yet by the irreconcilability of Servia to the Austrian annexation of Bosnia and Herzegovina. Of course that small State could not hope to resist it successfully alone, or with Montenegrin aid; but a desperate venture of war,

into which Russia might be dragged, and if Russia, then Germany, — and who could tell what other powers! — and out of the wreckage of which something better for Southeastern Europe than an Austro-Hungarian domination might be drawn, — this appeal to the lottery of battle seemed a dangerous temptation to the Servian mind. It was extinguished as such in the end by the decision of Russia to drop the project of a Conference of Powers, accept the action of Austria, and recognize, unreservedly, on her own part, the annexation of Bosnia and Herzegovina as an accomplished fact. This was announced on the 15th of March, and with the announcement came excited and exciting reports that Germany had extorted the concession from the Russian Government, by pressures that were humiliating, but which the Empire, in its present circumstances, was powerless to resist. Germany denied having exercised an illegitimate pressure in the matter, but made no concealment of the fact that she stood by Austria-Hungary with approval of what the Imperial Government at Vienna had done. In a speech on the 29th of March Chancellor Bülow was reported as saying:

"In her quarrel with Servia Austria indisputably had right on her side. The annexation was no cynical act of robbery, but the last step on the road of the political work of civilization which had been followed for 30 years with the recognition of the Powers. Any offence against the form of the law had been disposed of by the negotiations with Turkey, and after this agreement between the parties most nearly interested the formal recognition of the other Powers signatory of the Berlin Treaty could not be withheld. The controllers of Russian policy, and especially the Emperor Nicholas, had earned the gratitude of all friends of peace in Europe. Concerning the Conference question, Germany still had no objection in principle to a Conference in which all the Powers took part and of which the programme was established in advance. They had been charged with inactivity, but they had no reason for special activity. They had done what they could and used influence, not without success, between Vienna and Constantinople, and also between Vienna and St. Petersburg. They had, however, carefully observed the limits prescribed by their interests and their loyalty. They had done nothing, and they would do nothing, which could afford the smallest doubt of their determination to sacrifice no vital interest of Austria Hungary, and they would have nothing to do with suggestions to Austria which were incompatible with the dignity of the Hapsburg Monarchy. They had experiences of their own to inspire caution with regard to playing the part of the broker, even in the most honourable way. . . . To sum up, by loyalty to her ally Germany best served her own interests and contributed most to the maintenance of the peace of Europe."

On the day of this speech at Berlin the London *Times* expressed, in an editorial article, what was then and what continues to be the prevailing belief and judgment of the best informed political circles throughout Europe, when it said: "The decision of the Russian Government to recognize the annexation of Bosnia and Herzegovina was, of course, an admission of their inability, in present circumstances, to countenance the aspirations of the Southern Slavs. The intense and general indignation which it has excited in Russia is natural, and indeed, in the known state of public feeling, inevitable. We trust, however, that it may be kept within bounds, and that it will not find expression in useless and vehement invective. Those who are tempted to indulge in it without restraint should reflect upon the difficulties which confront the responsible rulers of the State, and should consider whether, as Statesmen answerable for the future, as well as for the immediate present, of the Empire and of the Slav race, those rulers could wisely have rejected the proposal peremptorily made to them by the German Ambassador. The cardinal fact in the situation — the fact upon which Austria Hungary and Germany have based their calculations and determined their action throughout — is that Russia could not for some time to come engage in a great war without incurring unjustified risks. Nothing, we may be sure, but the overwhelming consciousness of this fact could have induced the Emperor and his advisers to adopt the decision to which they came a few days ago. They must have been well aware of the painful effect which it was certain to produce, in the first instance, abroad as well as at home. None can have realized more acutely than they that the presentation of the demand was humiliating, and that the circumstances attending it were eminently calculated to make that humiliation bitter. But they held, and rightly held, that it was their duty to accept humiliation rather than to jeopardize the great permanent interests which are committed to their keeping. They might, indeed, have been somewhat less precipitate. They might reasonably have asked for time for consulting the Powers with whom they have acted, and who have consistently supported them, upon the proposals which Germany sprang upon them. The fact that they did not do so is a significant indication that the pressure which Count Pourtalès was instructed to put upon them must have been of the most imperious and dictatorial kind.

"As to the precise form of the intimation conveyed to M. Isvolsky by the German Ambassador no definite information is yet forthcoming, but of its nature there can be no possible doubt. Our Paris Correspondent learns that, immediately after his interview with Count Pourtalès, the Russian Minister summoned a Council, and, after a hasty audience with the Tsar, communicated to the German Ambassador Russia's acquiescence in the demands of his Government. There was no alternative to this course, as we are told from St. Petersburg, unless Russia was prepared to face the consequences of the mobilization of the German Army. The matter, our Correspondent adds, was 'treated as of supreme urgency,' from which it may be inferred that a reply was required without delay. The Council of Ministers knew what 'German mobilization' in the circumstances would mean."

In appearance, if not in reality, Germany or Germany's Kaiser had again, as in the Morocco affair of 1905, taken advantage of the weakened circumstances of Russia to play a dictatorial part in European politics. The distrust and apprehension kept alive by such repeated performances of the military big stick at Berlin seem infinitely more dangerous to Europe than any

possible explosion of the unstable compounds of race, religion, and lawless politics that are mixed in the Balkan magazine. For the time being, however, the sparks that sputtered alarmingly in the latter, throughout the winter of 1908–9, were easily extinguished by the sudden dash of cold water upon them from St. Petersburg. Great Britain, France, and Italy, accepting the situation, joined Germany and Russia in persuading the Government at Belgrade to be equally submissive to events. Their persuasions were effective, and a note to the following purpose, which the Powers in question had formulated, was signed by the Servian Ministry and presented to the Government at Vienna on the 31st of March: "(1.) Servia declares that her rights have not been violated by the annexation by Austria-Hungary of Bosnia and Herzegovina, and accepts the Powers' decision to annul paragraph 25 of the Treaty of Berlin. (2.) Servia will not protest against the annexation of Bosnia and Herzegovina. (3.) Servia will maintain peaceful relations with Austria-Hungary. (4.) Servia will return her military forces to normal conditions, and will discharge the reservists and volunteers; she will not permit the formation of irregular troops or bands."

The arbitrary annexation of Bosnia and Herzegovina was now legitimated; the Treaty of Berlin was revised by violations condoned; a serious precedent had been injected into European public law. What was said on the subject by the London *Times* on the morning after the delivery of the Servian note is hardly open to the least dispute. "The danger of war," said the *Times*, "has thus, we may confidently hope, been averted. But the sense of immediate relief with which this deliverance may well be greeted cannot blind us to the cost at which it has been achieved. The first great international compact to which the new German Empire of the Hohenzollerns subscribed within a few months of its proclamation at Versailles was that which embodied the resolutions of the London Conference of 1871. The European Powers, rightly disputing Russia's claim to denounce *motu proprio* the Black Sea Clauses of the Treaty of Paris, maintained that no revision of an international treaty could take place without 'impartial examination' and 'free discussion.' None upheld that principle more stoutly than Austria-Hungary. Russia herself finally accepted it, and it was solemnly placed on record by Lord Granville in his opening speech as President of the London Conference. It was embodied in a Protocol, signed by all the Plenipotentiaries of the Powers, laying down as 'an essential principle of the law of nations that no Power can repudiate treaty engagements or modify treaty provisions, except with the consent of the contracting parties by mutual agreement.' That instrument has, until recently, governed the public law of Europe. In conformity with its provisions, Russia, after her war with Turkey in 1877–78, was fain to submit the Treaty of San Stefano to the Congress of Berlin; and again in 1885 a Conference was held at Constantinople to settle the question of the union of Eastern Rumelia with Bulgaria which had been effected in violation of the Treaty of Berlin. Five months ago, immediately after the annexation of Bosnia and Herzegovina by Austria-Hungary and the proclamation of Bulgarian independence, Great Britain, France, and Russia were agreed, after M. Isvolsky's conversations with M. Clemenceau and Sir Edward Grey, that the same 'essential principle of the law of nations' was once more at stake and must be upheld. Italy adhered subsequently to that agreement, which took shape in the suggestion for a conference, and neither Germany nor Austria-Hungary openly rejected it at the time. . . .

"The terms of the submission now made by Servia at the instance of the Powers show how far we have travelled away from that 'essential principle of the law of nations' since October last. . . . Whether the formal ratification of the breaches of international law which were committed last autumn takes place now at a Conference, or by an exchange of Notes, is a matter of small moment. In substance the Powers have already conveyed their acquiescence in the abrogation of Article XXV. of the Berlin Treaty concerning Bosnia and Herzegovina, without the slightest show even of that 'impartial examination' and 'perfectly free discussion' which the London Conference of 1871 laid down as an essential preliminary to the revision of treaty engagements."

There was an illuminating sequel to this transaction near the end of the year, in the trial of a libel suit, known as the Friedjung case, which uncovered many hidden circumstances of the annexation. One of the arguments by which the annexation of Bosnia-Herzegovina was defended at the time was the necessity of putting an end to an alleged conspiracy of the Southern Slavs against the Austro-Hungarian Monarchy. (See, on "Agram Trials," AUSTRIA-HUNGARY: A. D. 1908–1909.) At the trial it was proved that the "documents" which had been accepted as proving the existence of this conspiracy were forgeries of the clumsiest description.

A. D. 1909.—Changed conditions making for peace.—Three striking examples.—Speaking at Sheffield, England, on the occasion of "the Cutlers' Feast," October 21, Sir Edward Grey, the British Secretary for Foreign Affairs, called to mind, in a few admirable sentences, three illustrations in the past year of wonderfully changed conditions in Europe, making for peace. He said:

"In the world at large to-day — if I may say a few words about the business of my own department — there is no doubt plenty of trouble, as there always is, but if you take the true measure of the situation by comparing it with what it was a short time ago, the outlook is distinctly favourable. I will give you three points which are, I think, subjects of congratulation.

"It is only a year ago to this very month that we were at the beginning of what was called the Balkan crisis. I do not know whether the Budget has driven all recollection of it from your minds, but it did occupy a good deal of attention a year ago and for some months afterwards. For a long time it had been almost an axiom of the diplomacy of Europe that some day or other there would be trouble in the Balkans, and that, when that trouble came, there would be danger of a European war. The trouble came a year ago; it caused anxiety; there was a storm; and for some months some anxiety as to whether one or other of the Great

European Powers might not drift from their moorings. But the anchors held, and now the swell has subsided, and though there may be trouble again in the future, the fact that the Great Powers of Europe have passed through the Balkan troubles of the last year and yet maintained their peace is a good augury that in future troubles the same may be done.

"Then I will take the question of Persia. A few years ago, had any one foretold exactly what has happened in Persia in the last year — that there would be a revolution, that there would be great outbreaks of disorder throughout the country, and that the Shah would be deposed — he would certainly have said that it would be a time of considerable anxiety both for Russia and for ourselves. A few years ago the representatives of those two countries were watching each other in Persia with jealousy, suspicion, and distrust. Had what has happened in Persia in the last year happened a few years ago when those were the relations between the two countries, I do not say that there would actually have been war, but there would certainly have been considerable anxiety and considerable scares in the public opinion of both countries as to the effect upon their relations with each other. Now we have passed through the troubles of the last year in Persia, and in no section of the Press of either country, in no section of public opinion of either country, has there been a fear that relations between ourselves and Russia would be impaired by what was happening in Persia.

"The third subject to which I would refer is that of Morocco. Morocco is to-day very full of trouble, and the trouble is a matter of concern and worry to those Powers who have conterminous frontiers in Morocco. That of course is so, but look back over the last few years and survey. The matter which occupied men's minds in regard to Morocco was not the troubles in Morocco itself but the possible effect which events in Morocco might have upon the relations of the European Powers to each other. To-day the trouble continues in Morocco, but during the last year the anxiety that what was happening in Morocco might cause serious difficulties between European Powers themselves has greatly diminished if it has not entirely disappeared. That, again, is a satisfactory retrospect."

FINANCE AND TRADE.

A. D. 1901-1909.—A Review of the decade.—The Sequence of Phenomena from the beginning of "the great Trade Boom" to the Collapse of 1907, and after.—The Process of Recovery.—On the 31st of December, 1908, the New York *Evening Post* gave an admirably studied and clear, though succinct, review of the sequence of phenomena in financial and commercial affairs that could be traced through "the series of years since the great trade boom began which collapsed in 1907," and thence to the close of 1908. By permission of the proprietors of the *Evening Post* a considerable part of that review is quoted here. While it relates more especially to conditions and events in the United States, it affords substantially a summary of the financial history of the world from 1901 to 1908, both inclusive:

"**1901.**—This was preëminently the 'boom year'—much more legitimately so, as events have proved, than 1905 or 1906, when overstrained capital resources gave an atmosphere of unreality to what seemed altogether real in the days of abundant capital in 1901. It is first to be said of 1901 that a probably unexampled surplus of ready capital in the United States, and a certainly unprecedented foreign credit balance—due to our amazing surplus of exports over imports—happened to coincide with a period of European trade reaction which released foreign capital from foreign industries and left it free for use in America. Presuming the foregoing influences, the six main causes for the phenomena of 1901 were: (1) The series of enormous company amalgamations, beginning with the billion-dollar Steel incorporation, and culminating in the purchase of the British steamship lines at wildly extravagant prices; these operations being based on issues of securities in unprecedented quantity; (2) Formation of 'underwriting syndicates' to float these securities, one of those syndicates receiving a bonus of $50,000,000 for one year's use of $25,000,000, and all of them using freely for their purposes the surpluses of life-insurance companies and the deposits of trust companies; (3) Acquisition of control of great railway companies by powerful millionaires, through purchase of stock of these railways in the open market, often at extravagant prices; the purchase-money being obtained through issue of bonds by railways already under control of the purchasers; (4) Wild speculation by the public; (5) Sudden fright of Europe at our excesses, withdrawal of its capital, and consequent severe reaction in our markets; (6) The failure of the corn crop, which in the summer applied a further check to this speculation, but which was itself offset by a wheat crop larger than any harvested in this country before or since, and sold at the highest average price since 1897.

"**1902.**—This year was one both of reaction and of further expansion; it was both a legitimate sequel to 1901 and a legitimate forerunner of 1903. . . .

"Its salient phenomena were these: (1) Abundant harvests; (2) Overstraining of bank resources by financial 'deals' and Stock Exchange speculation, exhausting the bank surplus in September; (3) Enormous increase in imports and decrease in agricultural exports, along with Europe's withdrawal of its capital; (4) Rapid advance in cost of raw material and labor; (5) Struggle of capitalists to so entrench themselves in control of corporate enterprises that they could not be dislodged.

"**1903.**—The year which followed was an entirely logical sequel. Its controlling factors were: (1) Forced liquidation by individuals and syndicates who were tied up in new securities at a time when the investing public withdrew from the market; (2) Inability of great corporations to sell bonds, and their resort to notes at a high interest rate; (3) Abundant grain crops, but an inadequate cotton crop, with great speculation, and famine prices; (4) Rapid fall in the price of steel and iron; (5) Severe contraction in profits of industrial combinations, with reduced dividends in some, reorganization of capital in others, and bankruptcy in still others.

"**1904.**—For obvious reasons, 1904 is an interesting year to compare with 1908. Both were in a sense 'after-panic years,' though the strain of 1903, and the resultant financial and commercial reaction of 1904, were trifles compared with those of the past two years. It will be seen that 1904, which did in fact usher in another great boom in trade, paralleled closely in some respects the history of 1908, but in others diverged very widely from it. Its dominant influences were: (1) A huge surplus reserve at the New York banks, reaching in August a height only four times exceeded in the country's history, and as a result a 1 per cent. call money market during two-thirds of the year; (2) The largest gold export movement in the history of the country; (3) A midsummer recovery on the Stock Exchange, with large investment buying; (4) A Presidential campaign, which hardly affected business; (5) Substantial, but not very rapid, trade revivals, without any of the extravagant optimism of 1908; (6) Famine prices for cotton during half the year, followed by a new crop unparalleled in history, and by a heavy fall in prices; (7) Virtual disappearance of our export trade in wheat, with the smallest harvest since 1900, the highest prices since 1898, and the smallest shipment to Europe since 1872. The Russian war, which began in February, affected our markets only indirectly.

"**1905.**—This year's history is better understood to-day than it has been before. The testimony of the whole financial and commercial world now is, that the exploiting of capital in trade and speculation, which eventually brought

FINANCE AND TRADE

about the recent panic, and the abnormal enhancement of cost of living, which lifted the average price of commodities as much in two years as it had risen in the eight preceding years, began in the middle of 1905. These were the salient incidents of the financial year: (1) Rapid and vigorous trade revival, with industry and production probably more active than at any previous period, and with profits and dividends enhanced; (2) Exposure of the use of life insurance funds by promoting and speculating millionaires, an exposure which ended in legislation preventing such use of them in future speculations; (3) World-wide money stringency, with the New York bank surplus twice exhausted, London's bank position the weakest since 1890, and Berlin's the weakest since 1897; (4) Excited stock speculation for the rise, in this country and in Germany, which in New York almost wholly disregarded the abnormal strain on money.

"**1906.** — Neither the $400,000,000 loss at San Francisco in April, nor the Treasury's efforts to relieve an overstrained New York money market in September, was a fundamental cause for the events of 1906. They were a true sequel to 1905, and may be summarized as follows: (1) Enormous volume of trade, the whole world over, with rapid rise in price of goods, but equally rapid rise in cost of raw material and labor; (2) Grain harvests, as a whole, never paralleled in volume, and wheat crop second only to 1901; (3) Wild speculation by all classes of the community, particularly in land, mining shares, and Stock Exchange securities, but not as a rule in produce, the wealthiest capitalists in the country entering into stock speculation in the late summer, and using most unscrupulously their power over company finance to help along their purposes; (4) Overstrained bank resources as a result, with five deficits at New York, occurring in spring, autumn, and winter, two of these deficits being the largest since 1893; (5) Abnormally high money rates all the year, with the highest September rate for call loans ever reached in New York and the highest rate for time loans and merchants' paper reached at that time of year since 1872. (6) Sudden decision by Europe that American credit was unlimited, and the consequent placing of foreign capital unrestrictedly at our disposal; (7) Struggle between London and New York for possession of new gold arriving in London, resulting in our import of $40,000,000 gold from Europe in the spring, and $45,000,000 in the autumn, and leading to a rise of the Bank of England rate to 6 per cent. for the first time since the Boer war panic, and to an energetic effort on the Bank's part to stop the wholesale equipping of the American speculation with London bank money.

"**1907.** — The panic year's story may be told without further introduction, summing up thus its characteristic events: (1) Withdrawal by Europe of the capital loaned to us in 1906, leading, early in the year, to $32,000,000 gold exports to Europe, of which $25,000,000 went to France. (2) Partial withdrawal of their capital from Wall Street by interior markets, which were said to have had $400,000,000 outstanding in New York during 1906. (3) Distress of the immensely wealthy capitalists who had tied themselves up in the Wall Street speculation of 1906, their forced liquidation on an enormous scale, and consequent demoralized stock Exchange markets in March and August; (4) Very abnormal crop weather throughout the spring and over nearly all the world, with a resultant shortage of the whole world's wheat crop, the deficit of supplies below expected requirements being probably the largest since 1890.

"(5) Revelation of unsound banking practices at New York in October; leading to the failure of the Knickerbocker Trust, a formidable run on the banks, adoption of Clearing House certificates in all the larger cities and issue of emergency credit currency in many; to restriction of cash payments to depositors throughout the country, to a premium on currency, to complete demoralization of interior exchange, and to insolvency of several large industrial companies and numerous banks — neither, however, reaching the number which shortly followed the panic of 1893; (6) Import of $100,000,000 gold from Europe during November and December, most of it bought at a premium and some of it engaged with sight sterling at 4.91; (7) As a result, large inroads on the Bank of England's gold reserve, rise in the bank rate from 4½ to 7 per cent., rapid advance of all continental bank rates, and loan of large sums of gold by the Bank of France to the Bank of England.

"(8) Precarious position of financial Germany throughout the year, important failures at Hamburg, minor financial panics in Holland, Egypt, Italy, and Chili, many of them before our own; (9) Intervention of our Treasury, which wisely placed all its surplus on deposit with the banks in October, and most unwisely undertook to issue $150,000,000 bonds and notes in November to provide basis for new bank-note circulation; (10) Recovery in markets late in November, with slow return of the bank situation to normal, the currency premium at New York lasting longer than in either 1893 or 1873; (11) Discharge of laborers from employment all over the country, and the beginning of severe trade reaction — all this in spite of the largest annual gold output in the history of the world.

"**1908.** — Now comes the present remarkable after panic year, of which the salient phenomena may be thus summed up: (1) Spasmodic and irregular recovery in trade activity, starting from a very low level, with merchants rushing in suddenly with orders — in February, in July, and in November — when their shelves were almost depleted, these buying impulses ceasing as suddenly as they had begun, leaving trade stagnation again; (2) Slow increase in consumption of merchandise, here and abroad, the ratio being below 90 per cent. of normal at the beginning of the year, and 60 to 75 per cent. on the average at its close; (3) Sudden shrinkage of our international commerce, merchandise trade in eleven months falling $478,000,000 from 1907, a decline of 15 per cent., of which $326,000,000 was imports and $152,000,000 exports, experience of European nations being similar; (4) Enormous increase in the unemployed, leading, at the Atlantic ports, to an emigration 250,000 larger than immigration; (5) Severe contraction of railway earnings, resulting in twenty four railway insolvencies, involving the largest capital of any receiverships since those of 1893, and causing many dividend reductions, but followed, after the middle of the year, by such enormous reduction in expenses that, in some cases, autumn net earnings actually increased over 1907;

FINANCE AND TRADE

"(6) Sudden rush of currency into the banks, as a result, first of removal of restrictions on depositors and next of idle trade, with resultant change from a $30,000,000 New York bank deficit at the end of 1907 to a surplus of $40,000,000 at the end of January and of $66,000,000 on June 27 — the latter being second only to the $111,000,000 maximum of 1894; (7) As a consequence, abnormally low rates for money, call loans going at 2 per cent. before the end of January, at 1 per cent. in eighteen weeks of the present year, and at less than 1 per cent. in three weeks; (8) Export of $73,000,000 gold, the largest (except for 1904) since 1895, and net export of $45,000,000, the largest in thirteen years;

"(9) In spite of the above recited facts, a constant spirit of optimism throughout the year, expressing itself, first in the organization of 'Prosperity Leagues' which held conventions and proclaimed that if people would only decide to be prosperous, they would be prosperous, and second by a series of extravagant speculative movements on the Stock Exchange, in the course of which it was declared in February, in July, and in November, that we were not only destined to get back into the boom of 1906, but that we were there already; (10) A wheat harvest which in midsummer promised to be the second largest on record, but which turned out only of average volume, the quality and price for this and other cereals, however, being so good as to enhance very greatly the wealth of the agricultural West; (11) A Presidential election, the result of which the markets and all experienced people foresaw from the beginning, but of which it was alleged, for two weeks in November, that its outcome had totally changed for the better the entire aspect of American business affairs."

1909. — The following, from the New York *Evening Post* of December 31, 1909, continues the review:

The noteworthy characteristics of "the year which ends to-day, . . . so far as they can now be discerned, have been as follows: (1) Rapid industrial recovery, beginning with the steel trade's reduction of prices, leading in September to the largest monthly output of iron and steel in the history of the country, and to heavy demand from consumers, but contrasting singularly with the copper market, where signs of overproduction were visible throughout the year; (2) Very rapid increase in cost of necessaries of life, affecting chiefly food, clothing, and rent, leading in the autumn to bitter complaint and to numerous strikes for higher wages, notably on the railways; (3) Along with reviving trade, a speculation of great magnitude on the Stock Exchange, ascribed to the initiative of very powerful finance houses, and converging in a most peculiar way on United States Steel common shares, whose dividend was twice advanced, notwithstanding the fact that quarterly earnings had not recovered to the magnitude of 1906 or 1907, when the dividend had been maintained at the old rate; (4) Largely as a result of the tying-up of capital in this speculation, severe autumn strain on bank reserves, turning a New York surplus of $34,000,000 on July 10 into one of only $1,600,000 on October 2, driving Wall Street to probably unprecedented borrowings from interior banks and from London, which latter market, under the influence of the Bank of England, threw back great amounts of these New York loans during October;

"(5) Call money rates kept down by such expedients, 6 per cent. being the maximum up to the two closing days of December; (6) a wheat corner in June, in the course of which the New York cash price rose to $1.51 in June, the highest price since the Leiter corner of 1898, followed by a new wheat crop unsurpassed in magnitude except for 1901, yet with high prices continued in later autumn, despite an abundant crop in Europe also; (7) A very short crop of cotton, driving the price from 9¼ cents a pound, early in the year, to 16 cents in December, the latter being the highest December price since paper inflation days, and less than one cent below the highest price in the corner of 1904; (8) Import of foreign merchandise wholly unparalleled for magnitude in our history, causing, in June, July, and August, an excess of imports over exports for the first time since 1897, and resulting, in the eleven first months of the year, in a total excess of exports over imports $340,000,000 less than in 1908, and very much the smallest of any year since 1897; (9) As a partial consequence, the largest export of gold of any year in the country's history, and the largest net export except for 1894 and the paper money days.

"The prolonged tariff debate in Congress, which high financial authority declared would hold back financial activity, but which gave no evidence of doing so, can hardly be classed as a fundamental influence of the year. Whether Mr. Harriman's death in September, with the resultant realignment of forces in high finance, deserves to be so classed, is a question which can hardly be passed upon as yet."

Asia: A. D. 1909. — Disturbance of Trade by the Fall in Silver Exchange. — The following is a Press telegram from Ottawa, Canada, June 23, 1909: "The serious check to American exports to the Orient resulting from the great fall in the silver exchanges last year is attracting increasing attention on the Pacific Coast. A League which describes itself as the Fair Exchange league has been organized in Ottawa to keep the issues before the Dominion parliament. It advocates the adoption of the Goschen plan of 1891 jointly by the British empire and the United States with open mints in India as before 1893. The new movement has secured a qualified endorsement from J. J. Hill of the Great Northern railway. Mr. Hill says: 'We must await the proposals of the monetary commission at Washington. The silver problem is full of difficulties. I wish it were possible to ignore it. But our consuls in Asia warn us that at the present rate of silver exchange Asia has ceased to import our wheat or flour or lumber; that the Shanghai merchants who eighteen months since bought the sovereign or five gold dollars with five taels, must now pay near eight taels; the result is disaster; he no longer buys.'"

FINANCE AND TRADE

Germany: A. D. 1901-1902. — Industrial Crisis and Period of Depression. — The extraordinary industrial development of Germany between 1895 and 1900 had its usual sequel in a sudden collapse, followed by a period of depression and slow return to productive activity. According to Dr. Braun, writing in the *Yale Review* of May, 1902, "the cause of the crisis lay undoubtedly in extreme overproduction, which had continued for a long time without its significance having been discovered by any one. Enormous quantities of commodities had been accumulated, numberless new industrial undertakings had come into being, or were about to be started, and every one was counting on further development of production by leaps and bounds. But a feeling of uncertainty, which should pass into a crisis, was bound to arise the moment certain unhealthy conditions of German economic life, which had been covered up during the period of prosperity, made their appearance.

"The conditions which did arouse this widespread feeling in German capitalistic circles lay far from the industrial market itself. Great losses suddenly appeared in the field of mortgage investments, whose securities had been accepted by the public as, next to government bonds, the safest form of investment, and the freest from speculation. These developments caused a panic among the investing public. This feeling of panic began, according to my view, at the time when the authorities found themselves forced to arrest two directors of the Pomeranian Mortgage Bank (*Pommersche Hypothekenbank*), who occupied the highest social position. . . . The extraordinary result of the action of the authorities against the leaders of certain mortgage banks is explained only by the facts that at the end of 1900, six and two-third billion marks of mortgage debentures were in circulation, and that within ten years the amount invested in such debentures had increased by three billion marks. The great majority of the small and middle-class capitalists, who wished to invest their money in safe securities, had put it into mortgage debentures of this kind. The greatest confidence had been placed in them, and now, for the first time, the eyes of the public were open to the fact that great losses could also ensue from such investments. The five principal offending banks had at the end of 1900, 692,670,950 marks of mortgage debentures in circulation. Every one had invested in these, from the smallest capitalist to the German Empress. The public and pretentious piety of the directors of the Prussian Mortgage Stock Bank, who were later placed under arrest, had induced even church-building associations to place their money in these debentures."

"Then came the failure of the *Dresdener Kreditanstalt*, which, with a capital of 20,000,000 marks, had loaned a single industrial company, the Dresden Electrical Company, 9,000,000 marks; and this failure was followed by that of the famous Leipsic Bank, which had loaned 84,000,000 marks to a concern which had used up its own capital, and was paying fraudulent dividends of 50 per cent. These two failures frightened the public into a general withdrawal of deposits from banks of every class."

United States: A. D. 1908. — The Emergency Currency Act. — What is known as the Emergency Currency Act was passed by Congress in May, 1908, and received the approval of the President on the 30th of that month. It is a temporary measure, for exigencies that may repeat the monetary experience of 1907 before an adequate reform of the banking and currency system of the country is effected, and will expire by limitation on the 30th of June, 1914. It does not disturb the present National bank note currency of the country, based on Government bonds, but provides a means by which an additional volume, amounting to a total of $500,000,000, if necessary, may be issued by the National banks in case of a currency stringency.

There are two ways in which emergency circulation may be issued. A bank may make an application through the Currency Association of which it is a member, or, where State and municipal bonds are offered as security, the application may be made directly. A Currency Association may be formed by ten or more banks having an aggregate capital and surplus of at least $5,000,000. Only one may be formed in any city, and no bank may belong to more than one. It must be formed by banks located in territory as contiguous as convenient.

All applications for emergency currency are to be passed upon by the Secretary of the Treasury after recommendation by the Comptroller of the Currency. The Secretary will also determine whether business conditions in the locality warrant the issuance of such circulation. The distribution of the notes is likewise left to him. Where application is made through an Association, the securities are deposited with it; where a direct application is made, they are deposited with the Treasurer or any Assistant Treasurer of the United States. All the members composing an Association are jointly and severally liable to the United States for the redemption of all emergency circulation taken out by its members.

A. D. 1909. — The "Wall Street Investigation." — Report on the Operations of the Stock Exchange and other Exchanges of New York City. — In December, 1908, a Special Committee of nine experienced gentlemen, having Mr. Horace White for its chairman, was appointed by Governor Hughes, of the State of New York, to investigate and report "what changes, if any, are advisable in the laws of the State bearing upon speculation in securities and commodities, or relating to the protection of investors, or with regard to the instrumentalities and organizations used in dealings in securities and commodities which are the subject of speculation." On the 7th of the following June the Committee submitted to the Governor an extended report, describing and discussing the organizations, the instrumentalities and the methods employed in the dealings with which their inquiry had to do. The following excerpts from this important report (known commonly as the "report on Wall Street") may suffice, perhaps,

FINANCE AND TRADE

to convey the main matters of information afforded by it and the more valuable conclusions at which the Committee arrived:

"In law, speculation becomes gambling when the trading which it involves does not lead, and is not intended to lead, to the actual passing from hand to hand of the property that is dealt in. . . . The rules of all the exchanges forbid gambling as defined by this opinion [of the N. Y. Court of Appeals, case of Hurd vs. Taylor, 181 N. Y. 221]; but they make so easy a technical delivery of the property contracted for, that the practical effect of much speculation, in point of form legitimate, is not greatly different from that of gambling. Contracts to buy may be privately offset by contracts to sell. The offsetting may be done, in a systematic way, by clearing houses, or by 'ring settlements.' Where deliveries are actually made, property may be temporarily borrowed for the purpose. In these ways, speculation which has the legal traits of legitimate dealing may go on almost as freely as mere wagering, and may have most of the pecuniary and immoral effects of gambling on a large scale.

"A real distinction exists between speculation which is carried on by persons of means and experience, and based on an intelligent forecast, and that which is carried on by persons without these qualifications. The former is closely connected with regular business. While not unaccompanied by waste and loss, this speculation accomplishes an amount of good which offsets much of its cost. The latter does but a small amount of good and an almost incalculable amount of evil. In its nature it is in the same class with gambling upon the race-track or at the roulette table, but is practised on a vastly larger scale. Its ramifications extend to all parts of the country. It involves a practical certainty of loss to those who engage in it.

"The problem, wherever speculation is strongly rooted, is to eliminate that which is wasteful and morally destructive, while retaining and allowing free play to that which is beneficial. The difficulty in the solution of the problem lies in the practical impossibility of distinguishing what is virtually gambling from legitimate speculation. The most fruitful policy will be found in measures which will lessen speculation by persons not qualified to engage in it. In carrying out such a policy exchanges can accomplish more than legislatures. . . .

"The New York Stock Exchange is a voluntary association, limited to 1,100 members, of whom about 700 are active, some of them residents of other cities. Memberships are sold for about $80,000. The Exchange as such does no business, merely providing facilities to members and regulating their conduct. The governing power is in an elected committee of forty members and is plenary in scope. The business transacted on the floor is the purchase and sale of stocks and bonds of corporations and governments. Practically all transactions must be completed by delivery and payment on the following day. The mechanism of the Exchange, provided by its constitution and rules, is the evolution of more than a century. . . .

The volume of transactions indicates that the Exchange is to-day probably the most important financial institution in the world. In the past decade the average annual sales of shares have been 196,500,000 at prices involving an annual average turnover of nearly $15,500,000,000; bond transactions averaged about $800,000,000. This enormous business affects the financial and credit interests of the country in so large a measure that its proper regulation is a matter of transcendent importance. While radical changes in the mechanism, which is now so nicely adjusted that the transactions are carried on with the minimum of friction, might prove disastrous to the whole country, nevertheless measures should be adopted to correct existing abuses.

"It is unquestionable that only a small part of the transactions upon the Exchange is of an investment character; a substantial part may be characterized as virtually gambling. Yet we are unable to see how the State could distinguish by law between proper and improper transactions, since the forms and the mechanisms used are identical. Rigid statutes directed against the latter would seriously interfere with the former. The experience of Germany with similar legislation is illuminating. [See, in this vol., GERMANY: A. D. 1908.] But the Exchange, with the plenary power over members and their operations, could provide correctives, as we shall show.

"Purchasing securities on margin is as legitimate a transaction as a purchase of any other property in which part payment is deferred. We therefore see no reason whatsoever for recommending the radical change suggested, that margin trading be prohibited. . . . In so far as losses are due to insufficient margins, they would be materially reduced if the customary percentage of margins were increased. The amount of margin which a broker requires from a speculative buyer of stocks depends, in each case, on the credit of the buyer; and the amount of credit which one person may extend to another is a dangerous subject on which to legislate. Upon the other hand, a rule made by the Exchange could safely deal with the prevalent rate of margins required from customers. In preference, therefore, to recommending legislation, we urge upon all brokers to discourage speculation upon small margins and upon the Exchange to use its influence, and, if necessary, its power, to prevent members from soliciting and generally accepting business on a less margin than 20 per cent.

"'Pyramiding,' which is the use of paper profits in stock transactions as a margin for further commitments, should be discouraged. The practice tends to produce more extreme fluctuations and more rapid wiping out of margins. If the stock brokers and the banks would make it a rule to value securities for the purpose of margin or collateral, not at the current price of the moment, but at the average price of, say, the previous two or three months (provided that such average price were not higher than the price of the moment), the dangers of pyramiding would be largely prevented.

"We have been strongly urged to advise the prohibition or limitation of short sales, not only on the theory that it is wrong to agree to sell what one does not possess, but that such sales reduce the market price of the securities involved. We do not think that it is wrong to agree to sell something that one does not now possess, but expects to obtain later. Contracts and agreements to sell, and deliver in the future, property which

FINANCE AND TRADE

one does not possess at the time of the contract, are common in all kinds of business. The man who has 'sold short' must some day buy in order to return the stock which he has borrowed to make the short sale. Short-sellers endeavor to select times when prices seem high in order to sell, and times when prices seem low in order to buy, their action in both cases serving to lessen advances and diminish declines of price. In other words, short-selling tends to produce steadiness in prices, which is an advantage to the community. No other means of restraining unwarranted marking up and down of prices has been suggested to us. . . .

"A subject to which we have devoted much time and thought is that of the manipulation of prices by large interests. This falls into two general classes: (1.) That which is resorted to for the purpose of making a market for issues of new securities. (2.) That which is designed to serve merely speculative purposes in the endeavor to make a profit as the result of fluctuations which have been planned in advance. The first kind of manipulation has certain advantages, and when not accompanied by 'matched orders' is unobjectionable *per se*. . . .

"The second kind of manipulation mentioned is undoubtedly open to serious criticism. It has for its object either the creation of high prices for particular stocks, in order to draw in the public as buyers and to unload upon them the holdings of the operators, or to depress the prices and induce the public to sell. There have been instances of gross and unjustifiable manipulation of securities, as in the case of American Ice stock. While we have been unable to discover any complete remedy short of abolishing the Stock Exchange itself, we are convinced that the Exchange can prevent the worst forms of this evil by exercising its influence and authority over the members to prevent them. When continued manipulation exists it is patent to experienced observers.

"In the foregoing discussion we have confined ourselves to *bona-fide* sales. So far as manipulation of either class is based upon fictitious or so called 'wash sales' it is open to the severest condemnation, and should be prevented by all possible means. These fictitious sales are forbidden by the rules of all the regular exchanges, and are not enforceable at law. They are less frequent than many persons suppose. . . . There is, however, another class of transactions called 'matched orders,' which differ materially from those already mentioned, in that they are actual and enforceable contracts. We refer to that class of transactions, engineered by some manipulator who sends a number of orders simultaneously to different brokers, some to buy and some to sell. These brokers, without knowing that other brokers have countervailing orders from the same principal, execute their orders upon the floor of the Exchange, and the transactions become binding contracts; they cause an appearance of activity in a certain security which is unreal. Since they are legal and binding, we find a difficulty in suggesting a legislative remedy. But where the activities of two or more brokers in a certain securities become so extreme as to indicate manipulation rather than genuine transactions, the officers of the Exchange would be remiss unless they exercised their influence and authority upon such members. . . .

"The subject of corners in the stock market has engaged our attention. The Stock Exchange might properly adopt a rule providing that the governors shall have power to decide when a corner exists and to fix a settlement price, so as to relieve innocent persons from the injury or ruin which may result therefrom. The mere existence of such a rule would tend to prevent corners."

Speaking in a general way, it may be said that the Committee holds the directorate of the Stock Exchange responsible for evils connected with the operations that are centralized by it. "It has almost unlimited power over the conduct of its members," says the report, "and it can subject them to instant discipline for wrongdoing." As a voluntary organization it is more free in the exercise of this power than it would be if incorporated and brought under the authority and supervision of the State and the process of the courts. Hence the Committee refrains from advising the incorporation of the Exchange; but it does so only on the assumption that it "will in the future take full advantage of the powers conferred upon it by its voluntary organization." In the past it has failed to do so.

At the same time, the Committee corrects an erroneous public notion that Wall Street and the Stock Exchange are one and the same thing. "An investigation was made of the transactions on the Exchange for a given day, when the sales were 1,500,000 shares. The returns showed that on that day 52 per cent. of the total transactions on the Exchange apparently originated in New York city, and 48 per cent. in other localities."

The operations of the various other trading exchanges in New York, — the Consolidated Stock Exchange, "the Curb," so called, and the several "commodity exchanges," where dealings in produce, cotton, coffee, etc., are centered, — are discussed in the report, with disapproval of some. The abuses which find their opportunity in the unorganized Curb market, — carried on within a roped-off section of Broad Street, — are set forth with distinctness, and are traced clearly to the tolerance and encouragement afforded to them by the Stock Exchange. "About 85 per cent. of the business of the Curb," says the report, "comes through the offices of members of the New York Stock Exchange, but a provision of the constitution of that Exchange prohibits its members from becoming members of, or dealing on, any other *organized* Stock Exchange in New York. Accordingly, operators on the curb market have not attempted to form an organization. The attitude of the Stock Exchange is therefore largely responsible for the existence of such abuses as result from the want of organization of the curb market. The brokers dealing on the latter do not wish to lose their best customers, and hence they submit to these irregularities and inconveniences. Some of the members of the Exchange dealing on the curb have apparently been satisfied with the prevailing conditions, and in their own selfish interests have maintained an attitude of indifference toward abuses. We are informed that some of the most flagrant cases of discreditable enterprises finding dealings on the curb were promoted by members of the New York Stock Exchange. The present apparent attitude of the Exchange toward the curb seems to us clearly inconsistent with its moral obligations to the community at large."

FINANCE AND TRADE

On the much debated question, whether dealing in "futures," — the selling of agricultural products for future delivery, — should be prohibited or otherwise interfered with, the report of the Committee is strongly in favor of letting it alone. It says, "The subject was exhaustively considered by the Industrial Commission of Congress which in 1901 made an elaborate report (Vol. VI.), showing that selling for future delivery, based upon a forecast of future conditions of supply and demand, is an indispensable part of the world's commercial machinery, by which prices are, as far as possible, equalized throughout the year to the advantage of both producer and consumer. The subject is also treated with clearness and impartiality in the Cyclopedia of American Agriculture, in an article on 'Speculation and Farm Prices'; where it is shown that since the yearly supply of wheat, for example, matures within a comparatively short period of time, somebody must handle and store the great bulk of it during the interval between production and consumption. Otherwise the price will be unduly depressed at the end of one harvest and correspondingly advanced before the beginning of another. Buying for future delivery causes advances in prices; selling short tends to restrain inordinate advances. In each case there must be a buyer and a seller, and the interaction of their trading steadies prices. Speculation thus brings into the market a distinct class of people possessing capital and special training who assume the risks of holding and distributing the proceeds of the crops from one season to another with the minimum of cost to producer and consumer."

A. D. 1909-1910. — The "Central Bank" Question. — In Boston, at the outset of President Taft's tour of the country in the fall of 1909, he made a speech on financial subjects which touched the old question of the need in the country of a Central Bank of Issue, as an instrument for the automatic or natural regulation of its currency, in quantity and distribution. This gave the opening to a revival of discussions which have been seldom heard since Jackson's time. A clear, succinct statement of the banking conditions which have revived this question, with explanations of what it involves, appears in the following, borrowed from a monthly financial letter sent out in November by the National City Bank of Chicago:

"The creation of a Central Bank of Issue as a cure for the defects of our financial system is of such importance that a brief review of the proposition may be of interest to our clients.

"The business of banking is probably as sound in this country as in any other. Our individual banks are, as a rule, prudently, honestly and capably managed. During normal times they deserve and enjoy the confidence of the public which they efficiently serve. Yet only two years ago they practically suspended because the *system* — that is the relation of one bank to all the others — had collapsed. This occurred while there was more gold in the country than existed in several of the other leading commercial nations combined, and while nearly all of the twenty or more thousand banks in the United States were sound, solvent, and in normal condition. With over $800,000,000 of gold in the United States Treasury, and several hundred millions more in the country, we imported at great cost about $100,000,000 chiefly from the coffers of the Bank of England, which itself only held $165,000,000.

"The loss on investments and to general business by such a panic as that of 1907 is beyond computation. When we consider that we have had several such panics within the memory of living men, and that other and poorer countries possess the means of avoiding such conditions, we naturally ask what is wrong or lacking in our financial system as compared to theirs?

"In times of trouble our reserves scatter. Theirs are massed. Our currency is rigid and cannot be quickly expanded to meet an emergency. Their currency is capable of instantaneous expansion. Our chief gold reserves are in the United States Treasury unavailable as a basis for such expansion. Their reserves are in great central banks — immediately available for currency expansion. Besides, under our national banking system, a bank in a non-reserve city with deposits of, say $1,000,000, keeps six per cent, or $60,000 in its own vault, and nine per cent, or $90,000, to its credit with a reserve city bank. In the reserve city bank, however, the $90,000 is merely a deposit against which it keeps an actual reserve of about $20,000. When trouble comes, therefore, and the bank in the non-reserve city decides to increase its cash reserves from six to eight per cent it calls upon its reserve agent for $20,000 cash, and when the reserve city bank has forwarded that amount, it has parted with all the actual reserve it has belonging to the non-reserve city bank, and it still has a deposit liability on its books of $70,000 against which it holds no reserve whatever.

"As it is a very natural and prudent thing for banks in non-reserve cities to increase their cash reserves by at least two per cent when trouble threatens, nearly all try to do so at the same time, and the result is that the threatened trouble becomes a reality. In short, when financial trouble threatens in any other great country the *system* provides relief and the danger is avoided, whereas, unfortunately, with us every step we take increases the trouble and helps it along until it is beyond control.

"Financial stringency existed in all the leading countries in 1907. Suspension of specie payments and actual panic occurred only in the United States. They stopped abruptly at our borders, and Canada and even Mexico knew nothing of them. Manifestly, we need something! There is little difference of opinion on that score. But when we begin to discuss the remedy we have a wide divergence of views.

"Many favor asset or credit currency similar to that prevailing in Canada. The Canadian System of asset currency is excellent when joined to the branch banking system. But it is felt that it would be almost impossible to apply it to a system containing thousands of individual banks. The difficulty is that of providing adequate redemption facilities, without which the danger of currency inflation could scarcely be avoided. Several schemes to meet this difficulty have been suggested, but the best of them seem rather unwieldy.

"The proposal which seems to be gaining most ground is to establish a great semi-government bank to be added to our present system. To this bank would be transferred at once the government deposits now in national banks, and

later a large part of the reserves of the banks in the central reserve, and possibly also the reserve cities. Like everything else, the bank would have to be an evolution. Years would pass before it would work into its proper position and exercise its full powers. Gradually, it is hoped, the United States Treasury could be done away with and the government taken out of the banking business. Then all government funds would be deposited with the Central Bank. Its branches would take the place of our Sub-Treasuries. It would be a bank of banks, where other banks could re-discount their bills, or borrow on securities, receiving therefor currency to be issued by the Central Bank. This currency would be partly secured by a gold reserve, and partly by the general assets of the bank.

"If the $900,000,000 gold in the United States Treasury in 1907, held against an equal amount of notes, had been in a Central Bank it would have formed a sufficient basis for the issue of an additional $900,000,000 of currency, for fifty per cent reserve against currency would be ample. For such additional issue the Central Bank would, of course, receive acceptable banking assets. A far smaller amount, however, than $900,000,000 would have averted the panic. It seems clear that such an institution would provide the elasticity to our currency which we so much need, not only in times of stress, but every crop moving season.

"There are many details which would require careful study, but to many competent to judge, the Central Bank idea seems to be the correct solution of the difficulty. The fact that all the other important countries of the world have adopted it ought to give it weight. Even little Switzerland came to it four years ago, and Japan, after adopting a system copied from ours, has established a Central Bank patterned after the Imperial Bank of Germany.

"Most of the objections raised seem to be largely based on sentiment rather than on argument. It is said to be 'un-American,' or that it would be 'used by Wall Street,' or that 'it would get into politics.' It would seem to us that if the system is the best, it should not be 'un-American' to adopt it, and that an illegitimate use of it by 'Wall Street' could easily be guarded against in its organization. To say that we cannot trust our government to properly use, and not abuse, the powers of a Central Bank is to say that it is inferior to the governments of Europe which have wisely used such powers for generations.

"There seems some danger that the bank would not pay unless it entered into competition with existing banks for regular commercial business; but we must remember that Central Banks are not expected to earn large dividends.

"We predict a long campaign of discussion before the right course appears clear to the American people; but it seems to us that the arguments advanced for a Central Bank are well worthy of the most earnest study."

A. D. 1909–1910. — Powerful Combination of Banking Interests by J. P. Morgan & Co. — Early in December, 1909, the powerful banking house of J. P. Morgan & Co. obtained control of the Guaranty Trust Company and the Equitable Life Assurance Company, which latter controls the Equitable and Mercantile trust companies. In the former case it purchased the holding of the Harriman estate, and in the latter that of Thomas Ryan. At the beginning of the following month, by another deal with Mr. Ryan, the same firm acquired the Morton and the Fifth Avenue trust companies. The combined assets of the Guaranty, Morton, and Fifth Avenue trust companies were reported to be $259,000,000. Joined to the vast resources of the Equitable Life Assurance Company and to those previously controlled by the Morgan Company, the financial combination seems overpowering.

FINLAND: A. D. 1901. — The Russianizing of the Finnish Army. — Resistance to the Violation of Constitutional Rights. — Despotic measures of the Tsar. — M. de Plehve's defence. — The shameful overthrow, in 1899, by the present Tsar of Russia, of the ancient constitution of Finland, which had preserved its distinct nationality ever since it came, in 1809, under the Russian crown, is related in Volume VI. of this work. Among the measures then undertaken for Russianizing Finland — reducing it substantially to the status of a Russian province — the most serious was the practical incorporation of the Finnish army with the Russian, the law for accomplishing which had not been fully carried through when the account of events in Volume VI. was closed. It was opposed very strenuously by M. Witte, then rising to influence in the councils of the Tsar, and seemed not unlikely to be put aside. But the worse influences prevailed in the end over the wiser, and the proposed measure became law on the 11th of July, 1901. It placed all Finnish troops under the orders of the Russian commander in Finland, authorized the putting of Finnish conscripts into the Russian regiments stationed in Finland, and subjected Finnish regiments to service, when required, outside of Finland, from which service they had been constitutionally exempt hitherto.

The resistance to this gross violation of time-honored rights was universal and determined. Conscripts refused to answer the call to military service, subjecting themselves to the penalties for desertion, and practically the whole population stood ready to protect them. Extensive movements of emigration to America and elsewhere were begun. At the same time the Tsar's authority, as the common sovereign of Finland and Russia, was used in many ways as autocratically in his constitutional realm as in that where his absolutism knew no bounds. The powers of the Russian Governor General of Finland were enlarged; the Finnish archives were removed to St. Petersburg. Cossacks were sent into the abused country with their knouts to quell resistance to the army law; but the resistance went on, taking presently a more passive form. Communes refused to elect the conscription boards which the law prescribed for carrying out the levy of recruits, and heavy fines were imposed on them without effect. In November, 1902, a convention of delegates from all parts of Finland, composed largely of peasants and workmen, resolved to "continue everywhere, unswervingly, and until legal conditions are restored to the

country, the passive resistance against all measures conflicting with, or calculated to abolish, our fundamental laws."

An elaborate defence of these Russianizing measures in Finland was addressed, in August, 1903, by the Russian Minister of the Interior, M. de Plehve, to Mr. W. T. Stead, editor of the *English Review of Reviews*, by way of reply to an "open letter" to himself on the subject, by Mr. Stead, published in the *Review* of that month. Concerning the military law, M. Plehve wrote: "This law, in its application to the new conscription regulations, has alleviated the condition of the population of Finland. Contrary to the information you have received, the military burden laid on the population of the land has not been increased by 5,000 recruits annually, but has been decreased from 2,000 men to 500 per annum, and latterly to 280. As you will see, there is in reality no opposition between the will of the Emperor of Russia as announced to Finland in 1899 and his generous initiative at The Hague Conference." At the end of a long exposition of the principles of Russian imperial policy, which left it far from clear, the Minister said: "I shall give the following answer to your entreaty to put an end to the present policy of Russia in Finland, which you are pleased to call the policy of General Bobrikoff. First of all, it is incorrect to connect the present course of Russian policy in Finland with the name of the present Governor-General of Finland alone, for, as regards the fundamental purpose of his labors, all the advisers and servants of his Imperial Majesty who have to do with the government of Finland are at one with him in their firm conviction that the measures now applied in Finland are called for by the pressing requirements of our state. With regard to the essence of the question, I repeat that in matters of government temporary phenomena should be distinguished from permanent ones. The incidental expression of Russian policy, necessitated by an open mutiny against the government in Finland, will, undoubtedly, be replaced by the former favor of the sovereign toward his Finnish subjects, as soon as peace is finally restored and the current of social life in that country assumes its normal course. Then, certainly, all repressive measures will be repealed. But the realization of the fundamental aim which the Russian Government has set itself in Finland, *i. e.*, the confirming in that land of the principle of imperial unity, — must continue, and it would be best of all if this end were attained with the trustful coöperation of local workers under the guidance of the sovereign to whom Divine Providence has committed the destinies of Russia and Finland."

A. D. 1904. — Assassination of Governor-General Bobrikoff. — On the 15th of June, 1904, Governor General Bobrikoff, who had been the executor of the Russianizing policy in Finland, and was hated accordingly, was shot by a Finnish member of the Parliamentary opposition.

A. D. 1905. — Successful Revolt against the Russianizing Oppressions. — The Tsar's Concessions. — Restoration of Ancient Liberties. — Taking advantage of the situation in Russia, which tied the hands of the Autocrat (see RUSSIA: A. D. 1904–1905), the Finns, by a sudden general rising, drove out the Russian officials in their country, took possession of the military posts and Government building, and forced the Governor, Prince John Obolenski, to send to the Tsar their demand for a restoration of their ancient constitutional rights which he had taken away (see, in Volume VI. of this work, FINLAND: A. D. 1898–1901). The helplessness to which their Russian master had been reduced was signified by the prompt amiability of his response, in successive manifestoes, the first of which bore the following command:

"By the grace of God, we, Nicholas II., etc., command the opening at Helsingfors, December 20, of an extraordinary Diet to consider the following questions.

"*First.* — The proposals for the budget of 1906–07, provisional taxes, and a loan for railway construction.

"*Second.* — A bill providing, by a new fundamental law, a parliament for Finland on the basis of universal suffrage, with the establishment of the responsibility of the local authorities to the nation's deputies.

"*Third.* — Bills granting liberty of the press, of meeting, and of unions."

A subsequent manifesto announced: "We have ordered the elaboration of bills reforming the fundamental laws for submission to the deputies of the nation, and we order the abrogation of the manifesto of February 15, 1899; the ukase of April 15, 1903, concerning measures for the maintenance of public order and tranquillity; the imperial ukase of November 23, 1903, according exceptional rights to the gendarmerie in the grand duchy; Article 12 of the ukase of July 13, 1903, on Finnish legislation; the ukase of September 21, 1909, on the reform of the Senate and the extension of powers of governors; the ukase of April 8, 1903, on instructions for the governor-general and the assistant governor of Finland; the law of July 25, 1901, on military service; the ukase of August 13, 1902, on the duties of civic officials in Finland; the ukase of August 27, 1902, on the resignation of administrative officials and judicial responsibility for offenses and crimes of officials, and the ukase of July 15, 1900, on meetings.

"We further order the Senate to proceed immediately with the revision of the other regulations enumerated in the petition, and we order the immediate suppression of the censorship.

"The Senate should prepare bills granting liberty of speech, of the press, of meeting, and of union; a national assembly on the basis of universal suffrage, and the responsibility of the local authorities as soon as possible, in order that the Diet may discuss them.

"We trust that the measures enumerated, being dictated by a desire to benefit Finland, will strengthen the ties uniting the Finnish nation to its sovereign."

An article quoted from a Danish magazine tells in a few words how the bloodless revolution was accomplished: "The weapon used for the purpose of paralyzing the government was the general strike. It may be questioned to which class belongs the chief part of honor in this struggle. A marvelous unity characterized the whole movement. While post, telegraph, and railroad traffic was stopped the entire light supply was cut off. The strike extended even into the private kitchen, and this was one of the reasons which hastened the departure of the Russian officials. In the meantime the question was not only should Russian guns be directed

on Helsingfors, but also should personal safety be maintained. That so few transgressions of the law occurred with the whole police force on strike is a splendid testimony for the Finnish people. The revolution in Finland stands hence as an unparalleled example of a popular upheaval."

A. D. 1906. — Political Enfranchisement of Women. See (in this vol.) ELECTIVE FRANCHISE: WOMAN SUFFRAGE.

A. D. 1908-1909. — Russian Measures for the Destruction of the Constitutional Autonomy of Finland. — The reactionary determinations of the Russian Government, since it mastered the revolutionary movements of 1905–6, are revealed in nothing else more plainly than in its steady pursuance of measures to extinguish the degree of autonomy which belongs to Finland, under the constitution that was confirmed to its people by the Tsar Alexander I., after he had taken their country from the Swedish crown (see, in Volume IV. of this work, SCANDINAVIAN STATES: A. D. 1807–1810). One of the most arbitrary of the early measures in this direction was the assumption by the Tsar, in June, 1908, of a right to confer on the Russian Council of Ministers certain powers of control over Finnish legislation. The protests of the Diet and Senate of Finland against this and other attacks on their constitutional rights led to a dissolution of the Diet, and the election of a new representative body, early in May, 1909. The election produced substantially the same popular representation in the new Diet that had characterized its predecessor, and its attitude toward the autocratic invasion of Finnish rights was the same. The Socialists received 79,447 votes. The party of the Old Finns which inclines to submissiveness polled a total of 52,396. The Constitutional parties, the Young Finns and the Swedes, received respectively 28,711 and 15,885 votes, while the Agrarian-Socialists got 13,648 and the Christian Workmen 6172. The Old Finns stand alone against the other parties.

Meantime, the Tsar, in sanctioning an Act of the previous Diet, after its dissolution, had done it in terms that were deemed contrary to the Constitution of Finland, and the Senate, which is composed of members appointed by the Tsar, petitioned him for a modification of them. His reply was a rebuke and a command that they promulgate the law, and thus accept his misconstruction of the Constitution. Thereupon the Vice-President of the Senate and four of its members resigned. The remaining five, pliant to the imperial will, voted with the presiding Governor-General for the promulgation of the law.

In the course of the next few months other demands were made on the Finns which even the imperial appointees of the Senate could not yield to. In October, an Imperial rescript decreed that military service legislation for Finland should be withdrawn from the competence of the Finnish Diet and transferred to the Imperial Legislature; and that until such legislation is enacted Finland should pay into the Russian exchequer an annual contribution of 10,000,000 marks (82,000,000), to be increased gradually to 20,000,000 marks. This left the Finnish Diet no voice in the appropriation. The five members who had remained in the Senate when their four colleagues resigned now intimated their intention to withdraw. On the 14th of October the four vacant seats were filled by an appointment of naval and military officers who were said to be "technically Finnish citizens," but all of whom, save one, had spent their lives in Russia. A month later, November 17, a Press despatch from Helsingfors made the following announcement: "At an all-night session which ended to-day the Finnish Diet rejected the government bill providing for Finland's contribution to the Russian military appropriation. A resolution was adopted requesting the Emperor to reintroduce the measure in a constitutional form. The dissolution of the Diet is expected. The Emperor has accepted the resignations of the Finnish Senators who refused to remain in office if the Russian demand for a big military appropriation by Finland was pressed." The expectation of another dissolution of the Diet by the Tsar, as the consequence of this action, was realized the next day.

Some months prior to this time a joint committee of Russians and Finns had been appointed to formulate rules or principles that should apply with authority in future to legislation for Finland. Agreement between the two constituents of this Russo-Finnish committee appears to have been impossible from the beginning. They were hopelessly opposed in their views of the relation existing between the constitutional Grand Duchy of Finland and the autocratic Empire of Russia, by virtue of their having a common sovereign. Toward the end of November their failure to come to any agreement was made known; and on the 22d of December a despatch from St. Petersburg announced that "the conclusion of the labours of the Russo-Finnish Commission, resulting in a perfunctory majority vote of the Russian members in favour of the reduction of the Finnish Constitution to a provincial autonomy, is deplored by most of the newspapers. The Finnish members apprehend a military dictatorship."

The St. Petersburg correspondent of *The Times* had previously stated what the prescription of the Russian majority of the Committee would be. They maintain, he wrote, that "there never was a Constitution granted to Finland binding on Russia as the Sovereign Power, and that, therefore, a new order of procedure can be established independently of the Finnish authorities by an Act of legislation passed by the Russian Legislature alone. They have drawn up a list of matters to come under the new procedure. According to this list all legislation on such matters as the Russian language in Finland, the principles of Finnish administration, police, administration of justice, public education, formation of business companies and of associations, public meetings, Press, importation of foreign literature, Customs tariffs, literary and artistic copyright, monetary system, means of communication, including pilot and lighthouse service, and many other subjects, shall be enacted by the Imperial legislative organs. The Finnish Diet shall be entirely ignored in such matters, while there is a provision for some cases that the opinion of the Finnish Senate shall be taken.

"It is difficult to understand what legislative matters are to be left for the Finnish Diet to deal with; but it seems that the Russian members are not sure that they have covered the whole ground, for their project contains a clause to the effect that additions to their list may be made by means of Imperial legislation.

"It is proposed that Finland shall be represented in the Russian Duma by five members, one of whom shall be elected by Russian residents in Finland who are not Finnish citizens, whilst the Finnish Diet shall send one member to the Council of Empire."

The first movement, probably, on these new lines of imperial government for Finland, was that reported in a Reuter message from St. Petersburg, December 24, as follows: "The Cabinet has approved new regulations whereby all documents issued by the Chancellery of the Governor-General of Finland shall be worded in Russian without a Finnish or Swedish translation."

A. D. 1910. — Fresh Elections to the Finnish Diet. — The Russian Duma assuming authority over Finland. — A new Diet, chosen at elections held early in February, 1910, is composed as follows: Old Finns, 42; Young Finns, 28; Swedish People's party, 26; Social Democrats, 86; Agrarians, 17; Christian Labor party, 1. Fifteen women were elected, nine of them by the Social Democrats.

Just as this matter goes into type, a despatch from St. Petersburg, March 30, 1910, announces the introduction of a bill in the Russian Duma assuming authority in that body over Finland.

FOOD FISHES: Convention respecting their Protection, Preservation, and Propagation in the Waters contiguous to the United States and Canada. — The following are the articles of a Convention negotiated at Washington and signed by Ambassador James Bryce, for the Government of Great Britain, and by Secretary Elihu Root, for that of the United States, on the 11th of April, 1908. Ratifications of the Convention were exchanged on the 4th of June:

"ARTICLE 1. The times, seasons, and methods of fishing in the waters contiguous to the United States and Canada as specified in Article 4 of this Convention, and the nets, engines, gear, apparatus, and appliances which may be used therein, shall be fixed and determined by uniform and common international regulations, restrictions, and provisions; and to that end the High Contracting Parties agree to appoint, within three months after this Convention is proclaimed, a Commission to be known as the International Fisheries Commission, consisting of one person named by each Government.

"ARTICLE 2. It shall be the duty of this International Fisheries Commission, within six months after being named, to prepare a system of uniform and common International Regulations for the protection and preservation of the food fishes in each of the waters prescribed in Article 4 of this Convention, which Regulations shall embrace close seasons, limitations as to the character, size, and manner of use of nets, engines, gear, apparatus, and other appliances; a uniform system of registry by each Government in waters where required for the more convenient regulation of commercial fishing by its own citizens or subjects within its own territorial waters or any part of such waters; an arrangement for concurrent measures for the propagation of fish; and such other provisions and measures as the Commission shall deem necessary.

"ARTICLE 3. The two Governments engage to put into operation and to enforce by legislation and executive action, with as little delay as possible, the Regulations, restrictions, and provisions with appropriate penalties for all breaches thereof; and the date when they shall be put into operation shall be fixed by the concurrent proclamations of the President of the United States and the Governor-General of the Dominion of Canada in Council.

"And it is further agreed that jurisdiction shall be exercised by either Government, as well over citizens or subjects of either party apprehended for violation of the Regulations in any of its own waters to which said Regulations apply, as over its own citizens or subjects found within its own jurisdiction who shall have violated said Regulations within the waters of the other party.

"ARTICLE 4. It is agreed that the waters within which the aforementioned Regulations are to be applied shall be as follows: (1) The territorial waters of Passamaquoddy Bay; (2) the St. John and St. Croix Rivers; (3) Lake Memphremagog; (4) Lake Champlain; (5) the St. Lawrence River, where the said River constitutes the International Boundary; (6) Lake Ontario; (7) the Niagara River; (8) Lake Erie; (9) the waters connecting Lake Erie and Lake Huron, including Lake St. Clair; (10) Lake Huron, excluding Georgian Bay but including North Channel; (11) St. Mary's River and Lake Superior; (12) Rainy River and Rainy Lake; (13) Lake of the Woods; (14) the Strait of San Juan de Fuca, those parts of Washington Sound, the Gulf of Georgia and Puget Sound lying between the parallels of 48° 10′ and 49° 20′; (15) and such other contiguous waters as may be recommended by the International Fisheries Commission and approved by the two Governments. It is agreed on the part of Great Britain that the Canadian Government will protect by adequate regulations the food fishes frequenting the Fraser River.

"The two Governments engage to have prepared as soon as practicable charts of the waters described in this Article, with the International Boundary Line indicated thereon; and to estab-

lish such additional boundary monuments, buoys, and marks as may be recommended by the Commission.

"ARTICLE 5. The International Fisheries Commission shall continue in existence so long as this Convention shall be in force, and each Government shall have the power to fill, and shall fill from time to time, any vacancy which may occur in its representation on the Commission. Each Government shall pay its own Commissioner, and any joint expenses shall be paid by the two Governments in equal moieties.

"ARTICLE 6. The Regulations, restrictions, and provisions provided for in this Convention shall remain in force for a period of four years from the date of their executive promulgation, and thereafter until one year from the date when either the Government of Great Britain or of the United States shall give notice to the other of its desire for their revision; and immediately upon such notice being given the Commission shall proceed to make a revision thereof, which Revised Regulations, if adopted and promulgated by the President of the United States and the Governor-General of Canada in Council, shall remain in force for another period of four years and thereafter until one year from the date when a further notice of revision is given as above provided in this Article. It shall, however, be in the power of the two Governments, by joint or concurrent action upon the recommendation of the Commission, to make modifications at any time in the Regulations.

"ARTICLE 7. The present Convention shall be duly ratified by His Britannic Majesty and by the President of the United States, by and with the advice and consent of the Senate thereof, and the ratifications shall be exchanged in Washington as soon as practicable."

A. D. 1902 (April-Oct.). — Elections to the Chamber of Deputies. — Resignation of Waldeck-Rousseau. — Formation of a Radical Ministry under M. Combes. — Enforcement of the Law of Associations. — Closing of unauthorized schools. — The first ballot in elections to the Chamber of Deputies was cast on the 27th of April, producing 413 conclusive elections and leaving 178 to be decided by a second vote. The new Chamber met on the 1st of June, and elected for its president, M. Leon Bourgeois, by a vote of 303 against 267. On the following day M. Waldeck-Rousseau, who had been at the head of the Ministry for three years — an exceptional term of premiership in France — resigned, on the plea that his task was done. A new Radical Cabinet was then formed by M. Émile Combes, which announced a moderate programme on the 10th, and received the declared support of 312 members, against 116 in opposition and 149 who took neutral ground. Of the previous Cabinet, M. Delcassé retained the portfolio of Foreign Affairs and General André that of War. The session was short and little was done.

In the following months great excitement and much disorder in parts of the country, especially in Brittany, was caused by proceedings taken to enforce the law concerning Associations, passed in the previous year (see in Volume VI. FRANCE: A. D. 1901). Some religious orders — teaching orders and others — had refused or neglected to register themselves and obtain authorization, as required by the law, and these were now to be closed. In many cases there was resistance to the closing of the unauthorized schools. In a few cases there was a refusal by military officers to obey commands for the assistance of their soldiery in enforcing the law. Magistrates, too, opposed the government, and a majority of the councils in the departments of France withheld their support. Nevertheless the government proceeded firmly in the matter and the provisions of the law were carried out. When the Chambers were reconvened in October the burning subject came up for fierce discussion, and the attitude and acts of the Combes Ministry were approved in the Chamber of Deputies by 329 against 233.

A. D. 1903. — Elections to the Senate. — Execution of the Associations Law. — Closing of Schools and Houses of the Religious Orders. — Resistance and Rioting encouraged by Magistrates. — State Monopoly of Education established. — Building new Schoolhouses. — Elections for a section of the Senate, occurring early in January, 1903, went favorably for the Government. M. Fallières was reëlected President of that body, while M. Bourgeois was seated again in the presiding chair of the lower Chamber. The Combes Ministry was strengthened in its hold of power by the continued agitation that attended the execution of the Associations Law (see in Volume VI. of this work, FRANCE: A. D. 1901) as applied to the religious orders and brotherhoods. Its support was a shifting one, made up sometimes by one combination of the many party divisions in the Chambers and sometimes by another; but it did not fail throughout the year to find somewhere a majority that would not allow a political crisis to be brought on. Everywhere the closing of the schools and houses of the unauthorized associations was resisted with increasing determination, and the proceeding became too much retarded to satisfy the supporters of the law. Objection was raised to the separate dealing with questions of authorization for this and that order or congregation, and the Government was called upon to name at once to the Chambers the whole list of institutions which it would have authorizations refused to. In March this demand was acceded to, so far as concerned the male congregations, and a great debate, of a fortnight's duration, in the Chamber of Deputies, resulted in the refusal of authorization to all the teaching, preaching, and contemplative orders, of Redemptorists, Capuchins, Benedictines, Dominicans, and Passionists. A few months later the same entire refusal of authorization to the teaching orders of women was voted, but by a diminished majority.

The Clericals, on their side, were as energetic as the parties of the Government, and were supported very generally by the magistracy of the country at large, which dealt so leniently with the resistance and rioting provoked by the enforcement of the law that the Government was left practically dependent on the army and the police. The army, too, was a doubtful instrument of authority in many cases, numerous officers of all grades resigning to escape the repugnant mandate of law. The most threatening situation arose in Brittany, consequent on the inauguration of a monument to Renan, which the Catholics regarded as an insult to the Church.

One final step in the secularizing of education in France was taken late in the year, by the passing of a bill which practically established a State monopoly of education, by repealing a law of 1850 that abolished such monopoly. By the new law all members of any religious order, authorized or unauthorized, were forbidden to engage in teaching.

The extent to which the schools of the religious congregations were being closed involved a great expenditure for building new schoolhouses, and the Government had difficulty in passing an Act which laid the cost of this provision on the communes, instead of accepting it for the state at large. It carried the Act, however, notwithstanding the opposition of M. Waldeck-Rousseau.

A. D. 1904 (June-July). — Groundless charges against the Premier. — A great public scandal was raised in June by charges against the Premier, M. Combes, that he had tried to force the Chartreux monks to buy the right of remaining in France. Investigation showed that bold swindlers had attempted to obtain money from the monks on the protence of being able to buy such permission for them. As the result of the investigation the President of the Council and his colleagues were vindicated by an almost unanimous vote of the Chamber of Deputies.

A. D. 1905-1906. — The Separation of Church and State. — Preceding Contentions. — Measures and Proceedings of the Separation, as recounted by writers of each Party. — The separation of Church and State in France involved the nullification of the Concordat, negotiated by Napoleon I. with Pope Pius VII. in 1802 (see PAPACY: A. D. 1808–1814, in Volume IV. of this work), and of what are known as the Organic Statutes, promulgated by the French Government at the same time. The former was in the nature of a treaty; the latter was not. The French Government claimed rights under both; the Roman Church acknowledged no force in the Statutes that could be binding on itself. This difference, which entered into much of the controversy preceding the measures taken by the Government to separate the State from the Church, is explained in the first quotation below, — following which, two accounts are given of some among those controversies, and of the proceedings connected with the adoption and execution of the Act of Separation, — one account written from the view-point of the Government and the other from that of the Church:

"The Concordat consists of a preamble and seventeen statutes. It is a reciprocal contract between the temporal and spiritual powers, and is therefore at the same time State law and Church law. The preamble states that the Catholic, Apostolic, and Roman religion is that of the great majority of the French people; it does not say that it is 'the religion of France,' as the Holy See would have wished, and consequently it does not restore to the Catholic religion its former character of being a State religion. After establishing a new distribution of the French dioceses, it directs that the bishops shall be 'nominated' by the Government and 'installed' by the Pope. The alienation of ecclesiastical property, effected by the Revolution, is definitely sanctioned. In return the Government undertakes, as had already been done by the Constituent Assembly, to secure 'a reasonable allowance to the bishops and curés, whose dioceses and parishes will be included in the new

FRANCE, 1905–1906

arrangement,' and to take 'measures to allow French Catholics to make foundations in favour of churches if they wish.'

"As regards the Organic Statutes, promulgated at the same time as the Concordat, 18th April, 1802, they proclaim that no bull, pastoral letter, or writing of any kind from the Holy See shall be published in France without the authority of the Government; no council, general or special, shall be held without this authority. There must be no other delegate from Rome in France besides the Nuncio, the official representative of the Sovereign Pontiff. Any infraction on the part of the clergy of the provisions either of the Concordat or of French law is referred to the Council of State, who must decide if there has been any abuse. The Organic Statutes were equally concerned with questions relating to discipline, doctrine, and even dogma — which are purely spiritual questions. They therefore not only upheld the Declaration of 1682 as a declaration of the principles of the Gallican Church, but also expected all the professors to teach it in the seminaries. According to the Concordat, bishops had a right to appoint curés; the Organic Statutes obliged them to obtain the approval of the Government for their appointments.

"Although the Organic Statutes are, with the Concordat, part of one and the same State law, they must not be considered to be entirely on the same footing. The Concordat concluded between the two powers binds them together; the Organic Statutes, an exclusive product of the French Government, never received the sanction of the Papal authority. They were, on the contrary, a source of further quarrels with the Roman Court. Even in our days, they frequently lead to conflict, the representatives of the Church having refused, on various occasions, to recognise the validity of decisions made in virtue of these Statutes by the French Government."—Jules Legrand, *Church and State in France* (*Contemporary Review*, *May*, 1901).

Measures and Proceedings of the Separation as recounted by its Advocates.—"The action of the Republic in suppressing the religious orders had produced strained relations between it and the Vatican. This was intensified by the 'nominavit nobis' controversy. In the Bulls instituting some bishops whom the President had nominated, and which had to have the sanction of the Government before they could be published and be valid in France, the Vatican had inserted the word 'nobis,' implying that the President had merely nominated the bishop to the Pope for appointment and that the appointment was really in the hands of the Pope. The French Government, under the guidance of M. Combes, the Premier and Minister of Public Worship, insisted that this word must be removed before the bull was sanctioned, and as both sides refused to yield no bishop was instituted. Relations were still further strained by the visit of the President to the King of Italy. . . . To visit the King was to insult the Pope by disregarding the protest made by him against the occupation of Rome. President Loubet was the first Roman Catholic ruler who ventured to disregard the feelings and protests of the Pope. From the 24th to the 28th April, 1904, M. Loubet was the guest of King Victor Emmanuel, and gave no intimation to the Pope of his intention to visit Rome, and did not include a visit to the Vatican in his programme. On the 28th of April, Cardinal Merry del Val sent to the representatives of the Curia at the Courts of all the Roman Catholic powers in the world, to be communicated to the Governments to which they were commissioned, a protest against the action of the French Government. . . . The French Government replied by recalling its ambassador from the Vatican and breaking off diplomatic relations with the Pope.

"In the summer of the same year the friction between the French Government and the Vatican was increased by the cases of the bishops of Laval and Dijon. Bishop Geay of Laval, in his opening discourse in his cathedral, had proclaimed his adherence to the Republic and his desire to be the shepherd of all his flock. He denounced Orleanism and refused to support reactionaries at the elections. . . . He was summoned to appear at Rome. He submitted the summons to the Government, as he was required by the Organic Articles to do, and he was refused permission to leave his diocese. Subsequently, under threats of excommunication, he went, and was immediately informed by the Minister of Public Worship that his salary was stopped from the day he left his diocese without permission. A similar summons to Mgr Le Nordez, Bishop of Dijon, led to similar results. . . .

"In the month of October, 1904, M. Combes, replying to several interpellations addressed to the Government, reviewed the history of the relations of the Vatican to the Republic since its foundation in 1870, and showed that there had been a continuous disregard of the Concordat and of the Organic Articles by the Vatican, and that clericalism had been the most invetcrate enemy of the Republic. He showed that no stipulations could safeguard the rights of the State, which were denied by the doctrines of the Catholic Church. The confidence of the Chamber was expressed by a vote of 548 to 88. In November he introduced a Bill for the separation of Church and State, which was referred to a Commission, by which it was adopted on the 2nd December. In the middle of January, 1905, M. Combes, owing to resentment at certain incidents in connection with the administration of the army, carried a vote of confidence by a majority of only ten votes and resigned. Before the end of the month a new Cabinet under the presidency of M. Rouvier, retaining several members of M. Combes' administration, was formed, which asserted its determination to carry out the policy of its predecessor in its relations with the Vatican. The Chamber of Deputies referred to a new Commission all the Bills dealing with the question of Church and State which had been presented to it, including that of M. Combes. Instead of adopting any one of them, the Commission decided to draft its own Bill, and shortly afterwards presented to the Chamber a Bill which engaged the close attention of the deputies for several months in the spring and summer of the year 1905. It passed through the Chamber on the 3rd of July, and was sent to the Senate the following day. . . . The Senate made no alterations in the Bill, and it became law on the 6th of December, 1905."—

FRANCE, 1905–1906

John A. Bain, *The New Reformation*, *ch.* 17 (*T. and T. Clark, Edinburgh*, 1906).

"The law of the 9th of December, 1905, which put an end to the régime of the Concordat and substituted that of separation between Church and State, had been promulgated on the 11th of December, 1905. It was to come into effect a year after its promulgation. The Protestants and the Israelites had accepted it even before it was passed; but they represented an infinitesimal minority, and it was not that minority that the legislators had had in view when they framed the law of separation. The one question in the matter was that of the attitude that would be taken by the Catholics, — the counsels that would come to them from Rome.

"In the French Episcopate there were two opposing currents of opinion, one for acceptance of the law, under certain reserves, the other for resistance. In the latter part of November, 1905, some bishops met in Paris and agreed that energetic efforts must be made to prevent action at Rome on misinformation as to the situation of the Church in France and the state of mind prevailing in it. Monseigneur Fulbert Petit, Archbishop of Besançon, was their chosen envoy, and in the following January he repaired to Rome. There he met other bishops who had come to give counsels to the Pope that were not pacific: and he met, also, the Père Le Doré, former superior of the dissolved congregation of the Eudistes, well known for his uncompromising opinions and his aggressive temper, but who had been commissioned to convey to Rome the proceedings of the meeting of French cardinals at Paris, on the 28th of December, which showed a majority in favor of the acceptance of the law. At the same time, an important meeting of bishops was held at Albi, under the presidency of Mgr. Mignot, the majority at which meeting, notably the Archbishop who received them and the Archbishop of Toulouse, Mgr. Germain, made no secret of their desire to adjust themselves to the law, according to the expression of Cardinal Lecot.

"But nothing said or done drew the Pope from the silence which he kept. Then it was rumored that the head of the Church would reserve his decision until a general assembly of the French episcopate, which the French cardinals had advised, could be held, to propose a solution of the question. This, however, was contradicted positively by the party which urged resistance to the law.

"Such was the situation when the Government, obliged to act, — since the period of delay fixed by the law was only a year, — came to the first proceedings which the Act prescribed. Article 43 of the law provided for administrative rules, of which the part relating to inventories appeared logically the first, that being the operation which needed consideration before all others. The second part of the regulations had to do with the life pensions and temporary provisions accorded to the ministers of religion. The regulation concerning pensions and provisions was published in the *Journal Officiel* of January 29, 1906. [Article 11 of the Act assigned to priests or ministers of more than sixty years of age, who had been not less than thirty years in an ecclesiastical service salaried by the state, a yearly life pension of three-fourths of their former stipend. To those under sixty years of age and above forty-five, whose service had been for less than thirty years but not less than twenty, it assigned one-half of their previous compensation.] . . .

"The first executive act imposed on the Government was the inventorying of the property, movable and fixed, belonging to the State, to the departments or to the communes, of which the establishments of public worship had had the use. Article 8 of the law required this to be proceeded with immediately after its promulgation. This article had been voted in the Chamber and in the Senate by very large majorities, and, so to speak, without discussion, so rational and judicial it seemed to be. In fact, as the existence of the public establishments of worship came to an end with the régime of the Concordat, the succession to them was left open, and an inventory, descriptive and estimative, of their property, was a necessary measure preliminary to any devolution of such property, dependent on that succession. . . . Being one of those conservative measures which attack no right and leave a continuous state of things, there was no expectation of much feeling about it among Catholics. . . . Apparently, the consistent attitude on the part of Catholics, provisionally, at least, and until the Pope had spoken, would be one of calm, of prudence, of expectancy. Such was the purport of the instructions given by the bishops, even by the most combative. These latter, while condemning the law with vehemence, did not counsel a recourse to force against the agents appointed to make the inventory. They required but one thing of their priests and of the administrators of parish property, which was that they should not coöperate in the work, and that they should make declaration that their non-resistance did not imply acceptance of the law.

"On the 29th of December, 1905, a first decree for regulating the procedure was issued by the Council of State. This was followed by a circular from the Minister of Finance which, it must be confessed, roused a justifiable feeling among the Catholics. From one phrase in that circular it could be understood that the officials making the inventory were authorized to demand the opening of the tabernacles. M. Groussau questioned the Minister on the subject, and M. Merlou cleared away all misunderstanding by replying that officials were to accept the declaration of the curé of a church as to the contents of its tabernacle; and that they had been instructed to avoid everything that could give pain to pious minds. The Abbé Gayraud recognized that these decisions of the Government were in conformity with the instructions of the Cardinal Archbishop of Paris, and the interpellation was withdrawn.

"The inventories were begun at once after this decision of the question of the tabernacles. At first there was no disorder. The bishops, notably those of Toulouse, of Rouen, of Albi, of Besançon, of Arras and Chartres, and their curés, from their example, confined themselves to the reading of a protestation to the receiver of the registration, after which the receiver was left free to fulfil his mission. But soon, in some dioceses, particularly in Paris, in the West, and in one part of the Center, the inventorying was made the pretext for demonstrations more political than religious, organized by enthusiasts or by political cliques. Generally the clergy were passively present at these demonstrations. . . .

FRANCE, 1905–1906

These tumultuous ma[illegible]stations, at the head of which the most conspi[illegible] personalities of the reactionary opposition [illegible] often seen, ended by degenerating into veritable riots, necessitating the intervention of troops, and leading finally to bloody conflicts." — René Wallier, *Le Vingtième Siècle Politique, Année* 1906, *pp.* 123–132.

It was not until the 17th of February that the silence of the Pope on the matters that were agitating France and the Papal Church was broken. Then the "Encyclical Vehementer," so named, according to custom, from its first word, was published.

Measures and proceedings of the separation as recounted by opponents. — "In the first period of his premiership M. Combes was not prepared either to denounce the Concordat or to separate the churches from the State, simply because he found public opinion not yet ripe for either measure. Later he thought he saw in adopting this course a means of prolonging his official existence, a matter of considerable importance to a country doctor like himself without large private resources. Having slaughtered nearly all religious congregations or prepared their ultimate extinction, Combes appeared to seek no further occupation for himself and to fortify his position by attacking the Church itself, whose secular clergy he had so recently praised and sought to protect from unfair and 'unjust concurrence or competition with the regulars!' Like Waldeck-Rousseau, Combes saw here an opportunity to 'save' the Republic from 'clerical reaction.' Throughout its whole discreditable history this third Republic of France has only been kept alive by being periodically 'saved' by some clever politician from 'perils' conjured up to terrorize the peasantry, who still recall the misery of their ancestors in the old *régime* and the misfortunes of France in the downfall of the first and second Empires. . . . The Pope protested, in March, 1904, against the bad faith and infamous aggressions of the French Government in the matter of religious education and those imparting it, and M. Delcassé, through the French Ambassador at the Vatican, p[illegible]sted against the Papal protest. In the following month M. Loubet, as President of the French Republic, visited the King of Italy at Rome, at the same time politely, but significantly, ignoring the existence of the Pope and the Vatican, at which court France then had accredited an Ambassador! Then followed the protest of the Vatican, addressed directly to the French Government, and the protest simultaneously sent to all the powers where Papal Nuncios are in residence. . . .

"In March, 1904, had arisen the trouble in the Diocese of Dijon, France, which culminated in students of the diocesan seminary refusing to receive ordination from the hands of the Bishop, Mgr. Le Nordez. The Bishop of Dijon was, unfortunately, not the only one of the French episcopate claiming to be a 'victim of hatred, deceit and calumny.' Almost from the commencement of his episcopate Mgr. Geay, Bishop of Laval, was attacked by accusations filed at Rome, charges which were examined into during the Pontificate of Leo XIII., and which led the Holy Office to advise the Bishop to resign his see. It was then (in 1900) thought at Rome that in the local conditions actually then existing it was impossible for Mgr. Geay to govern the diocese with the necessary authority and efficacy. Mgr. Geay agreed to resign, provided he received another bishopric in France. This condition appeared inacceptable to the Vatican, but no further action was taken in this case until May 17, 1904, when by order of Pius X. the request for the Bishop's resignation was renewed, and in case it was not forthcoming within a specified time an ecclesiastical trial was intimated as inevitable. Notwithstanding the secret and private character of this last letter emanating from the Holy Office, Mgr. Geay communicated its contents to the French Government. Combes and Delcassé, jealous of the prerogatives of the French State and presumably caring little for the honor of the French episcopate, notified Cardinal Merry del Val (by the acting Chargé d'Affaires) 'that if the letter of May 17 is not annulled the government will be led to take the measures that a like derogation of the compact wh'ch binds France and the Holy See admits of.' The Papal Nuncio at Paris explained to M. Delcassé that this was not a threat of *deposition* of the Bishop without a decision of the French Government, but an invitation to the Bishop to meet the charges by a voluntary resignation.

"As regards Mgr. Le Nordez and Mgr. Geay, respectively Bishops of Dijon and Laval, their long hesitation between the wishes of the French Government and the will of the Holy See ended by the departure of both of them for Rome. The government then promptly suppressed their salaries and after they had (under virtual pressure) placed their 'voluntary resignation' in the hands of the Holy Father, an allowance from the funds of the Vatican was made to each of them. They have since lived in France in a retirement, varied at first by interviews of Mgr. Geay with reporters that have since happily ceased. The severance of diplomatic relations with the Vatican was completed by a note from M. Delcassé to the Papal Nuncio at Paris stating that in consequence of the rupture of diplomatic relations between France and the Vatican 'the mission of the Nuncio would henceforth be deprived of scope.' In the parliamentary session of November 26, 1904, the credit for the Embassy at the Vatican was stricken from the budget. . . .

"After the downfall of Combes, through the odium attaching to his spy system, the Minister of the Interior and of Public Worship presented to the Chamber of Deputies on behalf of the Rouvier Ministry a project of law to establish the separation. If for Combes separation had signified little else than spoliation, aggravated by oppression, the Rouvier plan sought to render spoliation less unjust, less intolerant. The ministerial project having been somewhat altered by the commission, conferences were held and a final agreement having been obtained, the proposed law was reported to the Chamber of Deputies in March, 1905. It is unnecessary to follow the parliamentary evolution of this immature project, forced as an issue by two successive Premiers who had far less solicitude for the permanent interests of their country than to assure their own continuance in power. M. Briand, speaking for the commission, took great trouble to throw upon the Pope the responsibility of a law which he at the same time declared to be perfectly good, beneficent for the Republic and honorable for its authors! Alas! for separatists, in an unguarded

moment Combes betrayed the utter falsity and ridiculous insincerity of this pompous and solemn pretence of the anti-religious majority, that the Pope forced the separation upon France. In the parliamentary session of January 14, 1905, Combes declared: 'When I assumed power I judged that public opinion was insufficiently prepared for this reform. I have judged it to be necessary to lead it to that.'

"When the law of separation, as finally adopted in the Chamber of Deputies, was referred to the Senate, the Senatorial commission, under ministerial pressure, adopted the law as passed in the Chamber, without change of a single word. Although the law was the most important of any passed in France for a hundred years, and though it is fraught with grave influences upon the destinies of the country, this hastily matured, ill-framed measure, with all its unjust and vexatious provisions, was swallowed whole by a commission of cowardly, truckling Senatorial politicians, who disregarded their plain duty at the dictation of Radicals and Socialists on the outside. Separationists both in and out of Parliament were eager to see the law become operative before the universal suffrage of France could have an opportunity of passing judgment upon the principle of the separation in the parliamentary elections of May, 1906. . . .

"In the Papal Consistory of December 11, 1905, the Pope pronounced an allocution protesting against the law of separation in mild and temperate language, announcing his intention of again treating upon the same subject 'more solemnly and more deliberately at an opportune time.' The Holy Father evidently waited for the regulations of public administration that would indicate in what manner the Government of France intended to administer and enforce the law. . . .

"Immediately after the adoption of the law of separation the government appointed a special commission to elaborate rules of public administration by which the law was to be interpreted and applied. This commission being stuffed with the anti-religious element, its work was worthy of its authors. . . . The first details of the regulations officially promulgated governed the taking of inventories of all movable and real property of churches, chapels and ecclesiastical buildings, including rectories, chapter houses, homes of retreat for aged and infirm priests (even pension endowments), etc., ostensibly to facilitate the transfer of these properties to such associations for the maintenance of public worship as might be formed under the provisions of the law of separation. These inventories were imposed upon all religious bodies — Catholic, Protestant and Jewish — and the law was made applicable to Algiers, where there is a large Mahomedan population. Viewed in the abstract, the taking of inventories was a formality necessary to an application of principles inscribed in the law. As estimates of value such inventories are worthless, because compiled by agents of the administration of Public Domains or treasury agents, unaided by experts in art, architecture and archivial paleography. The Director General of the Register prescribed to agents taking these inventories a request for the opening of tabernacles in churches and chapels to facilitate completeness and accuracy. This order aroused a storm of indignation throughout France and the government realized that a stupid blunder had been made, and it was announced that agents would content themselves with gathering and incorporating into their report declarations of the priests upon the nature and value of sacred vessels contained in the tabernacles.

"The taking of inventories of churches and their contents commenced simultaneously in many parts of France in the latter part of January, 1906. Instead of the simple formality hastily accomplished without general observation, of which separatists had dreamed, this proceeding was characterized in various places by scenes of the wildest disorder. When officials of the Registry presented themselves for the taking of the inventories, the clergy, surrounded or attended by trustees of the building, read formal protests against what most of them styled 'the first step in an act of spoliation.' . . . If these protests had not been accompanied by physical violence, the country might have been spared the shocking scenes that took place in Paris and the provinces. In many churches free fights took place between militant Catholic laymen, opposed to an inventory, and police, firemen and troops, who burst open the doors of churches or broke them down with fire axes in order to make an inventory possible. While at the doors chairs and fragments of broken confessionals were flying through the air, pious women within sang: 'We will pray God that the Church may be able to teach the truth, to combat error which causes division, to preach to all charity!'" — F. W. Parsons, *Separation of Church and State in France* (*American Catholic Quarterly Review*, *July*, 1906).

A. D. 1906. — President Fallières succeeds Loubet. — Fall of the Rouvier Ministry. — Rise of M. Clemenceau. — The Elections of May. — Conformity to the Separation Law prohibited by the Pope. — Sequestration of Church Property. — The Socialists and the Bourgeois. — Justice at last to Dreyfus. — Honors to Picquart. — The presidential term of M. Loubet, who had been elected on the 19th of February, 1899, would expire on the 18th of February, 1906. M. Loubet declined a reelection, and M Fallières, the chosen candidate of the various groups of Republicans, was elected President of the French Republic at a joint session of the two chambers of the National Assembly, on the 17th of January, by 449 votes of a total 848. The new President was inducted into office on the 18th of February, and, according to usage, was offered the resignations of the existing Ministry, under M. Rouvier, which, however, he did not accept. M. Rouvier and his colleagues continued in office until the 7th of March, when a vote in the Chamber of Deputies which expressed want of confidence compelled a resignation that could not be declined.

The new Ministry then formed, and announced

FRANCE, 1906

on the 14th, was nominally presided over by M. Sarrien, President of the Council and Minister of Justice, but its real chief was known to be M. Clemenceau, Minister of the Interior. Other important members of this Cabinet were M. Bourgeois, Minister of Foreign Affairs, and M. Aristide Briand, Minister of Public Instruction and of Worship. Sarrien and Bourgeois were classed politically as Radicals, Briand as a Socialist, and Clemenceau as a Socialist-Radical. The Ministerial declaration read in both chambers on the 14th was criticised as colorless, and as indicating an incongruity of political material in the make-up of the administration. On the burning question of the execution of the law for the separation of Church and State its language was: "The law on the separation of Church and State has met, in the execution of the provisions relating to the inventories, a resistance as unexpected as it is unjustified. There is no one among us who wishes to assail in any manner whatever the freedom of religious belief and worship. The law will be applied in the same liberal spirit in which it was adopted by the Parliament. . . . But it is our duty to insure the execution of all laws throughout the land. Under a republican government the law is the highest expression of national sovereignty; it must everywhere be respected and everywhere obeyed. The Government intends to apply with all necessary circumspection, but with inflexible firmness, the new legislation which certain parties of opposition strive vainly to misrepresent."

On the 14th of April the Chamber of Deputies was adjourned *sine die*, and fresh elections to it were to be held in May. "The seventh legislature held under the Constitution of 1875 came to an end amid a domestic confusion unparalleled in France since 1871. In the Nord and the Pas de Calais there were miners' strikes, at Clermont-Ferrand strikes in the building trade; at Lorient and Toulon there was a general strike, and there were strikes also at Alais and Bordeaux. At Paris the compositors, the excavators and the railway men on the Metropolitan had left work, and the postmen also had joined the movement, though they were servants of the State. M. Clemenceau paid two visits to Lens to treat with the strikers; following his example and by his orders the magistrates, officers and soldiers exhibited admirable coolness as well as energy in controlling the excited crowds without resorting to force. . . . Attempts were made to form what were virtually revolutionary governments, and these announced openly that on May 1, capitalism would be assailed, a general strike proclaimed in Paris, and the Government swept away if it showed signs of attempting to interfere. These threats set up an unprecedented panic, which was intensified by the measures taken by the Government to get rid of it. Troops guarded the Metropolitan Railway workshops, the printing establishments, the bakeries. All the cavalry and infantry available were concentrated at Paris, and schools and empty houses taken up for their accommodation." — *Annual Register*, 1906, p. 270.

In the midst of these distractions the political canvass for a new representation of the Republic in its legislature was carried on, and the elections were but slightly disturbed. They went so sweepingly in favor of the Government that only 176 seats in the Chamber, out of 589, were carried by the opposition. The victory of the Government was more complete and decisive than the most sanguine had expected. Said a writer in *The Fortnightly Review*: "It is the end of the long struggle between the Republic and its internal enemies, those *émigrés de l'intérieur* as M. Paul Sabatier has happily called them. The political power of the Church is broken forever; the parties of reaction are finally crushed, and their future will be that of the Jacobites after Culloden. . . . It may perhaps be useful to record the relative strength of parties in the new Chamber as compared with the old. Precise accuracy is difficult, owing to the uncertainty as to the exact group to which a few of the deputies should be attributed, but the following figures are as near exactitude as possible:—

	New Chamber.	Old Chamber.
MINISTERIALISTS: (The *Bloc*): —		
Republicans of the Left (Alliance Démocratique and Gauche Démocratique)	90	83
Radicals	117	98
Radical-Socialists	132	119
Independent Socialists	20	14
	359	314
Unified Socialists	54	41
OPPOSITION: —		
Republicans of the Centre (Union Républicaine and Progressists)	68	97
Nationalists	30	53
Conservatives and Clericals	78	84
	176	234

"But the mere figures do not bring out the full significance of the election. Even more important than the fact that only 108 Clerical and Nationalist deputies were returned is the fact that these 108 represent, with very few exceptions, the most ignorant and backward districts in France. Immediately after the election the *Matin* published an electoral map of France, in which the districts represented by Opposition deputies were left white. It is a destructive document. The whole of central France is a solid mass of black, in the north and south the white spots are few and scattered, in the east black very greatly predominates; only in the west is there any conspicuous show of white." — Robert Dell, *France, England, and Mr. Bodley* (*Fortnightly Review*, *Sept.*, 1906).

Manifestly the majority in France approved the severance of religious institutions from the political organization of the State. In recognition of the fact, the General Assembly of French Bishops, sitting soon afterwards at Paris, petitioned the Pope, by the vote of a large majority, to permit the forming of Public Worship Associations under the Separation Law. The papal reply, given late in the summer, was a new Encyclical formally forbidding French Catholics to form such Associations for taking the offered use of the church buildings and property, as provided for continued exercises of religion by the law. A little later the prohibition was carried farther, and French Catholics were forbidden to conform to the Associations Law of 1891, as well as to the Separation Law. There seems to have been a

disposition in the Government to extend, from one year to two, the period allowed for conformity to the latter enactment; but this attitude on the part of the head of the Church dispelled it. Accordingly, on the 11th of December, 1906, when the term fixed by the law expired, sequestration of the property of the vestries was pronounced, and buildings occupied in connection with the churches by bishops, rectors, seminaries, etc., were ordered to be vacated with no further delay.

Before matters reached this stage M. Sarrien had resigned, on account of ill health, and the premiership had passed to Clemenceau. The Cabinet underwent a degree of reconstruction soon afterwards, and the upright, courageous Picquart, formerly Colonel, now Brigadier-General, who had stood so long almost alone in army circles as a champion of justice to the foully wronged Dreyfus (see, in Volume VI. of this work, FRANCE: A. D. 1897–1899), had been given the portfolio of War. To Dreyfus himself the Republic had made all the reparation that it could. On the 12th of July in this year its highest court had pronounced a decision which branded with falsity and forgery every document and the whole testimony on which he had been convicted, and declared that "the accusation against Dreyfus was completely unjustified." Thereupon he was reinstated in the army with the rank of major, and not many days later, on the spot where the ceremony of his degradation had been performed, in 1894, he received the insignia of a Chevalier of the Legion of Honor.

In the May elections for the Chamber of Deputies the Socialists had been heavily reinforced, and their most strenuous leader, M. Jaurès, was inspired to say in his journal, *L'Humanité*: "There is no more time to be lost. This time we must give the finishing blow to the Reaction, to all parties of the past, to Clericalism and Cæsarism. After clearing the battleground of all its litter, the Proletariat must be able to say to the face of the Republican Democracy, the Radical Democracy which at last is master of public power: 'What are you going to do for workmen? What reforms, what guarantees, are you going to give them? How are you going to help French society out of the deep crisis in which it struggles? How, by what organization of Property and Labor, will you put an end to the exploiting of men, to the war of classes let loose by the Capitalist form of property?'" Quoting these words, soon afterwards, a writer in *The Atlantic Monthly* remarked:

"Such words are not the mere rhetoric of a Parliamentary dictator who has just suffered a year's eclipse in the retrograde combinations given to the Radical majority by Prime Minister Rouvier. Almost physiologically, certainly socially, the millions of French workmen stand over against property-holders in a way to which there is nothing comparable in the Northern and Western United States, with all their labor difficulties. They form a separate class in society, because French property-holders form a exclusive caste. It was the middle classe, the property-holding *bourgeois* and the peasant proprietors bound up with them, who profited by the great Revolution against the privileged classes of that day, — royalty, clergy, and nobles. During the century which has elapsed the triumphant *bourgeois* have steadily persisted in throwing around themselves a practically impenetrable wall of legal and social privilege in their turn. And now there is a spontaneous upheaval of the excluded, unprivileged, inferior class." — Stoddard Dewey, *The Year in France* (*Atlantic Monthly, Aug.*, 1906).

Mainly, it appears, from the prompting and the influence of the Socialist and Labor organizations, France obtained, in 1906, a law making Sunday a day of rest from most descriptions of industry and commerce, exceptions being made to allow travel and transportation companies, lighting and water works, newspaper offices, and some other performers of public services, to continue their operations, while hotels, restaurants, wine shops, drug stores, and the like, were exempted from closing their doors. See SUNDAY OBSERVANCE.

A. D. 1906. — The Thrift and consequent loanable Wealth of the country. — The power that it makes for peace. — "In the world at large, however, France has also come to a consciousness of her real power. An English financier had already said that if the French people continue to live on the principle, 'where you have four sous spend only two,' they will end by having in their possession all the coined gold in the world. The great portion of it which they already possess, and the distress caused to German finance and industry by the patriotic refusal of the united French banks to allow their gold to be drawn until peace was secure, had a great and probably decisive influence in the happy termination of this entangled affair of Morocco. The floating of the latest Russian loan has since come to show yet further the riches of France, to which tourists alone, it is estimated, add two billion francs in gold each year. This money power and money need should tend to the keeping of European peace more than all the theories of the pacifists who clamor for a disarmament impossible to obtain." — Stoddard Dewey, *The Year in France* (*Atlantic Monthly, Aug.*, 1906).

A. D. 1906-1907. — The Separation of Church and State. — Further measures and proceedings, as related from opposite standpoints.

From the Separationist Standpoint:

"The practical question, what course the French Catholics were to adopt when the law should go into effect, was first answered by the pope in his encyclical Gravissimo, published August 10, 1906, eight months after the promulgation of the law. The gist of the document is in two sentences: 'After having condemned as was our duty this iniquitous law, we examined with the greatest care whether the articles of the aforesaid law would leave at least some means of organizing religious life in France so as to rescue the sacred principles upon which rests the Holy Church.' Having consulted the bishops, and addressed 'fervent prayers to the Father of Light,' the pope came to the following conclusion: 'As for the

associations of worship, as the law organizes them, we decree that they can absolutely not be formed without violating the sacred rights which are the very life of the church.'

"Is there any other form of association which might be both legal and canonical? Pius X did not see any. Therefore, as long as the law remained as it was, the Holy Father forbade the French Catholics to try any form of association which did not promise, in an 'unmistakable and legal manner, that the divine constitution of the church, the immutable rights of the Roman pontiff and the bishops, as well as their authority over the property necessary to the church, especially over the sacred edifices, will be forever insured in those associations.' . . .

"For this decision there were, from the ecclesiastical point of view, three grounds. One was the failure of the law of 1905 to recognize, in so many words, the authority of the ecclesiastical hierarchy. Another was the abrupt fashion in which the French government broke off its diplomatic relations with the Vatican. The fact that the government consistently ignored the pope during the drafting of the bill was a third. . . .

"Under what régime the churches were to live was at first somewhat uncertain; but M. Briand speedily discovered in existing legislation all that was needed to insure the continuance of religious worship. He was willing to admit that the church was not obliged to avail herself of the privileges that the new law provided for her. Law imposes duties on citizens, but it does not force them to make use of rights or privileges. Everything that is not forbidden is lawful. . . . The minister stated that the priests could make use of the churches after having filed such an application or declaration as is required for ordinary meetings by the law of 1881. These declarations would be valid for a whole year instead of for one meeting. But under this régime the priests would be simply temporary occupants of the buildings of worship without any legal title.

"This compromise proved no more satisfactory to the Vatican than the law of 1905. . . .

"The pope refused to sanction this arrangement. He objected to the scheme of yearly declaration. In the first place he complained that this broad interpretation of the law on public meetings was merely a personal fancy of M. Briand which might not bind his successors. In the second place, the dignity of the priests did not allow them to accept the humiliating position of simple occupants of the churches. . . .

"The government, however, could not leave several million Catholics in a position in which opportunity to perform their religious duties depended upon uncertain texts and the circulars of a temporary minister of worship. It therefore set out to draft a bill that would be acceptable to the church without any recourse to the discarded associations of worship. The new bill was submitted to Parliament December 15, 1906; was accepted by the Chamber December 21 and by the Senate December 29, and was promulgated January 2, 1907. . . .

"Most of the privileges granted in the law of 1905 are withdrawn; and the law of associations of 1901, combined with the law of public meetings of 1881, forms the basis of the new régime. . . .

"Of all the catastropnes prophesied or feared by foes or friends none has occurred. The new régime so violently attacked in and out of France is being gradually acclimated."—Othon Guerlac, *The Separation of Church and State in France* (*Political Science Quarterly*, June, 1908).

From the Standpoint of the Church:

"The third meeting of the French episcopate, held at the Château de la Muette, Paris, January 15–19, resulted in a declaration (approved by the Holy See) of their unanimous consent to essay the organization of public worship in churches to be placed at the Bishops' disposal free; an essential condition being a legal contract (authorized by Government) between themselves or their clergy and the Prefects or Mayors to whom such churches (sequestrated in December) have been handed or will be handed over; the contract to be for a term of eighteen years, during which term (being fixed by the common law of municipal leases of communal properties) neither Mayors nor Prefects shall in any way interfere either in parochial administration or in regard to the conditions of occupancy of the edifices, which must be, as regards police, under control of the priest in charge, the mayor intervening only on grave occasions when his official duties require him according to law to re-establish disturbed order.

"This document, published on January 29, was immediately, with a form of contract, sent by each Bishop to the Parish priests in his diocese with a request to be informed immediately whether the proposed contract would be entered into by their respective mayors, and instructing them if possible to get it signed at once and return it to the Bishop. Of course, from every parish where Catholics are strong and zealous the signed contracts were quickly obtainable or obtained. But so soon as the Minister of Worship learned these proceedings, he circularized the Prefects of France on February 1:

"'You will shortly receive instructions concerning the application of the Article in the Law of January 2, 1907, providing that free use of Communal buildings intended for worship, and of their fittings, may, subject to the requirements of Article 18 in the Law of 9 December, 1905, be accorded by an administration act of the mayors to the ministers of worship specified in declarations of worship meetings. It is extremely urgent, to prevent mayors being entrapped into giving their signatures, that you should telegraphically warn them, they are not entitled to enter into a contract of this kind without preliminary deliberation by their municipal council, and that they should, pending the vote of that body, confine themselves, if asked for it, to giving an acknowledgment of receipt of any request for use of edifices they may have received. You will also assure them they shall at a very early date receive instructions defining the conditions to be observed to render such contracts valid, and will direct them to do nothing until those instructions reach them.'

"It is due to M. Briand to acknowledge: first, that he lost no time whatever in fulfilling this promise; second, that his new circular on the application of the law of January 2, 1907, which bears date Paris, February 3rd, and was published the following evening, lays down regulations concerning the leases of Churches and Communal Chapels which on the face of these are fair, reasonable, and likely to be universally

FRANCE, 1907

acceptable. The main conditions are, approval of the agreements by the municipal councils, failing which mayors cannot enter into them; maximum term to be eighteen years; the lessee (whether a curé, or a worship association) to keep the buildings in proper repair; leases for longer periods than eighteen years to be sanctioned by the prefect; that the curé acts by permission of his ecclesiastical superior may be stated in the lease, but such superior is not to be entitled in any way, once the document is signed, to interfere, or exercise authority. . . .

"In Paris the appearance of the circular was hailed with satisfaction by Catholics and reasonable men. . . . Cardinal Richard deems it proper and useful to direct his priests to make the declaration, after the contract is duly signed, and when His Eminence shall authorize them to make it. . . .

"His Eminence lost no time in submitting to the Protestant prefect of the Seine, M. de Selves, a draft lease of the Paris Cathedral (Notre Dame) and the historical St. Denis Basilica. It was understood that, if settled and signed, this contract should serve as the model to be followed in the remaining eighty-five French dioceses. The Cardinal Secretary of State at the Vatican authorized these negotiations, against his personal judgment, without any illusions as to the result, simply to satisfy the French episcopate and a minority in the Sacred College. . . .

"After negotiations extending over three weeks, the Prefect informed the Cardinal (in writing, on February 23) that His Eminence's proposals were inacceptable, but the government invited amended ones based on ministerial declarations made in the Chamber during a stormy debate on February 19, when M. Briand found himself forced to confess the churches were left open in view of the truth that a parliamentary majority had 'no right to hinder millions of Catholic compatriots from practising their religion.' The Cardinal Archbishop replied immediately that the text of the draft submitted embodied the extreme limits of possible concessions." — A. F. Boyd, *The French Ecclesiastical Revolution* (*American Catholic Quarterly Review*, *Jan.-April*, 1907).

A. D. 1907. — Effects of the Separation Law. — The Catholics of France lose all Legal Organization. — "The Church Separation Law has failed to do the particular work for which it was voted by the preceding Parliament. Catholic citizens have chosen to undergo its penalties, with new pains and penalties voted by the present Parliament, rather than accept that civil reorganization of their religion which it imposed on them. The result has been to deprive French Catholics, not only of the church property which had been restored to them after the confiscations of the Revolution, but also of all church property of whatever kind, even such as had since been gathered together by their private and voluntary contributions. It is impossible to foresee how they are legally to constitute new church property for themselves. By the automatic working of separation, Catholics, so far as any corporative action might be intended, are left quite outside their country's laws.

"The Associations Law had previously suppressed their religious orders and congregations, that is, all those teaching and other communities which combined individual initiatives into a working power for their religion. In virtue of that law, their convents and colleges and the other properties of such religious associations have 'reverted' to the State, which is gradually liquidating them for its own purposes.

"No example of temporal sacrifices for religion's sake on such a scale has been seen since Catholics in the France of the Revolution chose to lose all, in many cases life itself, rather than accept the schismatical civil constitution of their clergy, which was accompanied by a like nationalizing of all their church property." — Stoddard Dewey, *The Year in France* (*Atlantic Monthly*, *Aug.*, 1907).

A. D. 1907 (May-July). — The Revolt of the Wine-growers of the Midi. — From various causes, the wine-growers of Southern France have suffered from an increasing decline in the market for their products. They attributed this wholly to the extensive manufacture of adulterated and counterfeited wines, though it came partly, without doubt, from the increasing use of beers and spirituous liquors among the French. The struggling cultivators of the grape, who could hardly obtain a living from their vineyards, accused the government of neglect to make and enforce effective laws for the suppression of the adulterating frauds. They demanded new measures for the suppression of all vinous beverages that were not the pure product of the grape. In the spring of 1907 their attitude became seriously threatening; for a leader named Marcelin Albert, having an eloquent tongue, a bold spirit, and a capacity for command, had risen among them. Alarming demonstrations of popular excitement occurred in the cities of Perpignan, Montpellier, Narbonne, and others. The 5th of May, the discontented people gave formal notice that they would refuse to pay taxes if adulterate wine-making was not summarily stopped by the 10th of June. At the appointed time the threat was even more than made good, for most of the municipal officers in the four departments of Gard, Aude, Hérault, and the Pyrenees Orientales resigned and the machinery of local government was dissolved. The troublesome situation thus created was handled ably by Premier Clemenceau. On one hand he secured new legislation from Parliament against wine adulteration, while promptly ordering troops to the region of revolt on the other. Marcelin Albert and another leader, Dr. Ferroul, Mayor of Narbonne, were arrested, and order was soon restored, though a few collisions with turbulent crowds were attended with some loss of life.

The new laws enacted for the occasion were intended in part to secure an annual record of the vineyard product of the country that would enable the Government to keep knowledge of it from the vine to the wine cask, and make fraudulent tampering with it more difficult, at least.

A. D. 1908. — The Situation of the Catholic Church since the Separation of Church and State. — A Church Organization impossible. — "To question whether the Catholics in France, who have alone done more than the Catholics in any other nation for foreign missions and for the propagation of the faith, will succeed in maintaining the Church in their own country by private contributions, will perhaps arouse astonishment. Nevertheless it may be questioned. We do not doubt the generosity of our people, but that which does give us concern is the impossibility of organizing any revenue which can be permanent. . . . The Church would be able to surmount the difficulty if she had endowments, revenues, or property, as in other countries. But that of course demands some regular organization, some corporation or some body recognized by the laws of the country and capable of acquiring, possessing, and exercising ordinary property rights. We cannot state too emphatically that such an organization for the Church is not possible to-day in France. On one side the only body authorized by the law to look after the material side of the religious interests is the *association cultuelle*, or local committee of public worship, as defined and regulated by the Law of Separation. On the other side, this *association cultuelle* has been declared by the Pope incompatible with the hierarchical constitution of the Church of Rome, and the bishops, the priests, and the Catholic laity, in obedience to their Supreme Head, have abstained and will continue to abstain from forming any such organization. Not only, then, have there been no Catholic *associations cultuelles* to receive from the state the portion of the former religious property (the half perhaps) which we might have kept; but there will be none in the future to receive a gift of any kind. In the eyes of the law there is no diocese, no parish, no corporation representing diocese or parish. The bishop and the pastor are only individual citizens, Messrs. So-and-So. They cannot hold property except as individuals, and what they might receive for religious purposes cannot be handed down to their successors, — it must revert only to their legal heirs. In brief, no permanent body whatever can provide for the maintenance of public worship.

"This is the situation with its almost insurmountable difficulties. In all probability it will be a long time before we escape from it." — **Felix Klein**, *The Present Difficulties of the Church in France* (*Fortnightly Review, April*, 1908).

A. D. 1909 (Jan.). — Elections to one-third of the French Senate. — Success of the Socialist-Radicals. — Endorsement of the Clemenceau Ministry. — Elections to the one-third of the French Senate which goes out every third year were held on Sunday, the 3d of January, and resulted heavily in favor of the party which calls itself Socialist Radical, holding a middle ground between the extreme Socialists and the Moderate Republicans. M. Clemenceau, the Premier, is of this party, and his administration had given it great strength. He was one of the Senators whose term had expired, and his constituents of the Var re-elected him by a majority of 390, 46 more than they had formerly given him. Of the 103 Senators chosen at this election the Socialist-Radicals and Radicals (who work together) won 60, giving them secure control of the Senate, where the Moderate Republicans had been holding the balance of power. The latter lost eighteen seats, while the Conservatives or Reactionists of the Right added 1 to the 4 they had previously held. The strength in France of a politically and practically restrained sympathy with the economic ideas of Socialism was proved signally in this election.

A. D. 1909 (March). — Appointment of Abbé Loisy to the Professorship of the History of Religions in the College of France. — Early in March, 1909, the Abbé Loisy, most conspicuous of the "Modernists" who had been condemned and denounced by the Pope, was appointed by the Minister of Public Instruction to be Professor of the History of Religions in the Collège de France, filling the chair vacated by the death of M. Réville. The appointment had been recommended by the authorities of the College, which is reputed to be an institution entirely devoted to "disinterested scientific research." Nevertheless, the choice was looked upon at once as being

prompted by a motive of offensive antagonism to the Papacy. The Abbé has had distinction for years among the masters of the higher criticism, and five of his books were placed on the "Index" by the church in 1908. The propositions characterized as "Modernism" and condemned by the Pope in 1907 were largely drawn from his writings. The Abbé replied to the condemnation, and was excommunicated.

A. D. 1909 (April). — Reported reanimation of Clerical Anti-Republicanism. — "I learn on excellent authority," said an English correspondent of the Press, writing from Paris in April, "that the leaders of anti-clericalism in the French political world are becoming somewhat concerned as to the rapid recrudescence of the political religious orders, which, although suppressed, are somehow managing to reëstablish themselves in France. As was recently pointed out by M. André Mater, in a volume, 'La Politique Religieuse de la République Française,' published under the auspices of the 'Committee for the defence abroad of the religious policy of France,' the French monks, and not the French Bishops and priests, were almost entirely responsible for the Vatican's refusal to accept the three Separation Laws which M. Briand, the then Minister of Public Worship, framed in a conciliatory spirit towards the Roman Catholic Church, and often with the assistance of the French Bishops themselves. The French Government will certainly not allow the religious orders to revive the old campaign of anti-Republicanism, which has, in the opinion of many French Roman Catholics, done so much to compromise the interests of Roman Catholicism in this country."

A. D. 1909 (June). — Earthquake on the Mediterranean coast. See EARTHQUAKES: FRANCE.

A. D. 1909 (June-July). — Revised Naval Programme. — Changes in the Department of the Marine. See WAR, THE PREPARATIONS FOR: NAVAL.

A. D. 1909 (July). Discussion of the Navy Report in the Chamber of Deputies. — M. Clemenceau's outbreak of passion. — His flings at M. Delcassé resented by the Chamber. — He is driven from office by its vote. — His Successor, M. Briand, and the New Cabinet. — A Socialist Statesman at the head of the Government. — When the report of the Parliamentary Commission on the Navy and the Naval Administration (see WAR, THE PREPARATIONS FOR: NAVAL) came up for discussion in the Chamber of Deputies, in July, it brought about the overthrow of Prime Minister Clemenceau and his Cabinet in a singular way. The report itself had not been seriously threatening to the stability of the Ministry. Responsibility for the weaknesses found in the Naval administration belonged evidently, in large measure, to the predecessors of M. Clemenceau and his colleagues, and they were united in maintaining that M. Picard, who held the Marine portfolio, had done all that could be done since he came to office towards reforming his department. M. Picard himself spoke with an aggressive boldness of self-justification in the debate. His speech, made on the 20th of July, called out M. Delcassé, president of the investigating Commission, who mounted the tribune and delivered an attack on the Government, fierce with the animosities of a long antagonism between M. Clemenceau and himself. This angered the Premier to a degree, apparently, which overpowered his usually clear judgment, and he retorted in a speech which taunted M. Delcassé with references to that Morocco affair in which he and France were subjected to mortifications at the hands of Germany (see, in this volume, EUROPE: A. D. 1905-1906). It is a matter on which sore feeling exists naturally in France, and concerning which the sympathy of the nation is with M. Delcassé. Hence the Chamber resented Clemenceau's allusions to it, and Delcassé was cheered when he made a passionate but dignified reply. The Premier would have needed to be blind if he did not see that his own party was against him in the tone he had given to the controversy; and yet he proceeded to a repetition of the taunt he had flung at his opponent before. What followed was thus described to the readers of the London *Times* the next morning, by its Paris correspondent:

"M. Clemenceau rose in face of a hostile Chamber, which had been profoundly impressed by M. Delcassé, although on entering the Palais Bourbon before the debate this afternoon not a single member of the House had contemplated the possibility of a division which would entail the fall of the Ministry and expose all parties to the necessity of readjustments of electoral arrangements under a new and untried Cabinet within less than a year of the general election. M. Clemenceau said: —

"'M. Delcassé has taken a great deal of trouble not to reply to the only question which I put to him — namely, you were Minister and you followed a policy which was bound to carry us to one of the greatest humiliations.'

"It seemed, as one gazed down upon the House, that the entire Chamber leapt as one man in indignant repudiation of this sentence, which, moreover, had been truncated by this spontaneous and concerted interruption. When the noise of the slamming desks had died down, M. Clemenceau was heard to say:

"'Oh, a truce to false indignation, I beg of you. You led us, M. Delcassé, within a hair's breadth of war and you did nothing to prepare for any such policy by taking military precautions. Everybody is aware that the Ministers of War and of Marine were questioned, and that they declared that we were not ready. (Loud protests.) I have not humiliated France, M. Delcassé humiliated her.'

"As M. Clemenceau returned to his place, there could be no doubt as to the temper of the House. A division was immediately announced on an order of the day of confidence, proposed by M. Jourde and accepted by the Government.

"The vote took place on priority in favour of this order of the day amid the liveliest agitation.

FRANCE, 1909

By 212 votes to 176 priority was rejected. As soon as the President had read out the figures, M. Clemenceau and the Ministers rose, and leaving the Government Bench filed out into the lobbies. Loud cheers from the Right and the Extreme Left followed them to the door. It was the fall of the Ministry which has enjoyed the longest lease of life of any under the Third Republic.

"After holding a consultation at the Palais Bourbon, the Prime Minister and his colleagues immediately proceeded to the Elysée in order formally to tender their resignation. President Fallières, who was at dinner and who had not heard the result of the vote in the Chamber, was taken by surprise and expressed regret at the departure of M. Clemenceau, with whom he had collaborated so long. The short interview, which lasted only ten minutes, concluded with a formal request on the part of the President that M. Clemenceau and his colleagues would continue to discharge the duties of their respective Departments until the appointment of their successors."

Though his colleagues went out of office with him, it was M. Clemenceau, alone, who could be said to have "fallen." Even that characterization of the occurrence was criticised by one of his opponents, who said: "M. Clemenceau did not fall; he plunged out of office." "The Chamber had no intention of upsetting the Government," said one of the Republican journals of Paris, "and an hour earlier, in fact, had loudly cheered the Minister of Marine, M. Picard." In these circumstances it was certain that the change of Ministry would make little change in the character or policy of the Government. It did, in fact, make no extensive change in even the personnel of the Ministry; for six members of the Cabinet of M. Clemenceau reappeared in its successor, and these included the new Premier, M. Aristide Briand.

The choice of M. Briand for leadership in the Government appears to have been made by a common consensus of opinion that he was the one man pointed to by all the circumstances of the case. As Minister of Public Worship he had shown a temperateness of disposition and a political capacity, in steering the country through the stormy achievement of the separation of the State from the Church, which won high admiration and esteem both at home and abroad. He had been known as distinctly a Socialist, according to the full meaning of the term in France, and had come into public life with the prejudices raised against that brand of radicalism to contend with. But he had given good proof that he could be practically a statesman as well as theoretically a Socialist, and France appeared to be fully willing to see the helm of Government put into his hands. He is the first fully professed Socialist to attain that position in a great State. In making up his Cabinet he called into it two others of his own Socialist sect, namely, M. Millerand, to be Minister of Public Works, Posts, and Telegraphs, and M. Viviani to be Minister of Labor, as he had been before. For himself he retained the Ministry of Public Worship, and, with it, the Ministry of the Interior. Of other important departments of the Government, that of Foreign Affairs was reassumed by M. Pichon and that of Public Instruction by M. Domergue. General Brun became Minister of War and Admiral Boué de Lapeyrère, Minister of Marine. The Cabinet appears to have been generally recognized as one of exceptional strength.

On the 27th of July the new Premier spoke as such to the Chamber of Deputies for the first time, and did so, it was manifest, with impressive effect. "If I deemed my person to be an element of discord in the Republican party," he said, "I should ask you not to follow me. I could not suppose that serious men would come to ask me to sort out, as it were, from my old ideas those which experience has confirmed within me and those which it has made me discard. If I had been base enough to do that, my interpellators would be right if they refused me their confidence. I come before you just as I am, a man whom you all know. I have been working with you of the majority for the last seven years. You know that I am not afraid of ideas, and that my way of thinking is daring. The Republic seems to me to be the germ of all progress, but I admit only such ideas as are feasible. *Je suis un homme de réalisation.* Those who have watched me know that full well. If there be among you any who are still ignorant of these facts, let them vote against me. I have as yet no mandate from you. To-night I may have one, but at present there is still time for you to refuse to invest me with one."

At the close of the Premier's address a motion of confidence was made, and carried by 306 votes against 46.

A. D. 1909 (July).— French Deputies to lose pay when not in attendance at the Chamber. —Voting by proxy is permitted in the French Chamber of Deputies, and this encourages absenteeism. To correct that result a remarkable rule was adopted by the Chamber at its session of July 17. "The Socialist Deputy for the Cher, M. Berton, aided by the Socialist Radical M. Dumont, induced the House to adopt, by 441 votes to 77, a measure in virtue of which 'any Deputy who shall not have signed during six consecutive sittings a certificate of attendance shall be regarded as being absent without permission' and deprived of his pay. M. Pelletan, ex-Minister of Marine, who is, with men like M. Brisson, President of the Chamber, the type of the old Parliamentary hand of the Republican *régime*, protested in vain against a conception of Parliamentary work which, as he said, humiliated the representatives of France to the position of schoolboys who have to be ruled with a rod of iron lest they play truant. M. Brisson himself pointed out that the proposal of the Socialist Deputies was seriously wanting in respect for the national sovereignty, and he reminded his colleagues that mere attendance in the Chamber was by no means the only, nor necessarily the most effective, way of doing one's duty as Deputy.

A. D. 1910. — Destructive Floods in France, most seriously in and around Paris. — Many parts of France suffered heavily from extraordinary floods in the later half of January and the early days of February, 1910; but Paris had the worst of the calamity to bear. In its long history the city has been cruelly dealt with many times by the waters of the Seine, which its quays and bridges constrict and obstruct; but this latest experience proved nearly the climax. It was comparable, at least, with a historic flood that dates back to 1615. Large districts were uninhabitable for days; half the streets and squares of the city were under water: foundations of many of the grandest buildings were being sapped, while sewers, subways, and pavements were extensively destroyed. It was not until the beginning of February that any subsidence of the waters occurred, and far into the month before much restoration of conditions could be taken in hand. The suffering meantime was very great and the pecuniary damage immense.

Legislation for its Suppression in Louisiana and the District of Columbia. — In June, 1908, Louisiana followed the example of New York in passing an Act for the suppression of race-track gambling. There, as in New York, only exactly enough votes to pass the bill were secured; one Senator was present for the final vote in spite of illness which subjected him to the most serious inconvenience, and one Senator had to be sought by messenger with a motor-car and brought by an all-night ride ninety miles through the Louisiana marshes. Within a few months past the gamblers of the race track had been similarly placed under the ban of the law in the District of Columbia.

Its Suppression in Japan. — The following was reported from Tokio, March 27, 1909: "A tremendous effort has been made by the race-track element in Japan to induce the government to retract and permit betting upon the tracks, but Marquis Katsura, the premier, has stood firm, and, for another year, at least, the race tracks of the Empire will be without their favorite Pari Mutuel or any other form of betting. This means in Japan practically an end of horse-racing, and necessarily a heavy loss to the stockholders in the various race tracks. The development of racing in Japan was extremely rapid. From a single course established at Yokohama by foreigners, at least half a dozen tracks were in full swing when gambling was prohibited. So flagrant were the cases of fraud and so numerous the examples of ruin brought about by reckless betting that the government suddenly put its foot down upon the whole thing."

A. D. 1902 (March-May). — Measures for Germanizing the Polish Provinces of Prussia. — For many years past the Prussian Government had been exerting itself to dilute the Polish population of its Polish provinces, by settling German colonists in them and by buying land from Polish owners. It now assumed a more aggressive attitude of hostility toward that portion of its subjects, as appeared from the temper of a speech by Count Bülow in the Prussian legislature, in January of this year, on what he characterized as "the most important concern of Prussian politics at the present time." German property, he said "was steadily passing into Polish hands," and "Polish lawyers, Polish doctors, Polish contractors, were united in the attempt to thrust the German element into the background." In support of the Count's position it was averred by others in the debate that not only was Eastern Prussia being made Polish by the rise of a vigorous Polish middle class, but that the Poles already formed 10 per cent of the whole population of Prussia, and were spreading in other parts of the Empire, holding themselves generally apart from their German neighbors and cultivating a national patriotism of their own.

In March the Prussian Government issued orders forbidding the admission of immigrants from Russian Poland into Prussia unless they brought not less than 400 marks of money in hand. Two months later a bill was brought forward appropriating 250,000,000 marks for the purchasing of land in the Polish provinces and for settling German colonists upon it. In connection with this measure it was reported that, since the buying of land for these purposes began, in Posen, the Poles had acquired more from Germans than Germans had acquired from Poles, to the extent of 76,611 acres. Hence more money must be put into the game if it was to be played with effect. The money was voted, though opposition to the policy which makes enemies of the Poles, instead of Germanizing them by friendly treatment, made a show of much strength.

"It was in 1886 that the Iron Chancellor started the fight against the Poles by the expulsion of more than 50,000 Polish labourers, natives of Austria and Russia. This measure not only hit the poor people who were driven away, it also and principally was directed against the Polish owners of large landed estates in the Eastern provinces, who thereafter experienced great difficulty in obtaining the necessary number of farm-hands. This artificial scarcity of labour, together with the great decrease in price of agricultural products which had just taken place, entirely ruined many owners of large estates, and there were therefore a great number who wanted to sell. Bismarck then appointed a Committee of Colonisation to buy Polish estates and parcel them out to German peasant farmers. The necessary funds were provided for by a sum of 100,000,000 marks (equal to £5,000,000) which was placed at the disposal of the Committee.

"At the first moment the Poles were paralysed. What were they to do to ward off such an attack aimed at the poorest among them? But they kept up a good heart and did the only reasonable thing: some wealthy Polish noblemen furnished a sum of 8,000,000 marks (equal to £150,000) whereby to fight the mighty Prussian Government, with its Committee of Colonisation and well-nigh inexhaustible financial resources. With this capital of 8,000,000 marks a Polish land bank was started for the purpose of buying estates and reselling them in small holdings to Polish colonists. . . .

"It may be guessed from what is already stated that the Poles have not only been able to maintain their former hold on the land, but actually as peaceable conquerors are marching triumphantly westwards. This is also the case, but we need not restrict ourselves to a guess, the '*Statistisches Jahrbuch für den Preussischen Staat*' for 1903 containing ample corroboration of it. According to this official handbook there were parcelled out in the years 1896 to 1901, in the Provinces of Posen and West Prussia, 7,828 estates by German activity, containing 617,200 hectares, and 9,079 estates by Polish activity, containing 213,700 hectares. Although the Germans have parcelled out a very considerably larger area, the Poles have bought and parcelled out a far greater number of properties. The advantage thus obtained is put into an even stronger light when we learn that during the same period by this parcelling out there have been created only 15,941 German farms, with an area of 155,200 hectares, as against 22,289 Polish farms, with an area of 95,800 hectares, for these figures show that during these six years more than 6,000 Polish homes have been established over and above the number of German homes planted on old Polish soil. Moreover the advantage thus gained by the Poles has been increased during the last two years." — Erik Givskov, *Germany and her Subjected Races* (*Contemporary Review*, *June*, 1905).

A. D. 1902. — The Imperial Pension Fund for Veterans. — A statement of the condition of the imperial pension fund for the veterans of the wars of 1864, 1866, and 1870 showed that this fund, which was established by setting apart $138,000,000 out of the war indemnity paid by France, had not for years past been able to meet the claims made upon it out of the income it produced. Recourse was had to appropriations of capital, and the fund would consequently be exhausted in course of time, probably not earlier than 1908 and not later than 1910. All the expenses now covered by the fund would then have to be incorporated in the ordinary estimates for the Empire. The Prussian Minister for War had estimated that about 600,000 veterans of the former wars were still surviving. Allowing 10,000 for those who had died since this estimate was made, and allowing both for the 45,000 who already received a pension and the 12,000 who depended upon the special fund at the disposition of the Emperor, there remained over half a million veterans who as yet received no support from the fund.

A. D. 1903. — Elections for the Reichstag. — Large gains by the Socialists. — Their disability in Prussia. — Strong combination supporting the Imperial Government. — Brutality in the Army. — Prosecutions for Lèse Majesté. — State of Colonies. — General elections for the Reichstag, on the 16th of June, 1903, took notable significance from the fact that the representation of the Social Democrats was increased from 58 to 81, and that these figures gave no full measure of their actual gain in strength, since their votes in the election rose in number from 2,107,000 in 1898 to 3,010,771. Had the distribution of seats in the imperial legislature been fair to the towns, instead of favoring the agricultural interests, the Socialists would have gained more. In Berlin they won every seat but one. Nevertheless, in the elections for the lower house of the Prussian Landtag, which took place in November, they could not carry a single seat in the kingdom, owing to the ingenious disfranchisement of the common people which the Prussian constitution accomplishes by its classification of votes. Socialist gains in the Reichstag were made at the expense of the Radicals, from whom it drew votes which expressed, not so much conversion to Socialism as bitterness of opposition to the government. Socialist and Radical representatives together numbered only 111, against 224 in the combination of Conservatives, Clericals, and National Liberals, which gave the Ministry a more than ample support.

"The Social Democrats in Germany are increasing in power at once steadily and rapidly; for, as Herr Bebel declares, every speech the Emperor makes secures for them thousands of adherents, adherents of whom quite a fair percentage now belong to the Intelligentia — are lawyers, professors, journalists, artists, etc. Already the party numbers nearly seven million members; it owns seventy-five journals, of which some thirty are issued daily; and the Berlin branch alone has under its control a revenue of £20,000 a year. At the General Election in 1874, their candidates received 351,671 votes; in 1884, although the Exceptional Laws were then in force, they received 549,990 votes; and in 1893, 1,786,738. Thus, already at that time they were numerically the strongest party in the Empire, as the Ultramontanes received only 1,468,000 votes; and the Conservatives 1,038,300. At the '98 General Election no fewer than 2,120,000 votes were recorded for the Socialists; and, at the last Election, that held only the other day, some 3,000,000. Thanks to the Emperor's speeches, thanks, too, to the new Tariff, Herr Bebel and his friends practically swept everything before them in the first ballot and captured seats everywhere — five out of six in Berlin, and, what is much more notable, eighteen out of the twenty-three seats in Hamburg, the most ultra-Conservative and clerical of all the States. Were every constituency of equal size in Germany, and thus every vote of equal value, the Socialist Party would already to-day be the dominant party in the Reichstag." — Edith Sellers, *August Bebel* (*Fortnightly Review*, *July*, 1903).

Throughout the year 1903 much excitement of

feeling was caused by the many complaints that were brought against officers of the army for brutal and insolent treatment of soldiers. No less than 180 convictions are said to have been obtained in the course of the single year, for cruelty in the use of the power which military rank confers. Several soldiers were found to have committed suicide to escape from the suffering and humiliation of their life in the service. Another excitement of angry discussion came often from the many prosecutions for *lèse-majesté* that were instituted at this time. In both matters a potent corrective was applied, without doubt, by the public feeling stirred up.

An official report at the end of the year 1903 showed the total number of Germans in the German colonial possessions in Africa and the South Seas was only 5,125, more than a fourth of the number being officials or in the military force. Since 1884 Germany had expended on its colonies about $75,000,000.

A. D. 1906-1907. — Popular Demand for better Representation in Prussia and elsewhere. — School "Strike" in Polish Provinces. — Dissatisfaction with Colonial Policy. — Refusal in the Reichstag of Increased Appropriations. — Dissolution by the Emperor. — Result of the Elections. — Popular Vote heavily against the Government. — Incongruous Coalition or "Bloc" secured by the Chancellor. — The democratic demand in Prussia and in some other German States, for a better representation in the legislatures than is afforded by their odious schemes of class election, became turbulent in the early part of 1906, and was met by strong military preparations for resistance by the Government. Notable demonstrations of popular feeling occurred in several cities, but with proceedings of violence only at Hamburg. Nothing was yielded to the demand; it was simply defied.

The hard Prussian determination to crush out Polish sentiment in the Prussian provinces of the kingdom was relentlessly pursued. Polish children in the schools were required to receive religious instruction in the German language, and punished if they refused to answer questions in that tongue. This provoked a "strike" which took over 100,000 pupils out of the schools. In dealing with it, the Government both fined and imprisoned parents, and even sent children to a reformatory, on the ground that their parents were incapable of giving them proper care.

The affairs of the German colonies in Africa became the subject of most heated and important discussion in the Reichstag during the last months of 1906. Both in German Southwest Africa and in German East Africa the obstinate revolts of native tribes were unsubdued, and the wars in the former were still requiring nearly 15,000 troops. The total German losses in Southwest Africa since the beginning of the outbreak of Hereros, Hottentots, and Witbois, were reported to have been 1750 killed, 900 wounded, 2000 disabled by disease. Popular feeling seemed to be turning very strongly against the whole colonial policy of the Empire. The economic promises of the undertaking were not looked upon as satisfactory. Statistical reports of the German capital invested in all German colonies excepting Kiao-chau, in China, showed a total of 370,000,000 marks ($92,500,000) of which 250,000,000 marks were classed as remunerative, 100,000,000 as "under development," 12,000,000 as unremunerative, and 8,000,000 as missionary property. The capital value of the total productions of German colonies was estimated at 616,000,000 marks ($154,000,000), half of which came from the Kameruns and Togo; but the revenue was only balancing the cost of administration. Ugly stories, moreover, of barbarity in the treatment of the natives, of official misconduct in other forms, and of private monopolies permitted, were told. On the whole, the colonial situation had created a temper in the Reichstag which was not friendly to the demand of the Government for increased appropriations to that department of administration. Even the Centrum or Clerical party, on which the Ministry counted for the reinforcing of the Conservatives of "the Right," refused the grant, and joined the Liberals, the Socialists, the Polish deputies, and other discontented groups in voting it down. As soon as the vote was announced, Chancellor Bülow arose and read a decree dissolving the House, which the Emperor had signed, in expectation of the defeat, that morning, December 13.

It is a provision of the Constitution of the German Empire that "in the case of a dissolu-

tion of the Reichstag, new elections shall take place within a period of sixty days" (see CONSTITUTION OF GERMANY in Volume I. of this work). The elections were appointed accordingly for the 25th of January, 1907. The preparatory canvass, compressed within six weeks, was one of extraordinary vigor, especially on the side of the Government, even the Emperor, as well as the Chancellor, making personal appeals. The efforts of the latter were directed especially against the party of the Center, from its past dependence on which for support the Government was most anxious to escape. These efforts were so little effective, however, that the Centrists gained two seats in the election, carrying 110. The heaviest losers were the Socialists who, though they gained a quarter of a million of electoral votes, yet secured 36 fewer representatives in the Reichstag than they had before, electing only 43.

Regarded as a *plébiscite*, the election went heavily against the government. That is to say, if the elected Reichstag had been truly representative of the popular vote, the Government could have made no combination of parties in it that would have given it support. As it was, the voters were so unequally represented that Chancellor Bülow was able, by dexterous compromises, to make up a precarious coalition, or "bloc," of Conservatives with National Liberals, and even Radicals, against Socialists, Clericals or Centrists, Poles, etc., which carried his administration through nearly three subsequent years.

Somewhat detailed, the election resulted as follows: The parties which gave subsequent support to the Government for a time secured 215 seats in the Reichstag, gaining 33, thus distributed: Conservatives 108 (gain 13); National Liberals 53 (gain 5); Radicals 51 (gain 15).

The parties in opposition won 182 seats, — a net loss among them of 33, — thus: Center 110 (gain 2); Socialists 43 (loss 36); Poles, Alsatians, etc. 29 (gain 1).

The popular vote in the election was divided among these parties as follows:

In the parties of the "bloc" —	
Conservatives (including Agrarians, Anti-Semites, etc.)	2,235,000
National Liberals	1,655,000
Radicals	1,226,000
Total for Government	5,116,000
In the Opposition —	
Socialists	3,259,000
Center	2,262,000
Poles, etc.	626,000
Total against the Government	6,147,000

To show what the Socialist vote really indicated, the following statement of the vote cast and the seats won by that party in successive elections of the past twenty years is interesting.

	Vote.	Seats won.	Seats that equal apportionment would have given.
1887	763,000	11	40
1890	1,427,000	35	80
1893	1,787,000	44	92
1898	2,107,000	56	108
1903	3,011,000	79	125
1907	3,259,000	43	116

GERMANY, 1906–1907

It is evident that the surface-show of results in the election cannot be taken for a true indication of the prevalent state of mind in the Empire. The Centrists or Clericals, for example, elected more than twice as many deputies as the Socialists, by nearly 1,000,000 votes less. The Socialists polled about 250,000 votes more than in 1903, and yet lost 36 seats. The inequity in the apportionment of representatives which produced this travesty of representation had some beginning, no doubt, in the organization of the imperial system, thirty-six years before; but it had been aggravated by the enormously disproportionate growth of cities ever since. That one constituency in Berlin, with a present population of nearly 700,000, had the same representation as a town of 60,000 people is doubtless an extreme instance of the inequalities that had come about, but the distortion was universal, and altogether in favor of the country landowning class. The Socialists polled some 250,000 more votes than in 1903, and this was reckoned as an increase substantially commensurate with the general growth of population in four years. Hence socialism may be said to have neither gained nor lost footing in the empire; but hitherto it had been showing rapid gains.

"The Centrum is one of the queerest, most paradoxical parties to be found in any country. It is usually called ultramontane by its enemies because it has its *raison d'être* in safeguarding the interests of the Catholic Church; yet it has not scrupled at times to disregard the wishes of the Vatican in respect to German internal affairs; and the Vatican, on its part, carefully avoids identifying its interests with those of the Centrum, since it is sure of getting better results through direct diplomatic action at Berlin. 'The Centrum is an incalculable party,' said Prince Bülow last winter in a campaign letter; 'it represents aristocratic and democratic, reactionary and liberal, ultramontane and national policies.' The party lives upon a reminiscence, its defeat of Bismarck in the *Kulturkampf* [see, in Vol. II. of this work, GERMANY: A. D. 1873–1887]; but since that time it has been without any sound reason for its existence. . . .

"The government's attempt to break the power of the Centrum had already been tried by Bismarck in 1887 and again by Caprivi in 1893, and it had failed. Bülow's step was accordingly a display of courage which the country had not been accustomed to expect from him. His breach with the Centrum, however, proved a most popular issue with the non-Catholic electorate; a thrill of exultation was its first response to the dissolution, and this feeling persisted throughout the campaign. Many of the most intelligent voters had hitherto stood aloof from politics owing precisely to the predominance of the Centrum; but they now greeted with enthusiasm the opportunity to extricate the government from its yoke. 'University professors, artists, and literary men organized an 'Action Committee' which plied these stay-at-home *Intellektuellen* with campaign literature." — W. C. Dreher, *The Year in Germany* (*Atlantic Monthly, Dec.*, 1907).

As stated and illustrated above, the election gave the Government no majority of natural supporters. For the carrying of its measures it was left dependent on a coalition of Liberal with

Conservative votes. The alliance was an incongruous one, produced by nothing but a common opposition to Socialists and Clericals, and it brought the Liberals into an utterly false position. Within the first year there were signs of a Liberal revolt from it; whereupon the chancellor made known that he would resign if the supporting coalition or "bloc" was not maintained. To avoid such a governmental crisis the Liberals were said to have given promises of continued support.

The attitude thus assumed by the German chancellor toward the Reichstag is practically that of an English prime minister toward the House of Commons, and it creates a precedent which must make it very difficult, if not impossible, for imperial ministers to recover the defiantly independent posture of former times. Without verbal amendment, perhaps, but incidentally and informally, by force of circumstances, the absolutist features of the German constitution are manifestly dropping away.

A. D. 1907.—Statistics of Population, — Birth Rate and Death Rate.—"The official report upon public health in Prussia for the year 1907 has just been published [May, 1909], and includes the latest available statistics regarding the movement of the population of Germany. The figures confirm the view, which is not always admitted, that a satisfactory decrease in the death-rate is still accompanied by a persistently unsatisfactory decrease in the birth-rate.

"Prussia may be regarded, roughly, as comprising two-thirds of the German Empire. The population of the empire on December 1, 1905, was 60,641,278, and the population of Prussia was 37,293,324. On January 1, 1907, the population of Prussia was 37,908,104. During the year 1907 the excess of births over deaths was 578,687, as compared with 595,942 in 1906, 514,941 in 1905, 562,387 in 1904, and 527,263 in 1903. Although the Prussian figures are not always a sufficient index, it may be estimated that the excess of births over deaths in the whole empire during 1907 did not exceed 900,000. The comparatively satisfactory total increase of population is due to a decline in the death-rate to 17.96 per 1,000 of the population — the lowest rate ever recorded. In Silesia, in Hohenzollern, and in both West and East Prussia the rate exceeds 20 per 1,000. In the city of Berlin, on the other hand, the rate is 15.62, and in Berlin (outside the city) only 14.79. For the most part a high death-rate is set off by a high birth-rate. In Westphalia and the Rhine Province alone is a high birth rate accompanied by a death-rate below the average. As regards ages at which death occurred, the statistics show a considerable decrease in infant mortality, although deaths under the age of one year were 31.14 per cent., or nearly one-third, of the whole number of deaths. While the death-rate was in 1907 the lowest ever recorded in Prussia, the birth-rate was the most unsatisfactory. The total number of births was less by 10,621 in 1907 than in 1906, and was actually less by 1,058 than in the year 1901. The birth-rate per 1,000 inhabitants declined to 33.23, as compared with 34.00 in 1906, 33.77 in 1905, and 35.04 in 1904."—*Berlin Correspondence London Times, May* 27, 1909.

The same correspondent reported, June 19, a further publication of statistics, which prove the Prussian returns, previously given, "to have been a fairly accurate index to the movement of population in the whole Empire. There is a marked decline in the birth-rate, which fell to 33.2 per 1,000 inhabitants, as compared with 34.08 in 1906. The death-rate fell to 18.98, as compared with 19.20 in 1906. The excess of births over deaths was 882,624, as compared with 910,275 in 1906. The excess, however, of births over deaths (natural increase of population) was greater in 1907 than in any previous year except 1906 and 1902 (902,243). The decline in the birth-rate, which stood at 41.64 in 1877, 38.33 in 1887, and 37.17 in 1897, as compared with 33.2 in 1907, is now attributable to a falling off in the number of births in every part of the Empire except Westphalia, and in Westphalia the number of births is not quite keeping pace with the total growth of population. The decrease in the number of births in the whole Empire in 1907 was 23,766, or 1.1 per cent. In Saxony the decrease was 3 per cent., and East Prussia, West Prussia, and Pomerania show about the same percentage. As regards the death-rate, which stood at 28.05 in 1877, 25.62 in 1887, and 22.52 in 1897, as compared with 18.98 in 1907, there is a steady decline in the infant mortality rate in all parts of the Empire, but especially in large towns."

A. D. 1907.—Rapid Decrease of Agricultural Population.—"The results of a census of occupations, taken in December of 1907, has just been published and shows a remarkably rapid shifting of the population of Prussia from agriculture to industry and trade. The number of persons engaged in industry and trade was increased by 1,500,000 from 1895 to 1907, while the number engaged in agriculture was decreased by 500,000. This means that the non-farming population rose from 50 to 66 per cent. in twelve years."—*Press Report from Berlin, Feb.*, 1909.

A. D. 1907 (Nov.).—Treaty with Great Britain, France, Norway, and Russia, guaranteeing the Integrity of Norway. See EUROPE: A. D. 1907-1908.

A. D. 1907-1908.—The Scandals connected with the Trials of Editor Harden.—Maximilian Harden, editor of the *Zukunft*, made attacks on the character of Prince Eulenburg and Count Kuno von Moltke, in 1907, on account of which the latter brought a libel suit against him. "The charges not only affected the character of the persons accused, but affirmed that they had constituted a kind of kitchen cabinet, or 'Camarilla,' and had again and again given the Emperor misleading information and had exerted a very unfortunate influence over him. The case aroused intense interest throughout Germany, and indeed throughout Europe; and in spite of the unspeakable nature of the charges, the testimony was widely reprinted, and much more frankly, it may be said in passing, than would have been possible for the yellowest journalism in this country. Harden was acquitted, and the plaintiff was sentenced to pay the cost of the suit. Taking into account the exalted political position of the accused, and the great respect in which the Imperial court is held in Germany, this action

of a German judge was regarded as sustaining the high character of the German courts for independence. A criminal suit was then brought by the public prosecutor, at the instigation of Count von Moltke and his associates, on the charge that Harden had committed an offense against public morals. On this trial the same witnesses appeared as on the former trial, but a great change had taken place in their memory of the transactions to which they had testified on the first trial. They either contradicted or repudiated their former statements to such a degree that their evidence was discredited and Harden's defense was broken down. Harden was found guilty and sentenced to four months' imprisonment. What changed the attitude of the witnesses is a matter of guesswork. It has been charged that their change of front was due to very powerful influences brought to bear upon them." — *The Outlook, Jan.* 18, 1908.

An appeal was taken by Harden to a higher court. Official investigations which followed the trials resulted in the court-martialing of Count Lynar and General Hohenau, the former of whom was sentenced to fifteen months' imprisonment, while the latter was acquitted. In May, 1908, Prince Eulenburg was arrested on charges of immorality, but appears to have been so shattered in health that he could not be brought to trial. Substantially, Editor Harden has been vindicated.

A. D. 1907-1909. — Opposition to the "Navy Fever." — Views of Herr von Holstein and Admiral Galster. See (in this vol.) WAR, THE REVOLT AGAINST: A. D. 1907-1909.

A. D. 1908. — Maintenance of the "Bloc." — Two good measures of legislation. — Revision of the Bourse Law and the law regulating meetings and association. — More vigorous Germanizing of Polish Prussia. — "Although many members of the Bloc thought its enemies justified in predicting that it would speedily break down, the combination did hold together during the past session. It did more; it passed at least two good laws. It revised the Bourse Law in a manner fairly satisfactory to the financial community, so that swindling speculators will henceforth find it less easy to get the sanction of the courts for repudiating debts incurred in stock operations. Another law regulates for the first time on a national basis the right of assembly and association, which had hitherto been in the hands of the individual states. It is interesting to note that this is another important step in the centralizing tendency in Germany. . . .

"The measure foreshadowed in my last article for the forcible acquisition of Polish estates was duly laid before the Diet. The discussion of the bill brought out intense antagonisms, and the line of cleavage between the parties was not along Bloc lines. The Radicals joined with the 'Centrum' in opposing the dispossession of the Poles. As finally passed, the bill gives the Government the right to acquire, under the law of eminent domain, a maximum of 174,000 acres in the provinces of Posen and West Prussia, and to borrow $65,000,000 for this purpose and for further prosecuting settlement work. The final reading of the bill in the House of Lords stirred that usually somnolent body to a remarkable degree. The vote there showed how deeply, and on what uncommon lines, this radical measure had divided the minds of the people. While most of the titled lords of the land, including many intimate friends of the Kaiser, voted against dispossession, the university professors and mayors of liberal municipalities voted mostly for it." — W. C. Dreher, *The Year in Germany* (*Atlantic, Jan.*, 1909).

In his advocacy of this measure Prince Bülow proclaimed the reasons for it without reserve. "Can we," he asked, "do without the two Polish provinces, one of which begins within 75 miles of Berlin? That is the crucial point of the situation; there is no doubt about it. Our eastern provinces constitute the point of least resistance in the public body. We dare not wait until the grave disease, with its probable irreparable consequences, sets in." An English view of the measure is presented in the following:

"Prince Bülow is only developing the policy of Bismarck, who perceived, as Frederick the Great did before him, that the possession of Posen was vital to the Prussian State, and who held that the surest way to secure that province was to plant German settlers on Polish land. The strategical importance of Posen has been a cardinal article in the political and military creed of all Prussian statesmen and soldiers for generations. Posen is of far more importance to Prussia than is Ireland to Great Britain, and the true motives which have induced Prussian statesmen to make the agrarian proposals embodied in Prince Bülow's Bill are to be found not in their comparatively trifling difficulties with Liberals, Radicals, and Revolutionists at home, but in the foreign policy of the Court of Berlin. . . .

"That portion of Poland which was given to Prussia by the Congress of Vienna has been administered by that Power in accordance with the spirit of Frederick the Great. The object of Frederick was to develop the intellectual and material resources of his Polish possessions, making them an integral part of the Prussian monarchy, and gradually eliminating all recollections on the part of the Poles of their having once been an independent nation. This policy to be successful should be carried out by officials with intellects as clear, if not as powerful, as that possessed by Frederick himself. The Prussian officials, however, who have administered Posen since 1815, have not always risen to the height of their mission. Edward Henry v. Flottwell, who was charged with the government of the province from 1830 to 1840, alone understood the conditions of success. He knew that in politics it is as mischievous as it is futile to endeavour to reconcile the irreconcilable. The efforts made in that direction after 1815 strengthened the revolutionary spirit in Posen. On the retirement of Flottwell, Frederick William IV. tried again to propitiate Polish national feeling, with the result that the irreconcilable forces grew in strength, and in March, 1848, the Poles were the driving-power of the Revolutionary movement in Berlin. . . .

"As far as international life is concerned the true significance of the Polish question is in the relations it has created between the three great Northern Powers. Those between Prussia and Russia have in consequence become extremely intimate. At the present moment that intimacy is as great, if not greater, than at any previous time. Besides the German Ambassador at St.

Petersburg and the Russian Ambassador at Berlin, there is a German military officer at St. Petersburg, and a Russian military officer at Berlin, who are especially charged to convey intimate communications between the Czar and the Kaiser. In spite of the alliance between Russia and France, which was concluded by the former Power, mainly for financial reasons, and which has never much disturbed the equanimity of Berlin, it is quite certain that in no conceivable circumstances will there be a real breach between Prussia and Russia. The Government of the Kaiser must and will make every possible concession to Russia rather than provoke a serious breach. This is the true inwardness of the policy as regards Poland. As long as Posen continues Polish Germany will be largely dependent on Russia."—Rowland Blennerhassett, *The Significance of the Polish Question* (*Fortnightly Review*, *March*, 1908).

Dr. Dillon, who reviews European politics regularly for the *Contemporary Review*, says with positiveness that the Polish expropriation bill was passed "against the better judgment of press, bar, gentry, political parties and people." He cites it as an illustration of the absolute domination under which the Prussian legislature is held, and maintains that national feeling and opinion have, practically, no influence over Prussian policy and no weight in the conduct of Prussian affairs. Concerning motives behind the Polish expropriation, this well-informed writer reports it to be a prevalent belief in Austrian and other political circles that the bill was driven through as a military measure, in anticipation of some future hostile alliance between Russia and Great Britain. It seems to be the belief that the Kaiser, if not his ministers, is haunted with the expectation of a war to be fought with those powers in combination, and is determined that, if a British fleet in the Baltic is ever coöperating with a Russian army, there shall be a population of patriotic Germans instead of disaffected Prussian Poles between them and Berlin.

A. D. 1908.—The leading motive of German Foreign Policy officially stated. — The Principle of the "Open Door." — Colonial Expansion unnecessary. — "Usually it has been stated that Germany has an annual increase of population of 800,000, that these new masses must be supported by manufactories, and that the German Empire will thus be forced, with or against its will, into expansion, in order to procure the raw material and to establish the requisite markets for its industrial growth. The annexation of Holland and Flemish Belgium, containing Antwerp, is described as a mere preliminary necessary to make possible such measures of expansion. Germany must enlarge its maritime basis, and should have control of the Lower Rhine and its harbors. To the alien, these arguments may seem plausible enough. Whoever is acquainted with existing conditions, however, knows that, though seemingly plausible, this is not the truth.

"In the first place, it is not true that colonial expansion is a necessity for Germany, resulting from its industrial growth. The impetus given to German commerce and German manufactures is to be ascribed far more to the increase in the buying capacity of other nations—England, France, Russia or America—than to all the German colonies combined. Germany needs no colonies; what she wants is merely free competition on all seas, the open door, and the right to cooperate freely on an equal footing with all other commercial and industrial nations, in opening up new and as yet unopened districts and markets. Hence the principle of the open door is the leading motive of the foreign policy pursued by Germany. It is the red thread that winds itself through the Eastern-Asiatic, the Oriental and the Moroccan policy of the German Empire. The high quality of all German products obviates the necessity of unfair preferences accruing to political power. All they need is a fair chance to compete on equal terms with other countries. The world is large enough, and rich enough, in still dormant possibilities, to admit of a pacific co-operation by all nations in this great work."—Baron von Speck-Sternburg, Imperial German Ambassador to the U. S., *The Truth about German Expansion* (*North American Review*, *March*, 1908).

A. D. 1908 (April). — Passage of Law defining for the Empire at large the Rights of Association and Public Meeting. — The rights of association and public meeting were determined for the Empire at large by an enactment of the Reichstag, for the first time, in April, 1908. Hitherto each State had regulated these fundamental matters of political freedom by legislation of its own, some with considerable latitude, and others, especially in the North German States, with a narrow restraint, subject, in an intolerable degree, to the discretion or will of the police. The national law now brought into force, superseding the local legislation, enlarged greatly the liberty of citizens to associate themselves for legitimate purposes and to hold public meetings. An attempt to forbid the use of any foreign language at public meetings was defeated; but public speaking in other languages was sanctioned only in districts where 60 per cent. of the population use the foreign tongue. This does not apply, however, to international congresses in Germany, or to meetings of electors for the election of legislative representatives, Federal or State; and the States have some privilege of modifying the rule.

A. D. 1908 (April). — Treaty with Denmark, England, France, the Netherlands, and Sweden, for maintenance of the Status Quo on the North Sea. See (in this vol.) EUROPE: A. D. 1907-1908.

A. D. 1908 (Nov.). — Excitement in Europe over a published Interview with the Emperor. — What may fairly be called a "row" in the European world, and of the greatest liveliness in Germany itself, arose, early in November, 1908, from the appearance in the London *Telegraph* of a reported interview with the Emperor by "a representative Englishman who long since passed" it was said, "from public

into private life." The writer characterized it as "a calculated indiscretion," which was expected to prove of great public service, by removing misconceptions of the Emperor's feelings toward the English. The effect produced by the publication left no doubt of its indiscretion, but proved likewise that it had been very badly miscalculated. In his anxiety to convince the English of his friendliness to them the talkative Emperor made known that France and Russia, during the Boer War, had invited him to join them in a demand on England to stop it, and claimed credit for having prepared for the British army in that war a plan of campaign, which could be found at Windsor Castle, and which was on lines that Lord Roberts had followed in his subsequent operations to a large extent.

How flattering this story was to English pride, and how pleasing to the Governments of Russia and France, might be imagined very easily; but it would not have been so easy to anticipate the outbreak of anger that it exploded in Germany. The Empire itself was surprised by that. It had been submissive to so many "indiscretions" of speech from its Kaiser that it could hardly have expected to be moved excitedly by anything from the imperial lips. But, with the indiscretion in this case, there seemed to be a reckless interference with the appointed organs provided for dealing with foreign affairs, doing mischief to the whole system of governmental administration. This proved, however, to be less the fact than appeared. According to subsequent explanations, the Emperor had sent the manuscript of the interview (which embodied the substance of a number of conversations with several Englishmen) to the Chancellor, Prince von Bülow, for his judgment on it, and the latter, not recognizing its character, had not read it, but passed it to a subordinate, who simply verified the facts stated in it and returned it to the Emperor as approved.

This revelation convicted the Chancellor very clearly of a careless performance of duty in his office, and laid on him a large share of responsibility for the mischievous publication. He offered his resignation to the Emperor and it was refused. Constitutionally he was responsible only to the Emperor; the Reichstag could not hold him to account, in any practical way, nor did it attempt to do so; but there was such plain speaking in the Chamber from all parties, Conservative, Liberal, and Radical, during two days of debate, November 11 and 12, as never had been heard in Germany before. Whatever the language of the Constitution might be, it was made known beyond a question, then and in a later discussion, that Germany expected the crowned head of its Government to conduct himself — in the words of one speaker — as "the first servant of the State," preserving his own august irresponsibility only by acting and speaking in public matters, through ministers responsible to the elected representatives of the people. "We wish," said Herr Bassermann, leader of the National Liberals "so far as it is possible, for trustworthy guarantees against the intervention of the personal régime," and before he sat down he declared with the approval of the House: "It is the desire of my friends that the Kaiser should be thoroughly informed with regard to these proceedings. . . . Although fully convinced that even these utterances of our Kaiser sprang from his deep anxiety for the welfare of his people, we must give expression to the earnest desire that the Kaiser will, in his political activity, impose upon himself the reserve proper to a Constitutional ruler."

Dr. Wiener, for the Radicals, corroborated the previous speaker by declaring that the article in question had filled the entire nation with embitterment, consternation, and rage, because it was felt that "confidence in our trustworthiness had been shaken. Everywhere it had been recognised that Germany's prestige had received a severe blow." The trend of his speech was to show that the so-called "interview" had been interpreted in Germany as a crass specimen of personal régime which was distasteful to the nation in its entirety. Constitutional Government was what was wanted: the Minister, not the Sovereign, should be responsible to the people.

Prince Hatzfeld, of the Imperial party, who stands in great favor with the Kaiser, impressed upon the House that the Chancellor and not the wearer of the crown was the responsible personage in the State. Prince von Bülow, speaking on the first day of debate, declared that grave injury had been caused by the publication in the *Daily Telegraph*. He added that immediately on reading the article in question, as to the disastrous consequences of which he could not for a moment be in doubt, he sent in his resignation, taking upon himself full responsibility for the mistakes which had been made in handling the manuscript. And he followed this up with the following significant statement: "Gentlemen! recognition that the publication of these utterances has not in England had the effect anticipated by his Majesty the Emperor, and, on the other hand, in Germany has called forth great excitement and painful regret, will — this firm conviction I have won in these sad days — induce his Majesty the Kaiser in future to impose upon himself, even in his private conversations, that reserve which is indispensable to a consistent policy and to the authority of the Crown. If that were not so, neither I nor any of my successors could accept responsibility for it."

Proposals of amendment to the Constitution, carrying such ministerial responsibility into the fundamental law, were advocated without success; but the unwritten constitution which public opinion moulds slowly in every country took a notable shaping from these debates.

For some time the Emperor was very silent, and kept himself unusually retired. Having occasion to speak publicly at Berlin on the 21st of November, when the centennial of the formation of the City Council was celebrated, it was reported that "Prince von Bülow stepped forward and impressively handed him a printed sheet," from which, contrary to his custom, he read his remarks.

A. D. 1908-1909. — Attempted Reform of Imperial Finance and its Defeat. — Breaking of Chancellor Bülow's "Bloc" in the Reichstag by the Government's project of New Taxes. — Triumph of the Agrarian Interests in renewed Coalition with the Center. — Resignation of Chancellor Bülow. — His successor. —Expenditure outrunning income from year to year — thanks mainly to the burden of army and navy — with deficits made good by loans, mortgaging the future in an ever-growing public debt, had forced the Government, in

1908, to a resolution, not that the imperial expenditure on armament must be cut down, but that imperial taxation must be increased. The Governments of the Federated States, which are directly represented, as such, in the Federal Council, were assenting parties to this conclusion, and the resulting measure was regarded, in all the proceedings which followed, as emanating essentially from that senatorial branch of the Parliament of the Empire.

Preparatory to the undertaking, a new Minister of Finance, Herr Reinhold Sydow, was brought into office, and early in November, 1908, he submitted to the Reichstag a bill providing for new taxes that were estimated to add 500,000,000 marks ($125,000,000) yearly to the Treasury of the Empire. The scheme included an extended and augmented inheritance tax, new methods of deriving revenue from spirits and tobacco, added excise duties on beer and bottled still wines, taxes on electricity, gas, advertisements, etc. The bill went to the Finance Committee of the Reichstag and developed there, during the next five months, an antagonism of class interests, and consequently of parties, which completely shattered the "bloc," or coalition, which Chancellor Bülow had contrived to organize in 1906 for the support of his administration. The proposed new inheritance tax or death duty was especially obnoxious to the land-owning classes, — the agrarian core of German conservatism, — and no influence from the Government could save it from being stifled in their hands. Other oppositions were rallied against the proposals which touched spirits, tobacco, electricity, gas, and newspaper advertisements, and by the 20th of March, 1909, it was known that the Finance Committee had rejected or would reject all but about one-fifth of the new taxation which the Government and the Federal Council claimed from it.

A month later the Government signified its abandonment of a present expectation, at least, of financial reform, by inviting subscriptions to a fresh loan. The budget wrangle in Committee went on, however, until the 18th of May, when the National-Liberals, the Radicals, and the Socialists of the Committee withdrew from it, the Chairman, Herr Pansche, a National-Liberal, resigning, refusing to take any further part in proceedings which they wholly disapproved. This left the Conservatives, the Center or Clerical party, and the Poles, who seem to have practically organized an opposition "bloc," which proceeded to frame a budget on entirely different lines from that which the Government desired, one of its contemplated features being a tax on purchases and sales of stocks. On the 18th of May the Reichstag was adjourned until the 15th of June, and a month of rest from the controversy was enjoyed.

When the Reichstag reassembled the Government laid before it several proposals of taxes to be substituted for those which the Committee had rejected. Inheritance taxation was still prominent in the revised scheme, but considerably modified in its range and reduced in productiveness. With it went an extensive readjustment of stamp duties, applied to bonds, stock certificates, transfers of real estate, bills and checks and a tax on policies of fire insurance. This revised budget of additions to the Imperial revenue was estimated to yield about $85,000,000. It fared no better than the original proposals of the Government. A week after its introduction the Reichstag adopted the tax on securities (called the *Ostervungssteuer*) which the Government disapproved, and on the 24th of June it rejected the new inheritance tax bill, by 194 votes to 180, the minority being composed of National-Liberals, Radicals and Socialists, with a few from the Conservative side. On the next day, rumors of the intended resignation of Prince Bülow were checked by the publication of the following semi-official statement: "Prince von Bülow will remain as chancellor of the empire. The Reichstag will not be dissolved. The chancellor holds that his duty is to be in accord with the conviction of the Federal Council of the necessity to bring about the passage of a taxation measure, but with the exclusion therefrom of duties on stock transfers, the output of the grain mills, and the exports of coal. Financial reform must now come into operation. What the chancellor will do after this has been accomplished is his personal affair."

Nevertheless, it was made known on the 27th that the Chancellor had offered his resignation to the Emperor, who had declined to accept it, pointing out "that in the unanimous conviction of the Federal Governments the early achievement of finance reform is a vital question for the internal welfare of the Empire, as well as for its position in relation to foreign countries. In the circumstances he could not take into closer consideration the fulfilment of Prince Bülow's wish to be relieved of his offices until the labours for the reform of the Imperial finances should have produced a result of a positive kind which the Federal Governments could accept." To this statement a proviso was added, semi-officially, next day, the following: "Subject to the rejection of those taxation proposals which would be injurious to the general interest, and therefore impossible of acceptance by the Federal Governments, the Imperial Chancellor was unwilling not to comply with the Emperor's desire. Nevertheless, having regard to the political development which was manifested by the division on the inheritance tax, he is irrevocably resolved to retire from office immediately after the accomplishment of finance reform."

Then followed negotiations with the Conservative-Clerical majority now fully in control of the Reichstag, the Government yielding step by step, and the Federal Council coming openly into the management of the negotiations, the Chancellor falling into the background, and waiting only for permission to lay his office down. In the resulting budget of new taxes there was very little saved of the "financial reform" which the Federal Council and the Chancellor had undertaken to introduce. On most points the land-owners had their way. The character and effect of the legislation accomplished in the early days of July were described thus by a Berlin correspondent of the New York *Evening Post*, who wrote on the 11th of the month: "The *leitmotif* of the bill is that property shall be protected and industry shall pay. Even on the reckoning of the new majority the ratio between indirect and direct taxation in the scheme is as 1¼ to 8¼, but in reality property comes off far better. . . . The large land-owners will not be hit at all. The only tax that could touch them to any appreciable

extent is the stamp duty on transfers of real estate. But the remedy lies in their hands; they need not sell, and, in any event, of the $10,000,000 at which the returns are estimated only $1,250,000 at most falls on landed property. If the spirits bounty to be paid by the Government to the spirit distilleries (which are in agrarian hands) is set against this sum, it will be seen that the agrarians do not only *not* suffer, but net a profit of some ten millions of dollars. Most of all it is the consuming classes that are the victims of the new majority's taxation proposals. Every cup of coffee, the staple nourishment of the German workingman's family, every cup of tea, every glass of beer and schnapps, the staple refreshment of the German workingman, will cost more, the total sum to be derived from these sources reaching $34,250,000, which, with the duty on the poor man's cigar, amounts to over $60,000,000. Adding to this 30 per cent. for the increase in the middleman's prices, the total burden of the consuming classes reaches over $80,000,000, or an increase of $7.50 on the workingman's household expenses a year."

On the 19th of July the session of the Reichstag was closed by Imperial decree. On the 14th the following announcement appeared in the *Imperial Gazette:* "His Majesty the Emperor and King has been graciously pleased to accede to the request of the Imperial Chancellor, the President of the Ministry, and Minister for Foreign Affairs, Prince Bülow, to be relieved of his offices, and has conferred upon him the High Order of the Black Eagle with brilliants. His Majesty has been graciously pleased to appoint Dr. von Bethmann Hollweg, Secretary of State for the Interior, Minister of State, to be Imperial Chancellor, President of the Ministry, and Minister for Foreign Affairs." Herr Sydow now resigned from the secretaryship of the Imperial Treasury, and was made Prussian Minister of Commerce, in place of Herr Delbruck, who succeeded the new Chancellor as "Imperial Secretary of State for the Interior and representative of the Imperial Chancellor." Herr Sydow's place in the department of the Imperial Treasury was taken by Herr Wermuth

A. D. 1909 (April). — Economic Conditions. — Gain of Fifteen Years in National Wealth. — Increased Cost of Living. — Diminished Savings. — Check on the Overcrowding of Towns. — A report by the British Consul-General on the trade and commerce of the consular district of Frankfort-on-the-Main for the year ending April 30, 1909, gave the following items of interest touching general economic conditions of the year.

Early in 1909 the national wealth of Germany, which had been estimated at 230,000,000,000 marks 15 years ago, was estimated to have reached 350,000,000,000 marks — *i. e.*, an increase of 50 per cent. in half a generation.

"The cheapening of all manufactured commodities in comparison with the price they had reached during the end of the boom has failed until now, in spite of an unprecedented supply of cash, because the development w' .. had taken place behind the wall of protection — the system of syndication — has killed free competition at home and has unduly raised the cost of the raw material needed by the finishing industries. The agricultural protection as well as the industrial has, moreover, increased the cost of living and has narrowed down the margin of profit which might have been used like a safety valve for reductions of price to revive trade at home or facilitate competition abroad. Syndication and protection have in fact combined to deprive German manufacture of that elastic cheapening power which ought chiefly to revive trade during the period succeeding a commercial high tide. At the same time the increased protection of the home market has admittedly rendered foreign markets more difficult for the German manufacturer."

A. D. 1909 (Sept.). — Latest Statistics of the Social Democratic Party. See SOCIALISM: GERMANY.

A. D. 1909 (Oct.-Dec.). — Socialist Gains in By-elections, etc. — Changed relations between Parties and the Government. — Several by elections for the Reichstag and elections to the diets of Saxony and Baden in these months showed somewhat startling gains for the Socialists. In the Saxon Diet they won 25 seats, whereas in the late chamber, elected in 1907, they had held but 1. Both the Conservatives and the National Liberals were losers in the contest, the former most heavily. The Radicals shared a few of the gains. In the Baden Diet the Socialist gain was 8. At a by-election in one of the Brandenburg divisions the Socialists increased their vote by more than a thousand.

The Reichstag was reopened by the Emperor on the 30th of November. On the organization of the House, Dr. Herman S. Paasche, National Liberal, declined election as Second Vice-President, stating that the National-Liberal party had decided unanimously not to accept office in the reorganization of the House. The Imperial party, or free Conservatives, also declined to take part in the organization, while the Radicals went so far as to decide that they would cast blank votes. These three parties are determined to place the full responsibility for the coming legislation upon the German Conservatives and Clericals.

This new attitude of parties, as one side of the sequence to the dissolution of the *bloc* of the past two years, and to the retirement of Chancellor Bülow, was responded to most appositely on the side of the Government by the new Im-

perial Chancellor, Dr. von Bethmann Hollweg, when he made his first speech in that capacity to the Reichstag, December 9th. In not many words he made it plain that the Imperial Government's policy now was "to stand aloof from parties and groups of parties; in short, that the government of Germany was not a government by party. Governmental measures would be submitted to the Reichstag for adoption, but he was not disposed to define the constellation of parties which, he thought, would support these measures. The recent political crisis over the taxation bill had made no change in German institutions, he continued. Radicalism strove to divide all Germany into two political camps, but the existence of such a dualism was a fiction devised for party objects. It could not contribute to the sound development of the country for every proposal to be classified as either radical or reactionary. Germany, the chancellor affirmed, needed continuous and steady policies, both at home and abroad, to satisfy the people to the end that their work, either material or intellectual, might be undisturbed by disorders or experiments." His words in part were as follows:

"As decidedly as the separate parties have ever refused, and still refuse, to be Government parties — and I personally can thoroughly understand it — so little will a Government in Germany ever be able to be a party Government. With the difficulties which arise from this fact every German statesman has had to fight, and in this relation of things, which is historic and based upon the peculiarity of our party life and of our State institutions, the last crisis has altered nothing whatever. I do not shut my eyes," continued the Chancellor, "to the excitement of party politics which pervades the country." But he believed that there were wide circles of the German people who did not wish to live permanently on political excitement and recrimination. "What our people desires in the first place is not to be disturbed in its actual work, whether economic or intellectual, either at home or abroad, in the markets of the world, by unrest or experiments. It wishes to be supported and encouraged by a policy of continuity and stability at home and abroad." As in the past there had never been a single party which had given its stamp to German policy, so all parties must work together in the future. The question was not one of "actual collaboration" or of nervous anxiety about the creation of a temporary Parliamentary majority, but of the conviction that there was an obligation to work imposed by the community upon each of its representatives, and the certainty that this obligation would survive the present turmoil.

It is an interesting experiment which the new Chancellor is venturing on; but it seems to require a Bismarck in the Chancellor's shoes.

Of Mr. John Stewart Kennedy. — Nearly $30,000,000, out of an estate valued close to $60,000,000, was left to public institutions by John Stewart Kennedy, banker and railroad builder, who died early in November, 1909. The remainder of the estate was bequeathed to relatives and employés. The larger bequests to religious, educational, and benevolent institutions were the following:

Board of Foreign Missions of the Presbyterian Church in the United States	$2,250,000
Board of Home Missions of the Presbyterian Church in the United States	2,250,000
Board of Church Erection Fund of the General Assembly of the Presbyterian Church in the United States	2,250,000
Presbyterian Hospital in New York City	2,250,000
New York Public Library, Astor, Lenox, and Tilden Foundations	2,250,000
Metropolitan Museum of Art	2,250,000
Columbia University	2,250,000
Church Extension Committee of the Presbytery of New York	1,500,000
Trustees of Robert College, Constantinople, Turkey	1,500,000
University of the City of New York	750,000

American Bible Society	750,000
Presbyterian Board of Aid for Colleges	750,000
Charity Organization Society of the City of New York for its School of Philanthrophy, "to which I have already given an endowment of $250,000, or to the said school if the same be separately incorporated at the time of my death,"	750,000
United Charities, a corporation of the State of New York	1,500,000

GREECE: A. D. 1905. — Assassination of Prime Minister Delyannis. — His successors. — Theodoros Delyannis, the Premier of Greece, was assassinated on the 13th of June, 1905, by a revengeful gambler whose place had been closed by the police A new Ministry formed by M. Ralli conducted the Government until December, when its defeat in the election of a president of the representative assembly forced a resignation. It was succeeded by a Cabinet formed under M. Theotokis, the leader of the Opposition.

A. D. 1909. — The Government dominated by a Military League. — Its submission to the Dictatorship. — Whatever vitality may previously have animated the forms of constitutional government in Greece was extinguished suddenly in July, 1909, by a demonstration of power on the part of a league of army officers to give orders to it. The Military League was backed, evidently, by a strong popular feeling against the Government, partly well founded, perhaps, but largely due to an unreasoning desire for rash undertakings to secure the annexation of Crete. The revolution in Turkey had stimulated this by seeming to open opportunities for breaking the island away from the claimed sovereignty of the Turks. What Bulgaria had been able to do in the situation for herself, and what Austria had done in annexing Bosnia and Herzegovina, it must be that the Powers which held Crete in commission, so to speak, could do for Greece, in the present state of things, if Greece had a competent Government to deal with affairs. This seems to have been the feeling, to a large extent, which produced the Military League and the popular threatenings whereby the Ministry of M. Theotoki was impelled to resign office on the 17th of July. The new Cabinet constructed by the King, under M. Ralli, held the semblance of power a little more than a month, and then had to choose between dropping it and taking orders from the League. When it hesitated, and ventured an arrest of several leaders of the military combination, the latter, in a body, to the num-

GREECE

ber of over 500, with about 2000 of the men of their commands, took possession of a hill outside of Athens, on the 27th of August, and established there a menacing camp. Parley was then opened with them and they submitted a programme of demands which M. Rallí declined to accept, and resigned.

According to a manifesto published by the League on the 27th, its demands, summarized in a letter from Athens, were as follows: "The officers belonging to the Military League respectfully ask the King and the Government to carry out radical reforms, and especially to proceed with the reorganization of the army and navy, in order that Greece might not in the future have to undergo any more humiliations such as she had had to tolerate in the past. The commands held by the Royal Princes in the army and navy are considered by the league to be prejudicial to their own prestige and to the accomplishment of their duties. The officers consequently insist that the Crown Prince, who is commander-in-chief of the army, and the other Royal Princes, should not hold any command in the army. They demand that the army shall be controlled by a council composed of the commanders of the three divisions under the presidency of the eldest of them, and the superintendence of the Crown Prince. They further ask that the two War Ministries should be invariably entrusted to the best officers in the army and navy and not to civilians. Among the detailed features of their programme they ask that four classes of the reserve should be called to the colours annually for manœuvres, that a battleship of not less than 10,000 tons, and eight destroyers of not less than 150 tons each, should be constructed, that the existing three cruisers should be repaired, that all the useless small ships should be sold, including the Royal yachts, with the exception of one for the King, that a war school should be established, that a foreign general with some officers should be called in to organize a Staff service and to look after the theoretical and practical training of the army and navy, and that a more efficient corps of *Gendarmerie* should be organized. In order to provide the necessary funds to carry out these reforms the league suggests that large retrenchments should be made in the general Budget."

The King found a compliant premier, M. Mavromichalis, who submitted to these dictations in principle, amnestied the whole League, and took one of its leaders, Colonel Lapathiotis, into his Cabinet, as Minister of War. Since that day the actual Government of Greece has been transferred from the King, his Constitutional Ministers and the "Boule," or Legislative Chamber, to the Military League. The nominal Government turned a cheerful face to the world by publishing a semi-official explanation which began as follows:

"Now that the situation has become clearer it becomes plain that the sole object of the military movement was the reorganization of the army and the reform and improvement of the Administration. The movement was at no time directed against the King or the dynasty, nor had it as its object the diminution of the rights and privileges of the Crown or the violation of the Constitution. The request of the Military Committee that the Crown Prince and the Royal Princes should be relieved of their high commands in the army was only formulated in their Highnesses' interests, and with a view to relieve them of grave responsibilities likely to injure their prestige and in order to avert the discord and hatred which personal favoritism and the sympathies of the Princes would inevitably have engendered among the officers serving under them."

That the League had strong backing in the country was shown by popular demonstrations, one of which, at Athens, on the 27th of September, brought 50,000 people, it was said, to the Champ de Mars, to pass a resolution and to convey it to the King. "The resolution began by expressing profound satisfaction at the initiation of the struggle by the Military League against the mischievous influence of parties on State affairs, and against the misuse of interest in the army and navy, and . . . concluded by declaring the determination of the people to exercise constant supervision over the Government and the Chamber until their demands had been completely fulfilled.

"The demonstrators then marched to the Royal Palace, where the committee were received by the King and handed his Majesty the resolution. The King, after congratulating them upon the orderly and lawful way in which the people had made known their wishes, expressed his conviction that his Government and the Chamber would consider them and would vote the requisite laws."

The Chamber, however, was less compliant, and showed marked signs of refusing legislation for the removal of the royal Princes from active service in the army. This angered the military dictators, and fresh trouble was threatened. It was averted by the resignation of the Princes, and by the speedy adoption of the whole series of measures demanded by the League, no less than twenty-three bills being enacted within the space of an hour.

The dictatorial work of the League, however, had not gone far enough to satisfy one of its chiefs, a Lieutenant Typaldos, commander of a fleet of torpedo-boats and submarines, who suddenly set on foot a naval revolt of his own, withdrawing, with a few other officers and men, to Sulamis and seizing the arsenal there. But, having the League against him, Typaldos was easily put to flight, and was captured eventually in ignominious disguise. For a time after this all went smoothly, and the Government was credited with a number of good measures, which its military masters permitted it to adopt. The situation was ruffled again toward the end of December by some offensive words in the Chamber from the Minister of War, Colonel Lapathiotis, which a large part of the deputies resented. These gave notice that they would not enter the Chamber again while the Colonel remained in the Ministry. Fortunately, just at this time, the obnoxious Minister gave offense to his associates of the League, by promoting several officers without consulting them, and they were willing that he should be dismissed.

A. D. 1910.—Agreements for a restored Constitutional Régime.—The dismissal of Colonel Lapathiotis emboldened the party in the Chamber which follows the lead of ex-Premier Rallis to make some show of an independent opposition, and provoked thereby the most arro-

gant reminder yet given of the dictatorial power of the Military League. On the 2d of January two officers from the League appeared in the Chamber, bearing letters addressed to the Prime Minister and to the two leaders of Opposition parties, M. Rallis and M. Theotokis, requiring the Chamber to pass twenty-seven specified measures, besides the pending budget, and requiring the Government to recall its diplomatic representatives from Paris, Berlin, Vienna, and Rome. The messengers announced that they would return at 2 P. M. for a reply, and when they did so they were assured that the commands received would be obeyed. A few hours later the Premier received a fresh mandate to dismiss his Minister of the Interior. On this, he and his colleagues attempted to resign, but were so entreated by the King to remain and submit to the humiliating situation, rather than bring the country to a state of complete political wreck, that they did so, excepting the Minister of the Interior, who withdrew.

In the succeeding four weeks, negotiations appear to have been effected between the League and the leaders of political parties, with the result announced as follows in a telegram from Athens to the American Press, January 28: "An agreement was reached to-day by the Theotokis party, the Rallis party, and the Military League to convoke the National Assembly for a revision of the Constitution, with the condition that the league shall first be dissolved. The powers of the National Assembly will be limited as to the sections of the Constitution to be revised, and no interference with the royal prerogatives will be permitted."

King George assented to the proposed convocation of a National Assembly for the revision of the Constitution, though the existing Constitution would be violated by the method of procedure to be taken, since the choice seemed to lie between this and a complete wreckage of constitutional government. A Cretan leader, M. Venezelo, of high reputation for political sagacity, came to Athens on invitation and conducted a settlement of the affair with apparent success. The Mavromichalis Ministry gave way to another, formed under M. Dragoumis; a programme of constitutional changes to be laid before the contemplated National Assembly was agreed upon; the election of the Assembly was appointed for August next and its meeting for September, and the dissolution of the Military League was pledged. Such was the situation in the later days of March, 1910.

A. D. 1902. — Revolution and Civil War produced by a Blunder of Law. — Resignation of President Sam. — Election of General Nord Alexis. — An outbreak of revolution in Haiti occurred under singular circumstances on the 12th of May, 1902. As related in a despatch of a few days later by Mr. W F. Powell, United States Minister to Haiti, the circumstances were these: When, in April, 1896, General Theresias Simon Sam was elected President of the Republic (see, under HAYTI, in Volume VI. of this work), on the sudden death of President Hypolite, "Congress enacted a law requiring him to enter upon the duties of the Presidential office at once, and to remain in office until May 15, 1903. This law, it seems now," wrote Mr. Powell, "was not constitutional, as the constitution states: 'That upon the death, resignation, malfeasance in office, or removal therefrom of the President before the 15th of May (in any year) the cabinet or council of ministers is charged with these functions until the 15th of May, when the newly elected President shall assume the duties of the presidency; but if a President should accept office or enter upon the duties of the same prior to this time (15th of May), then his term of office must expire on the 15th of May of the year preceding the time that it actually expired, thus not allowing the incumbent to remain in office the full seven years, the time for which he was elected.'

"For some reason this provision of the constitution was not thought of or else forgotten, at the time General Sam was elected. No mention was made of this section until about a year ago, when the question was launched upon the public view by the enemies of the Government. The more this question was discussed the more potent it became, until it occupied the attention of all classes to the exclusion of all other matters. . . . The several political arrests and the exile of many persons within the past two years have been on account of this discussion, they demanding that this article of the constitution should be literally followed, the Government, on its part, believing that in the arrest and exile of all such persons all discussions and agitation of this matter would cease. But this rigor on the part of the Government produced, instead of friends, enemies, who were daily gaining strength.

"At the several interviews I had with the President up to the time I left for Santo Domingo (February 10) he stated that it was his intention to remain in office until he had finished his term (to May 15, 1903) and that he would not resign or cease to be President prior to that time. He had also impressed this fact upon the members of his cabinet up to May 1 of the present year, when it was learned that it was his intention to resign at an early day." This announcement brought a number of candidates into the field, and Mr. Powell, on returning to Port au Prince on the 11th of May, found a precarious situation there. He secured an interview with President Sam the following morning, and "was informed that he had determined to resign, that his resignation was ready to be sent to Congress, that he was tired of this constant agitation, and that he would leave by the French steamer then in port for France, where he would pass the remainder of his life in quietness and peace; that since it was the wish of the people to have a new

President he would not oppose them, but would abide by article 98 of the national constitution, and if the chambers did not elect a President to-day, Monday, the country would be without a President."

One of the candidates, General Leconte, a member of the Government about to be dissolved, "felt certain that he would be elected, as he had sufficient votes pledged in both houses to elect him. This news spread rapidly, the streets became full of armed citizens wending their way toward the chambers to prevent, forcibly if necessary, his election. At first it was difficult to get the members together. The streets in the neighborhood of the legislative halls were thronged with people and the Government troops, the latter to protect the members in case of violence. Several secret meetings of the members were held. At last the doors were opened, and as soon as opened every available space not occupied by the two houses was filled by the friends and foes of General Leconte. As the balloting was about to commence some one in the chambers fired his revolver. In an instant shooting commenced from all parts of the room. One or two were killed and the same number wounded. The members all sought shelter in the most available places they could find — under benches or desks. Others forgot the way they entered and sought exit by means of the windows. By this means the populace prevented the election of General Leconte, forcibly adjourned the chambers without date, and dispersed the members of both chambers. The Government troops immediately retired to the palace, the arsenal, the barracks, or the arrondissement, as it was thought that an attack would be immediately made on each place.

"A committee of safety was at once formed to safeguard the interests of the city, and as the news reached the other cities of the Republic similar committees were named with like duties. The next object was to secure the palace, arsenal, and the Government buildings. A concerted attack was made on each of the above places at 10 P. M., lasting about twenty minutes, in which the Government troops were the victors. It is supposed that in these engagements about one hundred persons were either killed or wounded."

The next day, on the ex-President's request, Mr. Powell, as dean of the diplomatic corps, arranged with his associates to escort General and Mrs. Sam, together with General Leconte, to the steamer on which they wished to embark, and their departure was undisturbed.

On the 26th of May a Provisional Government, with General Boisrond Canal for President, was established by delegates sent from the several sections of the Republic." Elections for a new Chamber of Deputies were appointed to be held early in July; though the Constitution had declared that such elections "must occur during the first weeks in the month of January." This gave a fine opening for future troubles. Meantime, irregular skirmishing, preliminary to positive civil war, was bringing all business to an end. On the 26th of July Mr. Powell reported to Washington that civil war had been declared. The contest for the Presidency seemed narrowed to two candidates, General Nord Alexis, Minister of War and Marine in the Provisional Government, and Mr. A. Firmin, whose cause was supported by the Haytian navy, of two gunboats, commanded by Admiral Killick. It is needless to give details of the hostilities that ensued.

The elections were determined and the Chamber of Deputies was organized about the 20th of August. The Deputies had then to choose the Senatorial body, and the strife of factions among them prevented that election until late in the year, when the forces of the Provisional Government had achieved successes which brought the civil war practically to an end. General Nord Alexis, who had been campaigning for months, returned triumphantly with his army to Port au Prince on the 14th of December; was acclaimed President by the Army on the 17th, and was formally elected by the National Assembly on the 21st. He was then reported to be 85 years old.

A. D. 1908. — Revolution once more. — Overthrow and expulsion of President Nord Alexis. — General Antoine Simon his elected successor. — The Government under President Nord Alexis was maintained for six years, by its own unsparing use of power, it would seem, rather than by the good will of the country. Revolutionary projects had been crushed with prompt vigor before they had much chance of development, until November, 1908, when one, led by a displaced military commander, General Antoine Simon, ran so rapid a course that it arrived at complete success on the 2d of the following month. The aged but indomitable Nord Alexis strove hard to resist it, even to the last inch of fighting in his own palace; but Port au Prince rose against him; his partisans fell away; his soldiers deserted; and finally, on the afternoon of December 2d, he consented to be taken on board a French training-ship, then in port. In doing this there was difficulty in saving him from an angry city mob. The escape of the fallen President was described in a Port au Prince despatch to the Associated Press as follows:

"So serious was the situation that the French minister, M. Carteron, and other foreign representatives, with members of a specially appointed committee, forced themselves upon the President, who finally consented to withdraw. Shouts greeted him as he stepped to his carriage. M. Carteron, carrying the French tri-color, threw the folds of the flag over the shoulders of the deposed president to protect him. All along the route the people who lined the streets shouted, jeered and cursed the fallen President, but when the landing stage was reached, the mob lost all restraint. The scene was tragic and shameful. Infuriated women broke through the cordon of troops and shrieked the coarsest insults into the very face of the President, who strove bravely to appear undismayed. They hurled themselves, fighting with hands and feet, against the soldiers, who found difficulty in forcing them back. One woman with a murderous knife, got to the President's side and made a sweep at his body, but the blow fell short, and, before she could follow it with another, she was seized by a soldier. A man struck the President a glancing blow with his fist on the neck. Alexis, shaking his head, so, turned to M. Carteron and said: 'I told you your excellency.'

"To clear space, the troops fired several volleys over the heads of the mob. For a moment, they gave way, and Alexis, with the French colors draped about him, was bustled into a skiff,

in tow of a steam launch, his disordered suite tumbling in after him. As the launch drew away, three Haytian gunboats and the American warships in the harbor fired a salute to the fallen President.

"A trunk which was left behind on the precipitate departure of the President and his party from the wharf, was seized upon by the rioters and broken open. It was found to contain some $10,000 in gold and 20,000 Haytian gourdes. The specie was scattered about and promptly pillaged."

According to a despatch of the next day, "riot and pillage swept through the night following the flight of the fallen President, Nord Alexis. The populace, maddened by a taste of revolt, gave themselves over to absolute license. They looted stores and residences and then fought among themselves over the booty until an armed force, hastily gathered together by General Poitevin, fired a volley into the mob and finally drove them into hiding. In all, twelve persons were killed and many wounded before order was restored. . . .

"Past 90 years of age — how many years beyond nobody knows — Nord Alexis had faced his foes with the strength and determination of a man in the very prime of life. To-day he said: 'The courageous conduct of M. Carteron (the French minister) saved my life.' . . . The President was broken-hearted over the attitude of his people, of whose hostility he was entirely ignorant. 'They always cheered me when I appeared in the streets,' he said mournfully, 'and I have always labored for their good.'

"He protested against the 'legend' that he ever had shown any enmity toward the whites, and, for the first time, expressed his views with regard to the summary executions which took place on March 15th last, when many men were shot to death by order of General Leconte. He had always been convinced, he said, that the men had been killed during an attack upon the palace. His officials and those upon whom he depended had kept back the truth from him.

"With regard to his destination, Nord Alexis said that he would wait until he could be transported to Jamaica, Saint Thomas or Martinique."

General Simon and his victorious army of rebellion entered the capital on the 5th. Some degree of order had been restored by a Committee of Safety, under ex-President Legitime, but fresh strifes were imminent between rival candidates for the vacant presidency. Simon, with his military following, brushed them aside, and obtained a unanimous election by the Haitian Congress on the 17th, assuming office as President on the 20th.

A. D. 1909. — The Haitian People. — The splendid industry of the Women. — The curse of the country in its Military Government. — "Four-fifths of the Haitians — the peasantry of the country, that is to say — are hardworking, peaceable country people. These four-fifths of 3,000,000 are entirely negro in race, and probably represent a mingling of West African types from Senegambia, Dahomé, and the Congo. It is a race which exhibits, away from the towns, a fine physical development; its skin colour is much darker and the negro type more pronounced than in the United States. . . . The women are the best part of the nation. They are splendid, unremitting toilers. In the face of all discouragements with which a bad Government clouds their existence the women of Haiti almost remind one of certain patient types of ant or termite, who, as fast as you destroy their labour of months or days, hasten to repair it with unslacking energy.

"The curse of Haiti from the day she established her independence in 1804 to the present time is the tyrannical and wasteful Government of the military party. . . . Scarcely a President in the history of Haiti has not been a military man and the favourite leader, for the time being, of the major portion of the army. . . .

"That President Antoine Simon will follow in the bloody footsteps of all his Presidential predecessors is improbable. He is a man of obviously kindly nature, with a record of 22 years' essentially clement government of the great southern province of Haiti; but he is an old man of imperfect education, and though he may turn out a complete surprise, yet so far he has done nothing to improve the conditions of political elections. The whole power of the country is still entirely based on the soldiers." — Sir Harry Johnston, in *The London Times, April* 13, 1909.

I.

ICELAND: Its Ancient Claims to Nationality. — Within the last few years the Icelanders have been asserting their ancient right to a national life of their own so seriously that the King of Denmark has exerted himself to soothe their discontent with but partial success. For many historical reasons Iceland ought to have an independent standing among the European states. For some of those reasons its people seem fairly entitled to recognition as the foremost representatives of the old Norse or Scandinavian race. Their ancestors were men of the best blood of Norway, who quitted that country in the ninth century and took possession of the arctic island, because they would not submit to the despotism established by Harold the Fairhaired. That they took with them the best culture of their race and time is proved by the fact that almost everything we know of the old Norse literature, and of the mythology and history embedded in it, was preserved by their pens. Learning was cherished and cultivated among them from the first; and they had the capacity and the spirit for self-government from the first. Before the end of the tenth century they had adopted a republican constitution and founded a commonwealth which endured for about 300 years. This antedated the rise of the city republics of Italy and the free cantons of the Swiss by one or two centuries at the least.

The Icelandic republic was destroyed at last by feuds among its leading families, which invited Norwegian intervention from time to time, and subjected the island to the parent kingdom in the end. Late in the fourteenth century the three Scandinavian kingdoms of Norway, Sweden, and Denmark were joined in a union which did not endure. Its dissolution left

Norway, with Iceland as a dependency, attached to Denmark, and that connection was maintained till 1814. Norway was then transferred from the Danish to the Swedish crown; but Iceland was still kept as a part of the dominion of the Danish King. Norway regained national distinctness and independence in 1905, and now it is to be hoped that Iceland will have its just turn.

The island has never been governed as a mere province of Denmark, but always under its own laws. Its old representative assembly, the Althing, was suspended during most of the first half of the last century, but revived in 1845 as a merely consultative assembly. As such it voiced very steadily the claim of the Icelanders to more of autonomy and political distinctness than their Danish lord was willing to yield. In 1874, however, at the 1,000th anniversary of the Icelandic settlement, he granted a constitution which reinvested the Althing with legislative powers, and met the wishes of the island in other important ways; but not so far as to produce content.

IMMIGRATION AND EMIGRATION.

Australia: A. D. 1909. — The needs of the country. — The attitude of the people toward Immigration. — The difficulties. — Speaking at a dinner in his honor, given in London, after his return from five years of service as Governor-General of Australia, Lord Northcote touched on what he described as "the Aaron's rod of all political questions in Australia, which, if it does not swallow up the others, at all events the others depend upon it," — meaning the increase of Australia's population. As to the attitude of Australia to the immigration question he said: "No doubt, from time to time certain over-zealous officials have made mistakes which have prejudiced Australia in the eyes of the British public, but I do not believe that anything in the nature of a fixed desire to keep out men who are able to sustain themselves by their labour has ever existed. Of course, Australia has her number of unemployables, and is not prepared to import more from the old country. Then I come to the very important question of coloured immigration, and that is a question we should look at from an Australian as well as from a British point of view. . . .

"Suppose Australia or Canada confronted by the presence of a large number of Asiatics, men of ability enough to hold their own, men who, if they come there, come to stay, and it is quite conceivable from an Australian point of view that if they do not rigidly secure themselves against the possibility of being swamped by Asiatic labour, they may be presented with a problem even more serious than is the great negro question in the United States. I say this to show that there is more to be said for the Australian point of view than some people are inclined to suppose. Of course a great deal depends upon whether the huge northern territory can be populated by white men. Upon that I hesitate to pronounce a definite opinion. I believe it is possible for a white man, if he is steady, sober, and careful, to colonize for a time this great tropical land; but it is a very serious matter how far the climate is suitable for women and children, and whether we can hope from generation to generation that a healthy and virile race can continue to live and breed in that climate. The territory is over half a million square miles in extent, and the white population is well under 2,000 people. . . .

"There is plenty of land all through Australia for men who are willing to go there and will be steady and sober and work hard. I have been North, South, East, and West. I can claim for myself the credit that I have travelled fairly hard, and I have seen in every State of Australia plenty of land available for close settlement. If the great landowners are disinclined to sell their holdings — and I quite acknowledge that a great deal of the best land in Australia is in comparatively few hands — at all events the State Governments have very large reserves of land; and by the application of irrigation and other methods of scientific farming they could compete on even terms at least with these squatters, and they could turn these waste lands into fertile country fit for settlers. I am very glad to think that both in New South Wales and Victoria very large irrigation works are in progress and will be completed in a very short time, adding enormously to the acreage of land fit for cultivation; and I say deliberately and advisedly, I care not for reports of Commissions or individuals, that there is land and to spare for generations for men who are ready to undertake the cultivation."

A correspondent of the London *Times*, writing from Sydney in January, 1909, on the subject of the vast quantity of fertile land in Australia that is locked up by private owners in vast sheep runs, to the exclusion of settlement, had this to say: "You may take it as an axiom that immigration to Australia will do no good till the fertile lands are thrown open. And a very large proportion of the closed land is controlled from London, either by ex-Australians who live there and draw their income from Australian property, or by big British companies. . . . It is necessary to warn seriously shareholders and directors of the big companies that they must put pressure on their officials out here, or prepare to have more drastic pressure forced on themselves. At present, those officials are often responsible for Australian dislike of the absentee company."

IMMIGRATION AND EMIGRATION

In another letter to the same paper it was said: "Somehow or other the locked-up lands must be opened for agricultural uses. No one now doubts that, and only a few owners, usually either absentees or corporations, pretend to doubt it. The Labour recipe is a Federal land tax on estates over £5,000 in value, of such a kind that fair use of the land will produce profit on which the tax will be a mere fleabite, while it will be a serious charge on fertile land that is used only for sheep runs. The proposed tax is to be Federal simply because there is no hope of passing the requisite Bill through several of the State Upper Houses; otherwise it is more properly a State concern. Now what we have to remember is that this is not only Labour's remedy. I believe it would be quite possible to carry such a proposal in the present Federal Parliament, so definitely has public opinion swung round against the big owners who keep their land idle. If it is not carried next session, it will be because Mr. Deakin gave his word two years ago that he would not introduce the subject in this Parliament; but Mr. Deakin's attitude is this — that he wishes the States would do it, that he does not consider this Parliament has any mandate to legislate for it, but that he personally has always favoured such a tax, and, if the States take no steps in that direction, he will support, or even propose, the measure when it has been submitted to the country at a general election. It is useless, therefore, for any one to decry the tax as merely a Labour idea, a 'Socialistic' nostrum. The support given it in Australia is far wider than that. And, apart from the many who advocate it as the best remedy for the present land-hunger, there is an increasing body of electors who are being forced into supporting it because no other remedies seem practicable."

The attitude of the Australian Labor Party on the inseparable immigration and land questions was stated very clearly and succinctly in a letter to the London *Times*, dated at Newcastle, New South Wales, June 30, 1909, by a member of the Party, Frank Pittock, who signs himself "a Magistrate of the Territory." He writes: "We cannot at present obtain land for our own genuine land-seekers, skilled in the peculiar requirements of pastoral and agricultural work on the Australian soil. We certainly are unable to give our own unemployed a chance on the land. Any importations of labour from over the seas merely serve to render more distressful the unfortunate position of the colonial out-of-works. On the other hand, we do now, and always have, welcomed new arrivals who may be able, in the near future, to effectively augment our productive wealth. The party fully recognizes the need of population — of the right sort. We have vast empty spaces all over the continent, now grazing grounds for sheep, yet eminently suitable for intense settlement. The Australian Labour party seeks the support, at the forthcoming general election, of all who believe, as does your own Australian Correspondent, that the satisfying of the earth-hunger of our people is the great outstanding need of the day. Can we but be authorized to force the huge monopolists to surrender portions of their holdings we shall have, not only land for our own landless, but land and to spare for those who seek it from the British Isles. . . . We dare not, as a conscientious and humanitarian party, invite our kith and kin from other parts to come here now. We should be traitors to the Empire, betrayers of the race, if we endorsed in any way the attitude of those who seek, apparently, to flood this fair land with any population at all, regardless of the evil consequences to the immigrants themselves, and alike regardless of the grave injustice thereby done to native born landless and, in many cases, at present, work-seeking Australians."

A Press despatch from Sydney, October 30, made the following announcement: "Under the closer settlement amendment Bill, which is now before the Legislative Council of New South Wales, the Government will be empowered by proclamation to earmark estates in the vicinity of towns which might impede settlement. When such estates are of the value of £10,000 and upwards the Government may agree with the owners to subdivide them on terms and areas to be agreed upon, so as to ensure *bona fide* settlement. If the owners fulfil the agreement, the proclamation will be cancelled; if the owners refuse to subdivide within five years, the Government reserves the power to resume at the value on the date of proclamation."

Brazil: 1908-1909. — Increasing Influx. — "During the year [1908] 112,234 persons came into the country, of which 17,539 were visitors and 94,695 immigrants. This shows a notable increase of 26,908 immigrants, or about forty per cent. over the number registered in 1907. Of these 74,999 came at their own expense and 11,109 at the cost of the Union. The increase continues this year, as will be seen from the record of the Port of Rio de Janeiro alone, which received 18,580 immigrants during the first quarter of this year, as compared with 8,607 in 1908 and 5,948 in 1907. In spite of the small grant allotted to this service, it has been conducted with the greatest efficiency. The Department for the Peopling of the Soil has effected the location of immigrants in 26 colonies, situated respectively in the States of Espirito Santo, Rio de Janeiro, Minas Geraes, São Paulo, Paraná, Santa Catharina, and Rio-Grande-do-Sul, eleven of which are directly under the supervision of the Union. All the nucleus colonies founded last year enjoy unrestricted prosperity, and it has been even necessary to acquire neighbouring lands in order to satisfy the constant demand for more land on the part of the families settled." — *President's Message to Congress, May* 3, 1909.

Canada: A. D. 1896-1909. — The "American Invasion" of the Northwest. — Immigration of the last decade. See (in this vol.) CANADA: A. D. 1896–1909.

England: A. D. 1905-1909. — The Aliens Act. — Restrictions on the admission of Aliens. — A new policy. — Until 1905, England offered practically an open door to the aliens who sought either a permanent home or a temporary residence on her island soil. Little scrutiny was given to them and almost no restriction on their coming in. But some years before that date a growing criticism of such unconditioned hospitality was begun. In 1888 it induced the appointment of a Select Committee of the House of Commons "to inquire into the laws existing in the United States and elsewhere

IMMIGRATION AND EMIGRATION

on the subject of the immigration of destitute aliens, and the extent and effect of such immigration into the United Kingdom, and to report whether it is desirable to impose any, and if so, what, restrictions on such immigration." The Commission reported in 1889 that it thought "the alien population was not numerous enough to create alarm," and that it was "not prepared to recommend legislation at present," but saw "the possibility of such legislation becoming necessary in the future." Several proposals of restrictive measures were urged without success in the course of the next dozen years, and, in 1902, a Royal Commission was appointed, "to inquire into—(1) the character and extent of the evils which are attributed to the unrestricted immigration of aliens, especially in the Metropolis; (2) the measures which have been adopted for the restriction and control of alien immigration in foreign countries and in British colonies." The Commission produced an elaborate report in 1903 (Parliamentary Papers, Cd. 1741). Reviewing the hospitality of the past, it found that the migrant aliens of former generations had made the English people "their debtors"; but they were of a different stamp from the immigrants of the present movement, which "may be said to have begun about 1880, and is drawn mainly from the Jewish inhabitants of Eastern Europe." The causes of this recent exodus have been partly economic and partly due to oppressive measures; and the result of the Commission's investigation of it was the expressed opinion that "in respect of certain classes of immigrants, especially those arriving from Eastern Europe, it is necessary in the interests of the State generally, and of certain localities in particular, that the entrance of such immigrants into this country and their right of residence here should be placed under conditions and regulations coming within that right of interference which every country possesses to control the entrance of foreigners into it. Such regulations should, in our opinion," the report went on to say, "be made in order to prevent so far as possible this country being burdened with the presence of 'undesirable aliens' and to provide for their repatriation in certain cases.

"But we think that the greatest evils produced by the presence of the alien immigrants here are the overcrowding caused by them in certain districts of London, and the consequent displacement of the native population. There seems little likelihood of being able to remedy these great evils by the enforcement of any law applicable to the native and alien population alike. We therefore think that special regulations should be made for the purpose of preventing aliens at their own will choosing their residence within districts already so overcrowded that any addition to dwellers within it must produce most injurious results. On this point the Commission recommended specifically that if it be found that the immigration of aliens into any area has substantially contributed to any overcrowding, and that it is expedient that no further newly-arrived aliens should become residents in such area, the same may be declared prohibited area.

"We are also of opinion that efforts should be made to rid this country of the presence of alien criminals (and other objectionable characters)."

An Act embodying substantially the recommendations of the Commission passed Parliament in 1905. Both the Act and the administration of it have been criticised since, as lacking stringency. Its working was reviewed at considerable length in *The Times* of February 9, 1909 which made the following statements, among others, on the subject: "The Act, as now administered, does not subject all alien immigrants, or even all steerage immigrants, to inspection. To begin with, the regulation of alien immigration is confined, practically, to the traffic between the United Kingdom and ports in Europe or within the Mediterranean Sea."

In fact, according to *The Times*, "the vast majority of aliens are not affected by the Act. A foreigner may enter this country unchallenged—if he comes from an 'extra-European' port (with some exceptions); if he is a cabin passenger; if he is an exempted second-class passenger; if he is a transmigrant; if he is a passenger in a ship containing fewer than 21 'alien steerage passengers.'

"Then also, though nominally a subject for inspection, he is not called upon to satisfy the full requirements of the Act, if he is proceeding to a destination outside the United Kingdom; if he holds a return ticket; if he is a seaman; if he is fleeing from religious or political persecution."

Germany: A. D. 1904-1908. — Remarkable decrease of Emigration. — "German emigration has dwindled so steadily and rapidly that at present it would seem to have reached the low-water mark in its downward trend. A glance at the official statistics of emigration will indicate the remarkable extent of this retrogression. In 1852, Germans, to the number of 145,918, and in 1854, to the number of 215,009, went to the United States alone. In 1872, just after the unification of the Empire, the grand total of German emigration amounted to 128,152; in 1873, to 110,438; in 1881, to 220,902; in 1882, to 203,585 persons. During the years succeeding 1882 up to 1892, the figure, in the average, still surpassed 100,000, but since then they have shown a notable falling off. Thus only 22,309 in 1900; 22,073 in 1901; 32,098 in 1902; 36,310 in 1903; 27,984 in 1904—were recorded as having gone from Germany to lands beyond the sea.

"This retrogressive tendency appears the more surprising when it is remembered that Germany's population, mainly as a result of the excess of births over deaths, but partly through its inland migration, has, since the foundation of the Empire, increased at an average annual rate of over half a million, during recent years at the still higher rate of 800,000 *per annum*. The cause for this seeming anomaly lies in the extraordinary economical development of Germany during the last decade, in the consequent steady improvement of the social status of its laboring classes, brought about by a progressive rise in wages, and in the elimination, thereby, of one of the strongest incentives to emigration in former days." — Baron Speck von Sternburg, *The Phantom Peril of German Emigration and South-American Settlements* (*North American Review*, *May*, 1908).

Of the emigrants from Germany in 1908, the U. S. Consul-General reported that they numbered only 19,880, being 11,816 less than in 1907.

IMMIGRATION AND EMIGRATION

"From 1807 to 1907 the yearly mean average was 27,536, or 0.47 per cent. of the population. Altogether since 1871 the German Empire has lost only 2,750,000 people by emigration, or as many people as can be made good in four years by the excess of births over deaths."

Italy: A. D. 1908. — Great falling off in the Movement of Emigration. — As reported in a Press despatch from Rome, in June, 1909, the statistics of 1908 showed a marked falling off in Italian emigration. "In 1907 the total number of emigrants was 704,675; in 1908 it was only 486,674. The most notable reduction is in the number of emigrants to the United States, which has fallen from 298,124 in 1907 to 181,501 in 1908. This chiefly affects Southern Italy, the Abruzzi, Campania, Calabria, Basilicata, and Sicily; the northern emigration, which for the most part is directed towards European countries, is also diminished, but in a less proportion. Unfortunately, this change is not due to more favourable labour conditions in Italy, but to a smaller demand for labour in North America. The number of emigrants to Argentina has slightly increased from 78,498 to 80,699; but the great market for Italian labour, the United States, is, to judge from the figures of this year as well as last year, surely and irretrievably growing smaller."

Peru: A. D. 1906. — Decree for the Encouragement of Immigration. — The following decree was promulgated by President Pardo the 10th of August, 1906:

"First. The State will provide third-class passages for the natives of Europe and America who may wish to introduce industrial or private enterprises, provided that they fulfill the following conditions: (*a*) That they are from 16 to 50 years of age, if they are males, and from 10 to 40 if they are females, fulfilling the conditions of morality and health laid down in the rules now in force. (*b*) That they come to engage in agriculture, in mining, or in other industries, or to devote themselves to these occupations for account of colonization, immigration, or irrigation enterprises.

"Second. The payment of the passages will be made through the consuls of the Republic in the ports of shipment in view of the orders cabled by the ministry of fomento, to which office must be presented in writing the request of the interested parties for such payment, indicating at the same time the number of immigrants, the agricultural estate or industrial establishment to which they are destined, and declaring themselves obliged to provide lodging, board, and medical attendance for the immigrants from the port of landing to the place of destination.

"Third. The consuls of the Republic, on receipt of the order from the minister of fomento, shall make the payment of the passages to the steamer companies direct, with previous personal and individual evidence that the immigrants fulfill the conditions set forth in Article 1 of this decree, and for this purpose they shall give a certificate to each immigrant, which shall be collected by the maritime authorities of the port of landing and afterwards forwarded to the ministry of fomento.

"Fourth. A general register of immigrants shall be opened in the agricultural section of the ministry of fomento, in accordance with the models and instructions obtained from that department."

United States: A. D. 1868-1908. — Chinese Exclusion Laws vs. Treaties with China. See (in this vol.) RACE PROBLEMS: UNITED STATES: A. D. 1868–1900, and 1905–1909.

A. D. 1905-1909. — National Conference of 1905. — The New Immigration Law. — Excluded Classes. — Congressional Commission to investigate Immigration. — Its Preliminary Report. — Information for Immigrants. — Measures for distributing them. — Backward turn of the tide in 1908. — At a National Conference on the subject of Immigration, held at New York in December, 1905, under the auspices of the National Civic Federation, the Commissioner-General of Immigration, Mr. Frank P. Sargent, presented some facts of the immigration of the preceding statistical year which claimed very grave consideration. During the twelve months ending June 30 there had been 1,026,499 arrivals in this country, and of this number seven hundred and seventy-seven thousand, or 76 per cent., settled in six States — New York, Pennsylvania, Massachusetts, Illinois, New Jersey, and Ohio. New York received over three hundred and fifteen thousand, while the West received only forty three thousand; Pennsylvania received over two hundred and ten thousand, while the South received only forty-six thousand. Fifty-seven thousand came to New Jersey, while North Carolina's share was one hundred and eighty-three. These figures gave point to Mr. Sargent's statement that the immigrants go where their friends are. Their only sources of information concerning this country are the agents of the transportation companies and their friends who have come here before. The resulting lack of knowledge concerning those parts of the country in which they are most needed is the chief cause of the congestion in the large cities and the more densely populated States which is one of the most serious aspects of the immigration problem.

Nearly twelve thousand immigrants were refused admission during the year, of whom eight thousand were paupers, two thousand diseased, and one thousand brought in violation of the contract labour law. "It is right," said Mr. Sargent, "that they should be denied admission, wrong that they ever should have been started from home."

In the new Immigration Law enacted by Congress in February, 1907, provision was made for giving information to immigrants, after their landing in the country, such as may guide them in the choice of their place of settlement. It authorized the Commissioner General of Immigration to establish a Division of Information, the duty of which shall be "to promote a beneficial distribution of aliens admitted into the United States among the several States and Territories desiring immigration." To which end "correspondence shall be had with the proper officials of the States and Territories, and said division shall gather from all available sources useful information regarding the resources, products, and physical characteristics of each State and Territory, and shall publish such information in different languages and distribute the publications among all admitted aliens who may ask for such information at the immigrant sta-

tions of the United States and to such other persons as may desire the same." Agents appointed by any State or Territory to represent to arriving immigrants the inducements it can offer to them are to have perfect freedom and opportunity to do so.

For checking the immigration of prohibited classes of aliens at the foreign starting-points of their journey to America, instead of at the landing places on this side of the ocean, the new law only lays more rigid restrictions and heavier penalties on the transportation companies, to make them exercise a more careful discrimination in their acceptance of passengers. It adds several classes to the former list of aliens to be excluded from admission to the United States. The list now reads: "All idiots, imbeciles feeble-minded persons, epileptics, insane persons, and persons who have been insane within five years previous; persons who have had two or more attacks of insanity at any time previously; paupers; persons likely to become a public charge; professional beggars, persons afflicted with tuberculosis or with a loathsome or dangerous contagious disease; persons not comprehended within any of the foregoing excluded classes who are found to be and are certified by the examining surgeon as being mentally or physically defective, such mental or physical defect being of a nature which may affect the ability of such alien to earn a living; persons who have been convicted of or admit having committed a felony or other crime or misdemeanor involving moral turpitude; polygamists, or persons who admit their belief in the practice of polygamy, anarchists, or persons who believe in or advocate the overthrow by force or violence of the Government of the United States, or of all government, or of all forms of law, or the assassination of public officials; prostitutes, or women or girls coming into the United States for the purpose of prostitution or for any other immoral purpose; persons who procure or attempt to bring in prostitutes or women or girls for the purpose of prostitution or for any other immoral purpose," — together with contract laborers, so called, assisted immigrants, and children under sixteen years of age unaccompanied by one or both of their parents.

The new law created a Commission to investigate the subject of immigration and to report its findings and recommendations to Congress. The Commission to be composed of three Senators, three Representatives, and three persons to be appointed by the President. A preliminary report from this Commission was presented to Congress on the 1st of March, 1909. This indicated no more than the progress that had been made in a most exhaustive investigation, which probably would require the greater part of another year to carry it to completion. It was covering every phase of the immigration question, including Oriental aliens and other excluded classes, peonage, charity among immigrants, white slave traffic, conditions of steerage, anthropology, congestion in large cities, alien criminality, competition of immigrants, school inquiries, administration of the immigration laws, distribution of immigrants, and other questions. In its work the Commission had employed 198 persons, of whom 82 were in Washington, 2 in New York, 2 in San Francisco, 92 in field work, and 20 in special lines of inquiry.

IMMIGRATION AND EMIGRATION

The preliminary report of the Commission indicates that the present provisions of law for the exclusion of undesirable persons are stronger in theory than they are effective in practice, and that thousands of very undesirable immigrants enter the country every year. The Commission expresses a confident expectation of finding means of prevention that will be effective. It is conducting an inquiry of great importance into the subject of alien criminality. The higher criminal courts of New York city are keeping records, at its request, in detail, of each person convicted of crime, and it is intended that a study of foreign-born criminals, and criminals of the second generation, will be made in that city. The investigation, however, is not confined to the larger cities.

The Division of Information in the Department of Commerce and Labor which the new Immigration Law provided for was organized with Mr. Terence V. Powderly, former Commissioner-General of Immigration, as its Chief. In July, 1909, there was an announcement of its undertaking to bring about coöperation with the Governors of States and Territories, in organized measures to accomplish a better distribution through the country of the foreigners that come to it.

Dr. L. Pierce Clark has lately called attention to the fact that the increase of immigration into the United States has reached the point of making the influx of aliens the principal source of population, and that "its character has changed so fundamentally that it has assumed an entirely new relation to American social problems. Up to 1900 the average annual immigration had not exceeded one-half of one per cent of the population of the United States, and the races which had made the first settlement in the country were still contributing more than 75 per cent. of the whole number of arrivals. By 1901 the new immigration had fairly started, the English, Irish, German, and Scandinavian had been supplanted by Hebrews, Slavs, and Italians, and the impetus had been received which, four years later, was to carry immigration past the million a-year mark. More than one-fifth of all the immigrants who have come to this country have arrived since 1900, and, with the changed source of immigration, a remarkable transformation in the composition of our foreign-born population is in progress."

The industrial depression of 1907, however, produced evidence that much of this later immigration has not been for permanent settlement; that the facilitation and cheapening of travel have brought about extensive movements of people, from southern and southeastern Europe especially, who come to America only to earn and save a little fund which suffices for a comfortable remainder of life in their own land. The check to such earning which occurred in 1907 turned the tide of migration instantly back from America to Europe. According to statistics prepared by Mr. Watchorn, the late Commissioner-General of Immigration, the excess of departures over arrivals at the port of New York, in the half year from January 1 to July 1, 1908, was 129,511. In the whole fiscal year that ended June 30, 1908, the departures from New York were 631,458; the arrivals 689,474; showing the gain of population to the country that year from incomers through the port of New

York to have been only 38,016, even if all became permanent inhabitants.

A. D. 1905 (Aug.). — Resignation of Lord Curzon. — Announcement of the resignation of the Viceroyalty by Lord Curzon was made August 21. The immediate cause of his action was understood to be the refusal of the Home Government to approve his nomination of an officer, General Barrow, whom he wished to have placed on the Viceroy's Council. But friction between Lord Curzon and the Commander-in-Chief in India, Lord Kitchener, over questions of military administration and the authority belonging to their respective offices had been troublesome for some time past, and the Viceroy had seemed to regard the attitude of the government at home as more favorable to Lord Kitchener than to himself.

A. D. 1905-1908. — The Starving Poverty of the Mass of the People. — "Suppose we divide the past century into quarters, or periods of twenty-five years each. In the first quarter there were five famines, with an estimated loss of life of 1,000,000. During the second quarter of the century were two famines, with an estimated mortality of 500,000. During the third quarter there there were six famines, with a recorded loss of life of 5,000,000. During the last quarter of the century, what? Eighteen famines, with an estimated mortality reaching the awful totals of from 15,000,000 to 26,000,000. And this does not include the many more millions (over 6,000,000 in a single year) barely kept alive by government doles.

"What is the cause of these famines, and this appalling increase in their number and destructiveness. The common answer is, the failure of the rains. But there seems to be no evidence that the rains fail worse now than they did a hundred years ago. Moreover, why should failure of rains bring famine? The rains have never failed over areas so extensive as to prevent the raising of enough food in the land to supply the needs of the entire population. Why then have people starved? . . . Because they were so indescribably poor. All candid and thorough investigation into the causes of the famines of India has shown that the chief and fundamental cause has been and is the poverty of the people, — a poverty so severe and terrible that it keeps the majority of the entire population on the very verge of starvation even in years of greatest plenty. . . .

"And the people are growing poorer and poorer. The late Mr. William Digby, of London, long an Indian resident, in his recent book entitled, *Prosperous India*, shows from official estimates and Parliamentary and Indian Blue Books, that, whereas the average daily income of the people of India in the year 1850 was estimated as four cents per person (a pittance on which one wonders that any human being can live), in 1882 it had fallen to three cents per person and in 1900 actually to less than two cents per person. Is it any wonder that people reduced to such extremities as this can lay up nothing? . . .

"One cause of India's impoverishment is heavy taxation. Taxation in England and Scotland is high, so high that Englishmen and Scotchmen complain bitterly. But the people

of India are taxed more than twice as heavily as the people of England and three times as heavily as those of Scotland. According to the latest statistics at hand, those of 1905, the annual average income per person in India is about $6.00, and the annual tax per person about $2.00. . . .

"Notice the single item of salt-taxation. Salt is an absolute necessity to the people, to the very poorest; they must have it or die. But the tax upon it which for many years they have been compelled to pay has been much greater than the cost value of the salt. Under this taxation the quantity of salt consumed has been reduced actually to one-half the quantity declared by medical authorities to be absolutely necessary for health. . . .

"Another cause of India's impoverishment is the destruction of her manufactures, as the result of British rule. . . . Great Britain wanted India's markets. She could not find entrance for British manufactures so long as India was supplied with manufactures of her own. So those of India must be sacrificed. England had all power in her hands, and so she proceeded to pass tariff and excise laws that ruined the manufactures of India and secured the market for her own goods. . . . .

"A third cause of India's impoverishment is the enormous and wholly unnecessary cost of her government. . . .

"Another burden upon the people of India which they ought not to be compelled to bear, and which does much to increase their poverty, is the enormously heavy military expenses of the government. . . .

"Perhaps the greatest of all the causes of the impoverishment of the Indian people is the steady and enormous drain of wealth from India to England, which has been going on ever since the East India Company first set foot in the land, three hundred years ago, and is still going on with steadily increasing volume. . . . Says Mr. R. C. Dutt, author of the *Economic History of India* (and there is no higher authority), 'A sum reckoned at twenty millions of English money, or a hundred millions of American money [some other authorities put it much higher], which it should be borne in mind is equal to half the net revenues of India, is remitted annually from this country [India] to England, without a direct equivalent.'"—J. T. Sunderland, *The New Nationalist Movement in India* (*Atlantic Monthly, Oct.*, 1908).

A. D. 1905-1909.—The Partition of Bengal.—Resentment and Disaffection of the Bengalese.—The Swadeshi Movement.—Reported improvement of conditions in the new province of Eastern Bengal and Assam.—The partition of Bengal, in October, 1905, one of the latest measures of Lord Curzon's administration of the Government of India, gave rise to much native agitation and disaffection, and is still under criticism in England, but not likely to be undone. In the view of the Anglo-Indian Government the partition was a necessity, because of the magnitude of the province, in territory and population, which made the task of provincial administration too difficult. It was far the largest of the administrative divisions of British India, containing nearly a third of the Indian subjects of the English King. Assam, formerly joined with it, had been separated from it administratively in 1874, under a Chief Commissioner. Fifteen of the eastern districts of Bengal, adjacent to Assam, were now united with the latter to form a new province, called Eastern Bengal and Assam, and this disruption of the old province was resented very passionately by a large part of the Bengalese. They refused to believe the reasons given for the partition, but gave it an offensive explanation, which one of the native journals in Calcutta put briefly as follows: "The objects of the scheme are, briefly, first, to destroy the collective power of the Bengali people; secondly, to overthrow the political ascendency of Calcutta; and, thirdly, to foster in East Bengal the growth of a Mohammedan power which it is supposed will have the effect of keeping in check the rapidly growing strength of the educated Hindu community." In the official British view, on the other hand, the whole stir of Bengalese feeling was artfully wrought up for mischievous ends; but it is easier to believe that something in the nature of a historic sentiment of nationality was really hurt and angered by the partition. Yet Bengal cannot be said to have had anything that resembled a distinct national history for many centuries before it came under the rule of the British East India Company, in 1765. Nor had its name been precisely and continuously attached to any well-defined territory.

Whatever the source of excited feeling may have been, however, it was ardent and persistent, especially in the educated class, and it gave a start to what received the name of the Swadeshi or national movement of hostility to all things English, directed mainly to the boycotting of English merchandise, and to the organization of efforts for promoting home production in all industrial fields. The Swadeshi movement soon spread beyond Bengal; but its stimulations have been centered there. The intensity of the feeling in Bengal was such that on the 16th of October, 1905, when the partition took effect, the Hindus of Calcutta put on mourning garments, suspended business and work, and vowed that its anniversaries should be memorial mourning days. Pupils in native schools became so offensive in their anti-English demonstrations that the Lieutenant-Governor of the new province, Sir Bampfylde Fuller, in February, 1906, unwisely requested the Calcutta University to disaffiliate two schools in the Pabna district, taking away the pecuniary aid they received The request was disapproved by Lord Curzon's successor in the Viceroyalty, Lord Minto, and rather than withdraw it the Lieutenant-Governor resigned.

In the winter of 1909 the London *Times* sent a special correspondent into Eastern Bengal to study the results of the partition, so far as developed in three years. His observations and conclusions were communicated in a long, interesting letter from Dacca, February 15th. He wrote: "No one can visit the new province, and endeavour to inquire impartially into its condition before the 'partition,' without realizing that some administrative division of Bengal had become imperative. Until five years ago, Eastern Bengal was the 'Cinderella' of the provinces of India. Good administration stopped short on the line of the Ganges. Beyond that line officers were few, and the interest of the central authorities in their work and in the welfare of the

people in their charge was comparatively limited. . . . Land revenue administration was persistently neglected in the temporary settled tracts. Calcutta and its immediate vicinity, and the more accessible districts of Old Bengal, absorbed the greater part of the time and attention of the Bengal Government. Money was poured out upon Calcutta and its environs, and Eastern Bengal was financially starved. Very little was spent upon education, and the whole riverain region was most inadequately policed. Crime was far more rife in the southern districts of the province than in any other part of India. The peasantry groaned beneath the exactions of the representatives of absentee landlords, and they were left unregarded and unprotected. The whole province suffered because its rulers were immersed in the preoccupations of Calcutta. The very railways were constructed, not to serve the needs of these 30 millions of people, but to meet the requirements of the city on the Hughli. . . .

"It is remarkable to note how, in the short space of three years, the old deplorable conditions of Eastern Bengal have already undergone a satisfactory process of modification. The province is no longer content to be dragged at the tail of Old Bengal. A new and independent provincial spirit is springing up. Eastern Bengal is beginning to recognize all that a separate existence means to it. Its Civil servants, from the Lieutenant-Governor downwards, take a pride in the great work of regeneration which has been entrusted to them. Their task is enormous, and the workers are far too few. They are like men who have been set to create a new colony out of a land of chaos. They have before them almost as formidable an undertaking as the making of modern Egypt, but it is an Egypt of green rice-fields with half-a-dozen Niles. . . .
